- XRP price witnessed a 10% price dip today, falling below the \$3 mark. - Bitcoin price briefly fell below \$100,000 while major altcoins are dumping. - Crypto experts are bullish on XRP, estimating another price rally. XRP price declined over 10% today and fell below the \$3 mark it surpassed earlier this month. Meanwhile, several other altcoins and Bitcoin are also witnessing price declines amidst bear pressure. While Bitcoin briefly fell below \$100,000, altcoins such as Ether, Solana, XRP, Cardano, Dogecoin, Chainlink, and Tron are facing deep price dips. XRP price declined by more than 10% today. During early Asian hours, the token was trading at around the \$3.13 price level and then deeply plunged to as low as \$2.71. However, the XRP token is currently trading at \$2.91, with over 6% price dip in the last 24 hours. Even though the market cap declined by more than 6% and is hovering above the \$167 billion level, the trading volume is surging. A staggering 300% increase in its 24-hour trading volume is indicating a price increase. While the token price has declined sharply, its trading volume is telling another story. Experts Remain Bullish on XRP The Bollinger Bands are squeezing on the \$XRP daily chart, signaling that a significant price move could be on the horizon. pic.twitter.com/Sv7miRidTb Ali (@ali_charts) January 27, 2025 Even though XRP witnessed a steep decline of over 10% today, several market experts remain bullish on XRP. Renowned crypto market analyst Ali Martinez posted on X earlier today, demonstrating Bollinger Bands technical indicator on the XRP price chart. He further emphasized that a significant price surge is on the horizon for XRP. Another popular crypto expert BitBoy posted on his official X account recently saying, "XRP has never sustained these prices before. Not a bad time to buy as it forms new support lines above \$3." Even though the XRP fell below the support level at \$3, it remains true that it's been years since XRP witnessed sustained price surges. Nonetheless, XRP is set to witness another price surge with new favorable crypto regulations forming in the US.

Investors seeking substantial returns are turning their attention to cryptocurrencies priced below \$10. With long-term potential, even a modest \$750 investment could yield \$7.5 million by 2030. This article explores five promising tokens: Cardano (ADA), XRP, Tron (TRX), Dogecoin (DOGE), and Rexas Finance (RXS). Let's dive into what makes these cryptos stand out. Cardano's Path to \$7 Cardano (ADA) is setting the stage for a potential rally to \$7, as historical patterns suggest. Crypto analysts predict a strong uptrend, supported by ADA's recent recovery from pullbacks. A surge to \$2.77 could ignite a parabolic rally, reminiscent of its last bull cycle. ADA's potential lies in its consistent network upgrades and partnerships. As a blockchain platform known for scalability and sustainability, it appeals to investors looking for long-term growth. A \$7 price point represents over 600% growth from current levels, making it an attractive option for those planning for 2030 gains. Ripple (XRP) Holds Its Ground Despite market volatility, XRP maintains stability at \$2.47, signaling resilience. Analysts highlight a triangle breakout pattern, suggesting a continuation of its bullish trajectory. Fibonacci-based targets estimate XRP's price could reach \$3.42 and \$3.82, offering substantial upside for investors. XRP's utility as a bridge currency for international payments keeps it relevant. Its focus on transforming global transactions into faster, cheaper processes ensures its long-term appeal. Investors eyeing 2030 could benefit significantly from XRP's evolving ecosystem. Tron's Ascending Momentum Tron (TRX) is poised for a bullish climb, with analysts projecting near-term targets of \$0.50 and extended goals of \$1.65 to \$2.20. TRX's current position in an ascending channel indicates sustained growth potential. The blockchain's focus on decentralized applications and content-sharing platforms gives it a unique edge. Tron's expanding ecosystem and strategic collaborations solidify its place among long-term investment options. Its affordability, combined with ambitious price targets, makes TRX an enticing choice for a \$750 investment. Dogecoin's Speculative Potential Dogecoin (DOGE) consolidates at \$0.33, reflecting market hesitancy. However, rising open interest in DOGE futures suggests that traders are positioning for a potential breakout. Past price movements indicate that DOGE can deliver significant gains during bullish phases. Known for its community-driven nature, Dogecoin remains a speculative asset. While its value fluctuates, its history of unexpected rallies makes it a wildcard for those aiming for exponential returns by 2030. Rexas Finance Revolutionizes Real-World Assets Rexas Finance (RXS) stands out for its innovative approach to real-world asset tokenization. This project enables users to buy, sell, or fractionalize ownership of assets like real estate and gold with just a click. RXS goes beyond tokenization with its cutting-edge tools. The Rexas Token Builder simplifies asset tokenization for individuals, while the Rexas Launchpad offers a platform for raising funds for tokenized projects. Moreover, the ecosystem also includes Rexas Estate, a dedicated platform for tokenized real estate, and advanced AI tools like the Quickmint Bot, GenAI, and AI Shield. RXS is an ERC-20 token with a total supply of 1 billion. Its distribution includes presale (42.5%), staking pool (22.5%), and liquidity (15%), among other allocations. So far, \$38.8 million has been raised, with the presale price climbing from \$0.03 to \$0.175—a nearly sixfold increase. Stage 11 is now open, presenting a rare opportunity to invest before prices surge further. Rexas Finance has earned credibility with its CertiK audit and listings on CoinMarketCap and CoinGecko, exposing it to millions of investors globally. The \$1 million giveaway adds to its appeal, offering participants a chance to win \$50,000 USDT each. With plans to launch on three top-tier exchanges, RXS is cementing its position as a transformative force in the crypto market. Final Thoughts For those looking to turn a \$750 portfolio into \$7.5 million by 2030, Cardano, XRP, Tron, Dogecoin, and Rexas Finance present compelling opportunities. While each offers unique benefits, Rexas Finance leads with its groundbreaking integration of blockchain and real-world assets. Act now to secure your position in these promising investments before their values skyrocket. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram:

The crypto market is buzzing with top altcoins poised to explode in Q1. Trump Coin surges on its historical narrative, XRP leads in blockchain innovation, Ozak AI revolutionizes predictive analytics, and Dogecoin retains its meme coin dominance. Trump Coin Gains Momentum with Historical Narrative Trump Coin (\$TRUMP) has captured the attention of cryptocurrency enthusiasts, emerging as a standout meme coin. Currently trading at \$26.69 with a 21.76% loss in the last 24 hours. The coin boasts a market capitalization of \$6.58 billion and a daily trading volume of \$4.87 billion. The narrative surrounding \$TRUMP is tied to its symbolism of resilience, commemorating former U.S. President Donald Trump's defining moments. Positioned as a piece of digital history, Trump Coin has quickly built a community passionate about its iconic story. This unique combination of historical narrative and community support has positioned \$TRUMP as a potential breakout performer in Q1 2025. XRP Maintains Strength with Institutional Adoption XRP remains a cornerstone of the cryptocurrency market due to its versatile use cases and institutional backing. Currently trading at \$3.15, XRP's market cap stands at \$181.22 billion, with a daily volume of \$7.97 billion. The XRP Ledger (XRPL) continues to drive adoption with its fast transaction speeds, scalability, and carbon-neutral framework. Applications of XRPL extend beyond payments, encompassing tokenization, decentralized finance (DeFi), and upcoming NFT integrations. With its ability to support central bank digital currencies (CBDCs) and stablecoins, XRP has positioned itself as a leader in enterprise-grade blockchain solutions. Analysts predict sustained growth for XRP in Q1 2025, bolstered by its growing ecosystem. Ozak AI Poised to Revolutionize Predictive Analytics Ozak AI's innovative approach to combining AI and blockchain technology has captured investor interest. With its \$OZ token priced at \$0.002 during its second presale phase, the project has already raised \$500,000 in funds, indicating strong market confidence. Yes! Once the presale is over, the \$OZ token price will go higher as the listing price is set at \$0.05. Even crypto experts predict that the AI token will hit the \$1 target in 2025. The Ozak Stream Network (OSN) ensures low-latency data transmission, while decentralized infrastructure (DePIN) enhances security and resilience. Ozak AI Prediction Agents, capable of generating tailored insights, make it a powerful tool for real-time financial analysis and risk management. With a listing target price of \$1, \$OZ is projected to deliver substantial returns. Dogecoin Retains Relevance Amid Market Volatility Dogecoin (\$DOGE) currently trades at \$0.3595 as its market cap stands at \$53.12 billion while its daily trading volume reaches \$2.83 billion. Moreover the meme coin retains its market place dominance due to ongoing public backing and active involvement from Tesla leader Elon Musk. For more information about Ozak AI, visit the links below: - Website: <https://ozak.ai/> - Twitter/X: <https://x.com/OzakAGI> - Telegram: <https://t.me/OzakAGI> Disclaimer: TheNewsCrypto does not endorse any content on this page. SUI, Shiba Inu, and BlockDAG are at the forefront of the cryptocurrency sector with their impactful developments. SUI has impressively risen above the \$5 threshold, now stabilizing at \$4.50, with forecasts suggesting it could reach up to \$5.89, positioning it as a promising asset for potential upside. Concurrently, the Shiba Inu community is buzzing over a 600% increase in the burn rate, with debates centered around enhancing token burns versus leveraging Shibarium's growth strategies to solidify its future market position. In another significant move, BlockDAG (BDAG) has enhanced its leadership team by appointing the seasoned blockchain expert Marius Bock as Lead Project Manager. Having amassed \$184.5 million from its presale and delivering a 2,380% ROI to early adopters, BlockDAG is gearing up for significant expansion. Among these developments, BlockDAG is recognized for its potential to significantly impact the future of blockchain technology. SUI Target Captures Market Attention with Rising Aspirations After breaching the \$5 mark on January 10 and 11, the SUI target has caught the eye of investors, with the price adjusting to around \$4.60, indicating a 4% increase this month. Analysts are now predicting that the SUI target may ascend towards \$5.89, fueling interest among investors about its growth prospects. Market specialists note that the consistent support near \$4.50 has built a solid foundation, aiding in the token's upward trajectory. Technical indicators like the RSI support further advancements for the SUI target, provided it remains above the \$4.50 psychological level. For those seeking investment opportunities, SUI represents a stable and promising venture for potential returns. Shiba Inu Burn Rate Soars 600%: A Precursor to SHIB's Price Surge? On January 22, Shiba Inu's burn rate escalated by 600%, with 3.24 million SHIB tokens permanently eliminated from circulation, as reported by Shibburn. This dramatic reduction in supply is part of Shiba Inu's strategy to enhance token value via strategic burns. Although the immediate impact on the price was slight, SHIB increased by 2% to \$0.000024, the intensified burn rate has fueled optimism among investors. Currently positioned as the 17th largest cryptocurrency with a market cap of \$12 billion, SHIB has appreciated 125% in value over the last year. Its \$593 million trading volume, however, lags behind competitors such as Dogecoin and TrumpCoin. Analysts emphasize that a shrinking supply must be coupled with growing demand and user activity to sustain long-term appreciation. Shiba Inu's chief developer, Shytoshi Kusama, has teased future developments that could reinforce confidence in the market. With anticipated price targets ranging from \$0.00003340 to \$0.0000455, SHIB's prospects for an upward trend remain strong, particularly if trading volumes improve. Marius Bock Enhances BlockDAG: Pioneering Future Blockchain Leadership BlockDAG has secured a key addition to its team, igniting enthusiasm among blockchain aficionados. Marius Bock, renowned for his role in developing Cardano's wallet and contributions at Input Output, has been appointed as Lead Project Manager. His 25-plus years in blockchain, fintech, and software integration are perfectly matched with BlockDAG's strategy for a successful mainnet debut. With Bock at the helm, BlockDAG is poised to

refine its infrastructure, expand its offerings, and deepen user engagement. Noteworthy projects like the X1 Miner App and TG Tap Miner, already popular among over 270,000 users, showcase Bock's strategic prowess. His expertise in aligning stakeholders and managing diverse teams is crucial as BlockDAG collaborates with partners such as HackerEarth to introduce over 200 projects. Bock's proactive and visionary leadership complements BlockDAG's commitment to building a secure, scalable, and user-focused blockchain ecosystem. By strategically addressing challenges and crafting targeted strategies, he ensures that BlockDAG not only meets but exceeds its ambitious objectives. As the presale progresses to its 27th batch, BlockDAG's token, currently valued at \$0.0248, continues to draw attention. The initiative has raised over \$184.5 million, selling 18 billion coins, and early adopters have realized a remarkable 2,380% ROI, strengthening confidence in its future trajectory. Looking forward, Bock's leadership is set to bolster efforts in cultivating partnerships, enhancing user engagement, and introducing enticing incentives. Supported by his past roles at IBM and Visa and expertise in Agile and Waterfall methodologies, Key Highlights! The SUI target, Shiba Inu, and BlockDAG have become focal points within the cryptocurrency community, each offering unique growth opportunities. From the solid foundation of the SUI target at \$4.50 with prospects to climb to \$5.89, to the dynamic 600% rise in the Shiba Inu burn rate stirring extensive community discussions, and BlockDAG's strategic positioning through Marius Bock's leadership alongside a significant presale success, these projects collectively offer intriguing prospects for buyers seeking meaningful market returns. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockDAGnetwork> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. SUI, Shiba Inu, and BlockDAG are capturing attention in the crypto sphere due to their significant developments. SUI has notably risen past the \$5 threshold, currently stabilizing at \$4.50, with market experts predicting a rise to \$5.89, marking it as a coin to monitor for possible gains. Concurrently, Shiba Inu has seen a dramatic 600% increase in its burn rate, igniting vigorous discussions within its community. While some members are pushing for heightened token burns, others are focusing on Shibarium's growth tactics, which could influence its long-term market stance. Moreover, BlockDAG (BDAG) is making waves by appointing blockchain veteran Marius Bock as Lead Project Manager. Having raised \$184.5 million in its presale and early backers enjoying a 2,380% ROI, BlockDAG is shaping up for remarkable growth. Among these developments, BlockDAG is recognized for its potential as a standout project. SUI Target Attracts Notice with Aspirations for Higher Levels The SUI target has garnered significant trader interest after surpassing \$5 on January 10 and 11. Although the price has since settled at around \$4.60, this still represents a 4% monthly increase. Analysts now predict the SUI target may reach up to \$5.89, piquing curiosity among crypto enthusiasts about its growth prospects. Experts observe that the consistent support near \$4.50 has solidified a robust base, assisting the token's upward trajectory. Indicators like the RSI suggest continued advancement for the SUI target as long as it maintains above the \$4.50 psychological marker. For those considering investment opportunities, SUI's stable foundation and optimistic technical indicators suggest it's a promising candidate for potential gains. Shiba Inu Burn Rate Increases by 600%: A Catalyst for SHIB's Price Movement? Shiba Inu's burn rate escalated by 600% on January 22, with 3.24 million SHIB tokens being permanently withdrawn from circulation, as per Shibburn data. This notable decrease in supply corresponds with Shiba Inu's strategy to enhance token value via its burning mechanism. While the immediate price effect was minimal, SHIB ascended by 2% to \$0.000024, the heightened burns have fueled optimism among traders. Currently the 17th-largest cryptocurrency by market cap at \$12 billion, SHIB has appreciated 125% in value over the past year. However, its trading volume of \$593 million still trails competitors like Dogecoin and TrumpCoin. Analysts remark that a reduced supply might not alone sustain long-term growth without a corresponding rise in demand and activity. Shiba Inu's lead developer, Shytoshi Kusama, has teased forthcoming developments that may strengthen market confidence. With analysts setting price targets between \$0.00003340 and \$0.0000455, SHIB's prospects for upward momentum look promising, especially if trading volumes increase. Marius Bock Joins BlockDAG: Pioneering Future Blockchain Leadership BlockDAG has onboarded an experienced industry leader, drawing the attention of blockchain enthusiasts. Marius Bock, known for his contributions at Cardano and Input Output, steps in as Lead Project Manager. With over 25 years in blockchain, fintech, and enterprise software, his expertise is perfectly aligned with BlockDAG's vision for a triumphant mainnet launch. Under his guidance, BlockDAG aims to enhance its infrastructure, broaden product offerings, and deepen community ties. Pioneering initiatives like the X1 Miner App and TG Tap Miner, which have already attracted over 270,000 users, reflect Marius's strategic foresight. His knack for aligning stakeholders and orchestrating cross-functional teams will be pivotal as BlockDAG engages with partners like HackerEarth to launch over 200 projects. Marius's leadership transcends efficient management; his proactive vision complements BlockDAG's mission to forge a secure, scalable, and user-centric blockchain ecosystem. By addressing challenges and crafting bespoke strategies, Marius ensures that BlockDAG not only meets but exceeds its ambitious objectives. As the presale progresses to batch 27, BlockDAG's token, priced at \$0.0248, continues to attract attention. The project has amassed over \$184.5 million, selling 18 billion coins, while early adopters report a staggering 2,380% ROI, enhancing trust in its future prospects. Looking forward, Bock's leadership is anticipated to amplify efforts in forging partnerships, boosting user engagement, and presenting appealing incentives. Supported by his background at IBM and Visa and his expertise in Agile and Waterfall methodologies, Final Thoughts! The SUI target, Shiba Inu, and BlockDAG have risen as prominent topics in the crypto arena, each presenting unique opportunities for those seeking growth potential. Starting with the SUI target, its robust base at \$4.50 and potential ascent to \$5.89 position it as a viable option for steady progress. Meanwhile, the significant 600% jump in the Shiba Inu burn rate is fueling

active conversations within its community. BlockDAG distinguishes itself through Marius Bock's leadership and an impressive presale total of \$184.5 million. Together, these projects embody compelling reasons to consider their potential for substantial returns in the crypto market. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagnetwork> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. Crypto whales are actively participating, showing that not every digital asset is the same. Dogecoin (DOGE) experienced significant whale activity, with \$158.86 million acquired within three days. Although poised for a bull run, it hovers at the crucial \$0.33 mark, warranting caution. Meanwhile, Cardano (ADA) has caught the whales' interest, with \$100 million in ADA accumulated. Despite ADA's promising trajectory toward \$3, its short-term price instability remains a concern. BlockDAG (BDAG), on the other hand, is setting records with a \$184.5 million presale and an innovative collaboration with HackerEarth. Poised for over 200 Web3 projects and a mainnet debut in 2025, BlockDAG emerges as a standout option for sustained growth. Whales Target Dogecoin: Is a Price Surge Expected? Dogecoin has witnessed major whale activity, which has gathered about 470 million DOGE valued at \$158.86 million over three days. This substantial acquisition is in line with trends seen with XRP, as heavyweight players realign their focus, often heralding shifts in the market. Dogecoin is trading at a pivotal \$0.33. Staying above this price could ignite a bull run, whereas a decline might trigger further price drops. Nonetheless, the recent whale activity hints at an optimistic outlook with potential for price increases. Dogecoin's prior performance during Bitcoin halving cycles lends credibility to these expectations. Historically, DOGE has mirrored Bitcoin's pricing patterns, demonstrating significant growth months post-halving. Since April 2024's halving, Dogecoin has surged 113%. If history repeats, more increases could be forthcoming. Cardano Price Analysis: Can Whales Push to \$3? Cardano's price analysis is turning heads again as high-capacity players enter the scene. Specifically, ADA whales have been aggressively purchasing, amassing around 120 million tokens since January 19, worth upwards of \$100 million. This activity underscores confidence in ADA's prospects, despite ongoing price volatility. There's talk comparing ADA's current price analysis, presently at about \$0.98, to past market surges. Notably, in its 2021 rally, the price jumped from \$0.41 to a peak of \$3.10. If this pattern repeats, ADA might reach \$3 before this cycle concludes. However, the immediate outlook poses challenges. ADA's Relative Strength Index (RSI) shows bearish trends, and a fall to \$0.83 could occur if it breaks the \$0.91 support level. Conversely, heightened whale activity could stabilize the market, pushing ADA's price over \$1 and potentially sparking a significant rally. BlockDAG and HackerEarth Spearhead New Web3 Initiatives BlockDAG's recent alliance with HackerEarth is poised to revolutionize Web3 development. This partnership will launch four global hackathons, linking BlockDAG with over 10,000 proficient developers who are eager to push forward projects in DeFi, infrastructure, and governance. Through encouraging teamwork and pioneering ideas, BlockDAG is solidifying its reputation as an influential blockchain entity. Moreover, BlockDAG's ongoing presale is turning heads, with the latest batch of coins priced at \$0.0248, amassing more than \$184.5 million. To date, over 18 billion coins have been allocated, providing an impressive 2,380% return to the earliest participants. These remarkable outcomes highlight BlockDAG as a formidable force in the cryptocurrency arena for 2025. Additionally, these hackathons, supported by HackerEarth's robust developer community, aim to introduce over 200 projects to BlockDAG's primary platform. This initiative champions web3 solutions and broadens BlockDAG's global influence. Thus, the partnership offers a prime opportunity to delve into BlockDAG's substantial influence on the future of blockchain technology. Final Thoughts While Dogecoin whale activity and Cardano price analysis generate buzz, none seem to rival the transformative stride of BlockDAG. Its unique hybrid structure, swift adoption by developers, and expanding network make it a standout. For those looking for significant outcomes, BDAG presents an unparalleled chance to engage with a venture that melds innovation with tangible impact. As whales increasingly influence market trends, it appears BlockDAG is at the forefront of the next cryptocurrency revolution. Now is an opportune moment to engage with this promising venture before it advances further. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagnetwork> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market thrives on stories of exponential growth, with tokens like PEPE and Shiba Inu turning small investments into life-changing fortunes. For investors seeking the next big opportunity, Lightchain AI and Dogecoin (DOGE) are emerging as strong contenders. Lightchain AI, currently in its presale phase at \$0.005625 per token, has already raised \$12.9 million, reflecting its immense potential. Paired with Dogecoin's enduring popularity, these two coins could replicate the success of past meme coin sensations and deliver massive returns. From Small Investments to Big Wins- Learning from PEPE and Shiba Inu Putting money into meme coins such as Shiba Inu (SHIB) and Pepe Coin (PEPE) has shown the chance for big rewards from small starts. Started in 2020, SHIB had a fast climb, changing early little investments into large riches. In the same way, PEPE began in 2023 and rapidly got popular, giving first users great profits. These examples show the need of timing and market feel in crypto choices. But, the ups and downs and risky type of meme coins need care. While the charm of changing a tiny investment into a big fortune is strong its key to do deep research and know the risks involved. Spreading one's investments around and looking at such chances with a smart plan can help lessen possible problems. Two Coins to Watch- Lightchain AI and Dogecoin Lightchain AI and Dogecoin

