

token was trading at \$0.5784. FLOKI (FLOKI) The gaming token and one of the leading memecoins, FLOKI also recorded significant price declines in the past day. According to CMC data, FLOKI's price fell 4.79% as the token sparked bearish candles in the Asian early morning hours of September 11. At the time of writing, FLOKI was trading at \$0.000121 as per CMC data. Additionally, FLOKI's price movement recently witnessed a death crossover in its moving average in August. The token's 200-day MA currently stands above the 50-day MA indicating a bearish run. Highlighted Crypto News Today:

- A US federal judge dismissed the Atomic Wallet class-action lawsuit due to lack of jurisdiction. - The judge granted plaintiffs an extra 21 days to strengthen the case. A federal judge in the United States has dismissed a class-action lawsuit against Atomic Wallet, an Estonian-based crypto firm. Philip Brimmer, a judge in the Colorado district court, agreed, concluding there were insufficient grounds for the U.S. court to handle the case. Following a \$100 million hack in June 2023, a group of users alleged that Atomic Wallet CEO Konstantin Gladyshev, shareholder Pavel Sokolov, and Evercode Infinite, the company that developed the wallet software, were liable for their losses. The hack affected approximately 5,500 users, who reportedly lost significant amounts of their cryptocurrencies, including Bitcoin (BTC), Ethereum (ETH), Tether (USDT), and Dogecoin (DOGE). In November 2023, Atomic Wallet sought to have the case dismissed, arguing that it had "no US ties." Moreover, plaintiffs argued that its app, which was available for download in Colorado, along with its advertisements, should have been sufficient to establish jurisdiction. However, the plaintiff's arguments were rejected, stating that the digital nature of Atomic Wallet did not imply that the company was targeting the residents of Colorado. Despite the dismissal of the lawsuit, Judge Brimmer gave the plaintiffs 21 days to strengthen their case. Meanwhile, they continue to face challenges as users seek to recover their lost funds and consider other legal avenues. On the other hand, Ilia Brusov, founder and shareholder of Evercode Infinite, owns a 12.8% stake in Atomic Wallet. Konstantin Gladyshev holds the remaining 74.4%. Although the class-action lawsuit has been dismissed, Atomic Wallet continues to face challenges. Users are still working to reclaim their lost funds and explore additional legal options. - Altcoins are showing resilience as BTC's dominance declines, with a 4.4% spike in the market cap. - Top altcoin gainers ICP and AAVE, saw over 10% growth, while STRK, WIF, and AR dropped by 6%. As we enter the final quarter of 2024, the cryptocurrency market stands on the brink of potential upheaval and opportunity. The Q4 has been marked by heightened activity and bullish trends, making it a prime time for investors. However, analysts have noted a growing resilience in altcoins, despite Bitcoin's recent downturn. BTC's price dropped to as low as \$52,827 on September 7, marking a 10.8% decline from the previous week. Although Bitcoin has partially recovered to \$56,001, remaining below the \$60,000 level mark as seen on August 30. The data reveals that BTC's dominance in the market has decreased by 1.3%, with its current dominance at 57.23%. This decline, coupled with a 4.4% increase in the market cap of cryptocurrencies except the top 10, suggests that investors might be diversifying away from BTC and shifting to alternative assets, such as altcoins. Moreover, the total altcoin Open Interest (OI) has dropped by 55% excluding ETH, from its all-time high. Pseudonymous crypto trader Emperor suggests that altcoins might continue to outperform BTC, signaling proximity to a parabolic phase in the altcoin cycle. Altcoin Performance and Market Trends as 2024 Nears Its End Another notable altcoin, Solana (SOL) is trading at \$132.66, with whale activity and strong metrics suggesting a breakout to \$145-\$150. With BTC and Ethereum ETFs approved, Solana is a potential next candidate despite SEC skepticism. Dogecoin (DOGE) has shown recent bullish signs, with a 5% increase over the past week, following BTC's rebound. Despite this, DOGE has struggled to break the \$0.12 ceiling and is currently priced at \$0.10. Top gainers in altcoins are Internet Computer (ICP), and Aave (AAVE) with over 10% increase in the past 24 hrs. And losers in the list are, Starknet (STRK), Dogwifhat (WIF), and Arweave (AR) experiencing a 6% dip in the past day. In conclusion, as we approach the end of 2024, the cryptocurrency market is poised for significant movements. Investors closely analyze altcoin performance, Bitcoin dominance, and market sentiment to strategically position their portfolios for potential gains. Highlighted Crypto News Today: Is Bitcoin (BTC) Entering a Prolonged Slump Below \$58K?

- Elon Musk has announced DOGE as the mascot for his new Department of Government Efficiency. - Following the Musk announcement, Dogecoin's price has risen by 2.5% in a day. Elon Musk has once again captured the attention of the Dogecoin community by announcing that "Dogecoin will serve as the official mascot for his proposed Department of Government Efficiency." But what exactly does this mean? Recently, the Tesla and SpaceX CEO posted a tweet referencing a "Department of Government Efficiency," abbreviated as "DOGE," sparking speculation that he might be eyeing a new role in government if Donald Trump wins the 2024 presidential election. The tweet featured an AI-generated image of Musk at a desk with a sign reading "D.O.G.E.," humorously connecting the idea of government efficiency with Dogecoin. This playful fusion of cryptocurrency and politics drew attention in the crypto community and sparked a modest rally in Dogecoin's price. Following that, Elon Musk highlighted his decision to DOGE as the official mascot in a follow-up tweet, where he commented on a DogeDesigner post featuring the US flag, with Musk holding up Dogecoin in his hand. The announcement has resulted in a slight uptick in Dogecoin's value. Impact of Musk's Announcement on Dogecoin and Shiba Inu Elon Musk's recent announcement has had a significant effect on both Dogecoin and Shiba Inu. According to the CMC data, Dogecoin's price has risen to \$0.09833, with its daily trading volume surging by 26% to \$470 million. In parallel, people also connected the Shiba Inu dog, known as "Doge," to Musk's announcement. Since Shiba Inu is the face of Dogecoin, they see Musk's focus on Dogecoin as a nod to the dog meme that helped popularize it. At the time of writing, Shiba Inu was priced at \$0.0000132, and its trading volume climbed by 30% to \$118 million. Both cryptocurrencies have benefitted from the recent news, reflecting the continued interest and influence of Elon Musk in the world of memecoins. Further, the U.S. District Court for the Southern District of New York

recently dismissed a federal lawsuit against Elon Musk and Tesla, ruling that Musk's tweets about Dogecoin were not misleading but rather optimistic expressions. Highlighted Crypto News Spanish Banking Giant BBVA Rolls Out USDC Integration for Swiss Clients

The crypto market never fails to amaze, with new digital currencies and projects popping daily. These new players aim to attract investors by offering brand new features or addressing specific market needs. Recently, three crypto have gained significant attention within the digital currency community: Artemis Coin, Pepe Coin, and Shiba Inu. Each of these digital currencies presents its own unique value proposition to potential investors and users. However, Artemis Coin has attracted investors by solely focusing on decentralised commerce. This approach potentially positions Artemis Coin as an important development in the application of blockchain technology to online transactions. Artemis Coin: Revolutionising Crypto Commerce Artemis Coin (ARTMS) aims to create a decentralised marketplace that challenges the scope and functionality of e-commerce, along with the incorporation of blockchain technology. At the centre of Artemis lies its multi-chain support that helps to conduct transactions across various blockchain networks including Ethereum, Solana, BNB, TRON, Avalanche, and Cronos. What sets Artemis apart is its diverse offering. The platform isn't just limited to retail products; it extends to professional services as well. Imagine a world where you can not only purchase goods using crypto but also book a doctor's appointment or hire a freelance graphic designer, all within the same ecosystem. This comprehensive approach to decentralised commerce is what makes Artemis a potential frontrunner in the next generation of crypto projects. Smart contracts are at the core of the platform. This not only protects buyers and sellers but also builds trust within the community – a crucial factor for long-term success in the crypto space. Looking at the tokenomics, Artemis Coin presents a distribution model as follows: " Total Supply: 100,000,000,000 \$ARTMS " Presale: 15% " Marketing: 25% " Project Funds: 25% " Rewards: 15% " Liquidity: 10% " Staking: 10% This balanced allocation ensures a focus on project development and marketing while providing ample opportunities for community engagement through rewards and staking. It's a tokenomics model designed for long-term value creation and sustainability. Pepe Coin Pepe Coin takes a different approach, drawing inspiration from popular internet memes. It has quickly gained popularity, especially among younger users who are familiar with online trends. Pepe Coin's main strength is its active community of supporters. While it may not offer the same practical uses as Artemis, its rapid growth has made it a notable player in the cryptocurrency market. Shiba Inu Shiba Inu is often compared to Dogecoin, another popular cryptocurrency. Like Pepe Coin, Shiba Inu relies heavily on its community of supporters. It has expanded to include its own trading platform and a marketplace for digital art. While Shiba Inu has seen significant growth and has many supporters, it faces the challenge of maintaining its popularity and finding long-term practical uses. Looking Ahead Each of these projects brings something different to the cryptocurrency market. Pepe Coin and Shiba Inu demonstrate how online communities can drive interest in digital currencies. Artemis Coin, with its focus on creating a practical digital marketplace, aims to address specific needs in online commerce. Artemis's goal of creating a comprehensive digital marketplace could potentially fill a gap in the current market. As the crypto presale project moves towards its full launch, many people interested in cryptocurrencies are paying close attention. In the rapidly changing world of digital currencies, Artemis Coin, Pepe Coin, and Shiba Inu represent different aspects of cryptocurrency development. While currencies based on internet trends have shown impressive growth, projects like Artemis that focus on practical uses may be important for the wider adoption of cryptocurrencies. For those interested in new developments in digital currency, Artemis Coin's initial sale offers an opportunity to invest early in a project aimed at reshaping digital commerce. For more information about Artemis Project: - Website: <https://artemiscoin.co> - Twitter: <https://x.com/CoinArtemis> - Telegram: <https://t.me/coinartemis> Disclaimer: TheNewsCrypto does not endorse any content on this page. The light-hearted nature of crypto has bounced back into the limelight during crypto's latest purple patch, with the rise in crypto prices this year accompanied by a resurgence in so-called memecoins, led by the likes of Dogecoin, Pepe and Shiba Inu. According to data from BDC Consulting, the number of meme-related projects in the crypto space has jumped more than 440% in the last couple of years, making memecoins the fourth-most valuable sector in the industry, ahead of both decentralized finance and blockchain services. However, a more recent report from Chainplay notes that anyone thinking of dumping their life's savings into the latest memecoin should proceed with caution. The State of Memecoin 2024 report notes that the average life expectancy of such projects is less than one year – around a third of the lifespan of more purposeful crypto projects. This aligns with the fact that almost 60% of investors in memecoins see these tokens as short term bets. It also explains why a whopping 97% of all memecoins have already ceased to exist. The Rise Of The Memecoin Trend Before they die, a lot of new memecoins tend to explode in popularity, and much of the enthusiasm for new projects stems from the incredible success of the original memecoin, known as Dogecoin. It was created back in 2013 as a joke based on the then-popular Doge internet meme featuring a Shiba Inu dog. The coin featured a humorous image and attracted a wildly enthusiastic fan base that often used it for charity, tipping and fun. In addition, its popularity was boosted no end by the one and only Elon Musk, who has tweeted about it numerous times over the years, hailing it as a potential world currency and boosting its price. The success of Dogecoin led to the emergence of a glut of memecoins that followed in its wake, either trying to replicate the formula it used or creating their own. Some were very similar, such as the Dogecoin clone Shiba Inu, while others, like Dogelon Mars, tried to cash in on Elon Musk's close association with crypto. Floki Inu and Samoyedcoin were other dog-inspired memecoins, and others have since emerged that are based on pop culture, such as the irrepressible Pepe, the adult-themed token CumRocket, and HarryPotterObamaSonic10Inu. There are manifold reasons behind the

surging popularity of some memecoins. For one thing, theyâ€™re funny and appealing, and theyâ€™re also very cheap and easy to buy, lowering the barrier to entry while having a lot of potential for big returns. Some also benefit from network and bandwagon effects, as more people buy into the hype, driving up demand for the coins. Why Do So Many Die? Although many memecoins have seen their value surge, a lot of them have proven themselves to be unsustainable. Some of the challenges they face, and the reason for their decline, include a simple lack of innovation. Many memecoins are basically just clones, or forks, of existing tokens, and they donâ€™t offer any novel features or compelling use cases. Their appeal is based solely on the meme they represent, which is not enough to sustain interest in them. Others have been encumbered with poor tokenomics and governance models that left them vulnerable to dilution, inflation, manipulation and scams, while others were plagued by low liquidity and high fees that hindered the ability of users to trade them. As a result, the crypto industry has had a mixed reaction to the rise of memecoins. According to Chainplayâ€™s report, one in six investors describe memecoins as a â€œmust-haveâ€ in their crypto investment portfolios. Proponents of memecoins say they represent the simplest and purest examples of cryptoâ€™s promise to democratize finance. The great thing about memecoins is that anyone can launch them, based on any kind of meme. Some of the more humorous examples include Smoking Catfish and Kamala Horris. In addition, a lot of celebrities and influencers have attempted to cash in on the concept, with the likes of Iggy Azalea, Caitlyn Jenner and even Andrew Tate launching their own memecoins. On the other hand, some of the more serious voices in the crypto world have called out memecoins for perpetuating the â€œpump-and-dumpâ€ stigma that has long plagued the industry and arguably hindered its mainstream adoption. They include Ethereum co-founder Vitalik Buterin, who criticized memecoin culture in a post on X, adding that if they want to be beneficial, they should create some kind of â€œpublic-good goalâ€. He stated his belief that new tokens, memecoin or not, should be made to last for decades rather than simply bubbling around for a few months until theyâ€™re forgotten. Building A Lasting Impact Some memecoin projects appear to have heeded those words and are making extra efforts to have a more lasting impact on the crypto world. The finest example is, of course, Dogecoin, which has become accepted by more than 50 established brands globally, after getting traction as a currency for tipping and charity. A more recent example is LADYS, which is a memecoin founded last year as a homage to the popular Milady NFT collection. LADYS benefited immensely from a tweet by Elon Musk shortly after it launched, boosting its availability on numerous well-known crypto exchanges, and at one point its market capitalization exceeded \$100 million. LADYS, which bills itself as a â€œtokenized, fully memetically optimized white pillâ€, is a shining example of how a memecoin community can come together to make something out of nothing. While the team behind it continues to caution that LADYS has â€œno intrinsic value or expectation of financial returnâ€, they have established a vision that aims to build upon the tokenâ€™s brand and create a â€œlively, engaging environmentâ€ where its community will thrive on â€œplayful interactionsâ€ and a shared enthusiasm to keep the project alive. It also wants to create more unity among memecoins through friendly rivalries, fostering a healthy spirit of competition that, hopefully, will encourage other memecoin projects to up their game. To that end, LADYS has set about moving from the digital realm to the physical world, with plans to launch a selection of LADYS-branded merchandise that will be sold via its website, giving more utility to the LADYS token and increasing its brand recognition. This plan mirrors a growing trend in the memecoin space, which has seen a number of tokens attempt to tap into their communityâ€™s enthusiasm through merchandise. For instance, the biggest cat-themed memecoin on Solana, Wen Coin, recently partnered with Adidas to create its first product, a series of adorable Wen Cat plushies. Theyâ€™re following a model first claimed by popular NFT projects, such as Pudgy Penguins, which generated a remarkable \$10 million in revenue from the sale of its own plushies. Other memecoins have opted to pursue different strategies in an effort to make themselves more meaningful. For instance, Floki Inu has announced itâ€™s supporting a charity co-founded by Kimbal Musk, the brother of Elon. Through this partnership, designed to appeal to environmentalists, a portion of its transaction fees will be donated to urban gardening projects across the globe. Some Memecoins Can Thrive While some memecoins are clearly becoming more organized and trying to establish some kind of meaning beyond the meme itself, their future will inevitably be defined by market demand and community sentiment. Lest we forget, memecoins are driven primarily by their memes and the hype they generate. These projects can be exciting, fun and entertaining, but investors should remember that such investments are also fraught with risk. However, those memecoins that can maintain the interest and enthusiasm of their communities, whether thatâ€™s through merchandise, partnerships or other kinds of initiatives, have a good chance of carving out a long-term and sustainable future.

- Memecoins suffer sharp declines, averaging 63.73% drop from peak values. - Increased trading volume contrasts with declining market capitalization in memecoins. The cryptocurrency market continues to languish in a prolonged bearish phase, with major cryptocurrencies hitting new lows and altcoins suffering double-digit declines over the past week. The global market capitalisation currently stands at \$2.02 trillion, reflecting a 1.39% decline, while trading volume has surged by 68% in the past 24 hours. Despite the increased trading activity, the memecoin spaceâ€™a favourite among tradersâ€™has been particularly hard hit. In the last week alone, Dogecoin (DOGE) has fallen by 12%, Shiba Inu (SHIB) by 11%, Pepe (PEPE) by 20%, Wifecoin (WIF) by 23%, Bonk (BONK) by 20%, and Floki (FLOKI) by 24%. Known for their volatility, memecoins have historically experienced significant highs and lows, but 2024 has not mirrored the successes of 2023. Over the past year, the top 10 memecoins have lost an average of 63.73% from their peak values. DOGE has declined by 57.93%, SHIB by 70.86%, PEPE by 58.16%, WIF by 70.93%, BONK by 64.63%, FLOKI by 65.97%, Brett (BRETT) by 62.59%, Popcat (POPCAT) by 43.77%, Bome (BOME) by 79.48%, and Mew (MEW) by 62.99%, according to lookonchain. What is Ahead For Memecoins? In the past 24 hours alone, the overall memecoin market capitalisation has dropped by 5%. FLOKI hit a 13-day low of \$0.00011481, DOGE reached a 25-day low of \$0.09388, PEPE fell to \$0.00000706â€™a 13-day lowâ€™WIF hit a two-week low of \$1.38, and BONK declined to \$0.00001667, a 25-day low. Analysts suggest that memecoins will take time to recover as the market remains under pressure. DOGS, a new

memecoin on the TON blockchain, emerged as the top loser, dropping 14% to \$0.00001667, although its trading volume increased by 17%. The road ahead appears challenging for memecoins, with bulls likely to struggle in the near term. Highlighted News Of The Day

- This comes after Elon Musk's refusal to name a legal representation for the company. - Users in Brazil who use the X platform said they could still access it. X (formerly twitter), a social media platform, has been stopped in Brazil by an order of a Brazilian Supreme Court judge, after Elon Musk's refusal to name a legal representation for the company. As stated in an Associated Press report from August 30, Justice Alexandre de Moraes carried out his threat to shut down X's activities in Brazil in the event that Musk did not designate a legal counsel by August 29. The platform would defy [Moraes's] unlawful demands to suppress his political opponents, according to X's Global Government Affairs team. Ongoing Tussle What X may do next for Brazilian users is uncertain. According to Musk's many posts, Justice Moraes was a "dictator" and "evil" because of the alleged unlawful political censorship he engaged in. X was the subject of Moraes's investigation because of the spread of false material on Jair Bolsonaro, the former president of Brazil. Users in Brazil who use the X platform said they could still access it. Of the approximately 217 million people living in the nation, about 20 million use X, according to Statista. The decision came after satellite provider Starlink announced on August 29 that Justice Moraes had blocked the business's Brazilian finances. Starlink is a subsidiary of Musk's other firm, SpaceX. On the other hand, with a dismissal of the case citing the tweets as "aspirational and puffery," a US district court sided with Elon Musk and Tesla in the DOGE manipulation lawsuit. Elon Musk has stated his intention to reinstate Dogecoin payments for Tesla products after the victory. Highlighted Crypto News Today:

- Meme coins are struggling to regain their recent highs. - The fear and greed index of the global crypto market stays in neutral sentiment. The crypto market has been wading in the market dip. Several tokens hit new lows reflecting the intensity of the bearish phase. Among all altcoins, meme coins experienced a considerable downfall in August. The leading cryptocurrencies, Bitcoin (BTC) and Ethereum (ETH) are struggling to maintain their price at a moderate pace. Currently, BTC is trading below \$60K and ETH within the \$2.5K range. The global crypto market has witnessed a decline of 10% in market cap in August. Moreover, the fear and greed index stays at 46, indicating a neutral sentiment in the market. According to CMC data, the meme coins that witnessed maximum loss over the last 30 days are BOME, BRETT, BONK, and WIF. BOME Book of Meme (BOME) has considerably declined over the past month, noting a 44.39% plunge. The meme coin hit the lowest of \$0.005389 on August 5. Since then, the asset failed to maintain a stable price momentum. It fluctuated within the range between \$0.007749 and \$0.00602. BOME continued the loss till last week by 13.52%. Currently, the asset is trading at \$0.006236, with a spike of 0.77%. Whereas, the trading volume is down by 24.40%. BRETT The meme coin witnessed a drop of over 40% in the last 30 days. BRETT encountered a steady low at \$0.06146 on the 5th of August. The token price varies between the \$0.01056-\$0.07449 range. BRETT extended its loss over the past week by 12.82% and at the time of writing, BRETT is down by 1.20%, trading at \$0.08162. The daily trading volume plunged by 22.75%. BONK BONK has displayed a drop of 33.67% in the past month, and on August 5, the meme coin traded the lowest at \$0.00001608. BONK's price has fluctuated severely from \$0.00002172 to \$0.0000179. BONK was down by over 5.60% in the last week. The meme coin is currently trading at \$0.00001801, with a drop of 2.89% and its trading volume plunged by 17.39%. WIF dogwifhat (WIF) showcased a 34.49% decline over the last 30 days. The meme coin recorded its lowest price on August 5 at \$1.1234. In this timeframe, WIF struggles to maintain a stable pace, fluctuating between \$1.9145 and \$1.5329. The meme coin continued in the bear hold by dropping over 5.60%. At press time, WIF traded at \$1.54, marking a 3.65% drop in the last 24 hours, with a decrease of 10.96% in trading volume. Several notable meme coins have declined over the past month, including PEPE, which was down by 33.70%. DOGE and SHIB followed with a plunge of 21.60% and 15.55%, respectively. Highlighted Crypto News Dormant Coinbase User Sparks Attention with Significant Shib Burns