are two standout coins for investors seeking the next big opportunity in crypto. Dogecoin, a well-established meme coin, has shown resilience and a loyal community that keeps it relevant in the market. On the other hand, Lightchain AI offers something unique: real-world utility combined with cutting-edge technology. Its scalability solutions like sharding and Layer 2 integrations ensure high transaction efficiency, while its privacy-preserving AI framework and advanced cryptographic security provide trust and innovation. Unlike speculative meme coins, Lightchain AI's robust tokenomics and roadmap from prototype development to global adoption by 2025 make it a strong long-term contender. These two coins, blending community appeal and technological advancements, could replicate the success of PEPE and Shiba Inu. Dogecoin is a solid investment option, with its strong brand recognition and high liquidity providing stability in the volatile crypto market. Lightchain AI presents an exciting opportunity for growth, combining utility and innovation to deliver long-term gains. Lightchain AI - Rising Star Poised for Massive Growth Lightchain AI is emerging as a rising star, combining advanced scalability, robust tokenomics, and privacy-focused AI solutions. With its innovative roadmap and real-world utility, it's poised for massive growth, capturing the attention of savvy investors worldwide. Lightchain AI's presale phase has already seen enthusiastic investor participation, with over \$12.9 million raised so far. Lightchain AI's unique approach to scalability, combining sharding and Layer 2 solutions, addresses the growing concern of slow transaction speeds and high fees in decentralized networks. Invest in Lightchain AI to gain early access to its groundbreaking technology and be a part of its journey towards global adoption. Do not miss out on the potential gains from Lightchain AI and Dogecoin. With their strong appeal to community sentiment and promising technological advancements, these two coins could replicate the success of PEPE and Shiba Inu, turning small investments into life-changing fortunes. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://twitter.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. As DOGE consolidates around \$0.40, technicals predict a bigger breakout in price, followed by a wave of buying. The rise in XRP has also helped DOGE, with its price expected to rise to \$1. The supply of DOGE is growing every day, with 10,000 new coins being created every two minutes. Miners are among the largest holders of DOGE due to merged mining with LTC. This article details what Dogecoin cloud mining is and how you can make \$10,800 a day with DDB Miner and more What is Dogecoin cloud mining? Dogecoin cloud mining is the process by which cloud mining service providers are rewarded with new Dogecoins by viewing transactions on the Dogecoin blockchain. It may seem simple, but it is not easy to do! Cloud mining involves multiple computers processing the same batch of transactions at the same time, but only one computer can be rewarded with new coins. The computer that gets the new coins is the node that adds the old transaction block to the new block. This is done through a complex mathematical equation. The node that solves the math problem first wins! It can then append the newly confirmed block of transactions to the rest of the blockchain. Most cryptocurrency mining is done this way. However, Dogecoin mining differs from other currencies in a few important ways. These aspects include:

- Algorithms: Each cryptocurrency has a set of rules for mining new coins. These rules are called mining algorithms or hashing algorithms.
- Block time: This is the average length of time it takes to check a new block of transactions and add it to the blockchain.
- Difficulty: This number represents how difficult it is to mine each new block of the currency. Mining difficulty can go up or down, depending on how many miners there are. The currency protocol also adjusts the difficulty to ensure that the block time remains constant.
- Reward: This is the amount of new currency awarded to the miner for each new block.

How to Start Dogecoin Cloud Mining with DDB Miner Choose a crypto cloud mining service provider. In rare cases, DDB Miner's team of professional analysts and IT team will analyze the hash rate generated by the miner's operation and replace the latest miner. Ensure that users get higher returns in cloud mining. If you are worried about missing out on investment opportunities, now is the best time to join cloud mining before it is too late. The new contract is as follows:

- [Experience contract]: Investment amount: \$100, total net profit: \$100 + \$6.
- [LTC-Basic computing power]: Investment amount: \$500, total net profit: \$500 + \$31.5.
- [BTC- classic computing power]: Investment amount: \$1,000, total net profit: \$1,000 + \$131.
- [BTC-Advanced computing capabilities]: Investment amount: \$5,100, total net profit: \$5,100 + \$2310.3.
- [BTC-Advanced computing capabilities]: Investment amount: \$8,100, total net profit: \$8,100 + \$5054.4.
- [New mining equipment]: Investment amount: \$43,000, total net profit: \$43,000 + \$31,927.5.

(For more new contracts, please follow the official website of DDB Miner platform: ddbminer.com) Advantages of DDB Miner cloud mining:

- 1: Register now to get a \$12 reward (can be used for daily check-in to get \$0.5).
- 2: Crypto cloud mining reduces your financial burden of purchasing and maintaining expensive equipment. Compared with pure mining, cloud mining providers can break even and start making profits in a shorter time.
- 3: DDB Miner cloud mining provides multiple cryptocurrency payments. For example: BTC, LTC, ETH, DOGE, BCH, SOL, XRP, BNB, USDC and USDT, etc.
- 4: Intuitive interface designed for beginners and experienced miners.
- 5: The affiliate program allows users to receive up to 3% + 1.5% referral rewards and up to \$20,000 in bonuses per month.

As a newbie, I recommend joining a Dogecoin mining pool. This way you don't have to wait long to mine the first block of a new currency. You'll also feel like part of a community, which is what Dogecoin is all about! For more details, please visit the official website of the platform: <https://ddbminer.com> Company email: info@ddbminer.com

The meme coin market has seen a resurgence, with PEPE Coin and a rising \$0.005 altcoin, Lightchain AI, capturing the attention of traders. While Dogecoin (DOGE) and Shiba Inu (SHIB) have long been the stars of the meme coin frenzy, the market is evolving. Investors are increasingly looking for opportunities that combine community-driven excitement with innovative technology. With its presale

raising \$12.9 million and tokens priced at \$0.005625, Lightchain AI is gaining momentum as a standout project in the ever-growing altcoin market. PEPE Coin – New Entrant to Meme Coin Mania PEPE Coin, which comes from the online joke –Pepe the Frog– has grown fast in money world. Started in April 2023, it got a market size above \$500 million in just weeks. This rise is linked to its good group help and broad social media talk. Clearly, PEPE has done better than known meme coins like Dogecoin and Shiba Inu showing its big role in the meme coin area. Yet, the joke coin market is known for its ups and downs, with costs much swayed by social media fads and buyer feelings. Buyers are told to be careful, do deep study, and think of the natural dangers linked to such risky assets. Lightchain AI – Altcoin Breaking Into Meme Coin Hype In a world buzzing with meme coins, Lightchain AI is breaking through the noise with a blend of excitement and real-world purpose. Forget speculative hype–this project is all about using artificial intelligence and blockchain to tackle real industry challenges. The standout feature? A decentralized AI task marketplace that lets businesses tap into cutting-edge AI services on demand, all while staying cost-effective and scalable. It’s practical, powerful, and built to last. Lightchain AI isn’t just another fleeting trend–it’s designed to solve real problems, making it a smart choice for investors who want substance alongside potential profits. Its presale success speaks volumes, showing growing confidence in its ability to thrive in a tough market. Lightchain AI is more than a token–it’s a game-changer. DOGE and SHIB – Veteran Meme Coins Face Competition Dogecoin and Shiba Inu remain power players in the meme coin world, backed by loyal communities and their iconic status. But the meme coin game is changing. New contenders like PEPE Coin and Lightchain AI are shaking things up, stealing the spotlight and forcing these veterans to fight harder for attention in an increasingly crowded space. DOGE and SHIB aren’t standing still, though. They’re branching out with ecosystem expansions, collaborations, and utility-focused projects. Still, their meme coin roots sometimes hold them back, leaving cautious investors hesitant. The question is–can these trailblazers adapt and reclaim the throne, or will the newcomers steal the show? - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://twitter.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - ETF president Nate Geraci reports stated several ETF issuers registering in the US ETF market. - The pro-crypto administration change could be one of the top reasons for the ETF boom. Community members are settling into the weekend, and today’s crypto status stands as such – Bitcoin has climbed to the \$104K level. Activity is far from diminished as more pro-crypto instances continue to occur. Yesterday’s highlights included Donald Trump signing an executive order for a digital asset strategic reserve in the US. Amid these events, the ETF market caught members’ attention the past day. Multiple institutions including Grayscale, the New York Stock Exchange (NYSE), and CoinShares have filed for ETP products. According to Nate Geraci, the President of the ETF store’s recent X post, these institutions have filed for the ETP products in the last 24 hours. In the Asian early morning hours of January 25, NYSE filed for a Grayscale Litecoin Trust. This has resulted in a price surge for Litecoin, which has taken the crypto spotlight. Recapping Day 4 – Nate Geraci (@NateGeraci) January 25, 2025 Nasdaq files for in-kind creation & redemption on iShares Bitcoin ETF CoinShares files for ltc & xrp ETFs NYSE files to list & trade Grayscale ltc & sol ETFs Grayscale files for btc adopters ETF Grayscale files for eth premium income ETF Entertained yet? <https://t.co/715gESQSAW> Secondly, Nasdaq is reported to have filed for an –in-kind & redemption– on the iShares Bitcoin ETF. Thirdly, CoinShares registrations include two ETF filings – LTC and XRP. The last day also saw Bitwise file for the very first Dogecoin ETF. What is Behind the US ETF Boom? The US ETF market had previously hit a slump in H2 2024. Spot ETFs Bitcoin and ETH showed minimal and volatile capital influx. The spot Bitcoin ETFs had lost the hype that existed at the year’s beginning. Additionally, the SEC also rejected the Solana ETF filings by leading issuers. This caused quite the dejection in the market. However, the past few days have seen a spur in activity within the ETF sector. This could be a reflection of the overall optimistic crypto sector fueled by the US’s current pro-crypto administration. With Donald Trump’s inauguration, the market has seen several updates as aforementioned. This includes the release of Silk Road Founder Ross Ulbricht over the past week. Highlighted Crypto News Today: A Quick Guide to Adapting Crypto Payment Gateway with CryptoProcessing

The cryptocurrency market is abuzz with speculation as XRP showcases strong bullish signals, hinting at its next breakout move. As one of the most prominent assets in the crypto space, XRP continues to draw attention from investors, particularly amid its recent legal victories and growing adoption in cross-border payments. Meanwhile, a new presale event has captured investor interest, promising substantial returns and further diversifying opportunities in the market. With XRP trading at impressive levels and whale accumulation on the rise, the convergence of these factors could mark a pivotal moment. Is XRP poised to lead the next market rally, or will the presale steal the spotlight? Investors are watching closely. XRP’s Bullish Momentum- Signals Pointing to Breakout XRP is getting a good push as signs pop up pointing to a possible breakout. Lately, big buyers have been stacking up more XRP tokens, showing strong trust in its future. The coin’s price has held steady even with market ups and downs, backed by Ripple’s growing ties and progress in cross-border payment ways. Tech signs, like higher trade amounts and equal triangle shapes, hint at a chance for price to go up. Also, more guessing about good rules have lifted market feelings. With these parts coming together, XRP looks set for a rise catching eyes from both small and big buyers. Growing Investor Buzz Around Emerging Presales Emerging presales, such as Lightchain AI, are garnering substantial attention from investors pursuing high-yield opportunities. Lightchain AI’s presale, currently priced at \$0.005625 per token and having already amassed millions in funding, presents a rare opportunity to acquire

tokens prior to the impending price escalation. Its transparent mechanisms and restricted supply position it as an exceptional prospect for both retail and institutional stakeholders. The roadmap showcases a structured vision, starting with prototype development in November 2024, including PoI and AIVM testing in a sandbox environment. By January 2025, the testnet rollout will allow real-world testing with developer participation. The mainnet launch in March 2025 will introduce full functionality, followed by ecosystem growth in May and global adoption by June 2025, cementing Lightchain AI's transformative potential. Why Lightchain AI's Presale Could Eclipse XRP's Breakout Potential Lightchain AI's presale is shaping up to be a game-changer, with the potential to outshine XRP's breakout and open the door to incredible opportunities for investors. By combining cutting-edge machine learning and artificial intelligence with the power of blockchain, Lightchain AI is poised to disrupt industries long controlled by centralized systems. Here's the kicker; Lightchain AI offers immediate liquidity on exchanges after its ICO, giving early investors a chance to see returns quickly and reinvest in top assets like XRP. This presale isn't just about Lightchain AI—it could also spark a surge in demand for cryptocurrencies like XRP, pushing them to new heights. Don't miss out! Join Lightchain AI's presale today and secure your place in one of the most exciting crypto projects of 2021. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - President Trump pardoned Ross Ulbricht after 11 years in prison, and Ulbricht publicly thanked him. - Ulbricht received over \$270,000 in cryptocurrency donations, including \$111,111 from Kraken. - Approximately 430 BTC worth \$47 million linked to Ulbricht remain untouched in wallets. Silk Road founder Ross Ulbricht thanks Trump for pardon after 11 years in prison Ross Ulbricht Thanks Trump President Donald Trump freed Ross Ulbricht, the founder of Silk Road, after more than 11 years in prison. Ulbricht was serving a double life sentence without parole. He is the first to thank Trump in public, identifying him as a man of his word. For the first public statement since he was released from prison, a video of Ulbricht has been captured, speaking on his X post. "Last night, Donald Trump granted me a full pardon," he said. "I was doing life without parole, and I was locked up for over 11 years. But he let me out. I am a free man now. So let it be known that Donald Trump is a man of his word." Thank you so much, President Trump, for giving me this amazing blessing. I am so, so grateful to have my life back, to have my future back, to have this second chance. This is such an important moment for me and for my whole family. Since his release, supporters have mobilized in many ways to try to help Ulbricht get back into society as easily as possible. The Free_Ross campaign on X states that over \$270,000 has been donated in Bitcoin. Some of the biggest donations include: \$111,111 from Kraken crypto exchange, 2,400 in Ether (ETH), 900 in Solana (SOL), 200 in Cardano (ADA), and several smaller donations in BNB and Dogecoin (DOGE). Ulbricht would want to take some time out to spend it with his family and heal his time in the incarceration. "This feels amazing to be free," he said. "This is a victory for everybody everywhere who loves freedom and who cares about second chances." Unclaimed Bitcoin Holdings Linked to Ulbricht Other than donations, Coinbase director Conor Grogan asserted that around 430 BTC, worth around \$47 million, are sitting in wallets that likely belong to Ulbricht. Those wallets haven't been accessed since more than 13 years ago, and the authorities did not seize them. Arkham Intelligence confirmed what Grogan found out—he said there are 14 Bitcoin addresses that connect to Silk Road. One of those accounts has over \$9 million in BTC. In 2015, Ulbricht was found guilty of setting up and running the dark net-based marketplace, Silk Road where users buy illegal goods using a virtual currency, bitcoin in total anonymity. Multiple conviction under different charges also meant that he is to be imprisoned for life with accusations of conspiracy against the RICO act and laundering money, some computer hacking frauds proved his guilt as well. In fact, Ulbricht only tweeted this year for the very first time since more than 11 years of his silence over the Internet. He was obviously ecstatic and has tweeted, "Chances to begin anew." He also pointed out his admirers and revealed pardon was indeed collective victory. Digital Privacy and Crypto Regulation Well, even with his supporters' wonderful contributions, Ulbricht has yet to recover from his looted money. The BTC he held when he was caught exceeded 144,000. The court had then confiscated close to \$184 million worth of the Bitcoin that the United States Marshals Service sold in 2014 when the prices for the BTC were extremely low. Those sales then raised just \$48 million, a far cry from today's price for the BTC. The FBI wallet selling Ulbricht's crypto now holds nearly \$129,000. On January 23, Kraken donated around \$111,111 in BTC for Ulbricht to start living his new life. This really shows that he has a big community supporting him as he gets ready to return into society. This is the end of the world for Ulbricht. All the debates going on regarding digital privacy, the regulation of cryptocurrency, and justice are all at the limelight. Highlighted Crypto News Today Web3 Meets Idle Gaming: Slime Miner Launch Celebrates Players With Exclusive Rewards

- Taiwan will allow banks to issue stablecoins like USDT and USDC by June 2025 with FSC licensing. - New AML regulations for virtual asset service providers take effect in January 2025, requiring strict compliance and registration. - The FSC will enhance the crypto market by introducing virtual asset trading registrations, tokenizing real-world assets, and considering bitcoin ETFs. Stablecoin Issuance by Taiwan Banks Taiwanese Virtual Assets Law going to be placed into Congress by June of 2025. This legislation will enable, for the very first time ever, Taiwanese Banks. Which is to issue a product called stable coins. Stable-coins are essentially cryptocurrencies that purport to operate at a static value, while most of those are pegged to the USD. All this can be done so long as any stablecoin-issuing undertaking is licensed before issuance by FSC. Stablecoins like USDT and USDC are used in Taiwan but have not yet been approved. Another new AML regulation implemented by Taiwan is the one in January 2025. Virtual Asset Service Providers need to register and comply with the tighter

regulations. If they violate the regulations, severe penalties or imprisonment can be imposed. The goal is to bring the crypto closer to the financial world in general. VASPs will also be required to strengthen security in a way that customer assets are safeguarded, and their services are brought into conformity with the law. FSC Initiatives to Strengthen Crypto Market The FSC will introduce a new registration for trading virtual assets and de-couple the regulation of virtual assets from the Anti-Money Laundering Act. They hope to present the bill in June 2025, after consulting with the public on the draft bill. The FSC is currently collaborating with six financial institutions on the tokenization project for real-world assets, which will have great market impact. According to the FSC, it had left the door ajar previously, as it welcomed institutional investors who were buying bitcoin exchange-traded funds. And it expects to review whether those should be available for public purchase sometime later this year. Taiwan will provide a sound and safe ground for all businesses and investors in the crypto sector. The new rule and legislation will supplement Taiwan's position in the global crypto trading world without undermining the right regulations of finance. This means VASPs will have to abide by new requirements to avoid penalties and ensure trust in the system. Crypto presale is the best way to get started with any crypto investment. The major reasons being you can get crypto tokens at a discounted price in a presale and benefit when the token price surges in the future. Apart from getting crypto tokens at lesser prices, some projects also offer early-bird benefits such as exclusive access to project features. If you are looking for some of the best crypto presales in 2025, you've come to the right place. The present article gives a comprehensive list of top 10 crypto presales based on the project fundamentals and funds raised during presale events.

- 1. Rexas Finance** Rexas Finance project focuses on the tokenization of real-world assets (RWA) and allows users to own fractionalized assets of high value. Operating on the forefront of blockchain technology, it lowers barriers of entry to RWA tokenization and broadens investment opportunities. From real estate properties and commodities to art and intellectual properties, the Rexas project enables tokenization of any real world asset. It also completed CertiK Audit in Nov 2024, offering the best-possible security for users. Rexas Finance presale was launched in September 2024 and stage 12 of the presale is going on, at the time of writing. So far, the project has successfully raised over \$42 million by selling more than 432 million RXS tokens. It has an active community of over 50K across social platforms.
- 2. Lightchain AI** Lightchain AI operates at the intersection of blockchain technology and artificial intelligence to create an enhanced platform with scalability, privacy, and decentralization. With a Proof-of-Intelligence consensus mechanism, Transparent AI framework, and AI Virtual Machine, the project helps developers to build next-generation decentralized applications. The Lightchain AI project is undergoing stage 13 of LCAI token presale. It has raised more than \$12.6 million funds through the presale so far. The LCAI token price is currently \$0.005625 and users can purchase it using ETH and USDT tokens. With innovative features and strong fundamentals, Lightchain AI amassed over 30K active followers across all social platforms.
- 3. Remittix** The Remittix platform facilitates cross border payments and allows users to pay fiat currency to bank accounts using cryptocurrency. It operates at the frontline of PayFi revolution and connects cryptocurrency with local payment networks. Remittix aims to enhance crypto adoption by bringing into the convenience of everyday fiat payment networks. Around 50% of the RTX token supply is allocated for the Remittix presale. Users can sign-up on the website, connect their wallets, and buy RTX tokens using crypto or fiat payments. The project raised over \$5 million worth of funds so far through its presale. With attractive giveaway programs and robust projects with real-time use cases, Remittix has around 10K active community members.
- 4. 1 Fuel** 1 Fuel crypto project aims to revolutionize how users manage their digital assets. Using advanced infrastructure, 1 Fuel allows users to easily manage and transfer digital assets across multiple blockchain networks. It claims to provide ease and convenience so that users can avail its services with just a click. 1 Fuel crypto presale raised more than \$1.4 million worth of funds by selling over 148 million 1 Fuel tokens. Unlike the other crypto presales, 1 Fuel allows users to purchase tokens using over 100 different types of cryptocurrencies. With its unique and efficient way to manage digital assets, 1 Fuel has an active and loyal community of followers.
- 5. Flockerz** Flockerz is another memecoin added to the memeworld but with a Vote-to-Earn feature. It claims itself as "the people's meme coin" and gives power back to users by allowing them to vote and earn rewards. Having an interesting narrative behind the project, it didn't take long for Flockerz to gain a massive audience of over 50K across its social platforms. The Flockerz crypto presale has raised over \$12 million dollars so far and is still available for users to buy FLOCK tokens. Furthermore, users can buy and stake their FLOCK tokens to earn huge rewards. Its Flocktopia DAO rewards community members for casting their votes and being a part of the project.
- 6. Ozak AI** Ozak AI is the next-generation AI prediction platform with advanced analytics and data interpretation capabilities. Unlike traditional prediction platforms, Ozak AI employs AI agent technology and applies machine learning to increase the accuracy of financial market predictions. Furthermore, Ozak AI leverages DePIN technology to gather high-quality data for analysis and interpretation. The Ozak AI crypto presale is live, offering the native \$OZ tokens at a starting price of \$0.001. It is currently in the 2 phase of the presale and the \$OZ price increased to \$0.002, with a target price of \$1. So far, it has raised over \$350,000 funds through the presale. With an active community of more than 50K across social platforms, Ozak AI is growing at a fast pace.
- 7. RollBlock** RollBlock crypto ecosystem consists of multiple attractive features such as rewards at regular intervals, staking, token burn mechanism, rakebacks, and VIP bonuses. The project revolutionizes the online casino space with its high reward payouts, fast and transparent transactions. The RollBlock crypto presale is currently on stage 9, offering RBLK tokens at \$0.052. The token price increases with each passing stage of the presale. So far, the project raised over \$9.2 million through the presale and gathered over 30K active community members across X, Instagram, and Discord platforms.
- 8. DTX Exchange** DTX exchange combines the best parts of centralized exchanges (CEX) and decentralized exchanges (DEX). It introduced a VIP Rebate System, which offers rewards up to 3% of their daily profits to the joined users. DTX offers

more than 1000 global ETFs and allows users to trade with 100x leverage. The DTX presale is currently on stage 8 with a DTX token price of \$0.16. The funds raised through the presale crossed the \$12 million mark so far. And, also offers exclusive benefits to the users who join the DTX Black Club. With all these benefits and unique offerings, DTX handles a large community of followers on various social media platforms. 9. FX Guys FX Guys claims itself the the no.1 DeFi Prop Firm and allows users to trade different types of financial instruments such as cryptocurrency, forex, indices, and commodities. It offers custom-built platforms and advanced analytics to help users in trading and handles an active community on social platforms. The FX Guys offers a sustainable model of trading by combining a professional trading software, a prop firm, the \$FXG token, and decentralized finance. Its presale is offering \$FXG tokens at \$0.05 and has raised more than \$3.5 million dollars, which amounts to 95.22% of the total funds. 10. Intel Markets Intel Markets operates at the synergy of artificial intelligence (AI) agent technology and decentralized marketplace to offer innovative trading solutions to users. With the help of advanced AI agents, users can seamlessly buy, sell, and trade digital assets and gain an edge over other traders with advanced analytics. The Intel Markets presale has raised over \$7.3 million in USDT by offering each Intel X token at \$0.091636. It is currently in the stage 9 presale and allows users to participate by signing up on the website. Intel Markets gathers active and loyal community members across social platforms with its next-generation trading solutions. Conclusion Crypto presales offers exciting opportunities to get the tokens at lesser prices and gain exclusive benefits of the project. The above-given are the top 10 crypto presales that you can consider to invest in 2025. However, users must do their own research and stay cautious. It is best you invest only what you can afford to lose to avoid unfavourable situations.

- Nasdaq stock exchange's X social media account was hacked to promote fake STONKS memecoin. - The post promoting STONKS was deleted and the fake Nasdaq account was suspended. - STONK's market capitalization ballooned to \$80 million within a few hours after the promotion and then crashed. Nasdaq is one of the reputed stock exchange platforms and financial services corporations in the US. Despite being a renowned firm, it couldn't avoid social media hackers from hacking its official X account. When a hacker compromised its account and promoted STONKS memecoin, its market capitalization skyrocketed. As per the latest report from The Block, a hacker created a fake X account as an affiliate to Nasdaq's official X account. He used the fake account to make a post promoting STONKS memecoin. The hacker made the official Nasdaq account to retweet his post promoting this newly created STONKS memecoin. Within just a few hours after Nasdaq promoting the memecoin, STONK's market capitalization surpassed \$80 million. When the promotional post was deleted and the fake Nasdaq account was suspended by X, it didn't take long for the token to crash. Is STONKS Memecoin Fake? Original STONKS memecoin exists on the Solana blockchain and has been trading in the open markets since June 2024. The STONKS memecoin promoted by the hacker using the Nasdaq account is fake and was created on that day. Thus, STONKS is not a fake memecoin but the STONKS memecoin that was promoted on X using Nasdaq was fake. "STONKS" is a popular internet meme, represented by Stonks Guy or the Meme Man who is depicted as a bald headed person with a smooth and robot-like head having blue eyes. The word is the international misspelling of "Stocks", similar to "HODL" for Hold and "BUIDL" for Build, etc. Using this humorous word, a STONKS memecoin was created on the Solana blockchain. The memecoin name connected with Stocks and Nasdaq being a popular stock exchange platform, users didn't question its legitimacy and flocked to invest in the fake memecoin. As a result, the market capitalization of STONKS memecoin increased significantly within the matter of a few hours. However, this is not the first time official X accounts of celebrities and top companies have been hacked on the X social platform. Thus, staying cautious before investing in any cryptocurrency is always recommended. Highlighted Crypto News Today: Will DOGE Bulls Return as Bitwise Initiates Dogecoin ETF Filing?

- Pudgy Penguins price attempts to reclaim its bullish trend as token surges 8% in the past day. - The token's daily trading volume has increased 24.62% as per CMC data. A mid-week crisis seems to have hit the crypto market as Bitcoin decides to tank prices to a \$102K level. This occurring just days after a new all-time high also indicates a consolidation after the fluctuations. Subsequently, altcoins have begun to reflect the price drop just minutes after the largest cryptocurrency's downward movement. Notably, Pudgy Penguins, the cryptocurrency of the famed NFT collection, has finally begun to show bullish signs in the past few hours. In the afternoon hours of January 22, the altcoin dunked to the \$0.022 level. Following this, having factored in a 8.85% increase, PENGU has resurfaced in the \$0.24 range. At the time of writing, the altcoin was trading at \$0.025736 as per CMC data. Zooming out, onto its weekly chart, Pudgy Penguins' price stands out with a significant drop of 24.33%. This notable freefall has pulled prices from a high of \$0.035 to the current aforementioned levels. This past day's surge has caused us to expect a recovery road in the process. If Pudgy Penguins manages to sustain its current positive momentum, it might combat the bears to regain its bullish momentum. Will Pudgy Penguins Recover Soon? On analyzing its price actions, PENGU traces a horizontal pattern. Additionally, recent day's movement suggests the altcoin breaking out from this pattern. It could indicate incoming bullish trends in the coming days. Meanwhile, its Moving Average Convergence Divergence (MACD) signal line stands way below the MACD line. This also suggests that Pudgy Penguins price has to surpass multiple ranges to reach previous high trading levels. Additionally, its Chaikin Money Flow (CMF) value stands at -0.19 indicating the low capital influx as per TradingView data. Other altcoins such as Cardano and Solana have also shown similar movements. Highlighted Crypto News Today: Will DOGE Bulls Return as Bitwise Initiates Dogecoin ETF Filing?

Shiba Inu and XRP have both had their time in the spotlight. From the memecoin rally to the latest bull market, saw significant growth. However, a new token could soon challenge both, taking advantage of TON's growing ecosystem. Shiba Inu Fails To Gather Momentum The "Doge-killer" Shiba Inu (SHIB) proved its resilience during the past few months. Despite seeing significant volatility, Shiba Inu

retained its second place among all memecoins. Despite this, the memecoin failed to take significant advantage of the latest bull run. Since the bull run started in November, Shiba Inu's price doubled to a multi-month high of \$0.0000329. However, the token has since stabilized at \$0.00002096. This is because the bull market mostly affected utility tokens, as well as Shiba Inu's main competitor Dogecoin. Several of these utility tokens rose through the ranks in this period, leaving Shiba Inu in 17th place among crypto assets. What is more, Shiba Inu did not reach its highs in March, at the time of the latest big memecoin rally. Slow performance during the latest rally hurts Shiba Inu's utility narrative. It suggests that traders still see it mainly as a memecoin. What is more, Shiba Inu also faces fresh competition from a new entrant, Official Trump token. Despite this, analysts believe that SHIB will follow the broader market trends in 2025. According to Changelly, Shiba Inu is set for a 200% rally this year. XRP Sees Spectacular Rise During the latest market rally, few tokens performed as well as Ripple (XRP). Since November, the token has risen a staggering 470%, to its current level of \$3.19. This spectacular growth put XRP in third place among all crypto assets, behind only Bitcoin and Ethereum. The reason for this rally was the anticipated regulatory changes in the US, after Donald Trump's US election victory. Because XRP is focused on business customers, regulations have a significant effect on the market. If crypto assets become more legitimized, more businesses may seek Ripple's services. In particular, XRP plays a key role in B2B cross-chain transfers, which are still a main use case for crypto. This established market has helped XRP rise through the crypto rankings. Elluminex Takes On Shiba Inu And XRP While both XRP and Shiba Inu have had good runs, another token has just got into the spotlight. Elluminex (ELX) has been getting a lot of attention among TON holders, due to its potential for the ecosystem. Elluminex is a TON-based DeFi hub, which promises to overhaul TON's DeFi landscape. Its focus on cross-chain interoperability and ease of use promises to make blockchain more accessible than ever. The platform plans to build cross-chain bridges, connecting more than 40 major blockchains. This will bring much-needed liquidity to TON. Despite its significant growth last year, TON's DeFi ecosystem is relatively underdeveloped. Currently, the network lacks the liquidity to truly realize its potential. For that reason, Elluminex could play a key role in transforming TON into a DeFi hub. Moreover, Telegram integration gives it access to over 950 million potential users, which are all potential users. If Elluminex manages to position itself as a top DeFi hub on TON, it has real potential to rival XRP and Shiba Inu's growth. For more information about Elluminex (ELX) visit the links below: - Website: <https://elluminex.com> - Twitter/X: <https://x.com/elluminex> - Telegram: <https://t.me/Elluminex> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

Cryptocurrency investors recognize that the beginning of the year sets the stage for market trends. Between January and March, historical data reveals that 85% of bull run millionaires are made. Timing is key, and selecting the right tokens can make all the difference. As 2025 unfolds, five promising cryptocurrencies stand out: Dogecoin (DOGE), Shiba Inu (SHIB), Rexas Finance (RXS), Pepe Coin (PEPE), and XRP. Each presents unique opportunities in the crypto market, offering compelling reasons for investors to prepare now. Dogecoin Builds Momentum Dogecoin's recent price action has shifted as it struggles to recover from a dip below the \$0.35 mark. This movement followed its inability to sustain gains above \$0.40. DOGE is now trading under its 100-hourly simple moving average, signaling a bearish trend. Key support levels at \$0.320 and \$0.3150 are holding for now, with resistance at \$0.3350 and \$0.3400. Technical indicators suggest potential for recovery if DOGE can surpass these resistance points. Investors eyeing a rebound should monitor for a break above \$0.3420, which could reignite upward momentum. As DOGE navigates these levels, short-term volatility offers both risk and reward for those looking to capitalize on its trading range. Shiba Inu Attracts Whale Activity Shiba Inu, one of the leading meme coins, is building bullish momentum. Currently trading at \$0.00002208, SHIB has seen a 25.6% decline from its recent high but remains a focus for large investors. Whale activity suggests renewed confidence, with significant purchases like \$4.63 million worth of SHIB being moved to self-custody wallets. Analysts predict SHIB could surge by 260% if it overcomes resistance between \$0.000024 and \$0.000030. The asset's potential to hit \$0.000081 reflects growing optimism for a bullish reversal. For those seeking long-term gains, SHIB's appeal lies in its ability to leverage its community strength and attract institutional interest during market corrections. Rexas Finance Transforms Asset Ownership Rexas Finance (RXS) is redefining blockchain by bridging real-world assets and cryptocurrency. Its ecosystem enables seamless tokenization, allowing individuals to own real estate, gold, or other assets globally with just a few clicks. Whether full or fractional ownership, the platform offers endless possibilities for users to monetize and trade assets. The Rexas Token Builder empowers users to tokenize their real-world holdings, while the Rexas Launchpad provides a platform to raise funds. Its innovative features, including the Quickmint Bot, GenAI, and AI Shield, ensure the smooth integration of physical assets into blockchain networks. With these tools, Rexas eliminates barriers, creating a direct link between blockchain and traditional industries. The token's strong performance highlights its appeal. RXS, an ERC token with a total supply of 1 billion, has seen rapid growth during its presale. Stages 1 through 10 sold out swiftly, raising \$33.125 million. Now in Stage 11, the token is priced at \$0.175, marking a sixfold increase from its initial \$0.03 price. With \$38.492 million raised so far, RXS continues to gain momentum as investors recognize its transformative potential. The project's \$1M Giveaway has further energized its community. Twenty winners stand a chance to receive \$50,000 each, with bonus entries available for completing all tasks. Rexas' listing on CoinMarketCap and CoinGecko boosts its visibility and credibility, reinforcing investor confidence. As it prepares to launch on three Tier 1 exchanges, RXS positions itself as a leader in real-world asset tokenization. Pepe Coin Captures DeFi Attention Pepe Coin, now the third-largest meme coin, surged by 100% in late 2024 and continues to hold investor interest. Trading at \$0.00002134 in early 2025, PEPE offers staking and lending options, integrating

itself into the DeFi ecosystem. While its price target of \$0.01 requires an exponential 468x increase, the coin's strong community and presence on major exchanges like Binance.US and Coinbase provide a solid foundation for growth. As PEPE evolves, its potential to innovate within DeFi could redefine its role in the crypto market. XRP Gains Long-Term Support XRP remains a focal point for investors seeking long-term growth. Despite recent bearish patterns and a risk of downturns, analysts see key entry points at \$2.05 and \$2.50. Confidence in XRP's ability to reach \$10 is growing, supported by market sentiment and bullish forecasts. This optimism reflects XRP's resilience, making it a contender for those aiming to maximize returns in the first quarter of the year. Conclusion With 85% of bull run millionaires emerging between January and March, timing is critical. DOGE, SHIB, REX, PEPE, and XRP offer distinct opportunities in the evolving crypto market. Rexas Finance, with its real-world asset tokenization and robust ecosystem, stands out as a revolutionary investment. For those looking to capitalize on the momentum, now is the time to prepare and take action. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - DOGE is trading at \$0.3454, marking a loss of over 9%. - Elon Musk's "Doge to Mars" comment fails to ignite a rally for the meme coin. The crypto market failed to turn green even a day after Donald Trump's inauguration. The largest asset, Bitcoin, continues to stay at \$102K. Particularly, the prominent meme coin, Dogecoin (DOGE), has seen a notable price drop of over 9%. The recent bullish price pattern of Dogecoin price has signalled a potential breakout. The crypto analysts had a promising prediction, forecasting the meme coin could reach new highs. After the U.S. election and Elon Musk's endorsement, DOGE has notable price volatility. Elon Musk has triggered discussions in the market with his recent comment "Doge to Mars" during Donald Trump's inauguration. Despite this, Dogecoin chose to trade on the downside. DOGE opened the day trading at \$0.3824. Eventually, the meme coin bears took control and the price slipped toward a low of \$0.3359. At the time of writing, the meme coin traded at \$0.3454, with the market cap reaching \$51 billion. Furthermore, the market observed a liquidation of \$22.13 million worth of DOGE during this timeframe. It is crucial to note the daily trading volume of the meme coin resting at \$7 billion. Will DOGE's Decline Continue or Reverse? DOGE's four-hour trading session showcases the downside correction. If the meme coin fails to hold \$0.3386, the asset could fall toward the nearby \$33 mark. The meme coin might fall steeper to its previous lows if strong selloffs resume. However, the emergence of bullish pressure will invalidate these losses. If the meme coin holds the current price, it could drive the price to \$0.35. DOGE's extended gains might trigger a further uptrend and propel the asset to jump toward the \$0.3587 mark. The technical indicators of DOGE unveil the in-progress bearish momentum. The Moving Average Convergence Divergence (MACD) line and the signal line are below the zero line. This indicates that the meme coin is in a downtrend, with selling pressure outweighing buying pressure. Moreover, the Chaikin Money Flow (CMF) indicator, which estimates the capital flow, is found at -0.10. It suggests a negative money flow, signalling the weakness of the meme coin. In the meantime, DOGE's daily trading volume has plunged by over 30.98%. The meme coin's daily relative strength index (RSI) at 37.46 infers weak momentum and leans toward the bearish territory. Also, it has room to decline further before being considered oversold. Besides, DOGE's daily frame reveals the short-term 9-day MA below the long-term 21-day MA. Disclaimer: The opinion expressed in this article is solely the author's. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing.