- SHIB burn rate has spiked by 139103.39% in the last 24 hours according to Shibburn data. - The memecoin's daily price has not shown any notable upward movements. The Shibarium community is known to show a spur of activity apart from being an active cornerstone for the memecoin sector. Shiba Inu, the second largest memecoin in the market often garners market attention with its burn rates spiking multifold. In recent times, as of the last 24 hours, the Shib burn rate has soared by 28145% due to specific activities. Specifically, Shibburn, an on-chain monitoring platform, announced the movement of a dormant Coinbase wallet burning SHIB tokens on its X account. The mentioned dormant wallet identified with the address "0x713a" burnt 96,086,320 tokens worth \$1.35K 12 hours ago. This particular wallet's action accounted for the highest Shib Burn over the last 2 months. Previously another anonymous wallet ("0x7fe") burning 290M tokens of the memecoin topped the current user's movements. Moreover, this particular wallet with the "0x713a" address, had remained dormant for nearly 5 months before this recent transaction. During that time, it recorded an ETH transaction breaking its 2-year dormancy. Notably, the 96 million Shib tokens that the Coinbase wallet burnt were transferred to it from a Uniswap-associated address. Meanwhile, the Shibarium community reported a 139103.39% increase in daily Burn rate. Additionally, in the last 24 hours, the community burnt a total of 96,634,993 \$SHIB tokens. The Shib burn occurs to cause scarcity in the tokens and propels prices upward. However, the current burn has not achieved its target, as prices have shown downward movements. Shiba Inu (SHIB) Price Overview The Shiba Inu memecoin's daily price chart shows the token to have experienced a 0.23% price decline. While, in the Asian afternoon hours, SHIB traded at an intra-day high of \$0.00001452, it was subjugated to bearish takeovers. At the time of writing, the memecoin was trading at \$0.00001415 according to CMC data. Additionally, the token's weekly

performance stands at a 0.94% decline as SHIB has faced a tough month in August. However, the token's 24-hour trading volume has shown an increase of 1.49%. While the token's price hasn't shown bullish turns, the Shiba Inu community as aforementioned is spurring with activity. Recently, it launched a Decentralized Autonomous Organization to enhance community governance. Highlighted Crypto News Today:

- WIF whale's 643K token purchase challenge ongoing bearish trend. - WIF trades down 35% in 30 days amid market volatility. The memecoin space is abuzz with the recent activity of a major whale involving the dog-themed token WIF. This whale, the largest holder of WIF, recently borrowed 1.4 million USDC from Kamino, spending 1 million USDC to purchase 643,832 WIF at \$1.55 just six hours ago. The whale currently holds 28.66 million WIF, valued at \$44.13 million, with a profit on it amounting to approximately \$65.6 million. On August 25, the same whale spent 1.54 million USDC to acquire 800,556 WIF at \$1.92. Before that, on August 23, they deposited 21.9 million WIF (\$35.48 million) into Kamino and borrowed 3.24 million USDC, using 2.7 million USDC to purchase 1.8 million WIF. Moreover, the whale's involvement with it dates back to December 2023, when they spent \$226,000 to buy 19.86 million of them at just \$0.0114. Additionally, they registered the domain "binance-insider.sol" and spent 86,738 SOL (\$8.92 million) to purchase 17.23 million dogwifhat in a single transaction. How Does This Impact WIF? Currently, it is experiencing a 3.4% decline, trading at \$1.54, with trading volume down 26%. The token has been under prolonged bearish pressure, hitting a seven-day low of \$1.48 yesterday. Over the past week, it has declined by 6.5%, and over the past 30 days, it has dropped 35%. This decline mirrors the broader memecoin market, which has seen a 1.5% dip in market cap. Neighboring tokens BONK and FLOKI have also faced declines of 2.8% and 17%, respectively. Technical analysis shows it entrenched in a bearish trend, with the 9-day EMA at \$1.62 and an RSI of 43. It is nearing oversold territory. Key resistance levels lie at \$1.77 and \$2.05, while continued bearish sentiment could see the token drop to \$1.47, with support at \$1.29. Highlighted News Of The Day Elon Musk and Tesla Celebrate Dogecoin Manipulation Lawsuit Dismissal

- ParaFi Capital raises \$120M from investors highlighting the increased optimistic approach in the crypto sector. - A portion of this capital will be used to acquire General Partner stakes in other crypto funds. ParaFi Capital, a digital asset management firm based in New York, raised \$120 million from investors, including Theta Capital Management and Accolade Partners. This fundraiser highlights the increasing growth and renewed optimism in the crypto investment sector. ParaFi Capital, founded in 2018 by Ben Forman, has been a significant player in the digital asset sector. The firm operates on both hedge fund and venture capital strategies, focusing on cryptocurrency and blockchain investments. With a 22-member team, ParaFi has consistently adapted to the evolving market, emphasizing long-term value creation through investments in early-stage blockchain projects and DeFi protocols. In addition, a portion of this capital will be used to acquire general-partner (GP) stakes in other crypto funds, focusing on specific market segments. Over the next three to five years, ParaFi aims to build a portfolio of 30 to 50 such stakes. This approach is designed to diversify the firm's exposure to the crypto market. Institutional Investors Bet Big on Crypto Ben Forman explained that while GP stakes are a growing asset class in traditional finance, they have not yet been established in the crypto sector. The involvement of prominent investors like Theta Capital Management, Accolade Partners, and Henry Kravis, co-founder of KKR & Co., highlights the growing confidence in the crypto market. In addition to ParaFi's fundraising, other crypto firms and venture capitalists (VCs) are also raising capital. For example, Lemniscap, a crypto-focused VC firm, recently raised \$70M to invest in startups on blockchain technology. These efforts indicate the increased funding activity in crypto as the market recovers from the 2022 market crash. Moreover, ParaFi's strategic shift and successful fundraising signal a new phase of growth and institutionalization in the cryptocurrency market. By building a diverse portfolio of crypto funds, ParaFi is positioning itself for continued success. It is contributing to the broader development of the crypto investment ecosystem. Highlighted Crypto News Today: SEC Cracks Down on OpenSea as NFT Market Faces Legal Threat

- Memecoins like Dogecoin, Pepe, and Dogwifhat have shown significant losses amid the market downturn. - The crypto market cap dropped 5.58%, and significant liquidations were observed. The cryptocurrency market has been under significant pressure as bearish sentiment led to a 5.58% drop in the overall market cap. Bitcoin, the leading cryptocurrency, plunged to an eight-day low of \$58,034, marking a 5% decline. Ethereum also faced a sharp downturn, briefly falling to a 20-day low of \$2,481. Additionally, \$110 million was liquidated from the market in the past few hours. Even the typically volatile meme coins were not spared from this downward trend, with the meme coin market cap recording a 5.3% decline. Dogecoin (DOGE) Dogecoin saw a 4% decrease in the past 24 hours, currently trading at \$0.1003. Despite the downturn, trading volume surged by 31%. DOGE hit a nineteen-day low of \$0.1850, fluctuating between \$0.187 and \$0.2172 today. Over the past month, Dogecoin witnessed a 33% surge. The 9-day Exponential Moving Average (EMA) stands at \$0.09739, while the daily Relative Strength Index (RSI) is nearing oversold territory at 45. Analysts suggest that if bullish momentum resumes, Dogecoin could reach \$0.1156, but continued bearish pressure might push it down to \$0.0899. Pepe (PEPE) Pepe experienced a 4% decline in the last 24 hours, currently trading at \$0.000008089. Despite the drop, trading volume increased by 33%. PEPE reached a nine-day low of \$0.00000703, with trading ranging between \$0.000007163 and \$0.00000828 today. Over the past month, Pepe surged by 77%. The 9-day EMA is at \$0.00000746, and the daily RSI is nearing oversold conditions at 45. Analysts suggest that if bullish momentum persists, Pepe could rise to \$0.00000923, while a bearish scenario might see it drop to \$0.00000660. Dogwifhat (WIF) Dogwifhat witnessed a 6% decline in the past 24 hours, currently trading at \$1.63, with a 32% increase in trading volume. WIF hit a seven-day low of \$1.51, fluctuating between \$1.51 and \$1.75 today. Over the past month, it declined by 36%. The 9-day EMA is at \$1.68, and the daily RSI is at 46, showing it is nearing oversold conditions. Bulls might push it to \$2.17, while bears could drive it down to \$1.30. This downturn has raised concerns among investors, who are now

closely monitoring the market for potential shifts in sentiment and price movements. **Highlighted News Of The Day** MakerDAOs Freeze Function in Upgraded Stablecoin Raises Concerns

SwapKit.dev, a leader in cross-chain infrastructure, has integrated BitPay, a Bitcoin and cryptocurrency payment processor. This integration allows BitPay Wallet users to directly swap a wider range of cryptocurrencies within their wallets. The integration expands the capabilities of the BitPay Wallet, enabling users to swap a wide array of cryptocurrencies, including Bitcoin, Bitcoin Cash, Ethereum, Dogecoin, and Litecoin, as well as over 4,800 ERC-20 tokens. By utilizing liquidity from THORChain and other decentralized exchanges (DEXs), BitPay users gain unprecedented asset flexibility without the need to leave their wallets. Keaton Freeman, Partnership Director at SwapKit.dev, highlighted the integration's goal of streamlining the cryptocurrency payment process for both businesses and consumers. He stated, "SwapKit's integration with BitPay will empower businesses of all sizes to tap into the vast potential of crypto payments. We're confident this will streamline the checkout process and enhance the user experience for both merchants and customers." This partnership brings several key benefits, including expanded blockchain support, allowing BitPay Wallet users to access a wider variety of cryptocurrencies. SwapKit.dev's cross-chain DEX aggregator ensures seamless swaps between assets by automatically selecting the optimal route for competitive pricing and minimized transaction slippage. The integration also reduces the complexity of cross-chain transactions. By enabling swaps to be completed in a single transaction, the process becomes more efficient with fewer steps required from the user, ultimately lowering barriers to cryptocurrency adoption for payments, particularly for those new to cross-chain exchanges. Bill Zielke, Chief Marketing Officer at BitPay, emphasized the advantages for BitPay Wallet users: "The integration with SwapKit.dev provides our users with the ability to perform cross-chain swaps across multiple networks while maintaining self-custody of their assets. This addition offers greater flexibility in managing digital assets within the BitPay Wallet." In addition to user-facing benefits, developers gain access to SwapKit.dev's SDK and API, which offer tools for integrating cross-chain swap functionality into applications. The toolkit supports transactions involving Bitcoin and over 5,500 other crypto assets across more than 14 blockchains, broadening the range of services that can be built on top of the BitPay platform. The collaboration between SwapKit.dev and BitPay aligns with the ongoing mission to make cryptocurrency more accessible and usable in everyday transactions. By providing more options for swapping and managing digital assets within the BitPay Wallet, this integration aims to enhance the overall utility of cryptocurrencies in payments and financial services. For more information about the SwapKit and BitPay integration, visit SwapKit.dev. About SwapKit SwapKit.dev offers an API and SDK designed to simplify the integration of THORChain services, providing multi-chain functionality for decentralized applications (dApps) with minimal coding. The platform supports seamless swaps across over 5,500 crypto assets on 14 blockchains, offering tools for optimized quotes, gas pricing, wallet connectivity, and DEX aggregation. SwapKit.dev's infrastructure is used by various protocols to facilitate cross-chain transactions. About BitPay Founded in 2011, BitPay is a company specializing in blockchain payment processing. The company's services aim to reduce payment processing costs, eliminate fraud chargebacks, and enable borderless payments using cryptocurrencies. The BitPay Wallet provides users with a solution for managing digital assets, including the ability to buy, store, swap, sell, and spend cryptocurrency. BitPay operates globally, with offices in North America, Europe, and South America, and has secured funding from investment firms such as Founders Fund, Index Ventures, and Virgin Group. For more information, visit BitPay. - Kamala Harris's odds on Polymarket have risen to 50%, while Trump's have declined to 49%, reflecting a tight race. - The withdrawal of Robert F. Kennedy Jr. and his apparent endorsement of Trump could impact the election dynamics. Trump and Kamala are equally standing at the same win rate. Polymarket, the decentralised prediction platform, allows people to bet on their opinions. On a recent poll in the platform, there was a poll between Vice President Kamala Harris and former president Donald Trump. This was aimed to predict the winner of this coming November Presidential election. Polymarket involves staking funds and the platform has amassed over \$733M in the bet. On August 23rd, Polymarket in its official Twitter post reported that Kamala Harris's odds were up 3%. Bet for Kamala raised from 46% to 50% gaining \$84M bet this weekend. And the Trump graph is showing an 11% decline from 53% to 49%. Candidate Robert F Kennedy Jr officially dropped out of the presidential race last week. RFJ Jr joined the stage with Trump appearing as the special guest at his Arizona rally. So this withdrawal of RFK was intended to endorse Trump in the upcoming election. People, especially crypto investors are excited to see the alliance of "Pro-crypto" influencers. Polymarket is Not a Part of Gambling In a recent discussion, Vitalik Buterin, CEO of Ethereum, addressed the common misconception surrounding Polymarket, a blockchain-based prediction market. Buterin stated, "Putting Polymarket into the category of gambling is a big misunderstanding." He emphasized that, unlike traditional gambling platforms, Polymarket is designed to gather collective intelligence and provide insights into real-world events through user predictions. Buterin pointed out that Polymarket operates on a decentralized network, ensuring transparency and minimizing the risk of manipulation. **Highlighted Crypto News Today: FET Outperforms Major Cryptos With a 70% Weekly Gain**

Staking cryptocurrencies are a powerful way to get rewards while holding on to your digital assets. But flexibility in plans related to staking is paramount in the process of maximizing earnings and managing risks associated with such investments. This article now puts into perspective the five best

platforms to earn competitive rewards. The best platforms for a secure and flexible crypto staking plan can be ranked as follows. 1. StakingBonus.com 2. Binance Staking 3. Kraken Staking 4. Coinbase â€” Staking 5. Crypto.com Staking StakingBonus.com StakingBonus is the best when it comes to flexible staking plans. With plenty of diversified plans on the table across numerous cryptocurrencies, any user can pick a plan that is sure to work for them in regard to their financial goals. Be it the desire to stake major coins like Bitcoin, Litecoin, Ethereum, or some less popular ones like Dogecoin and XRP, StakingBonus has your back. Diverse Staking Options: StakingBonus supports a wide variety of digital currencies for staking as mentioned below. Bitcoin (BTC): Holding the title of the number-one crypto asset, BTC offers sizable opportunities for secure and lucrative staking on StakingBonus. Litecoin (LTC): It has faster and more scalable fundamentals than BTC, thus being preferred by many for staking. Ethereum (ETH): This is popular with the rise of Ethereum 2.0. StakingBonus provides one of the most competitive rates for staking ETH as you tap into the worldâ€™s leading smart contract-based platform. Bitcoin Cash (BCH): This offers an opportunity to get returns on a cryptocurrency that boasts low-cost transaction fees and quicker block times. Dogecoin (DOGE): Staking DOGE on StakingBonus helps you attract this rising star in the world of cryptocurrencies. XRP: Known for its cross-border happenings, XRP remains another option for staking on StakingBonus which brings flexibility and a possible stable return. TRON (TRX): It can be a possibly valuable asset for staking. StakingBonus can offer lucrative reward rates for staking TRX. Tether (USDT): Being a stablecoin, there is less price volatility, so it can be proved good to stake when thereâ€™s low risk. Flexible Staking Periods: The platform provides different staking periods, from short-term to long-term options, so users will be flexible in gaining access to their funds earlier if necessary. While in general flexible staking options are available on platforms like Binance and Kraken, owing to the diversified nature of cryptocurrencies at StakingBonus, combined with flexible staking periods and always high rewards, it makes this platform incomparable to others when one is looking for flexibility. Binance Staking Binance is one of the largest and most reputed cryptocurrency exchanges. It offers a wide array of staking options, from which it will provide flexibility in staking periods and the supported assets to both casual and serious investors on its staking platform. Extensive Cryptocurrency Support: Binance lends support to huge arrays of cryptocurrencies for staking. This includes major assets like ETH and BNB and even stablecoins like USDT. Flexible and Locked Staking: Binance has both flexible and locked staking. Users can choose to have higher rewards with longer lockup periods or easily accessible funds through flexible staking. Kraken Staking Kraken is one of the more reliable crypto exchanges, focusing much on security and user experience. Krakenâ€™s staking platform is versatile in terms of staking duration and caters to users seeking a secure environment for their investments. Flexible Staking Periods: Kraken has different lock-up periods for the staked assets, giving flexibility for users who want to liquidate their funds quickly. Security Centered: Krakenâ€™s staking platform is very secure, with an overwhelming amount of assets kept in cold storage. This makes the platform perfect for users who want security in their staking activities. Competitive Rewards: Kraken offers very competitive staking rewards, especially for the bigger cryptos like ETH and Polkadot DOT. Coinbase â€” Staking Coinbase is one of the most user-friendly cryptocurrency platforms and is, therefore, perfect for beginners in this field. It is also very intuitive for staking services offered at Coinbase, with great flexibility in staking operations focusing on major cryptocurrencies in the industry. Simplicity and Accessibility: Coinbase ensures simplicity in the platform and at the same time ensures accessibility to each and every user with an easy-to-use interface consisting of self-explanatory options for staking. Regulatory Compliant: Coinbase is fully regulated, providing an extra layer of security and trust, especially for new cryptocurrency investors. Crypto.com Staking Crypto.com is famous for its complete package when it comes to cryptocurrency services, which now include staking. It offers flexible staking options and brings in some additional benefits that really draw in the users to maximize their earnings. Wide Range of Staking Assets: Crypto.com supports staking a large variety of digital currencies, which includes but is not limited to CRO, ETH, stablecoins like USDT, etc. Flexible Lock-Up Periods: It provides different lock-up periods for more flexibility with regard to a userâ€™s liquidity needs. Other Benefits: Crypto.com offers numerous other benefits, including higher interest rates that users can earn by staking. Conclusion StakingBonus is second to none for flexible staking plans. The site offers unbeatable combinations of diverse cryptocurrency options, flexible staking periods, and high rewards. Anyone looking to make a passive income with staking can consider the platform as the foremost choice in making financial decisions. Of course, there are other highly recognized players in this space, such as Binance, Kraken, Coinbase, and Crypto.com, offering quality staking services; however, StakingBonus always provides better flexibility with more earnings than its competitors. This makes it the first choice for both newbie and professional stakers alike. Disclaimer: TheNewsCrypto does not endorse any content on this page. - Base is launching its native ENS subnames â€œBasenamesâ€ through a Dutch auction. - The initial pricing is at 100 ETH, descending to 0.39 ETH over a 36-hour timeframe. Coinbase-developed Ethereum L2, Base, transforms Ethereum interactions with its new feature, Basenames, launching today. Integrating with the Ethereum Names Service (ENS) infrastructure, Basenames emerged as a â€œonchain building block that enables anyone to establish their identity on Base.â€ The strategy for launching Basenames involves the Dutch auction mechanism for users to claim and purchase. The initial pricing is set to a premium fee of 100 ETH and gradually descends to 0.39 ETH over a 36-hour timeframe. This approach to pricing ensures users have an equal opportunity to secure the name they want. Reportedly, no premium fee will be charged post-auction. However, at present, users can only claim one basename per wallet for early access. Generally, the ENS subdomains allow users to create multiple ENS identities under an existing domain within the Ethereum ecosystem. It is similar to the subdomains