The meme coin trend has taken a real hit at the start of January, with all the key players posting major dips and fluctuations, and Dogecoin (DOGE) has borne the brunt of this downward pressure. This has led many investors to grow weary of the nature of highly speculative assets, and some are now turning their sights to utility-focused projects in pursuit of more stable returns. Among these projects are Ripple (XRP) and Remittix (RTX). While Ripple's offering is well known, Remittix is a newer player, currently amassing popularity for its powerful value proposition in a lucrative sector. This modern PayFi solution tackles inefficiencies in the global payments space, offering lower fees, faster transactions, and an all round smoother process for users. Currently gaining momentum in its presale, Remittix is gearing up for a big year. So how will Dogecoin (DOGE), Ripple (XRP), and Remittix (RTX), perform this quarter, and who will come out on top? Dogecoin (DOGE) Continues To Plummet Dogecoin (DOGE) is trading at \$0.337789 after a steep decline, losing 9.15% of its value in the last 24 hours. Dogecoin's total 24 hour trading volume has jumped up in response, climbing by 28% to \$9.44 billion. This figure suggests that many Dogecoin holders are panicking and selling off, though some will be attempting to buy Dogecoin while its price is in "the dip". However, despite its losses, Dogecoin (DOGE) is forming a big falling wedge pattern which is bullish and could signal a breakout. Ripple Drops By 9.9% In 24 Hours Ripple (XRP) enthusiasts are wondering whether the coin can hold after a steep 9.9% drop in the last few hours. Ripple is down to \$2.96, all the way from \$3.21 just hours ago. This significant drop comes just a night before Trump's inauguration in the U.S, which is likely the key driving force behind the volatility. With a \$14.79 billion 24 hour trading volume, Ripple (XRP) finds itself in a pivotal moment, though it is unclear where it will go next. Remittix Challenges the Global Payments Status Quo Remittix (RTX) addresses real challenges in the world of finance, and particularly, inefficiencies in the cross-border payments space. Remittix (RTX) supports conversions of over 40 cryptocurrencies to fiat and transfers to any bank account worldwide. Businesses are especially drawn to the platform's Remittix Pay API, which allows seamless acceptance of crypto payments while settling transactions in fiat. The API is a practical solution for freelancers, merchants, and global enterprises supporting more than 30 fiat currencies and 50 cryptocurrency pairs. A standout feature for businesses is the Remittix Pay API. This handy tech lets

companies accept cryptocurrency while settling payments in fiat currencies. This feature massively simplifies payments for freelancers, online retailers and global service providers, supporting more than 30 fiat currencies and 50 cryptocurrency pairs. Remittix also prioritizes user privacy by processing funds as standard bank transfers, concealing their cryptocurrency origins. This design removes any stigma or barriers associated with crypto adoption while maintaining the straightforward experience of traditional banking. For users who want to enjoy the benefits of blockchain technology without drawing unnecessary attention, this level of discretion is invaluable. Remittix Presale Dominates The DeFi Space The platform's native token, RTX, is currently available to early investors for an alluring price of just \$0.0228. The Remittix (RTX) presale continues to gain momentum, having seen over \$4 million in investments already. The project's immense value offering has led analysts to anticipate an 800% price surge during the course of the presale, with a further rally post-launch. For those who want to be a part of the next big project in PayFi, this is not one to miss out on. Discover the future of PayFi with Remittix by checking out their presale here: - Website: <https://remittix.io/> - Socials: <https://linktr.ee/remittix> Disclaimer: TheNewsCrypto does not endorse any content on this page. The price of bitcoin (BTC) has risen to a new record high, surpassing \$109,000. Markets for cryptocurrencies are showing signs of increasing optimism as this surge coincides with Donald Trump's inauguration as the 47th president of the United States. Institutional demand and optimistic sentiment have been boosted by the pro-crypto stance of the Trump administration. Newly launched cryptocurrencies like the Solana-based TRUMP memecoin are attracting attention from investors. After Trump promoted it on his social media accounts, the value of this token skyrocketed to \$70 and holders crossed 850k globally. Its market cap momentarily put it in the top 10 among cryptocurrencies. Even with a brief correction, TRUMP is still one of the top meme coins, just after DOGE and SHIB. According to analysts, it's a lucrative long-term investment. Even if Bitcoin is all anybody can talk about, the TRUMP token is making waves. In spite of the recent correction, it is still one of the biggest memecoins, ranking 18th by market capitalization. A variety of services focused on cryptocurrency payments are offered by the Singapore-based cryptocurrency company Oobit. One can buy anything from daily necessities to luxury goods with ease using crypto thanks to tether-backed Oobit's Tap & Pay feature. More than 100 million retailers throughout the globe accept Oobit, so customers can tap to pay with their favorite cryptocurrency assets wherever contactless payments are available. The company also allows users to purchase famous cryptocurrencies like Ethereum and Bitcoin with as little as \$10, making it suitable for both novice and seasoned traders. The feature that lets users transfer money globally fast and free is available on Oobit as well, with an emphasis on ease, security, and speed in all transactions. In light of the current TRUMP token frenzy, Oobit has taken a revolutionary step by integrating TRUMP token support and enabling users to make everyday purchases using the tap feature. Users (only EU for now) are able to make everyday purchases using their TRUMP tokens with no hassle thanks to this streamlined solution. The company has even shared a video of paying at McDonald's with the TRUMP token via its tap and pay feature. Since its launch in 2017, Oobit's ground-breaking platform has been revolutionizing the way people pay with cryptocurrency. The Oobit app, which is compatible with both iOS and Android devices, makes it easy for users to make everyday cryptocurrency purchases. By funding their Oobit accounts with any cryptocurrency including TRUMP token, users can pay for goods and services in-store, send and receive crypto amongst friends, and buy or sell various cryptocurrencies. Oobit has applied to the Abu Dhabi Global Market (ADGM) for a Financial Services Regulatory Authority license. The establishment of an office in Abu Dhabi is part of the company's strategy to strengthen relationships with regional stakeholders. Moreover, Oobit announced plans to expand into new markets, including the Asia Pacific, the United Arab Emirates, Canada, and Australia, in addition to its current focus on the European Union and the United Kingdom. The company plans to use the raised funds to accelerate the development of a Web3 gateway and integrate external wallets. Oobit is revolutionizing crypto payments by collaborating with traditional finance (TradFi) companies to provide customers with efficient ways to use their cryptocurrency holdings to pay for everyday goods.

- Analysts project Bitcoin prices between \$175,000 and \$250,000 by 2025. - TRUMP token sees strong gains, ranking as a top meme coin by market cap. Bitcoin (BTC) has surged above \$109,000, setting a new all-time high. This rally coincides with Donald Trump's inauguration as the 47th U.S. President, signaling growing optimism in cryptocurrency markets. The pro-crypto stance of Trump's administration has spurred institutional demand and bullish sentiment. Trump acknowledged Bitcoin's performance during a recent address. His administration plans to introduce a national Bitcoin reserve and deregulate the crypto sector. Bitcoin first crossed \$100,000 in December following his election win. As of now, BTC trades at \$108,900.35, up 3.52% in 24 hours. Institutional adoption has played a vital role in Bitcoin's rise. Major financial players like Standard Chartered predict Bitcoin prices will reach \$200,000. Analysts such as Tim Draper and Arthur Hayes project price targets ranging from \$175,000 to \$250,000. The 2024 halving event has further reduced Bitcoin supply, driving prices higher. TRUMP Token Gains Momentum The market is also eyeing new tokens like the TRUMP cryptocurrency. This token, launched by Trump on his social media platforms, saw a sharp rise to \$70. It briefly entered the top ten cryptocurrencies by market capitalization. However, a competing token, MELANIA, caused a price drop to \$47.35. TRUMP token currently ranks 18th with a market cap of \$9.47 billion and a trading volume of \$42.51 billion. Despite corrections, TRUMP remains a top meme coin, second only to DOGE and SHIB. Analysts view it as a lucrative long-term investment. While Bitcoin dominates headlines, the TRUMP token has gained significant attention. Launched by Trump through his social media platforms, the token initially soared to \$70. Despite a recent correction to \$47.35, it remains

one of the largest memecoins, ranking 18th by market capitalization. The TRUMP token has a market cap of \$9.47 billion and a trading volume of \$42.51 billion. Its fully diluted valuation (FDV) of \$49.69 billion highlights strong investor interest. Analysts see potential for the token to hit \$100, driven by its association with Trump and increasing adoption. The token's locked supply, set to unlock over three years, could drive long-term investment value. Although competition from the MELANIA token caused some short-term volatility, the TRUMP token remains a top contender in the meme coin space. This optimism has also fueled broader market gains, with Bitcoin leading the charge. Highlighted Crypto News Today Donald Trump Family's DeFi Platform Secures Four ENS Domains

XRP and Dogecoin (DOGE) together with Yeti Ouro (YETIO) are on the radar for the year 2025, as the cryptocurrency market continues to gather momentum. Investors are eager while the policies shift, enabling DOGE and XRP to take the bullish waves, whereas YETIO has set a considerably high \$1.7 million presale expectation, marking its territory in the blockchain gaming sector. These developments highlight the continuous innovations driving the crypto space forward, which are quite exciting. Trump's inauguration could usher in a wave of optimism for the crypto market. XRP Price Prediction: Has Set Its Eyes On The All-Time High XRP price is now at \$3.23, which is a 40% increase weekly, bringing XRP one step closer to its total high for January 2018, which is \$3.40. XRP's technical indicators show bullish sentiment as trade volumes overcome the 18.96 billion mark. Alongside, there is a noticeable increase in Whale activity compared to before. Within the eight hours, more than 2,300 transactions which surpassed the 100,000 dollar mark were recorded, showing healthy institutional interest. Additionally, Ripple's policy leadership is proceeding with optimism. CEO Brad Garlinghouse, along with CLO Stuart Alderoty, is directly in contact with the team of President Donald Trump. If Chair of SEC, Mr. Gary Gensler is removed from office, XRP has a high chance of gaining favorable regulatory conditions. Dogecoin Price Prediction: The Meme Coin's Return To Glory Dogecoin, the original meme coin, is proving its resilience with a 27% gain over the past week, with DOGE price at \$0.418 its highest price so far in 2025. DOGE's renewed rally is attributed to the pro-crypto administration's inauguration and the appointment of Elon Musk to lead the Department of Governmental Efficiency (DOGE). Musk's involvement has reignited investor interest, with open interest in DOGE futures contracts hitting a record \$5.5 billion. YETIO: Changing Trends In Blockchain Gaming As the frenzy revolving around major tokens such as XRP and DOGE heats up, Yeti Ouro, BUILDING ON DOGE, YETIO ICO represents blockchain racing to the beat of its drum. Its P2E racing game powered by the Unreal Engine offers something entirely new and with its 1.7 million presale target, we believe it is set to conquer the peak of P2E games before we know it. Unlike traditional meme coins that rely solely on hype, YETIO combines utility and community engagement. The token's capped supply of 1 billion and deflationary burn mechanism ensure long-term value stability. In-game features such as power-ups, vehicle upgrades, and hidden map zones create an immersive experience that keeps players invested. YETIO's early-stage presale success underscores strong market interest, with whale investors and gaming enthusiasts driving demand. As blockchain gaming gains traction, Yeti Ouro positions itself as a pioneer, offering both entertainment and tangible utility in the evolving crypto ecosystem. The team shared a video showcasing the first glance at the Level 1 map at a distance. This is a larger area of the map that uses the same deathmatch style game play. Players have a large surface area to avoid attackers and collect power-ups to help them defeat opponents. There is so much detail yet to be shown, with garages for vehicle repairs and upgrades as well as hidden tunnels and harsh terrains to get through. Together, these tokens showcase the dynamic possibilities that lie ahead for investors and enthusiasts alike. Join The Yeti Ouro Community - Website: <https://yetiouro.io/> - X (Formally Twitter): <https://x.com/yetiouro> - Telegram: <https://t.me/yetiouroofficial> - Discord: <https://discord.gg/YtUsEZ2Zr> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bitcoin sets a new all-time high of \$109,114.88 before dropping below \$108K. - Trump's pro-crypto policies drive market optimism and institutional demand. Bitcoin reached a new all-time high of \$109,114.88 on Jan. 20. It briefly surpassed \$109,000 before retreating below \$108,000 within minutes. At 06:55 am UTC, BTC hit \$109,036, breaking the previous record of \$108,000 from December 2024. The rally comes hours before Donald Trump's inauguration as the 47th U.S. President at 4:00 pm UTC. His presidency has driven optimism in crypto markets. Bitcoin crossed \$100,000 for the first time in early December after his election victory. Trump's plans for a Bitcoin reserve and crypto deregulation continue to fuel bullish sentiment. Currently, Bitcoin trades at \$108,900.35, up 3.52% in 24 hours. The market cap has risen to \$2.15 trillion, a 3.43% increase. Daily trading volume surged by 108.72%, reaching \$104.38 billion. Bitcoin ETFs added \$974 million to BTC reserves yesterday, signaling robust institutional demand. What's Next for BTC? Bitcoin's support sits at \$94,979, while the nearest resistance lies at \$109,500. A break above this resistance could push BTC toward \$115,000. Conversely, dropping below support may lead to a dip toward \$90,000. The RSI stands at 64.55, indicating slightly overbought conditions but room for further upward movement. The RSI average of 63.48 supports the ongoing bullish momentum. If RSI surpasses 70, Bitcoin could enter an overbought zone, signaling potential consolidation. The moving averages confirm a bullish outlook. The 9-period MA (\$104,583.19) is trending above the 21-period MA (\$103,752.38), forming a golden crossover. This indicates the continuation of an upward trend. Short-term moving averages also suggest sustained buying interest. The Chaikin Money Flow (CMF) shows strong capital inflows, reflecting heightened buying activity. If maintained, a positive CMF trend supports further price gains. Bitcoin's price is above the 50-day and 200-day moving averages, confirming a long-term bullish trend. The moving average convergence suggests increasing momentum, reducing the likelihood of major pullbacks in the short term. If resistance at \$109,500 breaks, BTC could extend gains toward \$115,000 and higher. However, failure to

hold support at \$94,979 could trigger a correction, testing the \$90,000 level. Traders are monitoring these levels closely for the next move. With Trump's pro-crypto stance and rising institutional interest, Bitcoin's bullish trajectory remains strong. Investors expect increased volatility and potential further gains as crypto markets react to new U.S. leadership.

- Ethereum has factored in a modest price increase of 4.00% in the last 24 hours. - The altcoin's daily trading volume shows a 113.21% surge as per CMC data. As US President Donald Trump's inauguration day dawns, the crypto market has gone full bullish. Over the weekend, the largest cryptocurrency, Bitcoin, tested the \$105K level and is currently trading at the \$103K level. Due to Trump's inauguration, memecoins surrounding the President and his wife Melania are trending in the market. Meanwhile, within the altcoin sector, Ethereum has continued to show resistance struggles and failed to fuel the bull market. While other altcoins, including XRP and Solana, have progressed upwards, ETH has shown stagnation over the past day. In the last 24 hours, Ethereum's chart shows a modest surge of 4.00% owing to mainly the past hour's bullish movement. However, in the afternoon hours of January 19, the altcoin was trading at a low of \$3,259. Following this, it slowly progressed to a momentary \$3.4K level. At the time of writing, ETH was trading at \$3,398 as per CMC data. Zooming out onto both its weekly and monthly charts depicts the struggle to break the \$3,500 level. Its price chart over the past seven days shows an increase of 6.62%, and the token has tested the \$3.5K level several times. Ethereum also presents similar price actions over the past month. Will Ethereum Recover From Bearish Control? Analyzing the current movements of technical indicators, the Moving Average Convergence Divergence (MACD) signal line has just crossed over the MACD line. On the other hand, the bull power indicator's value is 1.89 as per TradingView data. However, its bear power indicator's value is -2.81 showing the bearish control. However, as indicated by its MACD signal line, if Ethereum sustains the modest positive momentum it's presently experiencing, it might overpower the bears. In such a case of breaking its \$3.5K resistance, the next resistance levels for ETH lie at \$3,575.82 and \$3,672.04. Meanwhile, as aforementioned, altcoins such as XRP and Trump's memecoin TRUMP have witnessed significant surges. Highlighted Crypto News Today: Dogecoin Drops Below \$0.40 as TRUMP Meme Coin Takes the Spotlight

- Solana reached a new all-time high of \$294.33. - SOL is trading at \$243, down over 9% in the past 24 hours. The global cryptocurrency market is facing a bearish downturn, shedding 2.54% and bringing its market cap down to \$3.54 trillion. Amid the dip, the altcoin Solana (SOL) defies the trend, reaching a new all-time high of \$294.33. Despite the uptick, SOL couldn't escape the red zone. However, market analysts expect SOL to near the \$400 threshold shortly. Notably, the altcoin has registered a loss of over 9.05%. With a \$118 billion market cap, Solana trades at \$243.13. The altcoin opened the day trading at \$266.29, and it climbed up to hit its ATH. Later, the Solana price sharply fell back to visit its previous low of \$231.63. Moreover, SOL has witnessed a 24-hour liquidation of \$110.83 million. Consequently, the daily trading volume of SOL has reached \$35 billion. The altcoin has surged over 34.44% in the past seven days. The week began trading at \$183.24, and Solana steadily ascended to the current trading level. Is Solana Gearing Up for a New Peak? Solana's four-hour trading window displays the in-progress downside correction. SOL trades 16.78% below its new all-time high, and the support at \$240.63 is crucial. If bearish pressure intensifies, the altcoin could drop to the \$235 range, with a possible extended loss to even lower. If this momentum flips, Solana's price could likely test the nearby resistance level at \$246.88, and a brief bullish outlook may enter the market. Breaking through this mark could push the asset above the \$250 range, and if it sustains, SOL might move closer to its ATH. The technical indicators of SOL report bearish momentum by inferring the Moving Average Convergence Divergence (MACD) line. It has settled beneath the signal line, and this crossover indicates a downtrend and a potential sell signal. In addition, the Chaikin Money Flow (CMF) indicator is settled at 0.08, suggesting a positive money flow and moderate buying pressure in the market. In the meantime, the daily trading volume of Solana has increased by over 42.30%. Solana's daily relative strength index (RSI) is positioned at 53.77, which infers its neutral position. Besides, the daily frame of SOL exhibits the short-term 9-day moving average above the long-term 21-day moving average. Highlighted Crypto News Dogecoin Drops Below \$0.40 as TRUMP Meme Coin Takes the Spotlight

- TRUMP reached a \$7.6 billion market cap within 24 hours, ranking as the third-largest meme coin and driving Solana's SOL to record highs. - 80% of TRUMP's supply is controlled by CIC Digital LLC, raising centralization concerns despite its popularity. - TRUMP's rise overshadowed other meme tokens, causing Dogecoin to lose momentum and the MAGA token to decline further. The official meme coin by Donald Trump, TRUMP, is topping the crypto space. Both Binance and Coinbase gave in to this popularity, with Binance already accommodating trades and Coinbase listing. Other exchange houses, including KuCoin, Kraken, and Bitget, also introduced the token. Solana's Boost from TRUMP Token The coin was launched with a huge pump, peaking at \$75.43 on Sunday before stabilizing at \$59, according to CoinGecko. TRUMP now ranks 15th by market cap, with a valuation of \$7.6 billion and a trading volume of \$15 billion in just 24 hours. Built on the Solana blockchain, the token has also boosted Solana's native coin, SOL, which hit an all-time high of \$293. Controversy has surrounded TRUMP's tokenomics. Critics are quick to point out that 80% of its supply is controlled by CIC Digital LLC. The company is affiliated with the Trump Organization. This could, at best, be said to pose centralization concerns, but these haven't diminished the popularity of the token. CIC Digital previously launched NFTs related to Trump. Those too seem to be resurging; they have collected more than 2,800 sales worth \$2.5 million in the last 24 hours. Impact on Other Meme Coins Since its launch, TRUMP has turned out to be the third-largest meme coin, second only to DOGE and SHIB. Still, its FDV, factoring in the locked tokens, now surpasses DOGE. Locked supply is unlocking over the next three years and becomes a lucrative long-term investment. The launch affected other meme coins because Dogecoin lost some attention and fell from \$0.43 to under \$0.39. Meanwhile, an older Trump-themed

project known as the MAGA token fell 84% since June and continued falling after TRUMP was launched. Despite criticism, there is no lack of enthusiasm surrounding TRUMP due to its mass adoption and strong trading volumes. Whether this is something sustainable or mere hype. It has already gone down in the history books of meme coins due to its new combination of politics and cryptocurrency.

Meme coins have taken the crypto world by storm, proving that humor, community power, and smart features can translate into serious money. From Dogecoin's viral beginnings to Bonk's splashy entry into the Solana ecosystem, these coins have turned everyday investors into crypto millionaires. But as exciting as these stories are, missing out on early-stage opportunities can leave you feeling like you've been benched in the game of financial freedom. That's where BTFD Coin steps in, ready to steal the spotlight with its impressive presale performance and groundbreaking features. This coin is designed with community-driven utility and is shaping up to be one of the top new meme coins to buy for 2025. With a Play-to-Earn (P2E) game, 90% APY staking rewards, and a record-breaking presale, BTFD Coin is your chance to ride the next wave of meme coin success. BTFD Coin: Presale Performance and Analysts' Bold Prediction BTFD Coin isn't just a meme coin; it's a movement. This coin's success is fueled by its utility, passionate community, and innovative ecosystem. From the moment its P2E game launched on January 1, 2025, it's been clear that BTFD is in a league of its own. The game rewards players with \$BTFD tokens, combining entertainment with tangible earning opportunities. But that's just the tip of the iceberg. The real buzz comes from BTFD's presale, which is already in its 13th stage and with the current stage over 97% complete. Priced at just \$0.000142, this coin offers investors the chance to secure a 4000% ROI. Once listed, the price is expected to hit \$0.0006, with some analysts predicting it could soar to \$0.006, turning early investments into life-changing gains. Take this example: If you invest \$8,000 at the current presale price, you'll receive over 56 million \$BTFD tokens. When the price hits \$0.0006, your investment will grow to \$33,600—a staggering return. And if it climbs to \$0.006, you're looking at a whopping \$336,000. Whether you're saving for a dream vacation or putting a down payment on a house, BTFD's potential can make it happen. Buying BTFD is a breeze. All you need is a digital wallet like MetaMask or Trust Wallet, loaded with BNB, ETH, or USDT. Connect your wallet to the presale page, enter the amount you want to invest, and confirm the transaction. Before you know it, you'll be part of the Bulls Squad—a vibrant community of over 8,600 holders who have collectively raised more than \$5.2 million. And don't forget about staking. With a 90% APY, you can watch your \$BTFD tokens grow exponentially over time. For those looking for the top new meme coins to buy for 2025, BTFD's utility and growth potential make it a no-brainer. Bonk: The Missed Opportunity That Set the Stage Bonk burst onto the scene as the first meme coin on Solana, capturing attention with its community-first ethos and decentralized nature. Designed to empower its users, Bonk introduced features that set it apart from the typical meme coin—from airdrops to innovative tokenomics. Its rapid rise was a testament to the growing appetite for meme coins with real-world utility and strong community backing. Early Bonk investors saw jaw-dropping gains as the coin's value skyrocketed. Those who got in during its ICO reaped the rewards, but the opportunity didn't last long. For many, missing out on Bonk's early days was a tough pill to swallow, especially as the coin continued to perform well in the market. If you're still kicking yourself for not getting in on Bonk, now's the time to shift your focus to BTFD Coin. With its robust presale performance and exciting features like staking and P2E gaming, BTFD is poised to outshine its predecessors and claim its spot among the top new meme coins to buy for 2025. The Final Words Bonk may have been the talk of the town, but BTFD Coin is writing the next chapter in meme coin history. Its presale is breaking records, its ecosystem is thriving, and its ROI potential is turning heads. Missing Bonk was a lesson; don't let history repeat itself. With BTFD, you have a chance to be part of a community-driven success story that's just getting started. Don't wait. The presale price won't last forever, and opportunities like this don't come around every day. Secure your \$BTFD tokens now and position yourself for massive gains. The Bulls Squad is waiting, and so is your chance to ride one of the top new meme coins to buy for 2025 to the moon. Let's face it: the crypto world is as much about community as it is about coins. And referral programs? They're a game-changer. They bring people together and reward loyalty, turning casual users into hardcore supporters. Referral programs let crypto fans bring their mates into the fold, growing communities like wildfire. In a space where hype and momentum can mean everything, a solid referral program can be the secret sauce behind a coin's success. Over the past few years, meme coins have gone from a joke to a legitimate investment. Think Dogecoin or Shiba Inu—they started as internet jokes and became cultural icons, creating millionaires along the way. But the new wave of meme coins is turning up the heat, adding utility, innovation, and strong communities to the mix. Enter BTFD Coin (BTFD). This one's not just about laughs. It's got serious features like staking rewards, Play-to-Earn (P2E) games, and a killer referral program designed to build a loyal community. It's shaking up the meme coin scene, and with a presale that's already raised millions, it's got everyone talking. Let's dive into why it's topping the list of the best new meme coins to buy for 2025. And while we're at it, we'll check out two other standout contenders: Neiro (NEIRO) and Non-Playable Coin (NPC). BTFD Coin: A Meme Coin That Means Business BTFD Coin is rewriting the rulebook for meme coins, starting with its wildly successful presale. Within just two weeks of its launch, it raised over \$2.5 million, and the tally now sits at \$5.1 million. More than 64 billion coins have been snapped up by 8,600 eager holders. And here's the kicker: it's still in Stage 13 of its 16-stage presale. With a current price of \$0.000142, it's not hard to see why crypto fans are scrambling to buy before it hits its listing price of \$0.0006. The referral program is a major draw. Imagine earning