function on the websites. Networks such as Polygon, Solana, Arbitrum One, and BNB Chain host their web3 usernames through domain infrastructure providers such as Unstoppable domains and Space ID. Base Leads ETH L2 Transactions Hit ATH Ethereum layer-2 networks recorded 12.52 million transactions on August 13, setting a new all-time high (ATH). This marks a remarkable increase from the previous ATH of 11.5 million transactions set on April 4. The market activity surge is primarily due to Coinbase's Base and Arbitrum One. The Base network has accounted for a significant 3.98 million transactions on the ATH day. As a new entrant into the Ethereum ecosystem, Base's performance is notable. Meanwhile, it was followed by Arbitrum One with 1.79 million transactions. Notably, Base and Arbitrum One were the only networks to record transactions above the 1 million mark that day. Moreover, Base leads with 3.25 million weekly active addresses, with 9.1% of its activity involved with cross-chain transactions. And Arbitrum comes with 1.11 million weekly active addresses. - A fraudulent Chrome extension "Bull Checker" is found targetting Solana users. - The US SEC has delayed the approval of the Solana ETF, leading to the removal of 19b-4 forms. Solana users have been put on high alert following the discovery of a malicious Chrome extension named "Bull Checker." This fraudulent extension, pretending to be a helpful tool for crypto traders, has been found to target Solana users. Specifically putting their digital assets at risk. Meow, the pseudonymous founder of Jupiter, made an official post on X. Security researchers uncovered that the "Bull Checker" extension, once installed, gains access to users' private keys and seed phrases. With this sensitive information, cybercriminals can easily drain victims' wallets, potentially resulting in significant financial losses. The users affected by this have installed this extension becoming the main reason for the scam. The "Bull Checker" extension reportedly advertised itself as a tool to help users track their Solana investments and market trends. However, its true purpose was far more sinister. Once installed, the extension would monitor users' activities on Solana-related websites and crypto exchanges. This extension had permission to read and change all the data on the website. It harvests valuable data and transmits it to the attackers. Jupiter advised Solana users to immediately check their browser extensions and remove "Bull Checker" if found. Additionally, users who may have installed this extension should take immediate action to secure their funds by transferring them to a new, secure wallet. SEC Delays Solana ETF Approval The SEC has delayed approval for the Solana ETF, citing concerns about the cryptocurrency's security status. This has led to the removal of the related 19b-4 forms from CBOE's website. Additionally, 21Shares' S-1 registration statement and the forms are no longer visible in the SEC's EDGAR system or the BZX Pending Rule Changes. Both applications initially filed on July 8, had yet to receive Notices of Filing from the SEC. This delay signals ongoing regulatory uncertainty surrounding the approval of cryptocurrency ETFs, highlighting the challenges faced by issuers in navigating the complex regulatory environment. - Bitcoin is compared to the Nikkei index by TechDev predicted to hit \$1M by 2027. - BTC is currently trading at \$60,641 with a 4.54% spike in the last 24 hrs. Bitcoin (BTC) has recently been compared to historical market indexes, notably the Nikkei 225, by crypto analyst TechDev. He suggests BTC could mirror the Nikkei and hit \$1 million by 2027 before a major correction. TechDev is optimistic about BTC's future, comparing its trend to the Nasdaq's, suggesting it might rise more than expected. Despite recent downturns, TechDev views the current fear in the crypto market as part of the typical cycle where extreme pessimism often precedes significant gains. The financial crisis, driven by the yen's rise from Japan's rate hike, has affected global markets. The yen's strength has contributed to a sharp selloff in equities and digital assets, including Bitcoin, which fell 17% in a single day. This highlights Bitcoin's ongoing volatility and its divergence from the "digital gold" narrative, as highlighted by Citi analyst David Glass. Bitcoin has historically been more volatile than gold, behaving more like a risk-on asset. For Bitcoin to reach a \$1 million valuation, several factors must align. Its market cap would soar to around \$21 trillion, surpassing major economies and tech giants. Such a valuation would require massive adoption, technological advancements, and supportive regulatory environments. BTC's \$1 Million Ambition And Current Trends However, BTC reaching \$1 million is not without challenges. Bitcoin's journey will be influenced by competition from other cryptocurrencies, regulatory hurdles, and market dynamics. The rise of alternative digital assets and potential regulatory restrictions could impact Bitcoin's growth. At the time of writing, BTC is trading at around \$60,641 with a 4.54% spike in the last 24 hrs. There was a 33% surge in its 24-hour volume amounting to \$28 billion. In summary, while Bitcoin's ascent to \$1 million is ambitious and filled with obstacles, it remains a possibility over the long term, driven by technological progress, increasing adoption, and favorable economic conditions. The path to such a milestone involves navigating significant challenges and capitalizing on evolving market trends. - The altcoin market cap dropped to \$874.60B over the last week. - Current market sentiment is neutral as the fear and greed index stays at 43. The largest cryptocurrencies by market cap, Bitcoin (BTC) and Ethereum (ETH), continue to experience bearish fluctuations within the \$58K and \$60K level and ETH within the \$2.6K level, respectively. Altcoins are witnessing a continuous decline, facing selling pressure and a lack of buying interest. Earlier, the altcoin market experienced a promising uptrend, but is now facing down towards bearish sentiments. Despite hitting impressive highs earlier, several assets are now facing significant retracements, evoking fears among investors and traders. The total crypto market cap is found at \$2.035 trillion, where the altcoin market has a worth of \$874.607 billion. Over the last 24 hours, the crypto market volume has increased by 31.59%, reaching \$48.19 billion. However, the recent downturn in the altcoin sentiment has rippled certain tokens; let's check the price performances of notable coins and tokens. Ethereum (ETH) Ethereum (ETH), the second largest cryptocurrency by market cap and the altcoin leader, marked a decline of 23.14% over the last

month. The start of August was bullish, with the asset trading in the range of \$3.2K. Later, it dived to a low of \$2.2K. The asset was slightly up by 2.73% in the past seven days. ETH is currently trading at \$2,628, up by 0.88% over the past 24 hours. Meanwhile, the daily trading volume has increased by 42%, to \$9.96 billion. Dogwifhat (WIF) The popular dog-themed memecoin, WIF, is currently having bearish momentum. Continuing the downtrend, WIF recorded a significant price drop of 17.52% in the past week. Over the last 30 days, the asset was down by 44.45%. The current price stands at \$1.37, noting a decline of 3.06%. Toncoin (TON) TON, the eighth ranked altcoin by market cap, declined by 5.66% in the past month. The asset has climbed up by 13.48% from \$6.08 to a high of \$7.24, over the last seven days. Currently, TON is trading at \$6.80, up by 5.73%. Solana (SOL) Solana, the fifth largest crypto by market cap, shows a remarkable dip of 11.67%, over the last month. SOL dropped from a high of \$193 to \$112. In the past week, it was down by 0.82%, the lowest price traded was \$137. Currently, SOL trades at \$143, showing a 0.70% spike. The volatile altcoins, including DOGE and XRP witnessed price fluctuations. Dogecoin (DOGE) has been through a bearish rally for the last 30 days. The asset is currently trading at \$0.1002, noting a decline of 2.09%. Whereas XRP was up by 0.25%, as per CMC data. Over the past week, XRP was slightly bullish, up by 0.73%. The highest price traded was \$0.5821, and the lowest it hit was \$0.5531. Highlighted Crypto News Australia's ASIC Takes Down 7.3K Scam Sites in Fraud Crackdown

Victoria, Seychelles, August 14th, 2024, Chainwire Bitget, a top cryptocurrency exchange and web3 company, is pleased to announce the listing of DOGS, one of the fastest-growing dog-themed memecoins and tap-to-earn (T2E) game, as part of its ongoing support for the TON ecosystem. DOGS has rapidly gained popularity, following in the footsteps of Dogecoin and Shiba Inu, and has become one of the most viral Telegram mini-apps, alongside games like Hamster Kombat and TapSwap. Based on a doodle "Spotty" by Telegram founder Pavel Durov, DOGS quickly became popular on platforms like VK and Telegram, thanks to its unique airdrop mechanism and engaging gameplay. Recently, the DOGS Telegram group surged by 80% overnight, surpassing 1.7 million subscribers. DOGS's success is tied to its unique airdrop mechanism, widespread promotion, and the immense reach of Telegram, which is approaching one billion users. Recent Bitget research highlights that Telegram gamers prefer simple, low-entry-cost games with frequent rewards, with the average TON T2E gamer playing around five games. DOGS is not just a memecoin but also one of the most viral Telegram mini-apps, positioning itself as a key player in the memecoin space. This listing aligns with Bitget's mission to provide access to innovative projects and expand its support for the TON ecosystem. Bitget has a history of supporting TON-based projects, having previously listed tokens such as Notcoin (NOT), Major (MAJOR) and Hamster Kombat (HMSTR). Bitget's \$20 million TON Ecosystem Fund and the integration of features like the Telegram Signal Bot, which underlines its commitment to fostering innovation and growth. For more information on DOGS and its listing on Bitget, users can visit Bitget's announcement page. About Bitget Established in 2018, Bitget is the world's leading cryptocurrency exchange and Web3 company. Serving over 30 million users in 100+ countries and regions, the Bitget exchange is committed to helping users trade smarter with its pioneering copy trading feature and other trading solutions. Formerly known as BitKeep, Bitget Wallet is a world-class multi-chain crypto wallet that offers an array of comprehensive Web3 solutions and features including wallet functionality, swap, NFT Marketplace, DApp browser, and more. Bitget inspires individuals to embrace crypto through collaborations with credible partners, including legendary Argentinian footballer Lionel Messi and Turkish National athletes Buse Tosun Ayvaylu (Wrestling world champion), Samet Gilmay (Boxing gold medalist) and Alkin Aydın (Volleyball national team). For more information, users can visit: Website | Twitter | Telegram | LinkedIn | Discord | Bitget Wallet Contact PR team Bitget media@bitget.com

Toncoin, the native coin of The Open Network (TON) and the Telegram ecosystem, is performing better than several of its counterparts. The coin has outshone Bitcoin (BTC), Ripple-associated XRP and Dogecoin (DOGE). Amidst this development, Pawfury (PAW) is emerging as a presale project that's capturing the attention of savvy investors. With its promise of high returns and seemingly predictable patterns, Pawfury stands out in the volatile crypto landscape, offering a refreshing alternative to established tokens. Pawfury (PAW) "The New Golden Star Pawfury (PAW) is becoming the new golden star in the cryptocurrency market. This innovative coin stands out with its substantial benefits to its holders. Pawfury (PAW) demonstrates exceptional growth potential with robust community support and ongoing development efforts. Its strategic approach and advanced features make it a top contender for investors seeking high returns. As Pawfury (PAW) continues to shine, it promises to be a leading force in the ever-evolving crypto landscape. Presale is Live Now " Join Now for a Chance to Benefit with PAW Structured Investment Rewards in Pawfury Pawfury's presale offers structured rewards for early participants, ensuring fair token distribution. With multiple stages and rising prices, early investors gain the advantage of lower costs. This approach generates excitement and attracts capital, thereby boosting the project's liquidity and market stability. To celebrate its success, investors can now enjoy a 10% extra bonus on their first purchase on Pawfury using the promo code "EXTRA10X" for a limited time. Presale is Live, Learn More About Major Benefits Toncoin vs. Bitcoin: Comparing Recovery Rates Post-Market Plunge A few days ago, the crypto market experienced a significant plunge, with the price of leading digital assets like Bitcoin testing the waters below \$50,000. Since then, Bitcoin has recovered a significant portion of its market value, but it is currently not performing as high as TON. BTC Price: Source: TradingView Based on data from TradingView, BTC is currently trading at \$60,789.63, corresponding to a 0.32% increase in the last 24 hours. XRP and DOGE demonstrate negative sentiment on the charts. At the time of this writing, XRP traded at \$0.589 after gaining 0.04% in 24 hours. In addition, its market cap and trading volume are facing a mild downturn. The actual figures in these critical metrics equal 0.11% and 46.45%, respectively. TON's Price Momentum and Future Projections On the other hand, Toncoin has registered a price gain of 3.77% within the same time frame and is trading at \$6.72. Ton Price: Source: TradingView In the last seven days, TON has

equally seen an upside, recording as much as 9.42%. Considering how TON lost a significant amount of its value at the beginning of the week, this is an applaudable outlook for the coin. Bitcoin has yet to recover fully, as it has had a 1.5% deficit in the last seven days. Bottom Line As Toncoin demonstrates impressive performance against major cryptocurrencies like Bitcoin, XRP, and Dogecoin, it highlights the dynamic and often unpredictable nature of the crypto market. However, while established tokens like TON show promising short-term gains, emerging projects like Pawfury offer a different kind of opportunity. Pawfury's presale structure, with its staged approach and bonus incentives, presents a potentially more stable and predictable investment path in contrast to the volatility seen in traded cryptocurrencies. - Litecoin maintains a larger holder base compared to Dogecoin and Ripple, despite recent fluctuations. - Increased accumulation by large-scale LTC holders suggests growing confidence in the cryptocurrency. - Litecoin's transaction volume and market dynamics indicate potential for price recovery in the near future. Litecoin (LTC) stands out as a seasoned player, having weathered numerous market cycles since its inception in 2011. Alongside contemporaries like Ripple (XRP) and the slightly younger Dogecoin (DOGE), Litecoin has carved a unique niche in the cryptocurrency ecosystem. The Strength of Litecoin's Community Litecoin's resilience is perhaps most evident in its robust holder base. Despite recent fluctuations, LTC boasts over 8 million holders, surpassing both Dogecoin and Ripple. This impressive figure speaks volumes about the community's faith in Litecoin's long-term prospects, even in the face of short-term price volatility. The steadfast nature of Litecoin holders is particularly noteworthy given the cryptocurrency's performance relative to its peers. While LTC's price action may not have outpaced DOGE or XRP in recent times, the unwavering support of its community suggests a focus on fundamentals rather than speculative gains. An intriguing development in the Litecoin ecosystem is the recent surge in large-scale accumulation. Data from IntoTheBlock reveals a remarkable 33% increase in addresses holding between 1 million to 10 million LTC over the past month. This trend indicates growing confidence among significant market players, who appear to be capitalizing on current price levels to bolster their positions. The accumulation pattern observed in LTC stands in stark contrast to the broader market sentiment. While many cryptocurrencies have faced selling pressure, LTC seems to be attracting buyers who perceive value at current price points. This divergence could potentially set the stage for a price recovery in the coming weeks or months.

- Shiba Inu's price rose 3.19% while trading volume fell 23%. - The Sandbox offers SHIB avatars for holding SHIB and SAND tokens. The Sandbox, a Web3 gaming company, has extended an invitation to Shiba Inu enthusiasts to engage in its decentralized gaming ecosystem. The platform is encouraging the SHIB Army to use "RiseOfTheMemecoins" within The Sandbox to secure unique SHIB-based avatars. To qualify for this offer, participants must hold both SHIB tokens and the platform's native asset, SAND, in their wallets. These wallets must be connected to The Sandbox platform by Monday, July 29, when the team will take a snapshot of eligible wallets. For Shiba Inu Army members new to The Sandbox, an account can be created at the dedicated portal, sandbox.game. This announcement has sparked considerable interest within the Shiba Inu community, which has expressed enthusiasm about the opportunity. In addition, KURO, a prominent figure in the Shiba Inu community-based in Japan, has translated the announcement into Japanese. This translation ensures that local community members are informed and can participate in securing a Sandbox avatar modeled after SHIB. The Sandbox Calls Shiba Inu Army to Secure Unique SHIB-Inspired Avatars <https://t.co/ZkjLjxGouj> "ð˜ž˜ð˜ž˜ð˜ž˜, (@LucieSHIB) July 26, 2024 Sandbox And Meme Coins The Sandbox's latest initiative is part of its broader strategy to enhance its gaming platform's appeal by incorporating the unique cultures of various meme-inspired assets. Last week, The Sandbox revealed that it now holds Shiba Inu tokens alongside other meme coins like BONK, Dogecoin, and PEPE. The platform plans to integrate these diverse cultures into its gaming ecosystem. The Sandbox also recognized Shiba Inu's origins as a community-driven cryptocurrency project in 2020. Since then, Shiba Inu has grown into a global phenomenon with a broad ecosystem that includes tokens LEASH and BONE, as well as its native blockchain, Shibarium. As the community celebrated this news, Shiba Inu's price increased to \$0.00001681, marking a 3.19% rise over the past 24 hours. In contrast, the trading volume is down 24% in the same timeline. Its daily RSI is at 45, suggesting that it is reaching a neutral position. Highlighted News Of The Day Senator Marshall's Exit Marks Setback for Controversial Crypto Bill

- Litecoin's price dips but wallet numbers and whale activity remain strong. - Increased whale transactions suggest significant interest and potential market shifts. Litecoin (LTC) has been in the spotlight recently, reaching an 18-day high of \$74.61 two days ago. However, the cryptocurrency is experiencing a bearish trend, with its price dipping to \$71.92, reflecting a 2.53% decline. Trading volume has also decreased by 37%, adding to the cautious sentiment. Despite this, recent data from Santiment has provided some positive news. Litecoin's performance over the past decade shows it has amassed 8.08 million non-empty wallets, making it the most widely held altcoin among those listed. Dogecoin follows this with 6.69 million wallets, XRP Ledger with 5.24 million, and Cardano with 4.48 million. Shiba Inu and Chainlink have 1.39 million and 722,000 wallets, respectively. In addition to these metrics, recent findings from IntoTheBlock highlight increased whale activity on the Litecoin network. The "Large Transactions Volume" indicator, which tracks transactions valued at \$100,000 or more, shows a recent uptick. This surge suggests significant movement from large investors, indicating heightened interest and potential strategic shifts within the network. Litecoin To Reach New Heights In Q3? Trading expert John Bollinger has also weighed in, suggesting that Litecoin may be on the verge of a significant move. He noted that it might be "about time for LTC to wake up," referencing the

cryptocurrency's monthly chart analyzed through Bollinger Bands, a technical tool he developed. The above research indicates that Litecoin (LTC) remains a dominant player in the altcoin space with the highest number of non-empty wallets, suggesting strong long-term holder engagement. Despite recent price declines and reduced trading volume, increased whale activity signals significant interest from large investors. This could imply potential upcoming volatility or a shift in market dynamics. The recent dip and expert predictions of a possible major move suggest that LTC might be positioning for a significant price action. Investors should watch for further whale transactions and technical signals for insights into Litecoin's next potential move. Have you heard of meme coin magic? It's the smart way investors turn small amounts into huge fortunes. All you need is one of the top meme coin ICOs! MOONHOP, currently priced at just \$0.01, is expected to reach \$0.50 per coin soon. This means a \$1000 investment now could become \$50,000. Adding to the excitement, MOONHOP offers a 10% referral bonus whenever someone in your network buys MHOP coins! Doge2014, a new contender, aims to bring back the glory days of Dogecoin. But only time will tell how it fares in the meme coin race. Meanwhile, WienerAI investors are thrilled about a new staking mechanism. WienerAI Investors Praise its Latest Staking Mechanism WienerAI, still in its presale, is making significant progress. Social media buzz is strong, with 99Bitcoins on YouTube predicting a 50x gain. Even in a bear market, WienerAI's performance has been impressive. The presale price is \$0.00073 per coin, expected to rise. A staking mechanism allows investors to compound their investments. However, WienerAI faces competition from new stars like Sealana, Dogverse, PlayDoge, and MOONHOP, which could overshadow it soon. Doge2014 Presale: Bubble About to Burst? Remember Dogecoin's early days? Doge2014 wants to recreate that excitement, celebrating Dogecoin's 10th anniversary on the Ethereum blockchain. Despite the hype, its presale has only raised \$85k. They're offering tokens at Dogecoin's 2014 prices, appealing to those who missed the original wave. With 60% of tokens available and staking options promising passive income, Doge2014 has garnered a decent following. MOONHOP's Fluffle Reaps 10% Referral Rewards! MOONHOP, the newest player in the memecoin market, raised nearly \$1 million within hours of its presale! This project is serious about taking its Fluffle to the moon. Currently, MHOP is priced at \$0.01, but upon launch, it's expected to reach \$0.50, giving investors a 4900% ROI. But the best part is the 10% referral bonus. Investors can secure extra MHOP coins by helping their network members join The Fluffle. Just generate a referral code on MOONHOP's platform and share it. Once someone buys MHOP coins, you get 10% of their purchase for free! Before investors can profit from this lucrative referral program, they must join the Fluffle. Remember the MHOP price increase discussed earlier? Let's do some quick math: A \$1000 investment in this meme coin will turn into \$50,000 upon launch! These numbers aren't just dreams. They're backed by a solid roadmap and launch liquidity, ensuring the price increases steadily despite market fluctuations. Analysts already consider it one of the top meme coin ICOs, nearly selling out its presale stage one! We're All Magicians Here! WienerAI investors cautiously buy WAI tokens at \$0.00073, while Doge2014's presale has raised \$85k. But the market is most excited about MOONHOP, which can turn \$1000 into \$50,000 at launch. Plus, those who help expand its Fluffle earn a 10% referral bonus! To perform this 4900% ROI magic trick, invest now before this opportunity moves to presale stage 2! Join MOONHOP Presale Now: - Website: [MOONHOP.io](https://moonhop.io) - Presale: <https://moonhop.io/buy> - Twitter: <https://twitter.com/moonhopcoin> - Telegram: <https://t.me/moonhopcoin> Disclaimer: TheNewsCrypto does not endorse any content on this page. A playful little rabbit known as MOONHOP has been causing a stir in the cryptocurrency market with its promising returns. This charming coin, initially priced at just \$0.01 in its first presale stage, is anticipated to surge to \$0.50 at launch, delivering a staggering 4,900% ROI. Could MOONHOP outshine as one of the leading crypto winners this year? According to updates, Ethereum's meme coins like PeiPei and WienerAI might challenge the renowned DOGE, while Pepe Unchained's presale has impressively amassed \$3 million. Curious? We've got all your questions covered! Pepe Unchained's Presale Triumphs with a Triple Million! Pepe Unchained has just made a splash, surpassing the \$3 million mark. While PEIPEI enjoys its moment in the sun, Pepe Unchained is still paddling in its ICO waters. Will this ambitious frog leap to royal heights? Pepe Unchained boasts of reinventing Ethereum with greater speed and reduced fees on its layer-2 blockchain, promising staking returns up to 587% annually. With over 6,600 followers tuned into its Twitter updates, the anticipation is palpable. Yet, it remains to be seen whether this frog's claims will resonate louder than its ribbits, or if it will simply evaporate. Can Ethereum Meme Coins PeiPei & WienerAI Outpace DOGE? The meme coin arena is bustling once more with PeiPei and WienerAI attempting to outshine Dogecoin. Overnight, PeiPei's value soared by 13%, turning a \$10K investment into an additional \$1,300. Is this a ribbit-worthy rise or just a fantasy? Boasting a market cap of \$136 million and a trading volume of \$204 million, PeiPei is making significant noise. Market experts are hyping it up as the next big leap, setting ambitious price expectations. However, amidst the excitement, WienerAI is just dipping its toes in the market waters. Will these newcomers become the next Dogecoin, or are they just minor ripples in the vast crypto pond? Keep your boots ready, and stay updated! What Does a 4,900% ROI Mean for You? In the world of meme coins, the adage goes: The cuter the coin, the larger the profit. And who embodies this better than MOONHOP? This enchanting rabbit has hopped its way to nearly \$1 million in just a few days of its presale! With its coin price at a mere \$0.01, MHOP is poised to rocket to \$0.50 at launch. Imagine, a whopping 4,900% ROI! "potentially one of the highest crypto gains this year! Curious about the value of your MOONHOP investment? Check out the MOONHOP Returns Calculator. Adjust the adorable Rabbit ROI slider and witness your potential wealth expand. Consider this scenario: you invest \$10,000 in MOONHOP. Slide the bunny along, and you could see your funds leap to \$500,000 at launch. Give it a bit

more time, and that modest \$10K might just evolve into a staggering \$1 million. Thatâ€™s a golden ticket to a prosperous financial future. But remember, like any magic show, meme coins can disappear. At MOONHOP, they prioritize your security, partnering with Coinsult to ensure each transaction is secure. For those extra cautious, their full audit report is available online for review. Before You Go To sum it all up neatly, Pepe Unchainedâ€™s presale has hit a triple million, but itâ€™s uncertain if this quirky frog will soar or sink. Ethereum meme coins WienerAI and PeiPei are determined to overtake DOGE, but the marketâ€™s volatility is unpredictable. The one sure bet? MOONHOP. As one of the most promising crypto gains of 2024, this bunny could turn your \$10k into \$500k post-launch. But be swiftâ€”presale stage 1 is nearly sold out, and you wouldnâ€™t want to miss this bunnyâ€™s leap! Join Moonhop Presale Now: - Website: [Moonhop.io](https://moonhop.io) - Presale: <https://moonhop.io/buy> - Twitter: <https://twitter.com/Moonhopcoin> - Telegram: <https://t.me/moonhopcoin> Disclaimer: TheNewsCrypto does not endorse any content on this page. Are you gearing up for a cosmic journey? MOONHOP is on deck to inject a burst of thrill into the meme coin cosmos. With a stellar 4900% gain on the horizon, itâ€™s outshining rivals like DOGEâ€™s price goal and MoonBagâ€™s presale buzz. Whether youâ€™re a crypto rookie or a savvy trader, this piece will guide you through the latest on DOGE, the excitement over MoonBagâ€™s presale, and why MOONHOP is the new heavyweight. DOGE Price Goal: Will it Reach \$0.2? Dogecoin (DOGE) is creating a splash, targeting the \$0.2 milestone. Recently, DOGEâ€™s value climbed 1.5%, reaching \$0.1098 amid a broader market uptick. It swung between \$0.121 and \$0.093 last week, marking a 9.8% fall, and it dipped 24% over the past month. Yet, a recent 19% recovery from a low of \$0.09136 has DOGE supporters optimistic. Analysts believe breaking above its current band could propel DOGE to \$0.208. With a Relative Strength Index (RSI) of 38.54 and rising Chaikin Money Flow (CMF) at 0.08, buying momentum is accumulating. Despite hurdles, DOGEâ€™s technical signals hint at a potential upward trend, eyeing the \$0.2 target as reachable. Analyzing MoonBag Presale MoonBagâ€™s presale has garnered a notable \$3.4 million early on. It kicked off at merely \$0.00005 and has climbed to \$0.0003 by stage 6, marking a notable jump. Investors are abuzz as MoonBag has already offloaded 60% of its presale tokens, heralding substantial returns once listed at \$0.003 on various exchanges. Leveraging Ethereum 2.0 tech, MoonBag promises efficient transactions with fewer fees. The coinâ€™s scalability and liquidity strategy position it as a serious player in the meme coin arena. Offering an 88% Annual Percentage Yield (APY) for staking, MoonBag presents enticing rewards for crypto enthusiasts. MOONHOP Presale Triumph: \$980,000 Secured! MOONHOP is poised to leap towards the stars! Its presale marks the beginning, luring early investors with appealing prices. Itâ€™s more than a purchaseâ€”itâ€™s about joining a crusade. With a lively referral program, bringing friends rewards you handsomely. Picture joining this thrilling launch, each participant boosting MOONHOP towards its celestial aims. As MOONHOP gains momentum, the emphasis shifts to cultivating a dynamic community. The setup includes engaging fans via social media, competitions, and airdrops, making every moment thrilling. Strategic marketing pushes amplify this energy, crafting a prominent footprint in the crypto sphere. Collaborations with key influencers and industry figures enhance MOONHOPâ€™s prominence, ensuring it stays in the crypto conversation. Yet, the excitement continues. MOONHOP plans to expand its community through alliances and interactive events, keeping participants hooked with continuous updates and engaging activities. The goal is listing MOONHOP on centralized exchanges (CEXs) for broader reach. The presale unfolds across 50 stages, with MOONHOPâ€™s price escalating each phase. Starting at \$0.01 per MOONHOP and aiming for \$0.50 at launch, early backers stand to gain a 4900% return. With \$980,000 already raised in stage 1, MOONHOP is on track to hit its impressive growth target. MOONHOP: Premier Meme Coin Presale Prospect MOONHOP is redefining the meme coin landscape with its vibrant and promising approach. With hefty potential gains and a solid presale strategy, itâ€™s vying for a leading spot in the crypto market. As DOGE aims for the \$0.2 threshold and MoonBag draws investors, MOONHOP shines with its unique offerings and vast potential. Donâ€™t miss this whimsical escapade. Dive into the MOONHOP presale and jump towards the moon with MOONHOP! - Coinglass reports that the amount of derivatives has increased by 127.81% to \$1.94 billion. - WIF recently jumped to \$2.4786, a one-month high, a rise of 47% from \$1.665. The crypto market made a stunning turnaround this week, filling investors with enchanted anticipation for the commencement of the long-awaited bull run. With its surge to \$65,000, Bitcoin set off a larger wave of optimistic sentiment. The dogwifhat price analysis, meantime, shows that WIF is about to go on a run that will more than double its value in the next several weeks. Rebounding from support at \$1.5, Dogwifhat got the trading week off to a good start. With more and more investors purchasing WIF, the price surged and eventually settled at \$2.37. The Coinglass website reports that the amount of derivatives has increased by 127.81% to \$1.94 billion, signaling a rise in open interest (OI), with 27.37% of new contracts opening for a total of \$302.47 million. Bulls in Control Following an extended period of decline, Dogwifhat (WIF) recently jumped to \$2.4786, a one-month high, a rise of 47% from \$1.665 in the previous seven days as per data from CMC. The volume of trades, however, has fallen 11% in the last day. On the other hand, there is a pessimistic trend among other memecoins. Dogecoin fell 2% and SHIB fell 10% due to worries over the WazirX breach. Regardless, a number of indications for WIF are pointing to an upward trend, with the 50-day EMA at \$2.19 being the first. Similarly, the data from liquidations reveals that longs outnumbered shorts. But shorts have won out over longs in the last

four days, however, recently shorts worth \$1.83 million have been liquidated. Highlighted Crypto News Today: Bitcoin Faces Brief Resistance After Recent Rally, What Next?

Did you know a female rabbit can have more than 30 baby bunnies in a year? Rabbits are famous for their explosive breeding rates. According to the Fibonacci sequence, one rabbit pair can produce nearly 4 million offspring in four years. How is this relevant to crypto? It's a metaphor for the massive ROI you can achieve with the cutest new meme coin "MOONHOP. Inspired by the East Asian myth of the rabbit on the moon, MOONHOP is here to show why rabbits are destined to rule the meme coin world. Let's compare it to new cryptos like Dogwifhat and BlockDAG. Dogwifhat (WIF): A Dog Wif Memes Since Dogecoin's unexpected success, the meme coin market has been flooded with dog-themed cryptos. Dogwifhat is one of the latest, and it has become a surprise hit. Despite claiming to be "literally just a dog wif a hat," this Solana-based meme coin is surging. With a 16% increase in one day, Dogwifhat proves it's more than a Shiba Inu wearing a hat. This raises the question: are meme coins more than just a gimmick? BlockDAG (BDAG): 21st Century Mining Solutions Imagine mining for cash with a dustpan like during the California gold rush instead of working a 9-5 job. BlockDAG lets you do just that "sort of. BlockDAG is an upcoming PoW coin that's mineable, allowing you to use specialized hardware called ASIC miners to mine BDAG coins. You can still buy and invest in BDAG if you prefer. The coin's hybrid consensus mechanism offers multiple ways to earn passive income with this unique altcoin. MOONHOP (MHOP): Hopping to the Moon, One Purchase at a Time MOONHOP, the meme coin poised for 100x growth, is capturing the crypto community's attention! With a total supply of 8 billion coins and a presale of 4 billion MOONHOP, this coin aims to appeal to a broad audience. The community, affectionately called The Fluffle, invites all enthusiasts to join its lively journey towards financial freedom. The Fluffle is built on inclusivity and mutual support, fostering an environment where every member feels appreciated and involved. Social media is alive with dynamic contests and bunny-themed events, keeping followers engaged and excited. MOONHOP's presale, priced at a modest \$0.01 per coin, aims to raise an impressive \$30 million to drive its ambitious growth. At a launch price of \$0.50 per MOONHOP, early investors are expecting significant returns, showcasing the coin's potential for growth in a competitive market. As MOONHOP hops towards the moon, it represents a path to financial success and a vibrant community rallying behind a promising meme coin. Join the movement, embrace the hop, and see why MOONHOP might be the next big hit in the meme coin world! The Bright Side of the Moon Dogwifhat and BlockDAG both hold great promise, but the new MOONHOP token is stealing the spotlight. If you're a meme coin lover with a soft spot for cute critters, MOONHOP is the perfect pick. Don't get lost in the rabbit hole; invest in MOONHOP today and hop, hop, hop to the moon. Join MOONHOP Presale Now: - Website: MOONHOP.io - Presale: <https://MOONHOP.io/buy> - Twitter: <https://twitter.com/MOONHOPcoin> - Telegram: <https://t.me/MOONHOPcoin> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Over the past 24 hours, the memecoin market cap is up by 2.5%. - The market sentiment is neutral, as the fear and greed index stays at 58. The crypto market is briefly in the bullish sentiment. Alongside Bitcoin and Ethereum, altcoins recorded notable recovery gains in the last 24 hours. Despite demonstrating an uptrend, the price spikes in the memecoin market fall short of dominating. Will the sector's uptrend pick a bullish pace? The Dune Analytics data reveals the 30-day relative strength for memecoins suggests a lagging signal. Over the past 24 hours, the meme coin market cap has stayed at \$54.7 billion. Several meme coins have experienced significant volatility, and the daily trading volume rests at \$8.75 billion. Notable performers include DOGE, PEPE, WIF, BONK, SHIB, and FLOKI. Notably, the frog-based memecoin Pepe hit \$0.00001262, a spike noted by 5.66%, and Bonk is up by 5.49%, reaching \$0.00002824. Furthermore, SHIB also caused significant waves with a spike of 2.47% at \$0.00001956. Other leading memecoins, such as Dogecoin, Floki, and Bonk, have also shown price surges. DOGE recorded a 2.65% surge, reaching \$0.126, while Floki stayed at \$0.0001887, noting an increase of 1.28%. Whereas, Dogwifhat is up by 4.05% to \$2.27, according to CMC data. Will the Crypto Market Sustain the Recovery? The crypto market surge for the past few days is notable. Over the past week, the global crypto market capitalization grew 1.52% from \$2.2 trillion to \$2.4 trillion, as of now. The daily trading volume is up by 17.38% to mark \$97.89 billion. Exiting the fear zone, the market has attained a neutral market sentiment, as indicated by its Fear & Greed Index sitting at 58. Early July did record the fall of BTC price and the consequent bearish market sentiment. The main causes behind it were the defunct exchange Mt. Gox's BTC repayment to creditors and the German government's BTC sales. In a notable recovery from this declining phase, Bitcoin (BTC) spiked by 2.13% to \$65,789. BTC briefly reached \$65k following the Trump assassination incident, and the appointment of a pro-Crypto VP candidate, JD Vance. These updates are being positively received in the crypto space, as Trump's potential victory is anticipated to usher in bullish crypto regulations in the US. On the other hand, Ethereum (ETH) crossed a key resistance hitting \$3,517 over the past 24 hours amid the high anticipation for the spot Ethereum ETF launch. Highlighted Crypto News Is Trump's Pro-Crypto Stance a Game Changer for His Campaign?

The cryptocurrency market is buzzing with excitement as two new meme coins, Playdoge (PLAY) and Mpepe (MPEPE), are capturing the attention of investors worldwide. Both coins are making significant waves with their unique approaches, promising high returns and a strong community presence. This article delves into what makes these pre-sales so compelling and why they are drawing in fresh investors at an unprecedented rate. Mpepe (MPEPE): Blending Sports and Blockchain Mpepe (MPEPE) is not just another meme coin; it represents a fusion of sports fandom and blockchain technology. Inspired by the legendary Pepecoin and soccer superstar Kylian Mbappé, Mpepe aims to create a vibrant community that combines the love of sports with the potential of cryptocurrencies. This unique blend is attracting a

diverse range of investors, from sports enthusiasts to crypto veterans. Robust Ecosystem The Mpeppe ecosystem is designed to offer more than just financial transactions. It includes a gaming and sports betting platform, where community members can engage in various activities, trade tokens, and participate in social events. The integration of NFTs featuring iconic soccer players and Pepe the Frog artwork adds another layer of appeal, making Mpeppe a multifaceted project with a lot to offer. Tokenomics and Growth Potential With a maximum supply of 7.6 billion tokens and an initial price of 0.00077 USDT, Mpeppe (MPEPE) is strategically positioned for substantial growth. The tokenomics are well-planned, with allocations for presale, liquidity, and sports-related activities. This careful distribution ensures stability and encourages community involvement, setting Mpeppe up for long-term success. Playdodge (PLAY): Riding the Meme Wave Playdodge (PLAY) capitalizes on the popularity of meme coins like Dogecoin. By building on this established interest, Playdodge aims to create a dedicated community. The playful and humorous branding resonates with a younger demographic, making it a popular choice among new crypto investors. Community-Driven Success The success of Playdodge (PLAY) heavily relies on its community. Active engagement, continuous innovation, and strategic partnerships are crucial for maintaining relevance in the competitive meme coin market. Playdodge's approach focuses on fostering a strong community bond, which is essential for its long-term sustainability. High-Rising Assets: A Magnet for Fresh Investors One of the most fascinating aspects of high-rising assets like Playdodge (PLAY) and Mpeppe (MPEPE) is their potential for rapid appreciation. This allure attracts a large number of fresh investors who are looking to capitalize on the next big thing. The volatile nature of meme coins means that substantial returns can be achieved in a short period, which is a significant draw for those willing to take the risk. Engaging a Younger Demographic Young investors are particularly drawn to the excitement of meme coins. The blend of humor, culture, and community engagement found in projects like Playdodge (PLAY) and Mpeppe (MPEPE) appeals to this demographic. These coins provide a gateway into the crypto world, encouraging them to explore and invest in digital assets. Strategic Diversification Experienced investors also see the value in diversifying their portfolios with meme coins. The high-risk, high-reward nature of these assets can complement more traditional investments, offering a balanced approach to portfolio management. By including promising meme coins like Mpeppe (MPEPE) and Playdodge (PLAY), investors can hedge against potential losses in other areas. Opportunities for Different Types of Investors For young investors, meme coins represent an exciting opportunity to engage with the crypto market. The community aspect, combined with the potential for high returns, makes these investments particularly appealing. Mpeppe (MPEPE) and Playdodge (PLAY) provide a platform for these investors to learn, grow, and potentially profit. Experienced and Diversified Seasoned investors recognize the importance of diversification. By adding meme coins to their portfolios, they can balance their investment strategies and mitigate risks. The innovative approaches of Mpeppe (MPEPE) and Playdodge (PLAY) offer unique opportunities that can complement traditional investment vehicles. The Fascination with High-Rising Assets The rapid rise of assets like Mpeppe (MPEPE) and Playdodge (PLAY) is a significant draw for new investors. The promise of quick gains and the thrill of being part of a trending market create a magnetic effect. This fascination drives more people to explore these investments, contributing to their growth and popularity. Creating Community Buzz High-rising assets often generate a buzz that extends beyond the crypto community. Media coverage, social media discussions, and word-of-mouth all contribute to a broader awareness and interest. This dynamic helps sustain the momentum, attracting even more investors and driving the market forward. Conclusion: The Future of Mpeppe (MPEPE) and Playdodge (PLAY) Mpeppe (MPEPE) and Playdodge (PLAY) are more than just meme coins; they represent a new wave of cryptocurrency investments that blend culture, community, and technology. For investors looking to capitalize on the unique opportunities presented by meme coins, these projects offer exciting potential. As always, it is essential to stay informed and consider multiple factors before making investment decisions. Join the Mpeppe (MPEPE) and Playdodge (PLAY) communities and be part of the future of meme coins. By strategically positioning themselves in the market and leveraging their unique features, Mpeppe (MPEPE) and Playdodge (PLAY) are poised for significant success. Whether you are a young investor eager to dive into the crypto world or an experienced investor looking to diversify, these meme coins offer promising opportunities for growth and engagement. Interested in capitalizing on the promising future of Mpeppe (MPEPE)? The smart contract address you need is 0xd328a1C97e9b6b3Af4d2eAf535bcB55A85cDcA7B. Seize this chance to invest in the next big thing in the cryptocurrency market. - This settlement follows a series of lawsuits and countersuits by the parties. - As part of the settlement deal, Celsius will get a plethora of assets from KeyFi. Last week, an agreement was filed in court by the two parties involved in the KeyFi and the founder Jason Stone's link to the insolvent crypto lender Celsius. This settlement follows a series of lawsuits and countersuits. As part of the settlement deal, Celsius will get a plethora of assets from KeyFi. These assets include wallets holding several tokens and expensive NFTs. As well as the \$1.1 million that was sold by Mutant Ape Yacht Club to billionaire Adam Weitsman and is presently held in escrow. Assets associated with the Spartan, Unslashed, Stakehound, and Fireblocks protocols developed by DeFi will also be transferred by KeyFi. Valuable NFTs Included Following the conclusion of the agreement, Celsius will spend the next twelve months selling off the assets. Along with the \$300,000 upfront payment, Celsius will also provide KeyFi and Stone with a unique NFT designed by Marco Santorini. After the liquidations are complete, KeyFi will get 10% of the profits, up to a maximum of \$500,000. With so many valuable NFTs included in these assets, it's probable that it hit this limit. The wallets in question hold a diverse array of cryptocurrency tokens, often with very tiny amounts. Some of the various cryptocurrencies stored in these wallets include Dogecoin (valued about \$500) and USD Coin

(worth roughly \$2,600), among many more. But there are a lot of valuable NFTs in those wallets as well. These include, 13 CryptoPunks, 3 Fidenza's created by artist Tyler Hobbs, 19 Meebits, 4 Mutant Apes, 14 Otherdeeds, and dozens more from projects like Rarible, World of Women, and Art Blocks. The floor price of the collections might be affected by Celsius's liquidation of these NFTs during the next year. Highlighted Crypto News Today:

- Litecoin's price is up 15% in the past 24 hours. - The daily RSI suggests that LTC is facing selling pressure. In a bearish ride recently faced, where altcoins are facing a heavy dump, Litecoin is telling a different story. Despite hitting an 11-month low of \$56.86 six days ago, Litecoin has recovered to \$69.32 today. Litecoin is up 2% in the past 24 hours, with trading volume increasing by 39%. Notably, in the past week, Litecoin has risen by 15%. According to IntoTheBlock, Litecoin processes \$2.85 billion in transactions over \$100k daily on average, which is over 50% of its market cap. This figure surpasses most Layer 1s. For instance, Dogecoin handles \$590 million in large transactions, despite having roughly three times its market cap. Moreover, Analysts are bullish, noting that Litecoin has attracted more speculative investors. The network offers deep liquidity and faster transactions. They believe it is well-positioned to surpass its all-time high in this cycle, after underperforming in previous ones. LTC To Surge Past \$75? A closer look at Litecoin's recent price movements reveals an underlying bullish trend on the daily chart. The 9-day exponential moving average (EMA) is recorded below the trading price at \$67.25, further emphasizing the bullish sentiment. The daily Relative Strength Index (RSI) has hovered around oversold levels recently. If the price breaks through the \$70 resistance level, it could test the \$76 resistance. Conversely, a drop below the \$64 support level might see it testing the critical \$57 level. Highlighted News Of The Day