rewards just by bringing your friends into the fold. Itâ€™s straightforward and super effective, letting users amplify their holdings while spreading the word about \$BTFD. Add in staking rewards and P2E gaming opportunities, and this meme coin feels more like an ecosystem. The P2E games are a vibe, blending fun with functionality. Whether youâ€™re a casual gamer or someone looking to cash in on your skills, BTFDâ€™s games create another avenue for engagement and profit. Buying \$BTFD couldnâ€™t be easier. Head to BTFDâ€™s presale page, connect your wallet (MetaMask or Trust Wallet works a charm), and decide how much you want to invest. Once youâ€™ve reviewed the details, hit â€œBuy Nowâ€ and confirm the transaction. In just a few clicks, youâ€™re part of a growing community. Letâ€™s crunch some numbers: investing \$35,000 at \$0.000142 per coin gets you roughly 246,478,873 coins. If the coin hits \$0.0006 post-presale, that stash would be worth \$147,887.32. Talk about turning small change into big bucks. Neuro: The Meme Coin with AI Ambitions If BTFD is about community, Neuro is about brains. This meme coin is riding the AI wave, combining tech and humor in a way thatâ€™s hard to ignore. With an AI-powered roadmap, Neuro is positioning itself as the thinking personâ€™s meme coin. Itâ€™s packed with utility, from predictive analytics for market trends to advanced staking mechanisms. What sets Neuro apart is its focus on innovation. Meme coins arenâ€™t usually synonymous with cutting-edge tech, but Neuro flips that script. Itâ€™s designed for investors who want a laugh and a long-term play. Whether itâ€™s using AI to analyze market trends or integrating its token into decentralized finance (DeFi) platforms, Neuro is more than just a pretty face. Its community is growing fast, thanks to a mix of clever marketing and genuine utility. The team behind Neuro knows how to tap into social media trends, creating viral campaigns that resonate with Gen Z and Millennials. Plus, its staking rewards are nothing to sneeze at, offering holders the chance to earn passive income while holding onto their tokens. But Neuro isnâ€™t just about holding and hoping. Its AI tools let users make smarter investment decisions, turning the crypto learning curve into a straight shot. If youâ€™re after a meme coin thatâ€™s more about strategy than speculation, Neuroâ€™s your ticket. Non-Playable Coin (NPC): The Gamerâ€™s Meme Coin Non-Playable Coin (NPC) is taking meme coins into the gaming arena. Built for gamers by gamers, NPC is all about merging the worlds of cryptocurrency and play. With the rise of blockchain gaming and the metaverse, NPC is positioning itself as the ultimate in-game currency for the digital frontier. NPCâ€™s appeal lies in its simplicity. Itâ€™s a meme coin with a clear purpose: to create value in the gaming ecosystem. Whether itâ€™s for purchasing in-game assets, unlocking exclusive content, or participating in player-driven economies, NPC has you covered. What really sets NPC apart is its partnerships. The team behind it has inked deals with some big names in the gaming industry, ensuring the coinâ€™s integration into popular games and platforms. This gives NPC a use case that many meme coins can only dream of. The community around NPC is as passionate as they come. Gamers are a tight-knit bunch, and NPCâ€™s developers have leaned into that, creating forums, Discord servers, and in-game events to keep engagement high. If youâ€™re a gamer looking to dip your toes into cryptoâ€or a crypto investor who loves gamingâ€NPC is a no-brainer. Based on Our Research and Market Trends If youâ€™re looking for the best new meme coins to buy for 2025, BTFD Coin, Neuro, and NPC are three you canâ€™t afford to overlook. Whether itâ€™s BTFDâ€™s community-driven rewards, Neuroâ€™s AI-powered strategy, or NPCâ€™s gaming-centric focus, each of these coins offers something unique. The BTFD Coin presale is an unmissable opportunity to join a rapidly growing community. With its referral program, staking rewards, and P2E games, BTFD is more than just another meme coinâ€itâ€™s a movement. To get started, head to BTFDâ€™s presale page and make your move. Join the crypto revolution today and secure your spot in what could be the next big thing in the meme coin world. Donâ€™t waitâ€buy now and ride the wave before itâ€™s too late! Meme coins have taken the cryptocurrency world by storm, offering thrilling investment opportunities with unpredictable, high-reward potential. If youâ€™re eyeing the best meme coins to invest in for short term gains, there are a few exciting contenders that should be on your radar. Arctic Pablo, Brett, and Cheems are currently making waves, each with its unique story and market traction. In this article, weâ€™ll dive into these three meme coins, analyzing their features, potential for short-term ROI, and the factors that make them appealing for quick-hitting investments. Arctic Pablo Coin: A Journey to Prosperityâ€Catch the Thrill Before Itâ€™s Gone! Arctic Pablo Coin (\$APC) is one of the most thrilling and unique meme coins on the market today, especially for short-term investors looking for massive returns. Imagine being part of an exciting adventure where you accompany Arctic Pablo, a daring explorer, as he embarks on a journey across icy terrains and mystical lands. His quest? To uncover treasures hidden beneath the frostâ€\$APC coins that represent a gateway to prosperity. Arctic Pabloâ€™s presale, which launched at a price of \$0.000015, is gaining significant momentum, with each new location introducing a higher price point. As Pablo moves from location to location, each stage of the presale increases the coinâ€™s value, bringing you closer to a higher ROI. Currently in Chillhaven, Arctic Pablo has raised over \$100,000 in just nine days, and its price has already risen to \$0.000023. The projected price at the end of the presale? \$0.0008, followed by an eventual launch price of \$0.008. The hype surrounding this meme coin is undeniable, and itâ€™s only going to increase as more investors catch onto the thrilling narrative of Arctic Pabloâ€™s travels. The presale price progression from Stage 3 (Chillhaven) to the final presale price of \$0.0008 promises a staggering 34,683% ROI for early-stage investors. Plus, Arctic Pablo Coin features a deflationary token burn mechanism, which eliminates unsold tokens weekly, increasing scarcity and boosting the value for investors. Why invest in Arctic Pablo Coin? Arctic Pablo is the best new meme coins to invest in for short term. With its engaging narrative, deflationary mechanics, and incredible ROI potential, Arctic Pablo presents an irresistible short-term investment opportunity. If youâ€™re looking for meme coins with massive potential, Arctic Pablo should be at the top of your list. Brett Coin: A Rapidly Growing

Meme Coin with Long-Term Growth Potential Brett Coin (\$BRETT) has become one of the hottest meme coins in the crypto space, especially within the Base ecosystem. While its price may not be as low as Arctic Pablo, it offers incredible growth potential for investors looking for substantial returns in a relatively short time. Currently priced at \$0.131, Brett has already demonstrated impressive growth, with a market cap of \$1.29 billion and a trading volume of over \$45 million in the past 24 hours. What makes Brett such an exciting investment? For one, the coin is closely tied to the growing Base Chain ecosystem, which serves as its foundation. The Base Chain's rapid expansion and numerous projects built on its platform give Brett a strong foundation for long-term growth. But here's where things get exciting—Brett's all-time low was just \$0.0001076, and in just a year, it has skyrocketed by 121,605%. Even though it's seen a dip from its all-time high of \$0.235, it's still a solid contender for short-term investments, especially with its strong community following and the continued growth of the Base Chain. Why invest in Brett Coin? With a 121,605% increase from its all-time low and its strong positioning within the Base Chain ecosystem, Brett is a great short-term investment that could yield impressive returns as the ecosystem continues to expand.

Cheems Coin: Underdog with Big Potential—A Strong Meme Culture Play Cheems Coin (\$CHEEMS) has long been a beloved meme coin within the broader Doge ecosystem. With a price of \$0.097705 and a market cap of just over \$324,000, Cheems is still flying under the radar for many investors. But don't let its smaller market cap fool you—this meme coin has massive potential for growth, especially for short-term holders looking for the next meme coin to explode in value. One of the key selling points of Cheems is its community-driven nature. The coin's humorous and relatable representation of an underdog character within the larger Dogecoin universe resonates with meme lovers, making it one of the most popular coins in the space. With a 2.12% price increase over the last 24 hours and a 20% increase in trading volume, the momentum behind Cheems is growing fast. Despite a significant dip from its all-time high of \$0.071966, Cheems has still seen an impressive 3220.79% increase from its all-time low. Why invest in Cheems Coin? With a thriving meme culture community, low price entry, and strong growth potential, Cheems is an intriguing investment for short-term investors who love the underdog story.

Conclusion: Based on Our Research and Market Trends, Arctic Pablo Leads the Charge Based on our research and market trends, the best meme coin to invest in for short-term gains is Arctic Pablo Coin. With its engaging narrative, deflationary token burn system, and mind-blowing ROI potential, Arctic Pablo presents the ultimate opportunity for quick gains. The coin's presale has already raised over \$100,000, with a price progression that promises massive returns. For investors looking for a thrilling ride to the top, Arctic Pablo offers an unforgettable adventure. While Brett and Cheems have solid potential in their own right, Arctic Pablo's unique combination of myth, adventure, and scarcity-driven tokenomics positions it as the meme coin to watch. If you're ready to dive into the world of meme coins and take advantage of some of the best short-term investment opportunities in the market today, then Arctic Pablo is the coin for you. Don't miss out on this incredible opportunity. Join the Arctic Pablo Coin presale now, stake your tokens for 66% APY, and be part of a journey that promises prosperity and adventure at every turn. - Ethereum trades above the \$3,400 price level with no significant price change. - The developer team plans to deploy the Pectra upgrade in March 2025. Even though Bitcoin reclaimed its \$100,000 milestone earlier today, with over 4% price surge, Ether didn't record any significant price surge. For the past week, Ether has been trading in the \$3,000 to \$3,400 price range. On the other hand, the Ethereum developer team is planning to launch the Pectra upgrade in March this year. Ether is trading at \$3,415 with around 2% price increase in the last 24 hours, at press time. The second-largest token recorded weekly and monthly price changes of +3.37% and -11.68% respectively. While its market cap is \$412.38 billion and is up by 2.5%, 24-hour trading volume is down 5%, hovering around \$27 billion. Ethereum Developer Team Plans to Launch Pectra Mainnet Upgrade in March As per Ethereum Execution Layer Meeting that streamed recently, the team is planning to launch the Pectra upgrade in March this year. The developer team is also planning to achieve specific milestones that lead to mainnet upgrade. Before the Pectra mainnet upgrade, Sepolia and Holesky hard forks are expected to take place in February. In case the hard forks are launched as planned, the mainnet upgrade will be completed in the following month of March. The Pectra mainnet upgrade is originally estimated to take place by the end of 2024. However, the scope of his upgrade expanded, which resulted in the present delay in Pectra upgrade delay. Once the upgrade takes place as planned, it will bring several Ethereum Improvement Proposals along with it. With these EIPs, we can expect to see improved use experience and network efficiency. The maximum validator stake limit will also be increased from 32 ETH to 2,048 ETH. So far, multiple devnets have been completed to test individual components of the Pectra Upgrade. On the other hand, Ether price has been disappointing investors with no notable price surges since December 2024. However, the upcoming crypto bull run combined with successful launch of the upcoming upgrade might push Ether price to new ATH. Highlighted Crypto News Today: Is Dogecoin (DOGE) Showing Recovery Signs After a 10% Surge?

Meme coins continue to have some of the strongest communities in the crypto space. The new generation of meme coins are transforming the crypto space and Yeti Ouro (YETI0) is leading the charge. Solana and Sui continue to thrive with their loyal community members and solid infrastructure. Let us take a look at how meme coins have moved beyond memes and how important community is for a coin's growth. Solana Price Prediction With a market capitalization of over \$16 billion in Solana-based meme coins, Solana is one of the strongest players in the space. Pumpdotfun, a platform on Solana, is user-friendly and allows anyone to create and launch meme coins in minutes. Pumpdotfun has certainly

revolutionized space with new coins coming up every few minutes. Its intuitive platform has attracted over 50,000 active users, generating \$100 million in revenue within its first year. Solana's thriving community appeals to new developers, investors, and users. This community has helped Solana maintain their momentum. Solana (SOL) price today is \$214.73 with a 24-hour trading volume of \$6.24B. Solana is up by 8.28% in the last 24 hours. SUI At the end of 2023, Sui had 9 million active users. That figure had almost doubled to over 18 million by the end of Q3 2024. With a market cap of more than \$380 million, Sui meme coins exhibit significant investor interest and promise. Sui is a layer-1 blockchain with near-instant transaction finality and high throughput that is intended for speed and scale. The price of Sui has increased by 0.52% over the past 24 hours, and it is currently \$4.57. YETIO While the meme coin market survives mainly on hype internet relevance and social media virality, YETIO stands out by providing utility and sustainability. YETIO integrates real-world utility through its Play-to-Earn gaming platform, Yeti Go. This feature attracts not only crypto enthusiasts but also gamers eager to earn while playing. YETIO's tokenomics are designed for sustainability, with regular burns to reduce supply and increase scarcity. This deflationary mechanism ensures that YETIO will retain value over time. YETIO's call for transparent governance will ensure that the community members have a bigger say in the project. The success of a meme coin often hinges on the passion of its community. Conclusion The future of crypto is becoming increasingly community-centric. YETIO has the potential to redefine what a meme coin can do and create a sustainable ecosystem with a strong community. YETIO and Pumpdotfun continue to reshape the crypto landscape. Big players with solid infrastructure like Solana and Sui continue to leverage their communities for momentum. As the meme coin movement evolves, it's clear that coins that can provide utility with entertainment will survive in the long run. Or they will end up being just another meme coin. Join The Yeti Ouro Community - Website: <https://yetiouro.io/> - X (Formerly Twitter): <https://x.com/yetiouro> - Telegram: <https://t.me/yetiouroofficial> - Discord: <https://discord.gg/YtUsEZ2Zr> Disclaimer: TheNewsCrypto does not endorse any content on this page. Shiba Inu's market position has recently been under threat despite a recent price hike caused by a 2,133% increase in burn rate. With a market capitalization of \$14.2 billion and a price of \$0.000023, Shiba Inu struggles to preserve its position as younger, meme coins like Pepe Coin and utility-driven competitors such as Rexas Finance threaten its dominance. Both tokens are gaining popularity, and analysts anticipate major market movement in the near future. Rexas Finance Ready to Take Pepe Coin's Market Position Rexas Finance, with its revolutionary platform built on Real-World Asset (RWA) tokenization, is positioned to compete with Shiba Inu and PEPE Coin. The project has swiftly grabbed notice, and with continued momentum in its presale, it is poised to considerably increase its market share. Rexas Finance is a new platform that combines blockchain technology and RWA tokenization. For beginners and experts, it makes asset-backed token creation, management, and trading easy. By providing liquidity, security, and transparency for real-world assets, Rexas Finance democratizes investment access and simplifies asset management. Rexas Finance offers various components to improve its functionality and long-term market position. The Rexas Token Builder makes it easier to create digital tokens, while the Rexas QuickMint Bot lets you create tokens directly from popular messaging platforms. Rexas GenAI uses artificial intelligence to generate NFTs, encouraging creativity and innovation on the platform. Furthermore, Rexas DeFi provides liquidity and decentralized finance utilities, critical to increasing token value. These characteristics give users an advanced platform for participating in tokenized asset markets. The RWA tokenization market is expected to grow to \$50 billion in 2025 and \$16 trillion by 2030. Rexas Finance has already established itself as a leader in this industry, so capturing even a small portion of this market will greatly boost the platform's market position. Rexas Finance's capacity to tokenize precious assets such as real estate, art, and commodities positions it as a key player in transforming traditional investment methods into accessible blockchain solutions. The presale momentum has been impressive, with each stage selling out ahead of schedule. As Rexas Finance enters Stage 11 of the presale, the token price has increased nearly sixfold from its initial value. To date, Rexas Finance has raised \$37 million and sold 402 million tokens, indicating strong investor interest. Rexas Finance is making waves with its \$1 million giveaway. Twenty top participants will each receive \$50,000 worth of RXS tokens. This campaign generates more interest in the project and strengthens its community support. Once the presale is completed, RXS is projected to debut on at least three of the top ten global cryptocurrency exchanges, dramatically increasing its liquidity, accessibility, and visibility. This listing, paired with the platform's strong utility offers and RWA tokenization market potential, is expected to propel Rexas Finance into the top 20 or higher, potentially surpassing Shiba Inu in the rankings. PEPE Coin's Potential to Overtake Shiba Inu's Market Position Sitting at the 25th position with a market cap of \$8.6 billion, PEPE Coin has grown significantly, gaining over 1500% in 2024. It reached a record \$0.000027, indicating strong momentum, before correcting to its current price of \$ 0.00002. Favorable general market momentum and impressive whale activity have contributed greatly to its growth. Whale transactions on the PEPE network hit a weekly peak volume of \$121 million last week. The coin surged significantly following Elon Musk's actions regarding frog-themed coins on X. PEPE is expected to rise 234.69% to \$0.00006834 by February 2025. Should this happen, the PEPE market cap might also climb to the \$30 billion mark, potentially surpassing Shiba Inu. Conclusion Shiba Inu's market difficulty is becoming more obvious as competitors such as PEPE Coin and Rexas Finance gain traction. With rising market volatility, Shiba Inu risks being surpassed by upstart coins with higher utility and creativity. Rexas Finance is a prominent player in the cryptocurrency market. Its focus on RWA tokenization, utility-driven platform features, ongoing presale success, and upcoming exchange listings position it for significant market expansion. In 2025, Rexas Finance is expected to enter the top 20 and overtake Shiba Inu, making it a fascinating project to follow. For more

The cryptocurrency market has seen its fair share of trends, and meme coins have been a central theme for the past few years. However, as the market matures, a new wave of cryptocurrencies is stepping up to deliver not just hype but tangible value. Among these rising stars is Lightchain AI, a project that started as a buzzworthy presale and is now shaping up to be a market leader. With over \$10.4 million raised at a presale price of \$0.00525, Lightchain AI is turning heads in 2025 with its potential to revolutionize the crypto space. Evolution of Meme Coins From Hype to Utility Meme coins like Dogecoin (DOGE) and Shiba Inu (SHIB) took a market by storm, giving a mix of fun, group, and guess returns. Though these coins caught dreams, they often missed real use, making buyers look for plans with long life. The shift from joke coins to helpful projects shows a growing market. People are now interested in digital money that mixes good names with useful uses. This change has opened doors for things like Lightchain AI, which joins community charm with new smart machine skills. Lightchain AI From Presale Sensation to Market Contender Lightchain AI is shaking up the blockchain world with a bold mix of innovation and scalability. Forget meme coins—this platform delivers real-world value through AI-powered decentralized apps (dApps) and seamless cross-chain compatibility. Built with developers in mind, it offers powerful tools like APIs and SDKs to create smart blockchain solutions that actually make a difference. And for investors? The opportunity is massive. With the presale price at just \$0.00525, a \$1,000 investment gets you 190,476 LCAI tokens today. Analysts predict a jaw-dropping price of \$2.50 per token by 2025—turning that \$1K into a potential \$476,190. Whether you're building the future of blockchain or seeking the next big investment, Lightchain AI combines breakthrough tech with incredible growth potential. It's time to get on board! 2025 Year of AI-Integrated Blockchain The rise of AI-integrated blockchain solutions like Lightchain AI is a testament to the market's shift toward utility-focused projects. By addressing scalability, developer needs, and interoperability, Lightchain AI is poised to lead the charge in this new era. Its ability to blend the community-driven energy of meme coins with practical innovations positions it as a game-changer for 2025 and beyond. Investors and developers alike are taking notice, making Lightchain AI a top contender in the competitive crypto landscape. As the project continues to develop and gain traction, it's clear that this is not just another flash-in-the-pan meme coin but a market leader with staying power. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. In the fast-changing world of cryptocurrencies, some altcoins always grab the attention of big holders, often called "whales." This article explores four such altcoins—Chainlink (LINK), Ripple (XRP), Dogecoin (DOGE), and Pepe (PEPE). It highlights recent updates and their possible effects on the market. Chainlink: The Backbone of Reliable Data in DeFi Chainlink has recently joined forces with Ripple to help expand the use of Ripple's USD stablecoin (RLUSD) in decentralized finance (DeFi). This team-up will ensure RLUSD gets accurate and trusted pricing data for use in different DeFi platforms. Chainlink's oracle network secures over \$6 billion in value and serves over 1,000 projects. It provides real-time data to smart contracts, which has made it popular in the blockchain world. Even with this good news, LINK's price has dropped due to the overall market instability. Experts believe this partnership will improve Chainlink's position in DeFi. However, market trends and how people feel about buying crypto will still affect LINK's price. Chainlink's oracles are also known for being very reliable, with a 99.95% uptime, making it a top choice for secure blockchain data services. Ripple XRP: The Fastest Route for Global Payments XRP has shown big price changes recently, especially after political updates in the United States. Many expect new government policies to favor XRP, which has driven its recent price rise. Ripple's payment system handles over \$15 billion in transactions every year. Its On-Demand Liquidity (ODL) feature uses XRP as a bridge currency. This removes the need for pre-funded accounts and is especially useful in growing markets. The market, however, reacts quickly to changes in regulations and holder behavior. While XRP has performed well recently, its future depends on new rules and their effects on crypto. XRP's system can handle transfers in just 3–5 seconds at very low costs, making it one of the fastest and cheapest options for payments. Dogecoin: The People's Favorite for Fast and Cheap Transactions Dogecoin, which started as a joke, has become a serious cryptocurrency with a huge fan base. Recent market analysis shows that DOGE is close to key price levels, which might lead to a bounce-back. One of Dogecoin's strengths is its community, which has consistently supported it. Dogecoin has a fast block time of 1 minute, making transactions quicker than many other cryptocurrencies like Bitcoin. Its low transaction costs, often under \$0.01, also make it great for small payments or tipping. Experts suggest keeping an eye on these price levels, as they could indicate a recovery. Still, meme coins like Dogecoin are very unpredictable, so caution is advised. Dogecoin has more than 4 million active wallet users, showing how widely it is used and trusted for payments. Pepe Coin: A Meme Coin with Deflationary Power Pepe Coin, inspired by a popular internet meme, has caught the attention of the crypto world. Its price depends a lot on social media buzz and market speculation. Analysts say that PEPE is also near key price points, hinting at a possible recovery. Pepe's unique feature is its deflationary model. It reduces the total supply over time through burning, which creates scarcity and increases value for holders. Like other meme coins, PEPE is highly affected by how people feel about

it in the market. Holders need to be careful with such risky coins. Despite this, Pepe reached a market cap of over \$500 million during its peak, showing its significant appeal among meme coin fans.