Toncoin (TON) has seen a significant boost, with a 14% jump in price following a hefty \$500 million in USDT deposits. On the other side, Dogecoin (DOGE) is witnessing a substantial accumulation, as whale-sized transactions suggest big moves in the market. But it's BlockDAG's \$2 million giveaway that's stealing the limelight, drawing an enthusiastic crowd from across the crypto sphere. The campaign is not just lucrative but also strengthens the community vibe by encouraging participants to bring friends into the fold. With more than 80,000 entries and a staggering \$56.9 million raised from presales, BlockDAG's growth spurt is monumental, showing a 1300% rise in 19 batches. Experts are eyeing a \$10 valuation per BDAG by 2025. Toncoin Soars with Major USDT Inflows Toncoin (TON) saw an impressive 14% price increase recently, driven by \$500 million in USDT deposits. This influx of capital significantly boosted Toncoin's momentum. By late June, the price had risen \$14 from the previous week's lows, hitting \$7.72 on June 25 before stabilizing around \$7.60. The substantial USDT deposits have been a major factor in this upward trend, highlighting a robust capital inflow that continues to drive Toncoin's growth. Dogecoin Accumulation Gains Momentum Dogecoin is currently in a rapid accumulation phase, as evidenced by significant transaction volumes recorded by market intelligence firm IntoTheBlock. These transactions, each involving at least \$100,000 worth of Dogecoin, indicate that whales are actively buying or selling large quantities of DOGE. This heightened activity could signal a strategic move by major investors, potentially leading to a market rebound. Despite a recent dip to \$0.11, this accumulation wave may provide the momentum needed for Dogecoin to recover and thrive in the market. BlockDAG's \$2M Giveaway Ignites Crypto Enthusiasm BlockDAG Network's \$2 million giveaway is causing a stir among crypto enthusiasts, with participants eagerly vying for a chance to become millionaires. The giveaway offers substantial rewards to 50 lucky winners, requiring only a \$100 investment in BDAG coins. This opportunity is attracting a diverse crowd, with 86,448 participants already entered. The initiative encourages participants to invite friends, boosting individual involvement and fostering a sense of camaraderie and shared ambition among investors, which aligns with BlockDAG's community-driven ethos. Additionally, BDAG is experiencing rapid price growth, currently valued at \$0.014, marking a 1300% increase since its launch. Analysts project that BlockDAG could reach \$10 by 2025, making it a highly attractive investment opportunity. Even if participants don't win the \$2 million, their \$100 investment could potentially grow to around \$71,428 by 2025. These initiatives, like the \$2 million giveaway, have significantly boosted BlockDAG's popularity and market dominance. With \$56.9 million raised in its presale by Batch 19, the giveaway is set to further accelerate this growth. By actively engaging and expanding its community, BlockDAG strengthens its market position and investor relations, solidifying its status as the top crypto investment for 2024. Final Thoughts As Toncoin surges and Dogecoin garners attention from big investors, BlockDAG's \$2 million giveaway is capturing the crypto community's imagination, bolstering spirits, and driving widespread participation. Alongside a formidable \$56.9 million in presales, BlockDAG is emerging as the must-watch cryptocurrency of 2024, with projections pointing to a \$10 valuation by 2025—an opportunity too good to pass up. The cryptocurrency market is known for its volatility and rapid shifts in sentiment. Recently, Bonk (BONK) surged by 15% in just 24 hours, drawing the attention of traders and investors alike. Amidst this excitement, Mpepe (MPEPE) is also displaying significant momentum, suggesting that traders might be gearing up for another rally. This article explores the dynamics of these two tokens and what the future holds for them. The Rise of Bonk (BONK) Recent Surge Bonk (BONK) has captured headlines with its impressive 15% increase in a single day. This surge reflects the growing interest in meme coins and the potential they hold for substantial returns. Bonk (BONK) has built a dedicated community and leveraged social media hype, propelling its market value. Community and Hype The community behind Bonk

(BONK) plays a crucial role in its price movements. The collective enthusiasm and active participation in promoting the token contribute to its volatility and potential for rapid gains. However, this also means that Bonk (BONK) is susceptible to sudden drops, making it a high-risk, high-reward investment. Mpeppe (MPEPE) Gaining Traction Strong Momentum While Bonk (BONK) enjoys its moment in the spotlight, Mpeppe (MPEPE) is steadily gaining traction. Mpeppe (MPEPE) has managed to carve out a niche for itself by combining meme culture with sports fandom, particularly drawing inspiration from soccer star Kylian Mbappé. This unique positioning sets it apart from other meme coins and attracts a diverse range of investors. Strategic Tokenomics Mpeppe (MPEPE) is designed with strategic tokenomics to ensure long-term growth and stability. With a maximum supply of 7.6 billion tokens and an initial price of \$0.0007, Mpeppe (MPEPE) is accessible yet promising. The token distribution, which includes allocations for presale, liquidity, and sports-related activities, aims to foster a vibrant and engaged community. Opportunities in a Volatile Market Traders' Paradise The current volatility in the crypto market presents significant opportunities for traders. The rapid price movements of tokens like Bonk (BONK) and Mpeppe (MPEPE) create potential for high returns if traders can accurately predict and time their trades. This environment rewards those who stay informed and react quickly to market changes. Diversification Strategies Given the high-risk nature of these investments, diversification is key. Traders should consider spreading their investments across multiple tokens to mitigate risk. By including both established tokens like Bonk (BONK) and emerging ones like Mpeppe (MPEPE), traders can balance their portfolios and enhance their chances of capitalizing on market rallies. The Future of Mpeppe (MPEPE) and Bonk (BONK) Sustained Growth For Mpeppe (MPEPE) to continue its upward trajectory, maintaining community engagement and delivering on its promises will be crucial. The token's focus on sports and entertainment offers a unique appeal that can attract long-term supporters. Similarly, Bonk (BONK) must sustain its community-driven momentum and capitalize on its current hype. Potential Catalysts Both tokens could benefit from broader market trends and external catalysts. For instance, regulatory developments, partnerships, or major endorsements can significantly impact their prices. Staying attuned to news and market sentiment will help traders identify and leverage these opportunities. Benefits for Traders in a Volatile Market Volatility in the crypto market can be daunting, but it also offers unmatched opportunities for profit. Traders who understand the market dynamics and can anticipate price movements stand to gain the most. Tools such as technical analysis, market sentiment indicators, and staying informed about news and developments are invaluable. Risk Management Effective risk management strategies, including setting stop-loss orders and diversifying portfolios, are essential for navigating a volatile market. By mitigating potential losses and maximizing gains, traders can enhance their overall profitability. Conclusion As Bonk (BONK) surges and Mpeppe (MPEPE) gains momentum, traders are presented with exciting opportunities. The unique value propositions of these tokens, combined with the current market volatility, create a fertile ground for substantial returns. For those interested in exploring the potential of Mpeppe (MPEPE), the smart contract address is 0xd328a1c97e9b6b3Afd42eAf535bcB55A85cDcA7B. Join the Mpeppe (MPEPE) community and be part of the next big success story in the crypto world. - Eight asset managers had their spot Ether ETF 19b-4 filings accepted by the SEC on May 23. - The S-1s might be approved over the course of this summer according to the SEC Chair. In order to list and trade shares of a spot Ethereum (ETH) exchange-traded fund (ETF), asset management firms VanEck and 21Shares have updated their S-1 registrations with the US SEC. The firm's attempts to secure final clearance from the SEC for its Ethereum ETF included filings on July 8 in which VanEck modified its Form S-1 registration statement. In a similar move, 21Shares' Core Ethereum ETF also submitted a revised form. "As soon as practicable after the effective date" of the registration was stated in both filings. But no precise date was given for the debut on U.S. exchanges. All Eyes on SEC Moreover, in order for asset management companies to offer shares of spot Ether ETFs, the SEC requires these revised filings as part of the final approval process. Also, Bitwise submitted its own revised registration on July 3. And industry watchers anticipate that more businesses will do the same within the next week. Eight asset managers had their spot Ether ETF 19b-4 filings accepted by the SEC on May 23. Final approvals, according to experts, might occur in July. The S-1s might be approved "sometime over the course of this summer" according to SEC Chair Gary Gensler. The Chairman did not provide a specific date, at a Senate Banking Committee hearing in June. Furthermore, in January, after the SEC's approval of the listing and trading of spot Bitcoin ETF shares, VanEck applied for a spot Ether ETF. It has been reported that the SEC is now examining whether or not to classify ETH as a security. This can further delay the clearance process. Highlighted Crypto News Today: Dogecoin (DOGE) Derivatives Market Activity Plunges to Yearly Low

- The crypto exchange intends to reimburse investors far sooner than the 60 days allowed. - The start of Mt. Gox reimbursements have caused a commotion in the crypto market. Bitstamp has assured to pay out debtors who were owed payments by Mt. Gox as soon as possible. The crypto exchange intends to reimburse investors far sooner than the 60 days allowed by their agreement with the Mt. Gox trustee for distributing tokens. Several Japanese creditors of Mt. Gox have reported getting compensation in Bitcoin (BTC) and Bitcoin Cash (BCH) via Bitbank and Kraken exchange accounts, prompting this declaration. The payback time frame is now more clearly defined thanks to Bitstamp's quick response. Prioritizing Customer Service Bitstamp has stated its aim to handle the bitcoin repayments to creditors of Mt. Gox as swiftly as possible. It is one of the exchanges that has been assigned this responsibility. Bitstamp has 60 days to disburse the tokens once they are received, according to the arrangement with Mt. Gox trustees. However, the exchange is committing to refund investors as soon as

possible. There has been a lot of curiosity in Mt. Gox reimbursement schedule in the crypto market, and this news helps to clarify that. After receiving funds from the trustee, there are five exchanges in the payback process. And each one has a distinct distribution timeline. The process of allocating and distributing funds was completed within hours by two Japanese exchanges, Bitbank and SBI VC Trade. It's unclear how distributions are going for the remaining three exchanges: Bitstamp, Kraken, and BitGo. When it comes to processing payments, these exchanges have different deadlines. Bitstamp up to 60 days, Kraken up to 90 days, and BitGo up to 20 days. Along with other noteworthy occurrences, the start of Mt. Gox reimbursements have caused a commotion in the crypto market. Fears of future drops caused Bitcoin's price to fall below \$54,000; however, it has since rebounded and is now trading at \$55,600. Highlighted Crypto News Today: Dogecoin (DOGE) Derivatives Market Activity Plunges to Yearly Low

- Dogecoin (DOGE) recovered by 11% from recent lows, reclaiming the \$0.1097 level. - Shiba Inu (SHIB) soared over 16% in the last 24 hours to \$0.00001572. Today marks a significant recovery in the global cryptocurrency market, led by Bitcoin (BTC) as it surged to the \$56,500 zone. This bullish momentum has positively impacted nearly all cryptocurrencies, with notable gains across the board. Following the uptrend momentum, Dogecoin (DOGE) and Shiba Inu (SHIB) have shown significant rebounds after a prolonged period. Dogecoin and Shiba Inu Current Stats Dogecoin, which had seen a steep decline on July 5, falling by 23% from \$0.11898 to \$0.09166, has now rallied by 11.33%, reclaiming the \$0.1097 mark. Currently, DOGE is trading at \$0.1091, with a market capitalization of \$15.82 billion, which constitutes 0.79% of the global crypto market. Despite this recovery, its daily trading volume remains low, having dropped 40% to \$1 billion. However, the simple moving average (SMA) trend for DOGE/USD on the hourly chart indicates a bullish pattern if the momentum continues. Shiba Inu has also displayed a notable surge, rising 16.2% from a low of \$0.00001355 to a high of \$0.00001572. At the time of writing, SHIB's market cap has increased by 15% to \$9.26 billion. However, similar to DOGE, SHIB's daily trading volume has decreased by 28%, standing at \$368 million. The memecoin's price movement remains under scrutiny, with expectations of a potential spike to \$0.000065, which would mark a significant return to levels last seen in late 2021. Overall, the cryptocurrency market is witnessing a strong recovery, with memecoins leading the charge amidst a generally positive sentiment. BUSAI, the innovative memecoin on the Solana blockchain, is launching a series of exciting community activities aimed at engaging crypto enthusiasts worldwide. From the first Presale on PinkSale to the exclusive Airdrop or AMA, BUSAI invites participants to earn rewards and gain insights into the world of AI-infused memes. Recent Meme Market Trends and Q3 2024 Forecast Recent years have witnessed rapid expansion in the meme market, propelled by the rising popularity of cryptocurrencies like Dogecoin and Shiba Inu. As we approach Q3 2024, this upward trajectory shows no signs of slowing. Capitalizing on the growing interest in AI and its diverse applications, BUSAI is strategically positioned to leverage this trend. As an innovative memecoin on the Solana blockchain, BUSAI is set to launch a series of engaging community activities aimed at connecting with crypto enthusiasts worldwide. The project's robust foundation and unique value proposition firmly establish it as a formidable player in the memecoin market. Exciting July Events for the BUSAI Community Await **1st Pre-Sale Begins with 10 Billion \$BUSAI Tokens on PinkSale BUSAI kicks off its first pre-sale with 10 billion \$BUSAI tokens available at 0.00003 USDT per token. This event, running from July 11th to July 17th, offers a chance to participate in the forefront of the memecoin movement. **Claim Free Rewards in the \$BUSAI Token Airdrop - Timeline: July 5th to July 13th - Total rewards: 1,775,000,000 \$BUSAI - How to participate: To earn free tokens, you can complete tasks including liking, sharing, and following BUSAI on social media, as well as participating in seeding activities and sharing creative content. For all information and to get involved, head to BUSAI's official website at busai.me and start earning now. **Explore BUSAI Further in the AMA On July 11th, BUSAI and Tit0 Labs will host an Ask-Me-Anything (AMA) to allow for direct connection with partners and the community. This free event aims to explain BUSAI, address queries from the host and participants, and offer an in-depth overview of BUSAI. The AMA is intended to foster transparency, inspire dialogue, and disseminate critical information about BUSAI's mission and community-based initiatives. Promising Potential for BUSAI's Engagement Growth The BUSAI team intends to organize more Airdrops, Contests, and Community activities in the near future to improve user involvement and reward opportunities for cryptocurrency enthusiasts. These events seek to create engaging experiences that encourage community participation and innovation in the bitcoin field. Visit their official channel to learn about AI-powered memecoins, exhibit your creativity with memes, and earn prizes while contributing to the dynamic BUSAI community. - Altcoins like SOL, XRP, and MATIC face significant price dips. - Bitcoin hits a two-month low of \$57043 with a 4% decline. The cryptocurrency market experienced a significant bearish trend over the past twenty-four hours, with the overall market cap decreasing by 4.40%. Bitcoin, the largest cryptocurrency, fell by 4%, dropping to a two-month low of \$57,043.96, unsettling investors as it led to a broader decline in altcoin prices. Ethereum, the leading altcoin, also hit a two-week low. Ethereum (ETH) ETH saw a 4.33% decline over the past 24 hours, with trading volume increasing by 52% during the same period. Its price decreased from \$3,320.84 to \$3,128.61, currently under selling pressure with a daily RSI of 32. The 9-day EMA at \$3351 confirms a bearish trend. Resistance levels are identified at \$3520 and \$3632, while potential support levels include \$3246 and \$3065. Solana (SOL) Solana, among the top 5 cryptocurrencies by market cap, fell by 8% in the past twenty hours,

hitting a ten-day low of \$7.19, with trading volume up by 17%. Over the past month, it has declined notably by 20%. Solana is currently facing selling pressure with a daily RSI at 32 and a 9-day EMA at \$141 indicating a bearish trend. Resistance levels are noted at \$154 and \$162, while support levels might be tested at \$122 and \$116. Toncoin (TON) Toncoin, also in the top 8 by market cap, dropped by 7.18% in the past twenty hours, reaching a ten-day low of \$132.45, with trading volume up by 27%. It is nearing selling pressure with a daily RSI of 47. And a 9-day EMA at \$7.638 confirming a bearish trend. Resistance levels are observed at \$8.09 and \$8.28, with potential support at \$6.7 if bearish sentiment intensifies. Memecoins Face Heavy Dip Top memecoins like DOGE, PEPE, SHIB, and FLOKI also experienced significant declines during this bearish period. Dogecoin dropped to a five-month low of \$0.1103, down by 7%; PEPE hit a seven-day low of \$0.000009329, down by 9%. SHIB fell to a four-month low of \$0.00001522, down by 8%. And Floki reached a nine-week low of \$0.0001509, down by 8%.

Highlighted News Of The Day

Singapore, Singapore, July 4th, 2024, Chainwire The industry-leading brand of DOGE and Litecoin mining machines announced a new product line at the recent Mining Disrupt 2024 conference. FoundationLogic, the fabless semiconductor design company behind high-performance ElphaPex Dogecoin (DOGE) + Litecoin (LTC) miners, took center stage at Mining Disrupt 2024 in Miami, Florida, held from 24-26 June. At the event, FoundationLogic unveiled its new product line for silent home miners. Like the pro ElphaPex DG 1/DG 1+ models, the new device, dubbed ElphaPex DG Home 1, is powered by the Proof-of-Work (PoW) Scrypt algorithm, offering dual DOGE and LTC rewards. Designed for a new era of home mining, ElphaPex DG Home 1 promises silent, low-maintenance, yet performant DOGE + LTC mining ensured by water-cooling technology. Set to be released in Q4, 2024, the new model boasts a hashrate of 2000M, power of 620W and power efficiency of 0.31JM. Upon launch, ElphaPex DG Home 1 will be available for immediate purchase through the ElphaPex official website. ElphaPex DG Home 1 drew an immediate reaction from crypto mining insiders, with some of the industry's major influencers sharing photos on social media as soon as the model was showcased. Specifically, they described the new water-cooled miner as "silent, powerful, and efficient". "This new silent home miner embodies our commitment at ElphaPex to be everyone's miner partner, regardless of the scale of operations" said Ben Weng, VP of Product at FoundationLogic. "We were pleased by the enthusiastic response we saw at the conference, as many visitors wanted to get one on the spot. Luckily, it won't be long before everyone can start dual mining DOGE and Litecoin from the comfort of their homes". "ElphaPex products have achieved a remarkable milestone in the DOGE & Litecoin mining chip industry and we're excited to launch this new product into mass production" said Charles Song, Executive VP at Samsung Foundry. "I believe this is just the beginning of a very bright future for ElphaPex". In addition to launching its newest product, FoundationLogic made a strong impression at the event, drawing attention from industry insiders and influential figures. As the main sponsor of Mining Disrupt 2024, the Scrypt mining hardware company hosted the official opening party and operated one of the event's busiest booths, featuring engaging activities and giveaways. Another standout at the conference was FoundationLogic's keynote presentation. During the keynote, the company's representatives emphasized their commitment to advancing Scrypt mining, highlighting its growing potential for miners. This is particularly significant in light of bitcoin's recent halving, which has posed challenges across the industry due to reduced rewards. They also pointed out several key advantages of Scrypt hardware over SHA-256 hardware, including better cash flow, ROI, and equipment lifecycle. Another highlight of the presentation was the success of the ElphaPex DG 1+, an ASIC miner launched earlier this year at Blockchain Life 2024 in Dubai. As FoundationLogic's flagship model, it has set a new standard in the market and continues to dominate the Scrypt mining sector with a hashrate of 14000M, power of 3920W and efficiency of 0.28JM. Considering recent price trends and the increasing availability of reliable Scrypt mining hardware provided by FoundationLogic, leveraging DOGE's meme advantage alongside LTC's solid track record may offer a strategy for mining operations this year. About FoundationLogic FoundationLogic is a Singapore-based fabless semiconductor design company dedicated to revolutionizing the cryptocurrency mining industry. With a focus on innovation and reliability, FoundationLogic utilizes state-of-the-art ASIC chips designed in-house and subjects its products to rigorous field testing. Through its flagship ElphaPex series, FoundationLogic empowers mining enthusiasts and professionals with cutting-edge, accessible machines, setting new standards for efficiency and performance in the field. For more information, users can visit [elphapex.com](https://www.elphapex.com) LinkedIn: <https://www.linkedin.com/company/100958166> Contact VP of Product Ben Weng ben@foundationlogic.com

Pixelverse, a Web3 gaming ecosystem, plans to include the meme coin character MEW, based on Solana, into its real-time game rooster. The Pixelverse games operate inside the Telegram ecosystem, and this shift is expected to draw in new participants. The first meme coin based on Solana to be featured on TON will be MEW. Kori Leon, chief operating officer of PixelVerse, told CoinDesk in a Telegram message: "Pixelverse isn't just about creating a game; we're building a retail-friendly brand that captures audience attention and onboards millions to our product lines. The MEW partnership is possible as Pixelverse aims to integrate other IPs into their Pixel Universe." Launched in March during the Solana meme coin mania, MEW is a character and token based on cats. According to CoinGecko statistics, the token "named cat in a dog world" reached a high market valuation of about \$700 million in early April. With their in-game robots or characters, players on Pixelverse may receive token rewards. The game is estimated to have 35 million active players. The doge character from the dogecoin (DOGE) meme coin is one of the several unique characters on Pixelverse.