Minotaurus (MTAUR): The Next Generation of Web3 Gaming Minotaurus (MTAUR) is making headlines with more than 1,230,000 USDT marked in its presale, offering MTAUR at 0.00008136 USDT. This labyrinth-themed runner game pits you against cunning creatures and wily traps as you navigate corridors to find hidden treasures. The fun factor is only half the appeal—MTAUR also empowers you to access limited zones and special upgrades, turning the adventure into a personalized escapade. As you delve deeper, several community-focused features come into play: - Referral Program for inviting friends, benefiting both the inviter and the newcomer - Vesting Bonuses for those who opt to lock in their tokens for longer - Secure Contracts, audited by SolidProof and Coinsult to ensure peace of mind - 100,000 USDT giveaway, where one fortunate participant could secure 50,000 USDT worth of MTAUR. With the casual gaming industry valued at 14.78 billion USD and showing no signs of slowing, Minotaurus aims to combine accessible gameplay with blockchain features seamlessly. Don't miss the chance to experience the thrill of the maze at a price that still sits well below the future listing of 0.00020 USDT.

Conclusion The cryptocurrency market changes quickly and is highly unpredictable. Altcoins like Chainlink, Ripple, Dogecoin, and Pepe are popular among large holders for their unique features. Chainlink leads in blockchain data services, Ripple excels in fast and cheap global payments, Dogecoin has a strong community and fast transactions, and Pepe's scarcity model adds value. Minotaurus (MTAUR)? It doesn't rely on hype to succeed—its well-thought-out utility ensures it can stand the test of time. Add in generous incentives, and you've got a compelling crypto package. **Disclaimer:** TheNewsCrypto does not endorse any content on this page. - Coinbase asset listing included Toshi in its recent announcement. - Base memecoin Toshi price jumped over 160% today and reached a peak of \$0.0003662. The broader crypto market is still hesitating to resume the bull run that started in December 2024. While Bitcoin is trading at the \$96K price level, Ether is trading at \$3,220 range. However, altcoins such as XRP, Avalanche, Dogecoin, and Cardano are showing notable recovery from recent price dips. Meanwhile, Toshi memecoin price is up by a whopping 130% in the past few hours. The TOSHI memecoin was launched on Base network, being named after Coinbase CEO Brian Armstrong pet cat and Bitcoin creator Satoshi Nakamoto. It finally broke its long-term downward price movement when its price spiked by over 160% earlier today. From trading in the price range of \$0.00014, Toshi price suddenly surged past \$0.00035 range. At press time, TOSHI is trading at \$0.0002404, with a 75% increase in the last 24 hours. While its market cap is \$98.26 million, 24-hour trading volume increased by more than 500%. After trading above the \$0.0035 price range in Nov and Dec 2024, this is the first time Toshi price surged again. Coinbase Asset Listing Included Toshi Memecoin Assets added to the roadmap today: Toshi (TOSHI) <https://t.co/rRB9d3hSr2> — Coinbase Assets >ji (@CoinbaseAssets) January 14, 2025 Earlier today, Coinbase announced that Toshi will be added to its roadmap today. This created buzz around Toshi on social platforms such as X and drew significant attention to this cat-based memecoin. Within just a few minutes after the announcement, Toshi price witnessed a sharp price spike. Crypto investors and community members are perceiving this as a significant step for Toshi. Being one of the leading crypto exchanges, Coinbase asset listing is a crucial step for any crypto token to gain mass adoption. Toshi is the second Base-native memecoin to be listed on Coinbase exchange, as per Coinbase employee Rishi Prasad. Highlighted Crypto News Today:

Discover the potential and opportunities of KSD Miner Alex, a 33-year-old from Australia, had been working as a delivery driver for a local logistics company. Despite working long hours and navigating busy city traffic daily, Alex's income barely covered his bills. He felt stuck, with little opportunity to improve his financial situation. However, Alex always had a keen interest in technology and finance, and he spent his spare time researching new opportunities in these fields. In 2019, my coworkers and I went on a site visit to their company and I was impressed with their large scale mine, the friendly service of the staff, and the delicious coffee served. It was fantastic. The first choice for investment, KSD miner Established in 2016 to build the world's number one brand Sign up now to participate in free cloud mining. as the leading platform that will help you start earning \$931-\$41903 per day or more. One day, a friend mentioned the growing field of cryptocurrency mining and specifically introduced Alex to KSD Miner. Intrigued by the idea of passive income, Alex started reading more about cloud mining and how platforms like KSD Miner could help beginners get started without the need for expensive hardware or deep technical knowledge. With a small amount saved up, Alex decided to take a calculated risk. He initially invested \$50,000 into KSD Miner, attracted by the company's focus on clean energy and ease of entry into the mining world. The initial investment paid off quicker than he expected; within just two months, Alex was able to recoup his initial investment. Encouraged by these results, he gradually increased his investments and continued to learn about the cryptocurrency market. The platform supports multiple payment methods including USDT-TRC20, BTC, ETH, LTC, USDC, BNB, USDT-ERC20, BCH, DOGE, SOL (Solana), XRP. Of course, I prefer to use BNB, which is convenient and fast. Three months have passed and Alex is now financially independent. Thanks to his smart investment in KSD Miner, he no longer has to worry about bills or financial constraints. Instead, he enjoys the freedom that comes with a steady passive income, which allows him to focus on the things he loves — spending time with his family, traveling, and exploring new hobbies. How Does KSD Miner Work? KSD Miner, as a promoter of cryptocurrency mining using clean energy, has gained significant attention in the digital currency field in recent years. Bitcoin mining is a fundamental aspect of this field, involving specialized mining equipment with immense computational power to solve cryptographic challenges. Offering rewards to miners, cloud mining allows users to participate in cryptocurrency mining by renting the computational power of remote servers, thereby avoiding the high

costs associated with traditional mining equipment and electricity. KSD Miner: Where laziness meets profit KSD Miner takes the simplicity of cloud mining to the highest level, making it perfect for newbies. The platform's user-friendly interface ensures that even cryptocurrency novices can navigate with ease. For KSD Miner, laziness is not a weakness; it's the path to success. As a pioneer in providing cloud mining services, KSD Miner has 100 mines around the world with more than 6.31 million mining machines, all powered by new renewable energy cycles, and has won the recognition and support of more than 8.53 million users with its stable income and security. Unimaginable Earning Opportunities What makes KSD Miner different is its extraordinary daily passive income, which provides the opportunity to earn \$931-\$41903 or more every day, allowing users to realize their dreams of getting rich online. Imagine earning a substantial income without constant effort or complex setup – that's what KSD Miner offers. Security and Sustainability In the world of mining, trust and security are crucial. KSD Miner knows this and puts the safety of users first. KSD Miner is committed to transparency and legality to ensure that your investment is protected and you can focus on profitability. All mines use clean energy, making cloud mining a carbon neutral. Renewable energy protects the environment from pollution and brings super value returns, allowing every investor to enjoy opportunities and benefits. Why Choose KSD Miner? KSD Miner utilizes clean energy to power its operations, drawing on renewable energy sources like wind, hydro, and solar to provide miners with a stable energy supply. It also employs the latest ASIC mining machines and GPU equipment, combined with extensive experience and competitive mining technology in cloud operations. Most of KSD Miner's funds are securely stored in offline cold wallets. Strong security measures like McAfee® SECURE and Cloudflare® SECURE are also in place for protection. KSD Miner's mining team consists of blockchain industry professionals and IT engineers, ensuring the team has the necessary expertise to meet user needs. Moreover, KSD Miner requires no personal hardware. It provides the computing power, and the platform handles the entire mining process. All you need to do is purchase a contract, sit back, and wait for your profits. Lastly, KSD Miner offers a professional customer service team available 24/7 to answer any of your questions. How to Use KSD Miner? - Sign Up: Fill in the form and get ready to start mining in under than 1 minute. - Choose Your Contracts: Choose one of the most profitable contracts and start cloud mining. - Start Earning: Withdraw your mining income on a daily basis to your crypto wallet. Select Mining Contract KSD Miner offers a variety of cloud mining contracts to get you started on your cryptocurrency mining journey with just one click. By purchasing one of our contracts, you can start earning a stable and reliable income without any of the traditional barriers of mining such as hardware costs or technical complexity. What You Will Get As An Affiliate Partner? Join our referral program (Partner Program) and earn up to 3% – 4.5% commission for life! Help your friends make money easily and benefit from our system. Share it with friends who want to make money, and they will thank you! - First, sign up for an account and get your own referral link/URL. - Next, invite new users by sharing your referral link via social media or your own website. You can advertise any way you like, and your referral link will always be active. When new users sign up using your referral link, you will receive a 3% bonus based on their initial investment amount. Run your business like a boss and start making money today! | Project Name | Amount | Day | Daily interest rate | Total revenue | | Daily Sign-in | \$10 | 1 | 0.6% | \$10.6 | | Experience Contract | \$100 | 2 | 4% | \$108 | | Classic Contract | \$500 | 7 | 1.30% | \$539 | | Classic Contract | \$3000 | 20 | 1.45% | \$3870 | | Advanced Contracts | \$5000 | 30 | 1.55% | \$7325 | | Advanced Contracts | \$10000 | 50 | 1.75% | \$19625 | Why Partner with KSD Miner? Partnering with KSD Miner not only allows you to earn commissions for referring new users, but it also helps to build a passive income stream. As your referrals continue to invest and grow, so does your commission. KSD Miner's affiliate program is a great opportunity for those looking to expand their income without any upfront costs or technical knowledge. With a professional team, cutting-edge technology, and reliable customer support, KSD Miner makes it easy to start earning from cryptocurrency mining today. Benefits of Choosing KSD Miner - Zero Hardware Requirements: Forget about expensive mining rigs and technical setups. KSD Miner provides all the hardware and computing power needed. - Daily Payouts: Experience the convenience of receiving mining rewards every day. You can withdraw earnings to your crypto wallet without delay. - Clean Energy Mining: KSD Miner prides itself on its commitment to sustainability. Using renewable energy sources makes our mining operations environmentally friendly. - Professional Support: Our support team is available 24/7 to assist with any questions or issues that might arise, ensuring your mining journey is smooth and successful. - Flexible Contracts: We offer a variety of contracts that can be tailored to suit both beginners and experienced miners. Whether you want to start small or go big, KSD Miner has a contract that fits your goals. With KSD Miner, anyone can get started with cryptocurrency mining without needing technical expertise. By combining advanced technology, green energy solutions, and comprehensive support, we make cloud mining accessible for everyone. Ready to Start Your Journey? KSD Miner APP gives you the tools you need to start earning today. Join thousands of users worldwide who are benefiting from our reliable, eco-friendly mining solutions. Whether you are looking to make a little extra income or become a serious investor, KSD Miner has the platform, the technology, and the support to help you achieve your financial goals. SUI has made waves by entering the top 10 cryptocurrencies by market cap, overtaking Avalanche. Meanwhile, Dogecoin (DOGE) is showing signs of another big rally, with experts predicting a possible price rise to over \$20. At the same time, Minotaurus (MTAUR) is nearing 1.3M USDT in its presale, catching the attention of crypto enthusiasts. This article explores the recent growth of SUI price, the potential bull run for DOGE, and the rise of MTAUR as a promising project in the crypto world. SUI Makes Strong Progress SUI crypto continues to gain momentum as it surpasses Avalanche in market cap, reaching \$15.52 billion. With a current SUI price of \$5.16, the token is drawing attention for its

steady growth and rising popularity. Analysts have noted that SUI USD is selling within a tight range between \$4.61 and \$4.86. A breakout from this range could lead to a 10% price change, taking the token to around \$5.50. This movement is supported by strong demand for SUI token, as more people ask, "What is SUI?" The project's focus on scalability and decentralized finance (DeFi) has fueled positive SUI price predictions, with experts expecting further moves in the coming months. If transaction activity remains strong, SUI crypto could solidify its position as a top-performing asset in 2025. DOGE Aims for \$20 Dogecoin price is again making headlines as analysts predict another major rally. Historical patterns suggest that DOGE coin has a strong track record of delivering big upside during bull cycles. For instance, in 2021, DOGE saw a 306x leap. The ongoing 2024 cycle shows similar signs of potential growth. Recent analysis from Javon Marks points out that DOGE USD could be on track for another >60x surge. This would push the Dogecoin stock price to over \$20 if the bullish momentum continues. Whales are showing elevated activity, adding to the excitement surrounding Dogecoin USD as it gears up for a possible breakout. The combination of a strong community and increasing market interest keeps DOGE price in the spotlight. If the positive trends persist, DOGE coin could reach new all-time highs this year. Minotaurus (MTAUR): The Presale Contender For those seeking a light-hearted way to explore blockchain, Minotaurus (MTAUR) could be the perfect fit. The project has crossed the 1,220,000 USDT mark in its presale, showcasing robust interest. Each MTAUR token is currently priced at 0.00008135 USDT, while everyone keeps an eye on the 0.00020 USDT listing figure set for later. Minotaurus revolves around a casual runner game, where you command a minotaur charging through booby-trapped corridors in search of treasures. The labyrinth itself is full of surprises, which can be navigated more easily using special in-game add-ons that MTAUR makes possible. A well-received referral program encourages players to share the experience, and participants can further cement their involvement through vesting MTAUR tokens for extra perks. The hype doesn't stop there, though. The big talking point is a 100,000 USDT giveaway, offering one person a chance to secure half of that prize in MTAUR. Community members appreciate the thorough audits conducted by SolidProof and Coinsult, which underline Minotaurus's focus on transparency. With the casual gaming market standing tall at around 14.78 billion USD, this project captures attention from gamers, crypto fans, and everyone in between. Conclusion The crypto market is full of activity, with SUI crypto making its way into the top 10, DOGE targeting \$20, and the MTAUR presale smashing new milestones and nearing the 1.3M USDT threshold. A modest entry price and bold potential put Minotaurus on the radar. Add holder incentives to the mix, and you'll see why it's enjoying positive attention. With over three million users in 150 countries and 150+ assets, 200+ trading pairs, and 3+ national currencies, Cryptobax has risen to prominence as a global crypto exchange since its January 2022 launch in Europe, with 8 offices across three continents. Rather than becoming just another cryptocurrency exchange, Cryptobax represents a paradigm shift in the way individuals interact with digital assets. More than just a platform, it's the future of finance with a constant eye toward accessibility, security, and expansion. Unveiling the Vision At its core, Cryptobax champions a singular mission: to simplify financial access for everyone, from novices to seasoned traders. The platform bridges the gap between digital assets and fiat currencies through:

- Comprehensive Trading Solutions: From spot and margin trading to high-leverage futures, users have the flexibility to navigate markets seamlessly.
- Real-World Integration: Fiat gateways and the soon-to-launch Cryptobax Card empower users to make everyday transactions in USD, GBP, EUR, and more.
- Swift Market Entry: An accelerated 48-hour listing system allows new projects to gain instant market exposure.

Where Institutions Thrive Cryptobax is more than just a trading platform; it's a strategic ally for over 500 corporate clients with a daily trading volume of \$700 million. Designed to enhance institutional operations, the platform offers:

- Advanced Market Making: Improved liquidity and innovative risk management.
- Custom Asset Management: Supporting over 270 digital assets with state-of-the-art tools.
- Streamlined Crypto Wallets: Unlimited wallet generation for seamless asset tracking.
- Tailored Solutions for Funds: Crypto Deposit plans yielding up to 24.85% annually.

With operations spread across three continents, Cryptobax is the partner of choice for financial institutions. Innovating Passive Income Streams Cryptobax Earn is a revolutionary addition, enabling users to grow their wealth effortlessly:

- Lend & Earn: Up to 24.85% annual returns through crypto lending programs.
- Risk-Free Staking (Coming Soon): A secure way to earn rewards while contributing to network operations.
- Flexible Income Tools: Simple, user-friendly products for tracking and optimizing earnings.

Setting a New Benchmark in Security The digital asset space demands robust security, and Cryptobax delivers:

- Cold Storage Protocols: Securely safeguarding 96% of funds offline.
- Web Application Firewalls: Advanced threat detection to mitigate cyber risks.
- Compliance Leadership: Full adherence to FATF regulations and stringent anti-money laundering standards.
- Ethical Hacking Initiatives: A bug bounty program ensures constant system fortification.

Milestones That Matter Cryptobax has achieved significant milestones in its journey, solidifying its reputation as a leader:

- 2022: Launch of the platform and the introduction of Cryptobax Earn.
- 2023: Introduction of margin trading and seamless integration with Ukrainian Hryvnia.
- 2024: Launch of perpetual futures and innovative payment solutions like CryptobaxPay.

Future-Forward Innovations Cryptobax is committed to staying ahead of the curve with a roadmap focused on:

- Expanding staking capabilities for diverse assets.
- Growing its asset portfolio to meet dynamic market demands.
- Enhancing user engagement through events and trading tournaments.

Conclusion Unlike conventional exchanges, Cryptobax flips trading into a holistic experience. For both retail and institutional traders, its intuitive interface combined with cutting-edge features and transparent fee structures make it a top pick. The dominance of Cryptobax in the cryptocurrency exchange industry seems to be becoming stronger by the day. Consistently drawing in retail and institutional investors, the platform offers a perfect blend of innovation, earning

prospects, and convenience of use. About Cryptobax: Cryptobax, founded in 2022, is a European cryptocurrency exchange. Spot, margin, and futures trading are only a few of the services offered by the exchange, which has three million users from over 150 countries. Contact: Website: <https://Cryptobax.com>

In the ever-evolving world of cryptocurrency, memecoins have emerged as a fascinating subculture, offering incredible gains for those brave enough to invest. From the explosive rise of Dogecoin to the meteoric success of Shiba Inu, memecoins have proven that, in the crypto market, the unpredictable can lead to extraordinary returns. As we look ahead, there's one new player in the game that has all the potential to deliver a jaw-dropping 1000x return on investment—HEADER. What is HEADER? HEADER is a fresh, Solana-based memecoin that combines the playful nature of memes with cutting-edge blockchain technology. Built on the Solana blockchain it is known for its fast transactions and low fees. What sets HEADER apart from other memecoins is its unique blend of humor, culture, and viral potential. With a chicken-themed branding, HEADER taps into the lighthearted spirit that drives the memecoin market. The coin's story began when a humorous talk between Elon Musk and Donald Trump about genetically engineered chickens for Mars went viral. Fans quickly turned this banter into memes, and thus HEADER was born. But it's not just about the memes—HEADER is designed to be more than just a meme token. It combines a fast and scalable blockchain with a vibrant, community-driven culture that has the potential to make it a force to be reckoned with. Why HEADER Has 1000x Potential Low Entry Price with Huge Growth Potential One of the most exciting aspects of HEADER is its low presale price. Priced at just 0.000000075 SOL per token, the presale offers early investors an incredibly low entry point, making it easy for anyone to get involved. With a total supply of 1 trillion tokens, the potential for price appreciation is enormous, especially as the project gains momentum. The Power of Solana Blockchain Built on the Solana blockchain, HEADER benefits from the network's lightning-fast transaction speeds and minimal fees. This means that as HEADER grows, it can scale quickly without the bottlenecks or high transaction costs seen in other blockchain ecosystems. Solana's strong technical foundation gives HEADER an edge, ensuring a smooth and efficient experience for users and investors alike. Community-Driven Success Memecoins thrive on community engagement, and HEADER is no exception. The project has been designed with a strong emphasis on community involvement, ensuring that its supporters are actively shaping its future. HEADER's development team is continuously engaging with its audience, creating an ecosystem where users feel a sense of ownership and connection to the project. Celebrity Endorsements & Viral Culture Much like Dogecoin, HEADER is already attracting attention from celebrities and influencers. Speculation around celebrity endorsements and potential partnerships is fueling excitement around the token. As we've seen with other successful memecoins, celebrity endorsements can send prices soaring, and HEADER seems poised to capitalize on this viral aspect. Memes featuring high-profile figures like Trump and Musk are already circulating, generating buzz and anticipation for the coin's future. Innovative Tokenomics HEADER's tokenomics are designed with both growth and sustainability in mind. The token has a 0% tax structure, which sets it apart from many other tokens that charge high transaction fees. This encourages both frequent trading and long-term holding, helping to build a strong and active user base. Additionally, 40% of the total supply is allocated for the presale, ensuring that early adopters can grab a significant portion of the coin's supply at an affordable price. A Growing Market for Memecoins The memecoin market is more than just a passing trend—it's an established and growing niche within the cryptocurrency world. Memecoins have proven to be a fun and engaging way for investors to speculate, and HEADER is tapping into this trend at the perfect time. As more traders enter the memecoin space, HEADER is positioning itself to take full advantage of this surge, delivering the kind of excitement that drives massive gains. The Road Ahead for HEADER As the presale continues, HEADER is quickly gaining traction. The presale offers a rare chance to get in early on a project with massive upside potential. With its combination of viral culture, strong community involvement, and technical foundation on Solana, HEADER is positioned to capture the attention of both seasoned investors and newcomers to the crypto space. If HEADER continues to build momentum and gain exposure, there's no doubt that it has the potential to reach incredible heights. For those willing to take a risk on a promising memecoin with an engaging story and a vibrant community, HEADER could very well be the next token to deliver that coveted 1000x ROI. Conclusion In the unpredictable world of memecoins, HEADER stands out as one of the most exciting projects to watch. With its unique branding, fast transaction speeds, low fees, and strong community backing, HEADER has all the ingredients to make a massive impact in the memecoin space. As the presale heats up and more investors catch wind of its potential, HEADER is positioning itself to steal the spotlight in the crypto world—and with it, the chance for a 1000x return on investment. So, if you're looking to ride the next big wave in memecoins, don't miss out on HEADER—it could be the game-changer you've been waiting for. The cryptocurrency market has experienced a whirlwind of change in recent years, evolving from a niche community into a dominant force in the global economy. Among the various innovations, meme coins have carved out a unique niche, capturing the imagination of investors and casual users alike. These quirky, often humorous tokens have turned internet culture into a financial phenomenon, showcasing how digital assets can thrive on community engagement and viral trends. As we move further into 2025, the importance of these meme coins is clearer than ever; they reflect not just economic trends but also social dynamics in the digital age. Over the years, meme coins have surged in popularity, often creating unexpected wealth for savvy investors. The explosive rise of coins like Dogecoin and Shiba Inu has proven that there's real potential in this fun and often whimsical segment of the market. Enter BTFD Coin, which is poised to elevate meme coin popularity to unprecedented levels. With an

engaging play-to-earn (P2E) game, a robust referral program, and an eye-watering 90% annual percentage yield (APY) on staking, BTFD Coin is more than just a gimmick; it's a community-driven project that's set to deliver real returns. The excitement surrounding its presale, which raised over \$5.1 million in just the first month, speaks volumes about its potential. In this article, we'll explore the top new meme coins to join now, focusing on BTFD Coin, Apu Apustaja, and Degen. Each of these projects has its own unique flavour, whether it's BTFD Coin's explosive growth, Apu Apustaja's stabilising presence, or Degen's journey towards recovery. Let's dive into what makes these coins stand out in the crowded meme coin market.

BTFD Coin: The Excitement of the Presale BTFD Coin is buzzing with excitement as it continues to dominate the meme coin scene. With its presale currently in Stage 13 and a price of \$0.000142 per coin, it has already raised over \$5.1 million. That's more than 64 billion BTFD coins have been sold, and the community boasts over 8,200 enthusiastic holders. But what makes BTFD Coin one of the top new meme coins to join now? The answer lies in its innovative play-to-earn game. Imagine earning cryptocurrency while you're enjoying your favourite game—sounds pretty sweet, right? This gamified approach adds a layer of fun that attracts not just crypto enthusiasts but also gamers looking for new ways to make money. The P2E model is a significant draw, making it an enticing option for anyone looking to invest in something that's both entertaining and potentially lucrative. Moreover, BTFD Coin offers a staggering 90% APY on staking. Just think about it: by simply holding onto your coins, you can watch your investment grow without the need for constant trading. If you were to invest \$45,000 at the current presale price of \$0.000142, you'd acquire about 316 million BTFD coins. If the price climbs to \$0.0006 by the end of the presale, your investment could skyrocket to around \$189,600. That's a jaw-dropping return, demonstrating why BTFD Coin is one of the top new meme coins to join now. Analysts are buzzing with predictions about BTFD Coin's future price, and the community's enthusiasm is palpable. With a successful presale and a strong foundation, BTFD Coin is well-positioned to become a household name in the crypto community. Don't miss out on this thrilling opportunity—join the excitement and be part of this incredible journey!

Apu Apustaja: A Stable Presence Apu Apustaja has emerged as a stabilising force in the meme coin arena, making it one of the top new meme coins to join now. Known for its vibrant community and strong brand identity, Apu Apustaja has captured the hearts of many. But what's contributing to its stability in such a volatile market? First off, Apu Apustaja benefits from a solid community foundation. This coin has built a loyal following that engages actively, creating a sense of belonging among holders. When investors feel connected to a project, they're less likely to panic-sell during market dips. This community-driven approach is essential for maintaining stability and fostering a long-term vision. Additionally, Apu Apustaja is focused on utility. Unlike many meme coins that rely solely on jokes or memes, this project is looking to carve out a niche with real-world applications. Whether through partnerships, collaborations, or unique use cases, Apu Apustaja aims to provide value beyond the meme. This forward-thinking strategy is crucial in keeping the coin relevant and appealing in an ever-changing market. Moreover, the team behind Apu Apustaja is committed to transparency and regular updates. Keeping the community informed builds trust and ensures that everyone is on the same page. This kind of communication is essential, especially in the crypto space, where misinformation can spread like wildfire. For those seeking a meme coin with both charm and stability, Apu Apustaja is a fantastic option. Its strong community, focus on utility, and transparent communication make it a top new meme coin to join now. Don't overlook the chance to be part of this exciting venture!

Degen: The Road to Recovery Degen is on a path to recovery, making it one of the top new meme coins to join now. After facing some challenges in the volatile crypto landscape, Degen is coming back stronger, and here's why you should pay attention. Degen's unique branding has always set it apart. With a playful and irreverent approach, it taps into the fun side of investing. This playful nature resonates well with younger investors, making it appealing in a market that often feels serious and daunting. The community-driven aspect of Degen is also vital. Supporters are rallying together, sharing insights and strategies that contribute to the coin's resurgence. Moreover, Degen is focusing on building partnerships and collaborations that can enhance its visibility and utility. By aligning with other projects and platforms, Degen aims to create a more robust ecosystem. This approach can provide additional use cases for the coin, making it more attractive to potential investors. The Degen team is also committed to engaging with its community, seeking feedback and suggestions to improve the project. This level of interaction fosters loyalty and ensures that holders feel valued. In a market where community sentiment can make or break a coin, Degen's focus on collaboration and engagement is a winning strategy. For anyone looking to invest in a project with a sense of fun and a strong community, Degen is definitely worth considering. Its journey towards recovery, combined with a playful branding strategy and robust community engagement, positions it as one of the top new meme coins to join now.

Conclusion Based on our research and market trends, the meme coin landscape is overflowing with opportunities, and BTFD Coin, Apu Apustaja, and Degen are three of the top new meme coins to join now. Each project offers something unique—BTFD Coin with its explosive presale excitement, Apu Apustaja as a stabilising presence, and Degen as a fun coin on the road to recovery. Now is the moment to seize these exciting opportunities. Don't let the chance to be part of these engaging projects slip away. Join the BTFD Coin presale now and dive into the electrifying world of meme coins! Cryptocurrency thrives on community. It's the people behind the coin, the conversations they spark, and the movements they fuel that often determine whether a token skyrockets or sinks. While technical innovation matters, it's the collective energy of enthusiasts rallying behind a project that turns a simple token into a phenomenon. For meme coins, this community aspect is even more critical. They're

born out of humor, culture, and a shared sense of belonging—elements that have attracted investors who want more than just financial returns. Over the years, meme coins have transformed from a fringe joke into a legitimate part of the crypto space. Think about Dogecoin’s rise from being a punchline to one of the top cryptocurrencies. Shiba Inu followed suit, showing the world that meme coins could pack serious value. Now, a fresh generation of projects like BTFD Coin (BTFD), COQ Inu (COQ), and Osaka Protocol (OSAK) is pushing the envelope, combining meme culture with unique utilities to redefine what these coins can achieve. Among this exciting lineup, BTFD Coin stands out. It’s more than just a funny name; it’s a full-on ecosystem with staking, Play-to-Earn (P2E) games, and an engaged community driving its growth. Let’s dive deeper into what makes these three meme coins some of the best new investments to consider today.

BTFD Coin: Breaking Barriers with Staking, P2E Games, and the Bulls Squad

BTFD Coin is turning heads in the crypto space, and for good reason. Its presale performance has been nothing short of stellar, raising over \$5.1 million so far, with \$2.5 million pouring in during just the first two weeks. At Stage 13, the price sits at \$0.000142, and it’s gearing up for a listing at \$0.0006—a huge win for early investors. The Bulls Squad, a dedicated group of community members and influencers, is driving much of this excitement. They’re not just investors; they’re active participants who amplify the project’s vision through social media, meetups, and even in-game collaborations. Speaking of games, BTFD’s P2E ecosystem is another game-changer. Players earn rewards while having a blast, combining entertainment with income opportunities. The presale offers juicy rewards for investors who join early, and analysts are already predicting significant price growth post-launch. For instance, an investment of \$35,000 at the current price of \$0.000142 will net you over 246 million coins. When the price hits \$0.0006, that investment balloons to over \$147,000. It’s a prime example of why BTFD is one of the best new meme coins to invest in today. Buying BTFD is straightforward. Head to the presale page, connect your wallet, input your purchase details, and confirm the transaction. With only three stages left in the presale, now’s the time to act.

COQ Inu: Where Humor Meets Serious Potential

COQ Inu might make you chuckle with its playful name, but don’t let that fool you. Beneath the memes lies a project with real ambition. COQ Inu is riding the wave of humor-driven marketing, capturing the hearts of Gen Z and Millennials who appreciate a good laugh but also want solid returns on their investments. What sets COQ Inu apart is its commitment to blending fun with function. Its tokenomics are designed to reward holders, with a portion of every transaction redistributed to investors. This keeps the community engaged while ensuring steady growth. Unlike many meme coins that fade after the initial hype, COQ Inu is building a roadmap focused on longevity—including upcoming NFT drops and partnerships with prominent content creators. Analysts are buzzing about COQ Inu’s potential to outperform expectations. The coin’s community-centric approach has created a loyal base that’s ready to ride the waves—even during choppy market conditions. If you’re looking for one of the best new meme coins to invest in today, COQ Inu’s mix of humor and serious growth potential makes it a strong contender.

Osaka Protocol: A Meme Coin with DeFi Depth

Osaka Protocol is shaking things up by combining the charm of meme coins with the sophistication of decentralized finance (DeFi). It’s a bold move, but it’s paying off. While many meme coins focus solely on community and culture, Osaka Protocol is weaving in features that make it a powerhouse for DeFi enthusiasts and casual investors alike. One of Osaka Protocol’s standout features is its liquidity mining program, which incentivizes users to lock up their tokens in exchange for rewards. This not only stabilizes the coin but also attracts investors looking for passive income opportunities. Additionally, the protocol’s governance model gives holders a say in key decisions, further strengthening its community-driven ethos. Osaka Protocol’s performance has been nothing short of impressive. Its innovative approach has caught the eye of major influencers, and its price trajectory suggests it could be one of the best new meme coins to invest in today. Whether you’re a DeFi enthusiast or just someone who loves the creative side of crypto, Osaka Protocol offers something for everyone.

Conclusion

Based on our research and market trends, BTFD Coin, COQ Inu, and Osaka Protocol represent the next wave of meme coins that are blending humor, community, and real-world utility. BTFD’s explosive presale, COQ Inu’s humor-driven loyalty, and Osaka Protocol’s DeFi innovations make them standout choices for anyone looking to diversify their crypto portfolio. Join the BTFD Coin presale now to secure your spot before prices soar. With the best new meme coins to invest in today, the time to act is now. Don’t miss your chance to ride the wave and make your mark in the exciting world of crypto. Cardano (ADA) is valued at \$0.9536 and has a 24-hour trading volume of more than \$1.5 billion. Its astonishing 188.70% rise over the previous 60 days has rebuilt investor confidence; many see it as having the ability to hit a new all-time high of \$3.10. Though Cardano’s ascent is significant, Rexas Finance (RXS), priced at just \$0.175 in its presale stage 11, offers an unmatched return on investment (ROI) that has crypto enthusiasts humming. RXS poises to rally 12,300 as it targets \$21.52 in 2025. Cardano (ADA): The \$3.10 Target Renowned for its focus on security and scalability, Cardano’s blockchain technology has become a mainstay in the crypto scene. Given its recent price increase, ADA reaching \$3.10 seems reasonable. Nevertheless, despite its solid foundations and increasing acceptance, Cardano’s expected return on investment falls short of Rexas Finance’s explosive potential. Cardano’s expected price rise is 225% to \$3.10. Although remarkable, RXS’s expected 12,300% increase dwarfs it and might propel it to \$21.52. Rexas Finance (RXS): The New Frontier of Higher ROI Beginning its presale in September 2024 at a cheap \$0.030, Rexas Finance has since had an incredible 485% rise, hitting \$0.175 in stage 11. Rexas Finance has already shown its capacity to draw notable investor interest, with 394,226,897 RXS tokens sold and nearly \$35,615,980 raised. It is defined by a strong ecosystem, a creative approach to real-world asset tokenization, and

strategic benchmarks positioning RXS for long-term success. By closing the distance between actual assets and blockchain technology, Rexas Finance is leading a paradigm shift. Its technology lets people tokenize markets worth over \$500 trillion, transforming assets, including real estate, commodities, and art. Rexas Finance enables you to pursue complete or fractional ownership with a few clicks. This invention makes wealth-building prospects more widely available, allowing a worldwide audience. With the Rexas Token Builder, customers can streamline tokenizing their assets without writing a single line of code. Furthermore, the Rexas Launchpad offers a platform for companies and individuals to raise money for their tokens, fostering a vibrant asset-backed token ecosystem. The Certik audit of Rexas Finance clearly shows its dedication to security and openness. This thorough evaluation guarantees the platform's dependability and security, providing investors with peace of mind. Unlike many crypto initiatives that depend on venture capital money, Rexas Finance has adopted a community-driven strategy. Including private funders helps the project fit the distributed attitude of blockchain technologies. To further engage its community, Rexas Finance is offering a \$1 million giveaway. Twenty lucky winners will receive RXS tokens valued at \$50,000. With 752,985 entries already received, the offer emphasizes the project's popularity and dedication to thanking its supporters. Participants can increase their chances by finishing activities on the Rexas Finance website and distributing the giveaway. RXS's listing on CoinMarketCap and CoinGecko has greatly improved Rexas Finance's availability. Real-time updates and premium data about RXS are now readily available to investors, supporting its reputation in the crypto market. These listings offer a reliable forum for monitoring the coin's functioning and assessing its development possibilities. Why RXS Offers a Higher ROI The potential for exponential expansion of Rexas Finance at \$0.175 far exceeds that of Cardano. Analysts predict a startling 12,300% growth and estimate RXS may reach \$21.52. The project's unique value proposition—which includes its capacity to tokenize trillions of dollars worth of real-world assets and expanding network of committed investors—drives this positive momentum. Furthermore, confirming its leadership in the asset tokenizing market is the platform's support of several token standards (ERC-20, ERC-721, and ERC-1155), guaranteeing interoperability with different blockchain systems. The project presents a strong investment case with a total supply of 1 billion RXS tokens since it finds a mix of scarcity and accessibility. Conclusion Although Cardano's ascent to \$3.10 is remarkable, Rexas Finance's current \$0.175 price provides a considerably higher ROI as RXS targets \$21.52. RXS is positioned for explosive expansion due to its visionary attitude toward real-world asset tokenization, strong community base, and strategic goals. Those trying to maximize their gains should take advantage of the Rexas Finance presale, which will help revolutionize the crypto scene. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto world is never short of drama, and the latest contenders to grab the spotlight are Dogecoin (DOGE) and Avalanche (AVAX). Both are facing formidable market challenges—DOGE is stuck at a critical resistance zone, while AVAX is sliding into bearish territory. But here's the plot twist: FXGuys (\$FXG), a rising star in the crypto galaxy, is turning heads and igniting conversations. With analysts whispering of its colossal potential, could this upstart project redefine the game and leave DOGE and AVAX in the dust? Let's dig in. DOGE and AVAX: The Tipping Point Dogecoin, the meme coin that once captivated millions, now finds itself caught in a holding pattern. The 26-day EMA (Exponential Moving Average) looms large as a resistance zone, forcing DOGE to tread water. Down 11.9% in the past month, the coin's momentum is wavering, and a period of consolidation may be inevitable. Avalanche isn't faring much better. In fact, things might be worse. A bearish crossover on the Stochastic RSI has sparked a firestorm of selling pressure, dragging AVAX down by a staggering 23.8% over the past month. The ecosystem seems to be suffocating under the weight of bearish sentiment, and the horizon looks stormy. Enter FXGuys: The Disruptor While DOGE and AVAX flounder, FX Guys is making its move—and it's not subtle. This project isn't just another presale cryptocurrency; it's a bold statement of intent. In just a short time, FXGuys has pulled in a jaw-dropping \$3.319 million in its second presale phase. Investors are swarming, and the buzz is deafening. With momentum building and no signs of slowing, the FXGuys is fast becoming the darling of a crypto community hungry for innovation by cementing its status as an ideal crypto guide for beginners. What Makes FXGuys a Standout? 1. Staking with a Twist Forget the same old staking models. The FX Guys offers something fresh, exciting, and rewarding. Stake \$FXG tokens, and you'll earn a 20% share of the platform's trading profits—straightforward, lucrative, and designed for stability. But that's not all. The process is refreshingly simple. No endless paperwork. No labyrinthine onboarding. No KYC hoops to jump through. All you need is your wallet. Link it. Stake it. Profit. Done. 2. Trader Funding Program: A Revolution in Trading FXGuys isn't here to play by the crypto and forex trading rules—it's here to rewrite them. Its Trader Funding Program is the crown jewel, offering access to accounts worth up to \$500,000. The kicker? Traders get to keep 80% of the profits. Whether you're an expert in crypto, forex, commodities, or indices, FXGuys hands you the keys to the kingdom and lets you run the show. It's not just a proprietary trading platform, it's a launching pad for the next generation of trading prodigies. Why FXGuys Is Making Airwaves The crypto world is no stranger to hype, but the FXGuys is turning that hype into substance. This isn't about gimmicks or fleeting trends. It's about utility, sustainability, and a laser-sharp focus on empowering traders, making the FX Guys the most promising crypto. With its innovative staking rewards, user-first design, and groundbreaking profit-sharing model, FXGuys is delivering what the market has been craving. For investors disillusioned with AVAX's struggles or DOGE's stagnation, FX Guys offers a fresh, exciting alternative that's brimming with potential. Conclusion: A Crypto Trading Star Is Rising DOGE and