- Toncoin (TON), Cardano (ADA), and Conflux (CFX) defy the market slump, showcasing resilience with gains. - TON bucks the trend with a 20% monthly gain overtaking Dogecoin as the 8th largest crypto. The global cryptocurrency market has displayed a notable downtrend recently. Following a substantial price surge, Bitcoin (BTC) briefly climbed above \$63,700 before experiencing a decline that mirrored the overall market trend. In the past 24 hours, the global crypto market saw a bearish reversal,

dropping over 2.32% to \$2.26 trillion. Despite the widespread downturn, a few altcoins, including Toncoin (TON), Conflux (CFX), and Cardano (ADA), have managed to post gains. Top Crypto Gainers of the Day Toncoin emerged as the top third performer, with a 2.66% increase in the last 24 hours, adding to its week-long ascent of 7% and erasing previous losses. While most assets saw declines in their monthly performance, TON continued its rally and recorded a 20% increase. This upward movement has let Toncoin surpass Dogecoin, becoming the 8th largest cryptocurrency by market cap. At the time of writing, TON is trading at \$7.96 with a market cap of \$19.59 billion, now 3% below its all-time high of \$8.24. The recent traction for Toncoin can result from its listing on Kazakhstani exchanges and increased investments from Pantera Capital. Cardano has also showcased notable growth, climbing 3.87% to a peak of \$0.4219. This surge has boosted its market cap to \$14.85 billion, with a 22% rise in daily trading volume. The recent uptick is likely driven by anticipated network upgrades and increased on-chain activity, suggesting bullish sentiment despite market volatility. Conflux has been another standout, rising 6.63% in the last 24 hours to a high of \$0.1752, topping the gainers list. Over the past week, Conflux has surged over 10%, with a current market cap of \$730 million. However, the daily trading volume for Conflux decreased by 28%, indicating some caution among traders. Overall, while the broader crypto market faces fluctuations and regulatory challenges, select altcoins are showing bullish momentum. Highlighted Crypto News Today: Dormant PEPE Whale Activity Sparks Attention Amid Price Decline

- U.S. public firm Kronos accepted SHIB as a payment option. - In 2021, the company accepted Dogecoin as a payment method. - Shiba Inu was down by 31.53%, over the past month. The second largest meme coin Shiba Inu (SHIB) is endorsed as a payment method by the US-based public firm Kronos Advanced Technologies (KNOS) for purchasing air purifiers. The news was disclosed in the company's June filing with the U.S. Securities and Exchange Commission (SEC). Reportedly, there are 1.38 million SHIB wallet holders as of 2024. Acknowledging this fact, Kronos cited "the widespread ownership and popularity of SHIB among cryptocurrency enthusiasts" as the reason for accepting SHIB in the filing. Moreover, Greg Rubin, CEO of Kronos Advanced Technologies Inc., stated: "We are thrilled to be the first public company to accept SHIB as a form of payment for our air purification products. This move not only demonstrates our commitment to embracing new technologies but also allows us to cater to the growing demand for alternative payment options." Previously, in February 2021, KNOS announced on X its acceptance of memecoin Dogecoin (DOGE) as the payment token. The overall market fluctuation over the past few weeks has impacted SHIB and brought in a fuzz among investors. Shiba Inu (SHIB) experienced a considerable decline within the last 24 hours, dropping 1.23%. At the time of writing, the meme coin's price was \$0.00001718, as per CMC. Over the past week and month, the asset was down by 1.24% and 31.53%, respectively. In addition, Shibburn's on-chain data, reveals over 918 million SHIB tokens were burned across 237 transactions in the previous month. SHIB's 24-hour trading volume has dropped by 3.54% to \$175 million. Although, the RSI stays around 34.07, nearly oversold indicating insufficient momentum for the price shift. Highlighted Crypto News

In a fascinating development within the cryptocurrency market, two promising tokens, Ordi (ORDI) and Cosmic Kittens (CKIT), are vying for the title of closest correlation with Bitcoin (BTC). The rivalry between these digital assets has captured the attention of traders and investors, raising questions about their potential impact on the broader market. Currently preparing for presale, analysts believe Cosmic Kittens (CKIT) can follow Bitcoin's positive price trends. If this prediction holds, then CKIT could be a winner in the next bull run compared to the likes of Ordi (ORDI). >>Click Here To Learn More About Cosmic Kittens<< Ordi (ORDI) Fights Off Bears Amid Bitcoin Tailwinds For the uninitiated, Ordi (ORDI) is a crypto project that initially surged on the back of Bitcoin's (BTC) latest pump. The token price skyrocketed as speculative mania took hold, with Ordi (ORDI) investors piling in hopes of seeing even more gains. However, the rally has proven unsustainable as Ordi (ORDI) now faces a bearish reversal. The token has plummeted over 50% from its all-time high as the euphoria bubble pops. ORDI's struggles coincided with a wider crypto market pullback at the end of February before Bitcoin reasserted its dominance in March. Analysts warn that a further downslide could be in store if investor confidence keeps reducing. ORDI experienced a short-lived bounce back in March, with its price reaching an impressive \$63. However, the token's price has since fallen to \$36.11 and may drop below its 2024 all-time low of \$34.16, making it increasingly clear that Ordi (ORDI) may have been overhyped during the recent Bitcoin-driven shakeout. That said, the future of Ordinals (ORDI) remains bright. Analysts believe that ORDI can crawl back to its post-February highs of \$59.69 if it can sustain momentum throughout Q3 and Q4. However, investors looking for a crypto asset that could mimic Bitcoin's (BTC) historic price movements are turning to Cosmic Kittens (CKIT) for an answer. Cosmic Kittens (CKIT) Gaming Token Could Mirror Bitcoin-Like Growth As a blockchain-based game melding NFTs with "pet" mechanics, Cosmic Kittens (CKIT) represents new crypto frontiers centered around gaming culture and play-to-earn models. What intrigues analysts is CKIT's potential to become this cycle's top token investment, channeling the rabid demand that propelled Dogecoin and other dog-themed tokens to billions in market capital. If Cosmic Kittens (CKIT) can capture even a fraction of that virality, analysts believe it could deliver Dogecoin (DOGE)-esque gains that compete with Bitcoin's rallies. The gameplay loop of nurturing adorable NFT kittens and the ability to earn cryptocurrency has all the ingredients for meme-fueled mania. Cosmic Kittens (CKIT) brings ample meme energy and cuteness appeal that could resonate powerfully across internet culture if adoption takes off. Participants have three main ways of earning on Cosmic Kittens (CKIT) through the project's Rocket Rewards Program, including: - Staking CKIT to receive reward boosts that attract higher yields. - Trading NFT characters for CKIT tokens. - Accessing super rare NFTs like characters and galactic art pieces through Tiered Rewards. Outside investors have as much potential to earn from Cosmic Kittens (CKIT) as the token's price could soar to new heights. The blockchain gaming industry is experiencing explosive growth and could reach \$614.91 billion by 2030, up from \$154.46 billion in 2023. Combined with a highly anticipated gaming experience, analysts are confident that the Cosmic

Kittens (CKIT) token value can grow by 1,000% in the first 12 months after the presale. Even before its presale launch, Cosmic Kittens (CKIT) has seen an avalanche of speculative demand eerily reminiscent of meme coin frenzies. Buyers are frantically lining up to scoop up the 752,500,000 CKIT tokens (43% of total supply) allocated for presale. Tokenmonics Potential Gives Cosmic Kittens (CKIT) Bitcoin Edge Ordinals (ORDI) proved itself in 2024 as an altcoin with high financial potential, indicating that it could be a worthwhile investment long-term. However, its recent market decline suggests its performance was due to the Bitcoin wave in February. Now Cosmic Kittens (CKIT) stands out as a top alternative for investors looking for profitable coin assets. Its presale will start with a launch price of \$0.0055 per token. It will also offer a 20% bonus on all CKIT sales. The Cosmic Kittens P2E game has already grabbed the attention of blockchain gaming enthusiasts, while the overall market is set to reach record heights, making CKIT a very attractive investment with the potential for excellent returns during its presale. Presale entrants could be selected to purchase 700 NFTs at 0.02 ETH each, ahead of the general mint price of 0.04 ETH. Keep a close eye on the ongoing presale with the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. Transforming dreams into substantial wealth often begins with modest initial investments, leading to significant financial gains. A finance expert in New York exemplifies this path, having chosen to invest early in Shiba Inu (SHIB), and subsequently achieving remarkable financial freedom. This success has inspired many to focus on emerging technologies like BlockDAG. BlockDAG has quickly garnered attention with impressive early sales of \$53.5 million. This narrative delves into the potential of BlockDAG's innovative features to replicate or even surpass the financial success stories of early SHIB investors, offering a glimpse into the transformative possibilities of strategic investments in new blockchain technologies. A New Yorker Benefiting from Shiba Inu The story starts with Shiba Inu's (SHIB) emergence, often called the "Doge coin killer." Initially considered a fun investment due to its status as a meme coin, SHIB's value quickly soared thanks to its community-focused nature and widespread popularity. During a downturn in the crypto market, there was a notable increase in SHIB's burn rate—a method to decrease the number of tokens in circulation permanently. According to data from Shibburn, there was a significant jump in the burn rate, with 232 million SHIB tokens eliminated in a single day. This deliberate reduction in supply played a key role in enhancing the rarity and potential value of SHIB. Despite a general market decline, this strategy was crucial in keeping the community's interest and investments in SHIB. A financial professional from New York took advantage of this development by investing early in SHIB. As the cryptocurrency's value climbed, his investment yielded substantial returns. His profits allowed him to pay off his student debts, purchase an upscale penthouse in Manhattan, and retire significantly earlier than planned. BlockDAG Poised for Major Success The crypto world is abuzz again with the rise of a new contender—BlockDAG. BlockDAG initiated a presale frenzy at its latest groundbreaking keynote, with 11.8 billion coins sold, amassing \$53.5 million. This highlights a strong demand from visionary investors, putting BlockDAG in the spotlight. From its initial price of \$0.001 per coin, the value has soared to \$0.0122, marking an impressive 1120% increase. This growth reflects the community's confidence in BlockDAG's potential to transform blockchain applications in real scenarios. Currently priced at \$0.0122 in its 18th batch, the forecasted \$0.05 price at launch indicates promising returns, offering a prospect of significant gains. BDAG aims high with a projected price of \$10 by 2025, suggesting a potential 30,000x return post-launch. This ambitious target is supported by strategic initiatives like a four-month vesting period and a \$100 million investment to enhance market liquidity, promoting long-term stability against crypto volatility. BlockDAG's strategy is straightforward: establish a robust foundation, safeguard investor interests, and aim high. Early investors are not just buying into a cryptocurrency; they are part of a revolutionary change in blockchain applications, aiming to exceed the phenomenal returns of early SHIB investors. BlockDAG Sets a New Direction for Future Success BlockDAG presents an exciting opportunity for early investors to possibly match or exceed the success stories of past crypto booms. By investing in BlockDAG's innovative blockchain solutions, participants are positioning themselves in a project set for considerable growth. The strong presale results and strategic market positioning suggest another monumental rise in crypto wealth. For those ready to invest early in new technologies, BlockDAG offers not just an investment but a chance to join a groundbreaking movement in blockchain technology and financial prosperity. The wider market is seeing sell-offs, with Dogecoin (DOGE) futures recently experiencing \$60 million in long trades liquidated. Likewise, the Bonk price dropped 19% in one week. Meanwhile, BlockDAG (BDAG) is progressing quickly. The Keynote 1 launch at Tokyo's Shibuya Crossing and the X1 mobile mining app have greatly increased its visibility, pushing presale numbers to over \$53M. Its low-code, no-code platform allows users to create utility tokens, meme coins, and NFTs, setting BlockDAG up to become a significant player in the cryptocurrency market. Bonk Price Drops Amidst Market Volatility Bonk (BONK), one of the first Solana memecoins, saw decreased enthusiasm before its 2023 comeback. Despite a 7.5% increase over the past month, Bonk's price dropped 19% in one week, contributing to a 4% decline as the crypto market lost nearly 1%. BONK has surged significantly over the year, showing resilience and growth potential. The memecoin aims to restore liquidity to Solana, evidenced by its 2022 airdrop to the Solana community. With a trading volume of \$300 million and potential market

recovery, BONK might rebound to \$0.000030 in weeks and \$0.00005 by year-end. Dogecoin Futures Suffer Major Losses Amid Bearish Market Over \$400 million in crypto longs were liquidated in the past 24 hours, with Dogecoin futures seeing \$60 million in long trades liquidated as DOGE prices dropped over 10%. This exceeded liquidations for bitcoin (BTC) futures, which lost \$47 million. The CoinDesk 20 Index dropped 3.4%, reflecting a broader market sell-off and bearish sentiment. Dogecoin futures faced the highest liquidation activity since May 2021, with Huobi experiencing \$44 million in liquidations. Overall, the market faced sell-offs due to profit-taking and dollar strength, leading to significant losses in Dogecoin futures.

Unlocking Profits with BlockDAG's X1 Mining App and Low-Code Revolution

BlockDAG's X1 app transforms mobile mining, turning smartphones into powerful mining devices. Available on Android and Apple platforms, the app features an energy-saving algorithm that preserves battery life and data, ensuring efficient mining. Users can mine up to 20 BDAG per day, worth \$1 at the launch price of \$0.05 per coin. When the coin's value reaches \$1, daily earnings will rise to \$20, and at \$10, users could earn \$200 per day. The app also features a referral system and daily engagement incentives, enhancing accessibility and rewards for users. It stands out as one of the best crypto-mining apps available. BlockDAG's journey to global dominance began with the display of its keynote video at Tokyo's Shibuya Crossing, which detailed its project, including integration with DeFi platforms like Bitget and CoinEx. This strategic marketing move boosted visibility and presale numbers, raising over \$53 million till the 18th batch. BlockDAG's low-code, no-code platform is revolutionizing smart contract creation, making it accessible for developing utility tokens, meme coins, and NFTs. This platform allows users to create, manage, and deploy applications through a drag-and-drop interface, eliminating the need for extensive coding knowledge. This democratizes the development process, potentially giving birth to the next big meme coin by empowering more creators to innovate.

Key Insights

The broader market sell-offs have significantly impacted Dogecoin (DOGE) futures and Bonk, with substantial liquidations and price drops. In contrast, BlockDAG (BDAG) is making remarkable strides. The successful Keynote 1 launch at Tokyo's Shibuya Crossing and the innovative X1 mobile mining app have boosted its visibility and presale numbers to over \$53M. Furthermore, the low-code, no-code platform empowers users to develop the next big meme coin. Amid the dynamic shifts in the cryptocurrency realm, three tokens are seizing the spotlight: DogWifHat (WIF), XRP, and BlockDAG (BDAG). DogWifHat has experienced a significant price surge following an endorsement from Elon Musk, drawing considerable investor attention. On the other hand, XRP's future hangs in the balance as the Ripple vs. SEC lawsuit approaches its conclusion, which could dramatically impact its value. Amid these developments, BlockDAG distinguishes itself with a remarkable \$52.5 million from its presale and innovative technology, marking it as the top choice for investment. Its unique directed acyclic graph (DAG) technology promises exceptional returns, drawing in astute investors.

DogWifHat's Remarkable Rise: Could WIF Hit \$5?

DogWifHat is in the spotlight with its price recently spiking to \$3 before stabilizing around \$2.59. The surge gained momentum following Elon Musk's shout-out during an X platform stream, triggering a market buzz. Musk's impact on crypto prices is notorious, often leading to significant surges following his endorsements. Post-mention, DogWifHat's value jumped, and forecasts from CoinCodex now predict a potential rise to \$8.85 by July 2024. With its market days turning increasingly positive and volatility peaking, WIF is on the radar. Investors are now watching closely to see if DogWifHat can emulate Dogecoin's historic rise and make the most of the "Musk effect." The next few weeks are critical for WIF to cement its status in the crypto arena.

XRP's Price in the Balance

The impending verdict in the Ripple vs. SEC case holds significant implications for XRP's future. A favorable outcome for Ripple could elevate XRP's price beyond \$0.50, while an SEC appeal could see it tumble to \$0.30. Ripple has been cleared for secondary sales but remains scrutinized for direct institutional sales, with a resolution possible by July. Legal experts hint at an SEC appeal of the summary judgment, which could extend the legal wrangling and sway XRP's price. XRP lawyer Fred Rispoli contemplates a settlement, though it's uncertain. XRP's current trading price of approximately \$0.48 mirrors this ambiguity, with potential spikes or dips contingent on the lawsuit's outcome.

BlockDAG's Sales Explosion: From \$500K to \$5M

Daily BlockDAG, a pioneering Layer 1 cryptocurrency, is engineered to address the blockchain's core challenges of speed, security, and scalability, and it has witnessed rapid growth since its debut. The value of BDAG coins rocketed from \$0.001 in the initial batch to \$0.0122 in batch 18, achieving an impressive 1120% increase. To date, BlockDAG has sold approximately 12 billion coins, amassing around \$52.5 million, surpassing industry giants like Ethereum and Bitcoin in terms of presale achievements. This remarkable progress has spurred major investments from whales, with presale figures escalating swiftly. The recent "moon-themed" Keynote 2 event has hastened BlockDAG's Mainnet launch, priming the market for a substantial increase in demand and value. Daily sales are expected to explode from \$500K to \$5 million after the launch. Market analysts forecast that BDAG could hit \$1 by 2024 and ascend to \$10 by 2025, potentially delivering returns up to 30,000x for early investors. This keynote event also showcased BlockDAG's cutting-edge directed acyclic graph (DAG) technology, which significantly boosts transaction speed and security by facilitating multiple concurrent transactions. Featuring compatibility with Ethereum Virtual Machine (EVM), integration with Metamask, and the addition of more than ten new payment options, BlockDAG is solidifying its status as a formidable force in the cryptocurrency market. Continuous updates to its development and its sturdy architectural framework position BlockDAG as an enticing investment with substantial prospects for growth.

Closing Thoughts

As the cryptocurrency market continues to evolve, DogWifHat, XRP, and BlockDAG each present their distinct prospects and challenges. Amid the uncertainties surrounding DogWifHat and XRP,

BlockDAG's advanced technology and exceptional \$52.5 million presale performance distinctly position it as the superior investment option. With projections for 30,000X returns and a solid development trajectory, BlockDAG is emerging as the top investment among these contenders, poised to become the next giant of the crypto world. - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. - The Japan-based crypto exchange is said to be buying out FTX Japan's entire shares. - bitFlyer is anticipated to rebrand the FTX subsidiary to gain customer confidence. A key event is about to unfold as bitFlyer, a prominent Japanese crypto exchange, is slated to buy FTX Japan. Until today, details about the intention to acquire the local unit of the renowned but now insolvent FTX exchange remained undisclosed. Nonetheless, the arrangements for this transaction are nearing completion. Those familiar with the situation say that bitFlyer's parent firm has offered to buy out FTX Japan. There is a tight relationship between the transaction and the current processes in the US court that is overseeing FTX's bankruptcy. BitFlyer is said to be buying out FTX Japan's entire shares. In addition, local Japanese media outlet NHK reports that the cryptocurrency exchange will take over management of the company. The strategic importance of FTX Japan's market position is reflected in the estimated purchase price, which is in the range of several billion yen. Major Rebranding FTX, which was previously a major participant in the cryptocurrency industry worldwide, sought US Chapter 11 bankruptcy protection in November 2022. Roughly 130 related businesses were listed in the bankruptcy case of the exchange that Sam Bankman-Fried (SBF) created. Due to this, it became the biggest bankruptcy in the cryptocurrency industry's history. As a result, FTX Japan encountered limitations in its operations. The Japanese government ordered a temporary stop on the withdrawal of assets, among other things. Upon its demise in 2022, the exchange actively sought a purchaser for its Japanese affiliate. In addition, bitFlyer is anticipated to rebrand the FTX subsidiary significantly. This is in order to gain customer confidence despite the continuing legal issues. Stakeholders are keeping a careful eye on how this transaction would affect the country's crypto ecosystem as the proceedings wind down. Highlighted Crypto News Today: Ripple (XRP) Price Struggles to Recover Despite Consistent Trading Volume and Optimism

- The memecoin sector has declined 25.52% in the last 30 days. - Celebrity meme token shillings drew market attention to the sector in May. The memecoin sector received the market spotlight in May 2024. The tokens' activity ranked the highest in the overall monthly analysis. This activity surge was priced in by the memecoin tokens causing notable waves in the overall market. However, the rally has recently died down as highlighted by downward prices and market hype movements. This has caused community members to speculate an approaching end of the memecoin season. Memecoin dominance in alt markets is declining. "Ki Young Ju (@ki_young_ju) June 19, 2024 CT would be shifting from gambling to focusing on fundamentals, similar to a few years ago. Pack it up lads, it's over." pic.twitter.com/H5d81mRIJB Secondly, according to Dune Analytics data, the 30-day relative strength for memecoins indicates a lagging signal. The platform shows that the tokens have suffered a price decline of 25.52% in the past month. Moreover, the recent issuance of new memecoins by famed personalities has also lost pace. Notably, the frog-based memecoin Pepe hit its new ATH towards the end of the month. Additionally, it flipped positions with Dogwifhat (WIF) reclaiming its position as the third largest memecoin. Furthermore, PEPE also caused significant waves in the altcoin sector by flipping Uniswap (UNI) and Polygon (MATIC) in market cap. On the contrary, the past week recorded a price dip of 8.69% in the token. Other leading memecoins such as Dogecoin (DOGE) and Shiba Inu (SHIB) have also shown price declines in the past week. DOGE recorded a 12.72% weekly decline while SHIB dropped 14.02% over the week, according to CMC data. Has the Celebrity Memecoin Mania Quietened Down? Within the stratum of celebrity memecoin shillings, the beginning of June witnessed "rug pull" incidents in some of the tokens. Particularly, retired pro-boxer Hulk Hogan's Twitter account was hacked and saw the launch of a memecoin. The token surged in price at launch before plummeting and causing notable losses to buyers. Additionally, the presidential candidate Donald Trump has inspired multiple meme tokens which also enhanced the memecoin season. The market witnessed the launch of over a hundred Trump-based tokens. However, recently one of the coins believed to be issued by the Presidential candidate was later discovered to be issued under another individual. Following this, there has been an ensuing silence in activity thus leading to a drive in market attention to the sector. The lack of activity suggests a slowdown in the allure that surrounded the sector in the recent past. Highlighted Crypto News Today:

In the vast and ever-evolving crypto galaxy, few tokens have captured investor attention like Alex The Doge (ALEX). Forecasted to deliver astounding 5000x gains, Alex The Doge (ALEX) is emerging as a dominant force. As it ascends, Shiba Inu (SHIB) investors find themselves reconsidering their positions and spreading their investments to include this promising new token. Here's an in-depth look at why Alex The Doge (ALEX) is making waves and how it compares to Shiba Inu (SHIB). The Journey of Shiba Inu (SHIB) Shiba Inu (SHIB) has carved out a significant niche in the cryptocurrency market. Marketed as the "Dogecoin Killer," Shiba Inu (SHIB) leveraged its meme-based appeal and built a robust community around its token. It quickly became a favorite among investors, thanks to its innovative ecosystem and the strength of its community. Key Attributes of Shiba Inu (SHIB): - Community Strength: Shiba Inu (SHIB) has one of the most passionate and active communities in the crypto world, driving its adoption and growth. - Innovative Projects: With initiatives like ShibaSwap, Shiba Inu (SHIB) has expanded its utility beyond being just a meme coin. - Market Presence: Despite its playful origins, Shiba Inu (SHIB) boasts a significant market cap and strong presence among top

cryptocurrencies. The Rise of Alex The Doge (ALEX) As Shiba Inu (SHIB) continues to perform well, Alex The Doge (ALEX) is rapidly emerging as a formidable competitor, capturing the imagination of the crypto community with its ambitious forecast of 5000x gains. Known as DOGE 3.0, Alex The Doge (ALEX) blends the viral charm of meme coins with practical applications in social finance (Social Fi) and play-to-earn (P2E) gaming. Innovative Ecosystem: At the heart of Alex The Doge (ALEX) is the Miracle Verse, a virtual world where players can earn tokens through various in-game activities. This fusion of gaming and finance offers users multiple revenue streams and engagement opportunities, setting Alex The Doge (ALEX) apart from other meme coins. Technological Foundation: Built on the Ethereum (ETH) network, Alex The Doge (ALEX) benefits from low transaction fees and fast processing times. This robust infrastructure ensures a seamless user experience and supports the token's scalability. Community Engagement: Like Shiba Inu (SHIB), Alex The Doge (ALEX) has cultivated a vibrant and active community. This engagement is crucial for driving adoption and maintaining interest in the project. Why Investors Are Turning to Alex The Doge (ALEX) The prediction of a 5000x gain for Alex The Doge (ALEX) is based on several compelling factors that set it apart from Shiba Inu (SHIB): Unique Value Proposition: Alex The Doge (ALEX) combines the viral appeal of meme coins with practical applications in Social Fi and P2E gaming. This unique blend offers a comprehensive ecosystem that engages users in meaningful ways. High Growth Potential: The potential for significant returns is attracting investors looking for the next big opportunity in the crypto market. With predictions of a 5000x gain, Alex The Doge (ALEX) presents a compelling investment case. Robust Technological Support: Leveraging the strengths of the Ethereum (ETH) network ensures efficient transactions and scalability, critical for sustaining long-term growth. Shiba Inu (SHIB) Investors Spread Split Bag Faced with the meteoric rise of Alex The Doge (ALEX), many Shiba Inu (SHIB) investors are choosing to diversify their portfolios. Here's why they are spreading their investments: Hedging Bets: While Shiba Inu (SHIB) remains a strong contender, the allure of Alex The Doge (ALEX) and its potential for high returns is hard to ignore. Diversifying investments helps mitigate risk. Capturing Growth: By investing in both Shiba Inu (SHIB) and Alex The Doge (ALEX), investors can capture growth from two promising tokens, increasing their chances of substantial returns. Community and Innovation: Both tokens have strong communities and innovative projects. Investing in both ensures that investors are part of dynamic and forward-thinking ecosystems. Conclusion: A New Star in the Crypto Galaxy In conclusion, Alex The Doge (ALEX) is rapidly establishing itself as a dominant force in the crypto galaxy, with forecasts of 5000x gains capturing the attention of Shiba Inu (SHIB) investors and the broader crypto community. Its innovative ecosystem, robust technological foundation, and strong community support make it a compelling investment opportunity. As investors spread their portfolios to include Alex The Doge (ALEX), it will be fascinating to see how this new contender shapes the future of the meme coin market and continues to dominate the crypto galaxy. For more information about Alex The Doge (ALEX) presale use the links down below: - Website: <https://alexthedoge.live> - Telegram: <https://t.me/alexthedoge> - Twitter: https://x.com/alexthedoge_p2e Disclaimer: TheNewsCrypto does not endorse any content on this page. - Altcoins have been ruled by the bears for the past week. - The global crypto market cap is \$2.33T, a decline of 2.41% within 24 hours. The altcoin market is experiencing a prolonged decline, making it a hard time for investors. It is influenced by several factors that have created a complex environment for the assets. The launch and oversupply of new coins play a vital role in the decline, leading to a steep market. According to crypto analyst Pentoshi, around \$200 million a day is needed to balance the prices of these newly launched coins. This imbalance between demand and supply has led to a steep fall in altcoin prices while the market struggles to preoccupy the rush of upcoming assets. Analyzing Some of the Altcoins As Bitcoin is the largest asset by market cap, it may influence other coins's momentum. At the time of writing, BTC is trading at \$65,181, with a decline of 0.93%. Bitcoin has been struggling to break the \$65K range for the last week. Thus, its nearby resistance may be found at \$66,245. The initial support is found in the \$64,235 range. While analyzing the altcoins, most of the coins are declining. Ethereum is currently traded at \$3,405 and is down by 3.42%. The nearest resistance level is at \$3,580, with the nearest support level at \$3,389. It has seen a one-week price decline of 3.39%. Doge currently trades at \$0.1205, dipped by 10.24%. Over the past week, it has been down by 14.72% and has a one-month decline of 20.82%. The resistance and support might stay at \$0.1379 and \$0.1100, respectively. Meanwhile, Cardano's price traded at \$0.375, down by 7.31% in the last 24 hours, and a weekly decline of 12.71%. Nearby resistance is at \$0.410, and support is at the \$0.267 range. Shiba Inu's price is currently at \$0.00001782, but over the past 24 hours, it's been down by 10.60%. Notably, a dip of 19.33% marked over the past week. The key resistance may occur at \$0.00001999 and the support level at \$0.00001620. Further, Uniswap is trading at \$9.65, observing a dip of 11.31% in a day. But it was up by 3.83% in the past seven days. The major resistance and support stand at \$10.55 and \$8.36, respectively. However, with a loss of momentum in the altcoin market after reaching notable highs, most of the altcoins are struggling to maintain their positive price pace. Highlighted News of the Day

- Trump's new speculated token, DJT is up by 44.59% in the past 24 hours. - He has shown interest in the crypto market and would be the crypto president. The crypto market has endorsed the new meme coin, DJT, in the name of former U.S. President Donald Trump. The token on the Solana blockchain has skyrocketed in value amid rumors that it might be Trump's official token. However, there has been no official announcement from Trump. If the rumor is true, it would be history as the first time a U.S. presidential candidate has launched their cryptocurrency. This latest claim was by The Pirate Wires account, an American media company on Twitter, 9 hours ago. It was labeled as a "community note," declaring it "fake news." This statement is not in the tweet, now. Furthermore, it mentions that Trump's 18-year-old son Barron will be "spearheading" the token project. Per conversations, Trump

is launching an official token " \$DJT on Solana. Barron spearheading. " Pirate Wires (@PirateWires) June 17, 2024 DJT coin has been in the crypto market for two months and is performing considerably, as its price is currently up by 44.59% in the past 24 hours to \$0.002868. The trading volume soared by 1521.47% to \$369K. The coin has been driven by speculation and social media buzz. Other Trump-Themed Coins There are several other tokens themed around Donald Trump's name. MAGA Coin is one of them, built on the Ethereum blockchain. Currently trading at \$7.08, it has declined by 39.01%. Followed by TRUMP coin, one of the first Trump-related cryptocurrencies. The price dropped by 9.41% to \$0.0006536. Interestingly, Trump Inu is an inspired coin by Shiba Inu and Dogecoin, trading at \$0.000006237, down by 12.55%. These tokens have a common element of Trump's name for market appeal but different origins. Besides, Donald Trump declared that he would be the "crypto president" at a fundraiser in tech-friendly San Francisco a week ago. The role of cryptocurrency in the upcoming U.S. presidential election is seeking essential attention and scrutiny. Moreover, Biden is reportedly planning to be a part of the Bitcoin roundtable, yet to happen next month. Highlighted News of the Day Tanzania Proposes IT Act Amendment Including Tax For Crypto Traders

- Ethereum price is down 4% in the past 24 hours. - Whale activity suggests confidence; altcoins face significant bearish pressure. The altcoin market is experiencing high bearish pressure, with major cryptocurrencies seeing notable declines. Ethereum (ETH), the leading altcoin has dropped 4% in the past twenty-four hours, hitting a one-month low of \$3,355. Despite this price drop, trading volume has surged by 83%. Other notable coins in the altcoins' red sea include Solana-down 8%, Dogecoin-down 10%, Uniswap-down 11%, Polygon-down 10%, Cardano-down 8%, Avalanche-down 8%, and Chainlink-down 7%. Amidst this market slump, a significant whale movement has captured attention. Just before Ethereum's further decline a few hours ago, an Ethereum ICO participant deposited 5,500 ETH (worth \$19.3 million) to Kraken. This participant originally received 150,000 ETH in 2015 at an ICO price of \$0.31, totaling \$46,600. Over the past two days, this whale has deposited 10,000 ETH (\$35.4 million) to Kraken and still holds or stakes 139,000 ETH (\$476 million) across eight wallets. Whales' Move Indicate Bullish Recovery? Sentiment's data reveals a massive increase in Ethereum addresses holding more than 10,000 ETH over the past four weeks, showing a rise of over 3%. The accumulation by whales can significantly influence market sentiment and drive up demand for ETH, potentially leading to a price increase. Moreover, prominent analyst Ali highlighted in a recent tweet that Ethereum whales have purchased over 700,000 ETH in the past three weeks, amounting to approximately \$2.45 billion. On the technical side, the 9-day EMA for Ethereum is at \$3,553.6, indicating a compelling bearish chart. The daily RSI stands at 43, nearing oversold conditions. The first resistance level is at \$3,600, and if the price surges above this, it could potentially reach \$3,805. Despite the current bearish trend, the actions of these large holders suggest underlying confidence in Ethereum's long-term potential. The coming days will determine whether this accumulation will counteract the prevailing bearish sentiment and support a price recovery.

In the fast-paced world of cryptocurrency, certain digital assets hold the potential for explosive growth within short timeframes. Among these, Pepe Coin (PEPE), Shiba Inu (SHIB), and Retik Finance (RETIK) are three cryptocurrencies that stand out as prime candidates for a parabolic surge over the next ten days. Pepe Coin, known for its strong community and meme culture, is gaining traction due to its unique appeal. Shiba Inu, often dubbed the "Dogecoin killer," continues to capture investor interest with its robust ecosystem and strategic developments. Meanwhile, Retik Finance, a lesser-known yet promising project, offers innovative financial solutions that could drive its value significantly higher. As these cryptocurrencies garner attention, their market dynamics suggest they could experience substantial price increases in the near term. Pepe Coin (PEPE) Pepe Coin (PEPE) stands out as a prime candidate for a parabolic surge in investment returns within the next 10 days, fueled by its recent price rallies and unparalleled market momentum. This innovative cryptocurrency has captured global investor attention, showcasing a remarkable 769.7% increase in value over the past year. Robust spot trading volumes, soaring by 177% to \$2.2 billion in the past 24 hours, have firmly established PEPE as one of the most actively traded digital assets. Early investors have already seen substantial rewards, with notable cases of high profits from modest initial investments. Despite resistance in reclaiming its all-time high, PEPE remains poised for further upward momentum. Given its current market conditions and trajectory, PEPE presents a compelling opportunity for investors aiming to multiply their investments significantly within a short timeframe. Shiba Inu (SHIB) Shiba Inu, often referred to as the "Dogecoin killer," is a cryptocurrency that has gained immense popularity due to its resemblance to Dogecoin and strong community support. The project aims to create a decentralized ecosystem encompassing a decentralized exchange, NFT marketplace, and a platform for developers to build decentralized applications, enhancing its utility and appeal. Shiba Inu's unique tokenomics, with a significant portion of the total supply locked in liquidity pools and burned, creates a deflationary effect that can drive up its value. This, combined with robust community backing and ambitious development plans, positions Shiba Inu as a promising investment opportunity. Its innovative approach and dedicated following suggest that it has the potential for significant returns within the next 10 days, as market dynamics and investor interest could catalyze a parabolic surge in its value. Retik Finance (RETIK) Retik Finance (RETIK) is poised for a remarkable return in the next 10 days, driven by its recent momentum in the DeFi industry and the potential for a parabolic surge. The platform has captured significant attention, notably after its highly successful presale, which saw a 400% increase in participation over three months, raising approximately \$32 million. This surge in investor interest underscores the growing demand for innovative DeFi solutions and the confidence in Retik Finance's future. Officially launched on May 21, 2024, on Uniswap and several other exchanges, including P2PB2B and LBank, RETIK's debut has generated considerable excitement. Analysts are forecasting potential price gains in many folds as a result of its possible of parabolic surge by year-end. With its mission to offer decentralized financial services that empower users to manage their assets independently, Retik Finance is positioned as a disruptive force in the DeFi

landscape. The platform's decentralized nature is expected to attract an increasing number of users, thereby driving up the token's value. Given this strong momentum and robust market response, RETIK presents a compelling opportunity for investors seeking substantial short-term returns. Conclusion Pepe Coin (PEPE), Shiba Inu (SHIB), and Retik Finance (RETIK) represent three cryptocurrencies with significant potential for a parabolic surge within the next 10 days. Each of these digital assets is uniquely positioned to capture investor interest and market momentum. Pepe Coin leverages its strong community and meme culture to sustain its impressive trading volumes and price growth. Shiba Inu's comprehensive decentralized ecosystem, deflationary tokenomics, and dedicated community support position it as a robust contender for rapid appreciation. Meanwhile, Retik Finance, with its innovative DeFi solutions and successful market debut, stands as a promising investment opportunity driven by substantial presale interest and strategic exchange listings. As these cryptocurrencies navigate a bullish market environment and attract increasing attention, they offer compelling opportunities for investors aiming for significant short-term returns. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Twitter: [www.twitter.com/retikfinance](https://twitter.com/retikfinance) - Telegram: [www.t.me/retikfinance](https://t.me/retikfinance) Disclaimer: TheNewsCrypto does not endorse any content on this page. - The petition seeks to recover assets alleged to be associated with SBF. - They stress that the customers, and not FTX, are the legal owners of the assets at issue. Adam Moskowitz and David Boies, who are representing FTX creditors in a class action lawsuit, have made great strides in their quest for justice on behalf of those impacted by the crypto exchange's demise. They are requesting the seizure of assets associated with the troubled FTX founder, Sam Bankman-Fried (SBF). This is via a petition that was filed with Judge Moore in Florida. Moreover, many creditors were left financially devastated by FTX's collapse. The petition seeks to recover assets alleged to be associated with SBF, which might provide some compensation to them. Claim Over Legal Owners of the Assets Furthermore, the spokesman representing FTX creditors, Sunil Kavuri, has stated that the class action lawsuit against SBF's forfeited property was filed in Florida by his legal team, Moskowitz and Boies. The creditors contend that the claims that would normally be part of the bankruptcy estate are not included in the MDL litigation. Also, they stress that the customers, and not FTX, are the legal owners of the assets at issue. Also, even FTX insiders have acknowledged that the plaintiffs should get these assets back. And the Terms of Service are quite clear, according to Kavuri. Furthermore, the creditors are certain that they have a right to recover their cryptocurrency holdings as they are closely linked to investments made by SBF. Moreover, the planned restructuring plan for FTX Trading Ltd. and its affiliates has been opposed by the Moskowitz Law Firm and Boies Schiller Flexner LLP. They are representing thousands of plaintiffs in the multi-district litigation (MDL) against FTX. Claiming that the plan does not meet the full disclosure standards of Bankruptcy Code 1125. They contend that the recovery statistics are deceptive. And do not take into consideration the increase in crypto value since the petition date. Highlighted Crypto News Today: Curve Finance's Founder Claims \$10M Debt Repayment Amid Liquidation Crisis

Within the ever-volatile world of cryptocurrency, a strategic whale move can send ripples across the market. Recently, an enigmatic and wealthy whale has made headlines by reallocating a substantial \$600,000 USDT into Shiba Inu (SHIB) and the newly trending Retik Finance (RETIK). This financial manoeuvre comes on the heels of a significant profit, \$15,000,000 USDT to be exact, from the bullish run of PEPE. With a calculated approach, the whale aims to ride the wave of current market trends and capitalize on the potential of these two promising cryptocurrencies. Shiba Inu (SHIB): Riding the Bullish Wave Shiba Inu, often dubbed as the "Dogecoin Killer," has seen its fair share of market fluctuations. In May, SHIB experienced a remarkable 15.07% increase, which caught the eye of many investors, including our savvy whale. Currently priced at a fraction of a cent, SHIB has captivated a loyal community with its meme-driven appeal and potential for substantial returns. The whale's prediction that SHIB could soar to \$0.00004576 in June is grounded in its recent performance and the bullish momentum it has been riding. The whale's allocation of \$600,000 USDT into SHIB and RETIK is not a random gamble. This strategic move is based on meticulous market analysis and a belief in SHIB's potential to reach new heights. With the community-driven approach and continuous development, including the upcoming Shibarium layer-2 blockchain, SHIB is positioning itself as more than just a meme coin. Retik Finance (RETIK): The Overnight Sensation While SHIB's potential for steady growth is appealing, Retik Finance (RETIK) has taken the market by storm with its explosive overnight success. On May 21, RETIK was listed on several major exchanges, including Uniswap, MEXC, Bitmart, LBank, CoinW, Digifinex, Bitrue, and P2PB2B. Initially priced at \$0.15, RETIK's value skyrocketed by an astounding 2000%, reaching an all-time high (ATH) of \$3.08. This meteoric rise propelled Retik Finance into the spotlight, with its market cap surging to nearly \$3 billion and its holder count swelling to 8,660. The whale's keen interest in RETIK is understandable. In a market where gains can be hard to come by, a 2000% increase overnight is nothing short of extraordinary. The Retik Finance platform's offerings, including staking options and the live Retik Swap, have bolstered investor confidence and driven demand for the token. The whale's move to invest in RETIK reflects a calculated bet on its continued potential for rapid growth. The Strategic Move The decision to allocate \$600,000 USDT into both SHIB and RETIK is a testament to the whale's strategic acumen. Diversifying the substantial gains from PEPE into these two promising assets indicates a balanced approach to managing risk and potential reward. By spreading the investment across SHIB and RETIK, the whale not only mitigates risk but also positions itself to benefit from the distinct growth trajectories of both cryptocurrencies. Retik Finance (RETIK): A Promising Future Experts are now closely watching Retik Finance, which has already outperformed established cryptocurrencies like

Polygon (MATIC) and Cardano (ADA). Analysts predict that RETIK could continue its upward trajectory and possibly surpass these well-known coins in 2024. The platform's comprehensive ecosystem, which includes staking, swapping, and other DeFi functionalities, provides a solid foundation for sustained growth. Retik Finance's remarkable 20x increase from its launch price and 100x from its first stage presale price underscores its potential. As more investors flock to the platform and its user base expands, the demand for RETIK is likely to increase, driving its value even higher. The whale's investment, therefore, is not just a short-term play but a calculated move anticipating long-term gains. Conclusion The recent allocation of \$600,000 USDT by a wealthy whale into Shiba Inu (SHIB) and Retik Finance (RETIK) exemplifies a calculated approach to capitalizing on emerging trends. With SHIB's steady bullish performance and RETIK's explosive overnight success, this dual investment strategy showcases a blend of caution and boldness. As the market continues to evolve, the whale's moves will be closely watched by investors and analysts alike. Whether SHIB will reach the predicted \$0.00004576 in June or RETIK will maintain its rapid ascent remains to be seen. However, one thing is certain: in the world of crypto, where fortunes can change overnight, strategic foresight and calculated risks are the keys to staying ahead of the curve. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Twitter: [www.twitter.com/retikfinance](https://twitter.com/retikfinance) - Telegram: [www.t.me/retikfinance](https://t.me/retikfinance) Disclaimer: TheNewsCrypto does not endorse any content on this page. Slothana (SLOTH) and Moonbag have performed well in the crypto market; however, RCO Finance (RCOF) has surpassed them due to its unique concept of crypto AI. This has placed RCO Finance in a strategic position in the market and has made it a new king in the crypto world. Crypto AI is a relatively new concept that is rapidly gaining popularity in crypto. It entails using artificial intelligence (AI) to predict and make decisions while trading in the crypto market. The crypto market is highly unpredictable, so having a more developed AI can be advantageous. RCO Finance has taken this concept to another level with its sophisticated crypto AI robo advisor instruments. RCOF can accurately predict and execute trades in real time using machine learning algorithms and data analysis. The Rise of RCO Finance RCO Finance is a decentralized finance application designed to run on the Ethereum blockchain. It uses crypto AI to present multiple investment opportunities and strategies. By leveraging AI's benefits and applying blockchain's decentralized nature, RCO Finance becomes an innovative service that changes people's experience with crypto. One key aspect that sets RCO Finance apart is the crypto AI robo-advisor. By providing the user with all the vital information regarding investments, this tool demands as little interference as possible to give the maximum return on investment (ROI). The crypto AI robo-advisor bases its recommendations concerning wise investments on the user's profile, especially the risk appetite and investment targets. This approach ensures that any decision conforms to the user's needs and thus creates confidence and approval regarding the investment decisions. Key Features of RCO Finance With increased focus on the performance of its utility token, RCOF, the platform has gained competitive ground in the crypto space. Here are some of the features that make the RCO Finance platform outperform its predecessors; - Universal Token: The platform also has the native token, RCOF, a cornerstone. Various digital assets are exchanged through it, and the platform's token holders' audience is expanded by providing them with voting rights. - Real-Time Adaptability: RCOF features dynamic portfolio adoption learning that helps crypto AI tools adjust portfolios in real-time, depending on the market environment. This feature ensures better returns since it can adapt to the ever-changing business environment. - Multi-Asset Support: RCO Finance offers a diverse portfolio of over 12,500 financial products, such as stocks, cryptocurrencies, bonds, and various derivatives. This ensures that users have various investment options for the identified assets. - Enhanced Security: The solution is connected to Fireblocks to ensure the safety of the transaction, which is convenient, fast, and protected from fraud. - Global Debit Card: Users are given a worldwide-accepted debit card that is unrestricted by geographical location so they can spend their earnings without needing KYC checks. How RCO Finance Compares to SLOTH and Moonbag Slothana (SLOTH) is a p2p crypto created from entertainment that wants to disrupt the currency market. Although it is derived from the concept of Dogecoin, it has some higher features, such as the use of the sha3 encryption algorithm. Nevertheless, due to its original concept, SLOTH's primary idea remains its novelty and fun, distinguishing it from other traditional financial systems like RCO Finance, which provides its customers with an AI-based investment platform. Another new entrant in the market is Moonbag, which has exceptional presales. However, it does not necessarily rely on state-of-the-art artificial intelligence; it is more tuned to meme coins' appearance and the intergenerational incentives system. Although Moonbag has stirred immense attention and FOMO among investors, it does not provide custom-made investment plans and instant market responses like RCO Finance. Invest in the Future with RCO Finance (RCOF) Crypto AI RCO Finance has an edge over SLOTH and Moonbag because of its approach to the DeFi space. With a strong investment approach based on crypto AI in the world of crypto, cost-effectiveness, and versatility of assets, it is clear that RCO Finance is set to become one of the leaders in the field of DeFi. The current RCOF token presale, at \$0.0127, has already interested many investors, with more than 18 million tokens sold and counting. These numbers are expected to increase to the second stage, as the price will increase by 169% to \$0.0343. The token holders have the potential to grow their portfolios more than 100X after the token listing, as the token price predictions are between \$0.4 and \$0.6. They will also be able to receive tiered-based gifts and quarterly dividends. BEFE stands out from the herd of memecoin because of the generous return it has offered investors and early adopters that swooped in immediately after the token's launch in 2023. Like every other coin, BEFE has experienced its fair share of the dump, especially since Bitcoin has been in a downturn for a while. And now, every crypto is pumping alongside Bitcoin; it's finally time for BEFE performance to peak, and many respectable investors expect it to happen in June. As we progress into the coming weeks, the expectations for BEFE are high, and since all pointers show a possible bullish June, there's no telling how much of a return BEFE might produce anytime from now. This post addresses what the expected BEFE performance is for June. BEFE Token: What Investors Expect In June Many of the indicators used by Investors show a clear sign of a bullish month. Since Bitcoin hit a new all-time high, the Bitcoin fear-greed index has been consistently showing a 75-greed high index, which is a clear sign of the consistent liquidity and capital coming into the cryptocurrency market with each passing day. Notably, the BEFE coin has been the breakout star of the June 2024 memecoin frenzy. Its unique combination of scarcity, utility, and community hype has BEFE poised to continue heading toward a new high. Primary Key Performance Indicator that BEFE Will Yield Amazing Returns in June In contribution to the BEFE token allocation structure and transparency, several factors have consistently proven that BEFE might be the next big thing in June. Starting with the limited supply and a hard cap of about 100 billion tokens, BEFE has a more limited supply than most top performers during the memecoin in the last season run, like Dogecoin and Shiba Inu. This scarcity will be the fuel that drives an insatiable demand in June and the rest of this season. Currently, BEFE already has a massive daily trading volume of about \$430,822.52. There's no doubt it will continue to grow and reach a fully diluted valuation, at which point all that would be left is a spontaneous and steady climb to more height. Conclusion BEFE successfully achieved the status of the Star Riser memecoin in June. Its scarcity, structure, and distribution model help it stand out amongst the host of other memecoin, and there's no limit to what height it might climb to in June. - To learn more about BEFE, visit <https://befetoken.com>. Dogwifhat (WIF) and Solana (SOL) investors are purchasing 15,000 O2T tokens to diversify their portfolios and leverage the token's unique blend of A.I. technology and utility. This strategic move reflects the growing confidence in Option2Trade's (O2T) potential and highlights the benefits of diversifying investments to manage risk and maximize returns. As Option2Trade (O2T) continues to gain traction, its future looks bright, promising substantial gains and expanded market presence. Strategic Moves: Dogwifhat and Solana (SOL) Investors Turn to O2T Investors of Dogwifhat (WIF) and Solana (SOL) are making strategic moves by purchasing 15,000 Option2Trade (O2T) tokens. This shift reflects the growing interest in Option2Trade (O2T)'s innovative features and strong growth potential. As Dogwifhat (WIF) and Solana (SOL) have both shown impressive performance in their respective niches, their investors are now diversifying their portfolios with Option2Trade (O2T) to leverage its unique advantages. The Appeal of O2T: Beyond Meme Coins Option2Trade's (O2T) advanced A.I. technology and utility-driven approaches offer a compelling alternative to traditional meme coins. Unlike Dogwifhat (WIF) and Solana (SOL), which have carved out their niches based on community appeal and high-speed transactions, Option2Trade (O2T) combines cutting-edge artificial intelligence with a solid utility framework. This blend makes Option2Trade (O2T) a high-potential investment for those looking to diversify beyond meme coins. Dogwifhat, Solana (SOL), and O2T While Dogwifhat (WIF) and Solana (SOL) have established themselves as significant players in the crypto market, Option2Trade's (O2T) recent performance and strategic developments are positioning it as a formidable competitor. Dogwifhat (WIF) has dominated the meme coin sector with its unique community-driven initiatives, and Solana (SOL) has made its mark with its scalable and fast blockchain solutions. In contrast, Option2Trade (O2T) is making waves by integrating advanced A.I. technology into its trading and investment strategies, attracting a broad spectrum of investors. The Benefits of Diversification Crypto analysts highlight the benefits of diversifying into Option2Trade (O2T) for Dogwifhat (WIF) and Solana (SOL) investors. Diversification helps manage risk and maximize returns by spreading investments across different assets. For Dogwifhat (WIF) and Solana (SOL) investors, adding Option2Trade (O2T) to their portfolios provides exposure to a token that combines meme appeal with technological innovation. This strategy not only balances their investment portfolios but also positions them to benefit from Option2Trade (O2T)'s potential substantial growth. Optimism and Strategic Planning The sentiment among Dogwifhat (WIF) and Solana (SOL) investors is highly positive towards O2T. Many are strategically adding Option2Trade (O2T) to their portfolios, aiming to capitalize on its unique advantages and strong market potential. The optimism is fueled by Option2Trade (O2T)'s recent performance, strategic CEX listings, and its advanced A.I. capabilities. Investors are seeing O2T as a way to hedge their bets while staying engaged in the fast-evolving crypto market. Continued Growth for O2T With strong market fundamentals and ongoing strategic initiatives, O2T is well-positioned for continued success. The token's innovative approach and recent achievements have set the stage for further growth and market expansion. Investors are optimistic about O2T's future prospects, anticipating significant gains as the token continues to attract attention and investment. The synergy between O2T's technological edge and its strategic growth plans makes it a standout option in the crowded crypto market. [illegible]

As the crypto bull run unravels, analysts have observed an exciting play on the RCO Finance (RCOF), BONK, and PEPE charts, involving a latent breakout. This emerging price action is a reaction to Ethereum (ETH) crossing the \$3,900 mark during a recent trading session. As a result, investors ponder whether these coins could be the best altcoins for the next bull run. Here, we explore the potential outcome of the recent bullish observation of these top meme coins and altcoins in the ongoing bull market! RCO Finance Unlocks Access To Advanced DeFi Trading Tools With decentralized finance (DeFi) gaining traction, fresh innovations continue to take the sector by storm. One of the latest inventions making the rounds is RCO Finance, a decentralized AI-powered trading platform. RCO Finance intends to usher users into a realm percolated with DeFi-related solutions. For instance, the Real-World Asset (RWA) sector is projected to hit a trillion-dollar valuation by the decade's end. As a result, RWA tokenization has become a fad, although limited in scope. This limitation will be lifted with the presence of RCO Finance, which seeks to lead the Real-World Asset (RWA) tokenization revolution. Its artificial intelligence technology and machine learning capabilities present it as a futuristic project poised to stretch through time. This AI-ML capability suggests that RCO Finance does not necessarily require human interference. In fact, RCO Finance's AI robo advisor is meant to introduce investors to strategic investment opportunities for maximum gains. BONK Sees a 100% Price Rally Due to a Rising Channel Pattern The one-hour chart for the Bonk coin reveals a bullish engulfing candlestick following a 35% uptick the previous week. Simultaneously, analysts have spotted a rising channel pattern on BONK's daily time frame, suggesting a breakout might be in the cards. With Ethereum (ETH) surpassing \$3,900 again, this anticipated breakout may soon play out. On the technical front, the Fibonacci indicator was used to gauge the price range BONK will likely trade following the breakout. After careful analysis, the Fibonacci lines hint at BONK reaching the 1.618 level at \$0.000082. If sufficient bull power is available, BONK could take on the \$0.00010 price point, a psychological resistance zone. BONK trades at \$0.000031 after falling 7.8% over the last seven days. Hitting \$0.000082 will see the meme coin soar by 162.8% from its current price. PEPE to Hit \$0.000031 as a 78% Surge is Likely On the Horizon PEPE recently cracked an all-time high at \$0.0000172 after experiencing a meteoric surge in its market value. This rally drew attention to the Pepe coin, with several investors who aped into the coin before the explosive move, copping significant returns. However, the frog-themed meme coin has witnessed a slight correction, which analysts opined may end soon. Currently, Pepe is trading around the 1.618 Fibonacci level, with an impending rally in the works. Following the recent PEPE price surge, the meme coin claimed third place on the list of top meme coins on CoinMarketCap, trailing Shiba Inu (SHIB) and Dogecoin (DOGE). With sentiment arising that PEPE could displace SHIB to become the second-largest meme coin, the crypto asset must double its \$7.50 billion market cap to outrun Shiba Inu's \$14.42 billion market capitalization. Notably, PEPE trades at \$0.0000104, down 18% from its all-time high. The \$0.000031 projection will see the meme coin increase by 78%. RCOF Eyes \$0.6: An Opportunity For A 4,500% ROI Like BONK and PEPE, RCOF also aims to hit an ambitious price target of \$0.6 at the climax of its presale. From its current price of \$0.0127, investors can bag more than 4,500% returns on their investments. Therefore, a \$500 investment in RCOF could become \$20,000 upon its exchange debut. We believe this forecast presents RCO Finance as one of the best altcoins to buy now. For more information about the RCO Finance Presale: Disclaimer: TheNewsCrypto does not endorse any content on this page. Shiba Inu transactions have increased, suggesting a new stage in the meme coin market. RNDR token values have remained unchanged despite Nvidia's strong market performance, highlighting the significant changes in the cryptocurrency landscape. Amid these evolving market conditions, BlockDAG has entered the scene with a remarkable \$47 million from its pre-sale of 11.2 billion coins and the sale of 7,416 mining rigs. This article delves into these trends and the strategic innovations introduced by BlockDAG with its X1 Beta Mining App, a transformative toolset to redefine efficiency and accessibility in crypto mining. Shifting Dynamics in Meme Coin Transactions Recent data points to a notable increase in Shiba Inu transactions, signaling a significant shift in the meme coin market.

This rise occurs as interest in Dogecoin declines, with fewer social media conversations and user engagement. The growing transactions of Shiba Inu suggest a bullish market sentiment and position it as a potential leader in meme coin market capitalisation, supported by large-scale buyers favouring Shiba Inu for their transactions. Challenges for RNDR Amid Nvidia's Triumph Despite Nvidia's standout financial results for the first fiscal quarter, which greatly exceeded expectations with a substantial rise in profits, RNDR tokens have not seen a corresponding price surge. The broader market volatility and dwindling investor confidence have adversely affected RNDR's value. Even substantial transactions by major investors in the Render network have failed to boost the token's price recovery. This has led many investors to pivot their focus towards new alternative tokens like Rollblock (RBLK), which offers promising growth prospects and an innovative profit-sharing model, marking a significant shift in investment preferences within the crypto sector. BlockDAG Rolls Out X1 Beta on Google Play Store & App World! After an exciting preview at Keynote 2, transmitted from the moon, BlockDAG has released its X1 Beta Mining App on Google Play Store and App World. This release has significantly boosted its pre-sale figures, reaching an impressive \$47 million with 11.2 billion coins sold at \$0.011 each, in addition to \$3.2 million from the sale of 7,416 mining rigs. The X1 Beta Mining App, available on both Google Play Store and Apple App World, is a groundbreaking entry in the crypto mining space. It turns your smartphone into an efficient mining tool for 20 BDAG coins, employing an advanced, energy-saving consensus algorithm that minimises data and battery usage. Designed for both iOS and Android, the app is compact at about 50MB, requires Wi-Fi, and offers a user-friendly interface that simplifies the registration process. It enhances the user experience with a unique referral system to increase mining speeds and daily engagement rewards. Users can activate a feature every 24 hours to boost their mining speed. They unlock new ranks as they advance, gaining more benefits and enriching their mining experience. This innovative approach not only enhances the ease and accessibility of crypto mining but also establishes BlockDAG's X1 as a viable and sustainable option for participating in the cryptocurrency mining industry. Final Thoughts BlockDAG is making a distinctive mark in the cryptocurrency mining industry, underscored by its robust pre-sale and significant sales of mining rigs. As the market undergoes shifts with fluctuating Shiba Inu transactions and RNDR token values, BlockDAG introduces the X1 miner app beta version, reshaping the crypto mining platform landscape. With its dedication to innovation and user-centric technology, BlockDAG is not merely adapting to trends but creating them, offering a promising and enduring path for crypto enthusiasts and investors in the swiftly evolving digital economy. Join BlockDAG Now! - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bitcoin and Ethereum lead supply in profit percentages. - Bitcoin's positive Coinbase Premium Index, tempered retail sentiment signal stability. The cryptocurrency market is currently in a consolidation phase, with Bitcoin trading at \$71,377, experiencing a modest 0.77% price surge, while Ethereum has seen a 0.69% decrease, bringing its value to \$3,824. This period of market stability is marked by the absence of significant gains among the top 50 coins by market capitalization. Meanwhile, in a positive aspect, a recent report by Santiment has drawn the crypto community's attention, highlighting the 'Supply in Profit' metric. This metric measures the percentage of a token's supply that is currently valued higher than when it first appeared on the blockchain. According to Santiment, Bitcoin leads with 98.3% of its supply in profit. Followed by Ethereum at 95.1%, Chainlink at 86.8%, Dogecoin at 82.2%, XRP at 78.8%, and Cardano at 53.5%. Supply in Profit is calculated by summing a token's value vs. its value when it first originated on the blockchain. The percentage of top assets' supply in profit is: Santiment (@santimentfeed) June 6, 2024 Bitcoin: 98.3% Ethereum: 95.1% Chainlink: 86.8% Dogecoin: 82.2% XRP: 78.8% Cardano: 53.5% pic.twitter.com/ptaZVBSr41 In another development, Bitcoin's Coinbase Premium Index (CPI), which tracks the difference in price between Bitcoin on Coinbase. And also on other exchanges, it has turned positive. This shift comes after ten consecutive days of negative values, as reported by a pseudonymous CryptoQuant analyst. A positive CPI is often seen as a bullish signal, indicating increased buying pressure on Coinbase, typically from institutional investors. Can Bullish Rally Be Expected? Another Santiment's recent analysis suggests that Bitcoin's price surpassing the \$70,000 mark is no longer generating the same level of excitement among traders as it did three months ago. The data indicates a decrease in Fear of Missing Out (FOMO), which could be beneficial for the market. The absence of extreme crowd euphoria often seen during previous price tops may allow Bitcoin and other cryptocurrencies to achieve more sustainable growth. These insights reflect a maturing market where the psychological drivers of price movements are evolving. As Bitcoin and Ethereum navigate this consolidation phase, the broader implications for the market suggest a potential for more stable and measured growth. It which is driven by institutional participation and a tempered retail sentiment. Highlighted News Of The Day Toncoin Hits New Peak Amid Telegram Launch of TON-Linked Stars

- Chinese College student Yang Qichao's sentencing has led to a legal debate within the regulatory laws. - Leading regulatory organizations of China released a notice on token issuance in 2017. A student of Chinese Zhejiang University, Yang Qichao issued a virtual currency token BFF in 2022. After the issuance, Qichao's uninformed liquidity withdrawal caused a crypto investor, Luo, to lose 50,000 BSC-USDT coins that he exchanged for the tokens. This pushed Luo to file a complaint with the Nanyang Public Security Bureau. Presently, Qichao is facing a 4.5 year prison time and 30,000 Yuan fine being convicted for cryptocurrency fraud. The sentencing has raised legal concerns due to allegations of fraud surrounding its creation and trading activities. Looking back, Yang Qichao, who had a notable interest in digital currencies, came across the DAO community Blockchain Future Force (BFF). Inspired

by BFF, Qichao first issued the token on the BNB public chain in May 2022. He added a liquidity of 300K BSC-USD and 630K BFF during the issuance. Immediately after the BFF coin went online, Luo spent 50,000 BSC-USD coins to buy 85,316.72 BFF tokens. Within the next 24 seconds, Yang Qichao withdrew the liquidity in the BSC-USD pair along with 507K BFF coins. In total, Qichao liquidated a notable 353K BSC-USD which led to Luo losing the 50K USDT coins used to buy BFF coins. What is the Legal Defense Stating? The case's first sentencing happened on February 20, 2024. The Chinese student was sentenced to 4.5 years in prison along with a fine of 3,00,000 yuan as he was found guilty of fraud. Following this, the case included a second trial on May 24, 2024. Moreover, the controversy arose because of a 2017 Chinese Regulatory law which the defense lawyer leaned on. The People's Bank of China, the Ministry of Industry and Information Technology, along with three major regulatory commissions of China Banking, Securities, and Insurance issued the law. The "Notice on Preventing the Risks of Token Issuance and Financing" states that token issuance is illegal in China and that risks must be borne by investors themselves. This raises a contradiction in the aforementioned sentencing of Yang Qichao. Additionally, the prosecution also mentioned that Qichao's BFF coin is a "fake" coin. The defense lawyer optimized his client's innocence by stating that virtual currencies bearing the same BFF name already existed before Qichao issued the token. Furthermore, he stated that virtual currency platforms allow the issuance of multiple currencies with identical names but with unique contract addresses and liquidation at any time. Meanwhile, the legal defense referred to the prosecution's stating Luo's "loss" of money as incorrect. The lawyer stated that Luo made profits by trading back the virtual currency and stated Qichao's innocence. Additionally, the overall market has witnessed the report of multiple cryptocurrency frauds this year. Highlighted Crypto News Today:

- Around 63 US banks have \$517 billion in unrealized losses in Q1 2024. - The first quarter saw an increase of \$39 billion, reaching \$517 billion, in unrealized losses. Unrealized losses in the US banking industry totaling \$517 billion were disclosed by the Federal Deposit Insurance Corporation (FDIC). Concerns regarding the stability of the US economy and financial sector have been sparked by the FDIC's announcement that 63 banks are at risk of insolvency. A larger-than-expected drop in manufacturing activity was indicated by the ISM Manufacturing PMI, which came in at 48.7, lower than predictions of 49.6. As the possibility of interest rate reduction by the U.S. Federal Reserve grows in light of dismal industrial data, the price of Bitcoin surpassed \$70,000 yesterday. Under Tremendous Pressure U.S. banks and companies are still under tremendous pressure from the combination of rising interest rates and postponements in rate decreases. Banks, particularly regional banks, were already in a precarious position before the March 11th termination of the Bank Term Funding Program (BFTP) by the Federal Reserve Board. Around 63 US banks have \$517 billion in unrealized losses in Q1 2024, putting the US banking sector at severe risk of insolvency, according to the FDIC. The first quarter saw an increase of \$39 billion, reaching \$517 billion, in unrealized losses on assets that were available for sale and held to maturity. Unrealized losses have been abnormally high for nine straight quarters, dating back to when the U.S. Federal Reserve began hiking interest rates in 2022. Because of the potential for bank runs, the cryptocurrency market and the price of bitcoin are expected to have significant upward momentum. But since this is an election year, the Federal Reserve and the Treasury Department have likely measures prepared. - According to Gill's snapshot, he has made about \$2.5 million from his call options. - The development sent the stock price soaring by more than 19% in overnight trading. Keith Gill, better known by his Reddit handle "Roaring Kitty," revealed that he owns \$181.4 million worth of GameStop (GME) stock and call options, sending the stock price soaring by more than 19% in overnight trading. The trader commonly acknowledged as having a significant impact on the 2021 GME short squeeze, Gill, made his first Reddit post since April 2021 on June 2 using his "DeepFuckingValue" account. Banking on Substantial Turnaround He uploaded a screenshot demonstrating that he invested \$65.7 million in call options and bought 5 million GME shares for \$115.7 million, wagering that the company's share price would reach at least \$20 on June 21. According to Gill's snapshot, he has made about \$2.5 million from his call options and over \$9.3 million from his GME holdings. Gill's Reddit post caused GME to surge 19.19% in 20 minutes, reaching \$27.58, on Robinhood's overnight markets. Shares of GameStop rose 38.8% in 2024, closing at \$23.14 on May 31, perhaps helped along by Gill's comeback. As part of his series of esoteric messages and memes since his unexpected reappearance in May, Gill also shared a green Uno reverse card with X in a mysterious manner. Traders on Reddit turned the tables on hedge funds that had been profiting from shorting the doomed brick-and-mortar game store during the COVID-19 outbreak; some regarded Gill as the central figure in this narrative. Because of what they did, GameStop's stock price increased by more than 1,000% in less than a month. After retail focused elsewhere, some think the GameStop short squeeze set the stage for a huge surge in the price of memecoins like Shiba Inu and Dogecoin. Highlighted Crypto News Today:

- The top three crypto gainers in the market were Notcoin, Toncoin, and GALA. - Notcoin (NOT) leads the market with a surge of 54% to a new all-time high of \$0.02896. Bitcoin (BTC), the leading cryptocurrency, continues to exhibit volatile behavior, trapped below the \$69,000 range early Monday. Despite its unstable momentum, Bitcoin traded between \$68,000 and \$70,000 in the past week. In the past 24 hours, BTC has experienced a slight uptick of approximately 1.51%. Further, the global cryptocurrency market cap currently stands at \$2.55 trillion, reflecting a modest 0.35% rise over the last 24 hours. The market heatmap is slightly green, suggesting price recoveries for many cryptocurrencies. Meanwhile, other well-known altcoins such as Ethereum (ETH), Dogecoin (DOGE), Ripple (XRP), Solana (SOL), and Litecoin (LTC) have experienced minor declines. The overall market Fear & Greed Index stands at 60, indicating a sentiment of greed, according to CoinMarketCap data. Among the altcoins, Notcoin (NOT) has emerged as the top performer for the seventh consecutive day, with a