AVAX may be household names, but their current challenges are undeniable. Meanwhile, FXGuys is blazing its own trail, fueled by a vision that combines simplicity, innovation, and tangible rewards. With analysts predicting monumental growth and its presale success already cemented, the FXGuys is poised to shake up the crypto trading landscape in ways we haven't seen before. The question isn't whether FX Guys will rise. The question is: will you be ready when it does? To find out more about FXGuys follow the links below: Presale | Website | Whitepaper | Socials | Audit Disclaimer: TheNewsCrypto does not endorse any content on this page. Delivering startling gains of nearly 17,000% and 14,000%, respectively, Solana (SOL) and Polygon (POL) were emblems of wealth creation in 2021. Investors are keen to discover the next great chance, even if these tokens have lately become stable. Emerging as a potential rival with analysts anticipating a price surge that could match SOL and POL's past successes is Rexas Finance (RXS), an inventive altcoin transforming real-world asset tokenizing. The Level Returns of Solana and Polygon in 2021 With Solana (SOL) and Polygon (POL) driving the charge, 2021 was nothing less than remarkable for the bitcoin market. Solana started the year at about \$1.50 and shot an all-time high (ATH) of \$258.93, giving its early backers a fantastic 17,000% return. Thanks to its remarkable performance, Solana is among the blockchains offering extremely low prices and quick transactions. Beginning in 2021 at the modest \$0.02 and then exploding to an ATH of \$2.92 to reach well over 14,000%, Polygon wasn't to be outdone. Since Polygon is a layer-2 scaling solution for Ethereum that fixes the network's scalability issues, interest in it was great. Both tokens started representing the possibility of crypto generating life-changing riches, which drove great acceptance and investor hope. Rexas Finance (RXS): Recreating SOL and POL Level Returns Rexas Finance (RXS) is one of the new generations of altcoins most likely to match the amazing 2021-level returns Solana and Polygon attained. Targeting to close the gap between real-world assets and blockchain technology, RXS is presenting itself as a revolutionary participant in the blockchain scene. Its inventive platform lets users tokenize practically any real-world asset, from real estate and art to intellectual property and goods. This tokenizing may be done effortlessly from anywhere globally, creating unprecedented asset ownership and investment opportunities. Rexas Finance attracted considerable interest during its presale stages; at its present Stage 11 price of \$0.175, reflecting great investor trust in the project, the presale has already brought in over \$35.77 million. RXS distinguishes itself by choosing to give public engagement top priority rather than venture capital funds. This community-driven strategy fits its aim to democratize blockchain real-world asset access. Like Solana and Polygon's 2021 results, market analysts estimate Rexas Finance could have a price surge of above 20,000%. This forecast would drive the token's price to over \$35 for early investors, reflecting life-changing gains. Seen as a game-changer, the project's capacity to tokenize and include real-world assets into blockchain networks pushes acceptance across many sectors and generates a new wave of blockchain usage. The Factors Driving Rexas Finance's Momentum Many elements help explain the rising enthusiasm for Rexas Finance. First, its increasing visibility, thanks to its listing on sites like CoinMarketCap and CoinGecko, has drawn more investors. Its strong tokenomics and road map show how steadily the project might grow. Rexas Finance sets itself apart by filling a significant void in the blockchain space—that of flawless integration of actual resources. Solana and Polygon have concentrated on scalability and transaction efficiency, while RXS is introducing a new use case focusing on tokenizing physical objects. This unique value proposition makes Rexas Finance a possible leader in the Real-World Asset (RWA) industry, which is expected to expand enormously in the next few months. Rexas Finance also benefits from a robust community and a team dedicated to openness and creativity. The project promotes trust and inclusivity by prioritizing public engagement above venture capital funding, which is needed for long-term success. Many investors see RXS as the next major crypto prospect, and the continuous presale success highlights its potential even more. Conclusion Rexas Finance (RXS) presents a strong prospect for Solana and Polygon investors seeking to replicate the amazing gains of 2021. It's impressive presale performance and creative strategy of tokenizing actual assets point to great development possibilities. RXS might become the next altcoin to provide life-changing riches, as analysts forecast a more than 20,000% price surge. Investing in Rexas Finance at its presale level offers an early opportunity to engage with a breakthrough project ready to change asset ownership and blockchain use. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Ethereum (ETH) and Ripple (XRP) remain two of the most potent participants as the crypto market develops since they keep maturing. Investors and businesses have constantly been drawn to Ethereum's strong innovative contract features and Ripple, famed for its cross-border payment breakthroughs. But as the market prepares for a fresh bull cycle, Rexas Finance (RXS) is taking the front stage as a potential newcomer. With its creative tokenizing tools and utility-driven approach, RXS is likely to define the altcoins of 2025. Ethereum and Ripple's Growth Potential The improvements on Ethereum (ETH) should draw additional projects and developers, securing Ethereum's role as the preferred blockchain for innovation. Likewise, Ripple has been advancing the world financial scene. Notwithstanding legal obstacles, XRP's value in cross-border transactions has been well-known, particularly with Asian and Middle Eastern alliances. Financial institutions love it since it allows almost quick payments with low fees. For Ethereum and Ripple, these trends should propel a consistent

price increase next year. The Rise of Rexas Finance Although Ethereum and Ripple are predicted to shine, Rexas Finance (RXS) is rising as the altcoin to keep an eye on in 2025. At around \$0.175 as of writing, RXS is using its unique qualities and expanding ecosystem to draw significant interest from investors. The platform's main attraction is its emphasis on real-world asset (RWA) tokenizing, a trend gathering steam as blockchain technology gets increasingly included in conventional sectors. Users of Rexas Finance can tokenize actual items, including intellectual property, goods, and real estate. In usually illiquid markets, this democratizes access to high-value investments and improves liquidity and openness. RXS is creating a niche that might alter crypto by closing the distance between blockchain technology and practical uses. Institutional Interest and Community Support The growing interest of institutional investors is one of the main reasons for RXS's development. According to reports, prominent participants in the crypto scene—including some who had formerly supported Ethereum and Solana—are now focusing on Rexas Finance. This change in attitude emphasizes the increasing acceptance of RXS's possible significant returns. Furthermore, the initiative has attracted great community support; during its 11th presale, over 394.2 million tokens were sold. Having secured \$35.6 million, RXS has shown that it can attract investor interest and create a strong ecosystem before its introduction. Its new listings on CoinMarketCap and CoinGecko confirm its reputation and guarantee a more significant market presence. A Breakout Year for RXS Rexas Finance is positioned to expand exponentially in 2025. Analysts estimate the token might exceed \$10 from its presale price, indicating a fantastic rise. The platform is a great candidate for outperforming even well-known cryptocurrencies like Ethereum and Ripple because of its creative elements and emphasis on practical uses. Moreover, the Certik audit of Rexas Finance guarantees that the project follows the best security guidelines, increasing investor trust. More users and developers expected from this emphasis on openness and dependability will help to generate demand for the RXS token even more. The Future of Crypto in 2025 Although Ethereum and Ripple will probably keep the front stage, the arrival of Rexas Finance marks a change in the market dynamics. Projects with straightforward use and real-world problem-solving ability should lead the next wave of acceptance as blockchain technology develops. With its creative approach to RWA tokenization and solid community support, Rexas Finance is especially positioned to become the standout altcoin of 2025. RXS presents an unmatched chance for anyone trying to profit from the approaching bull cycle. Rexas Finance could be the secret to releasing life-changing rewards the following year, given its modest starting price and excellent expansion possibility. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. As we approach Q1 2025, the cryptocurrency market is teeming with opportunities. Savvy investors are seeking out altcoins with the potential for 10X or greater returns. With innovation driving adoption and market momentum on the rise, here are the top five altcoins poised to deliver explosive gains in the coming months. Why Altcoins Are the Key to Massive Gains Different from the older coins, lots of altcoins are made with new traits, special uses, and solid base systems that can boost their rise. These traits make them really appealing to money makers hoping for big gains. Plus, altcoins seem to draw notice as new fads like decentralized finance DeFi, NFTs and block chain gaming keep on growing. The next items are set up to take advantage of these trends, giving investors a way to get into new tech and make big profits Top 5 Altcoins for 10X Gains As of January 2025, several altcoins demonstrate strong potential for significant growth, offering opportunities for substantial returns. Below are five promising contenders. Ethereum (ETH) As the foundation for decentralized applications (dApps) and smart contracts, Ethereum's transition to Ethereum 2.0 has greatly improved its scalability and energy efficiency. This solidifies its leadership in the DeFi and NFT sectors. Lightchain AI (LCAI) Lightchain AI is transforming the blockchain landscape by integrating artificial intelligence. Analysts project it as a potential 100X opportunity, making it a top altcoin to monitor in 2025. Its Artificial Intelligence Virtual Machine (AIVM) empowers developers to seamlessly integrate AI applications into blockchain ecosystems, making it a versatile solution for industries such as healthcare, finance, and logistics. Cardano (ADA) Renowned for its focus on sustainability and scalability, Cardano's research-driven development model has resulted in secure and reliable blockchain solutions. Its growing ecosystem and practical applications suggest considerable growth potential. Avalanche (AVAX) Known for its high throughput and low latency, Avalanche's innovative consensus protocol and expanding DeFi ecosystem position it as a competitive player in the blockchain sector. Chainlink (LINK) By bridging smart contracts with real-world data, Chainlink serves as a cornerstone within the DeFi space. Its established partnerships and essential functionality highlight its potential for continued growth. Investors are encouraged to perform thorough research and remain mindful of market volatility when evaluating these altcoins for potential investment opportunities. Why Lightchain AI Stands Out While all five altcoins present significant potential for returns, Lightchain AI stands out as a particularly compelling option due to its integration of artificial intelligence with blockchain technology. The Lightchain AI's roadmap outlines a clear path to growth, with milestones such as the testnet launch in January 2025 and the mainnet activation in March 2025. This structured plan demonstrates a commitment to innovation and scalability. Additionally, the price prediction is 2 to 3\$ in 2025, potentially making it a lucrative investment opportunity for those who believe in the potential of AI and blockchain integration. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. With easily outperforming humor currencies like Shiba Inu (SHIB) and Pepe Coin (PEPE), Rexas Finance (RXS), the crypto valued under \$0.20, is rising as a top contender in the crypto market, prepared to outperform. Supported by a breakthrough tokenizing technology and real-world applications, RXS has already raised over \$35.29 million in its presale, enthralling investors with its exceptional performance and great future expansion possibilities. Rexas Finance (RXS): The Crypto to Outperform SHIB and PEPE Rexas Finance (RXS) is rapidly standing out among the crowded crypto field as a leading candidate for the bull market 2025. Priced at an easily reachable \$0.175 during its present presale, this coin has already drawn a lot of interest since investors consider it a revolution in digital assets. While Shiba Inu (SHIB) and Pepe Coin (PEPE) depend on meme-driven popularity and speculative trading, RXS is creating a strong ecosystem bridging the real world with blockchain technology. Rexas Finance (RXS) has already shown its capacity to enthrall investor interest with around \$35.29 million raised thus far. Market analysts expect this revolutionary currency to outperform SHIB and PEPE in 2025, confirming its leadership in the crypto space. Rexas Finance (RXS) is a tool that can completely change our interaction with actual assets. Users can use its ecosystem to tokenize real estate, artwork, intellectual property, and commodities. RXS distinguishes itself by its simplicity and accessibility. It allows people and companies to tokenize assets without needing knowledge of codes. Two main ingredients of this ecosystem are the Rexas Token Builder and the Rexas Launchpad. These instruments enable users to create tokenized assets that may be exchanged or kept, enabling funds for their initiatives. Thanks to this creative methodology, Rexas Finance (RXS) is positioned as a leader in real-world asset (RWA) tokenizing; this industry segment is projected to see explosive expansion. Massive Growth During the Presale During its presale, Rexas Finance (RXS) has shown extraordinary success, rising roughly six times from its starting price to its present value of \$0.175. This increasing trend emphasizes how much early investors want RXS tokens. Rexas Finance (RXS) is supported by real-world use cases and a sustainable development plan, unlike meme coins like Shiba Inu (SHIB) and Pepe Coin (PEPE), which frequently depend on the volatile market sentiment. The presale's success reflects investor trust in the coin's long-term vision rather than its potential. Since the presale now generates approximately \$35.29 million, RXS is laying the groundwork for a strong 2025 debut. Certik Audit and User Incentives Rexas Finance (RXS) stands out mainly for its dedication to security and openness. Leading blockchain security company Certik has thoroughly examined the initiative. This accreditation has significantly raised investor confidence since it guarantees a safe platform and consistent smart contracts. In a time when vulnerabilities and frauds abound in the crypto scene, the Certik audit distinguishes Rexas Finance (RXS) as a reliable investment choice. SHIB and PEPE have struggled to offer this degree of guarantee, so RXS has a competitive edge as it prepares for a significant price explosion in 2025. Rexas Finance (RXS) is sponsoring a \$1 million giveaway to further involve its developing community. Twenty lucky winners will receive \$50,000 worth of RXS tokens apiece. This project has drawn over 738,000 entries. Such incentives honor early adopters and generate project buzz and momentum. Another factor distinguishing Rexas Finance (RXS) from its rivals is its proactive attitude to community involvement. While SHIB and PEPE mainly depend on speculative interest, RXS actively adds value for its investors through strategic activities and practical implementations. Why Rexas Finance (RXS) Will Outperform SHIB and PEPE in 2025 The crypto industry is changing as investors choose more initiatives with actual value and long-term promise. Though somewhat popular, Shiba Inu (SHIB) and Pepe Coin (PEPE) are speculative assets with little practical value. Rexas Finance (RXS) has a significant advantage since it creates a whole ecosystem that meets practical needs. Thanks to its creative approach to tokenization and capacity to draw institutional and retail investors, market analysts project that RXS will have impressive expansion in 2025. Although SHIB and PEPE might find it challenging to remain relevant, Rexas Finance (RXS) is positioned to flourish with its special value offer and increasing community support. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. With Bitcoin (BTC) making headlines as it inches closer to the \$100K milestone, the cryptocurrency market is ripe for altcoins to shine. Historically, Bitcoin's bullish momentum has often sparked significant rallies among altcoins, presenting lucrative opportunities for savvy investors. While many tokens are poised to benefit from BTC's rise, Lightchain AI, Ethereum (ETH), and Avalanche (AVAX) stand out as top contenders to outperform the market. Ethereum and Avalanche Leading the Altcoin Market Ethereum remains a dominant force with its thriving dApp ecosystem, smart contracts, and the recent Ethereum 2.0 upgrade boosting scalability, energy efficiency, and transaction speed. It continues to attract developers in DeFi and NFTs, with analysts predicting strong growth as Bitcoin surges. Meanwhile, Avalanche stands out for its high-speed transactions, low fees, and scalable ecosystem. Its efficient consensus mechanism and ability to handle thousands of transactions per second make it a top choice for developers and enterprises. Both ETH and AVAX are leading the way in the altcoin market with robust ecosystems and real-world utility. Lightchain AI Rising Star with Unmatched Potential Though Ethereum and Avalanche are known names, Lightchain AI is the new player to see in this market time. With its pre-sale cost at \$0.00525 and more than \$10 million gotten, Lightchain AI has shown good trust from backers. Unlike old altcoins, Lightchain AI aims to make separate systems that are good for smart data jobs, making it easy and fast in many fields. Its skill to push new ideas in data handling and allow smooth links between chains makes it a clear pick for businesses and blockchain fans too. Lightchain AI also puts focus on user strength, giving tools that make it easier to enter blockchain use. As Bitcoin's climb lifts altcoins into view, Lightchain AI

is in a good spot to take advantage of the rising need for simple, helpful blockchain answers. Why Lightchain AI Could Outperform the Market As Bitcoin pushes toward \$100K, altcoins like Ethereum and Avalanche are expected to deliver significant returns. However, Lightchain AI's early-stage momentum and innovative approach give it the edge to outperform its peers. Its strong presale performance, coupled with its focus on solving complex challenges in blockchain adoption, makes it a high-growth opportunity for investors seeking the next big thing. For those looking to diversify their portfolios during this bull run, Lightchain AI represents a promising altcoin with the potential to outpace the market. Don't miss your chance to be part of this transformative project as it gains momentum in 2025 and beyond. Keep an eye on Lightchain AI as it continues to prove itself as a top contender in the altcoin market. So, don't wait any longer and get on board with Lightchain AI today! - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. While AI agents and stock market parody tokens have gained popularity lately, major investors are engaged in dogecoin (DOGE) markets, with some aiming for a \$1 mark by 2025. DOGE investors frequently look for projects that have a robust community spirit and an element of enjoyment. DLUME offers functionality while preserving a friendly attitude; it's a perfect match. DOGE has evolved, and certain investors are branching out into emerging projects with greater growth potential, such as DLUME. With Aureal One Crypto as an emerging token, we have more tokens on the list of the promising crypto presales. TICS, on the other hand, has an expanding user base exceeding 13,600 holders; the project has achieved notable momentum during its presale. 5 Best Crypto Presale - Aureal One (DLUME) - DexBoss (DEBO) - yPredict (YPRED) - Qubetics (TICS) - Lightchain AI (LCAI) To earn massive gains, you need cryptos that are easily accessible and provide the best crypto presale. Keep reading the article to learn about the best crypto for 2025 and choose that suits best for your investment requirements. Aureal One is emerging immensely as the promising crypto presale, offering massive gains and the best price. In the list below, we have the best crypto for 2025 that you must know about and let us go through each of them. Aureal One (DLUME): Utilizes a Deflationary Approach Aureal One Crypto seeks to connect real-world assets with blockchain technology, offering the promising crypto presale. By tokenizing physical assets (such as real estate or commodities), the initiative improves liquidity and accessibility for a wider array of investors. Click here to know more about Aureal One The best crypto for 2025 utilizes a deflationary approach, where a segment of the tokens is destroyed with each transaction. This system gradually decreases the available supply, which could elevate token value as demand rises. Investors Eyes on DLUME Presale Aureal One Crypto boasts more than 100,000 active followers and a dynamic online presence, utilizing community-driven expansion, a signature of thriving crypto projects such as Dogecoin and Shiba Inu. The presale period has shown significant investor enthusiasm, accumulating more than \$1.8 million rapidly. This initial momentum often indicates a favorable outlook for future performance. The tokens are currently priced at \$0.0011 per DLUME during this presale phase, and prices will gradually rise to \$0.005 in the subsequent presale stage. DLUME: A Diversified Ecosystem In addition to tokenization, DLUME could investigate applications in DeFi, international payments, and potentially NFTs. These applications have the potential to diversify the ecosystem and draw in a range of users and investors. DLUME is democratizing investment opportunities by facilitating fractional ownership of valuable assets. Collaborations with DeFi platforms and asset management companies can speed up adoption. Similar to Dogecoin, DLUME emphasizes cultivating a dedicated user community, which can greatly influence its market visibility. Entering the market amid a rising trend in crypto adoption sets it up favorably for expansion. DexBoss (DEBO): Get a Secure Trading Experience DexBoss (DEBO) is attracting considerable interest as the promising crypto presale for early 2025. It seeks to transform decentralized finance by providing smooth and secure trading experiences, featuring access to more than 2,000 cryptocurrencies, sophisticated trading tools, and liquidity farming. The platform aims to streamline the process of switching between fiat and crypto, collaborating with various fiat on/off-ramp providers to improve user access. 20x Returns Possible? The starting presale price is established at \$0.011 per DEBO token, with some forecasts indicating the price will increase to \$0.0505, suggesting possible 20x returns for early backers. The best crypto for 2025, DexBoss intends to accumulate a total of \$50 million through several presale rounds. The presale is organized into several rounds, with token prices rising in each following round to encourage early involvement. yPredict (YPRED): Unique Strategy with AI yPredict (YPRED) is gaining recognition as the promising crypto presale, capturing interest for its unique strategy in trading analytics. It provides a collection of AI-powered tools aimed at delivering traders with data-based insights, such as pattern identification, technical indicators, and sentiment evaluation. These instruments seek to provide traders with a statistical advantage in the market. Analyse Presale Through AI YPRED is priced at roughly \$0.01755 on MEXC, with a 24-hour trading volume of about \$105,090. Experts indicate that YPRED, the best crypto for 2025, may attain a value of \$1 in the future, suggesting considerable growth. The YPRED token has several roles within the ecosystem, allowing users to access the analytics platform. It also lets users pay for marketplace subscriptions and participate in staking options with appealing annual percentage yields (APYs). Qubetics (TICS): Improving Online Privacy Qubetics is a decentralized blockchain action aimed at perfecting online sequestration and scalability. The ecosystem features a decentralized VPN (dVPN), sophisticated decentralized operations (dApps), and a tokenomics frame aimed at incentivizing and promoting relinquishment. The main ideal of this best crypto for 2025 is to develop a secure, scalable, and accessible online structure for users around the globe. It also includes integrations with Layer-2 scaling solutions and NFT rollups. TICS in its Spectacular Presale Qubetics (TICS) is presently in Phase 16 of its promising crypto presale, offering tokens at a price of \$0.0455 each. The initiative has effectively gathered over \$9 million, sold in excess of 405 million tokens, and drawn in over 13,600 holders. Experts predict that \$TICS might hit
