Crypto industry is booming in recent times, grabbing the interest of all individuals globally with its digital features. Besides, cryptocurrencies are also becoming more popular among investors with their unique services. Thus, the main reason for crypto market expansion is addition of new faced tokens in the marketplace. So, as for the day, there are top three crypto tokens which are new to the market. They are SOLAR Token, Dopple Finance (DOPX) and Magicooin (MAGIC). 1. SOLAR Token The interesting fact about the SOLAR Token is it is launched as a fun cryptocurrency in the market. Besides, it also supports the users to earn SOLAR tokens as rewards for real world astrological events. If the users compete and solve cryptic messages and puzzles they are eligible to win SOLAR tokens. Moreover, the main aim of the team is to make people aware of our universe in a fun way and to take it in a meaningful way. Also, the team is planning to integrate NFTs into their network to reward the users even more in interesting ways. 2. Dopple Finance (DOPX) Dopple Finance is a stablecoin decentralized finance (DeFi) ecosystem processing on Binance smart chain platform. In addition, Dopple network has a fractional algorithmic stablecoin, æKUSDAæ, partly supported by USDC. Now, DOPX is the native utility token of the platform which is used to partly mint these KUSD stablecoins. More so the current market price of DOPX is \$0.022521 with a 24-hour trading volume of \$386,918. Additionally, there were no changes in the performance of DOPX in the last 24 hours. 3. Magicooin (MAGIC) Magicooin (MAGIC) is a new faced cryptocurrency which just entered the crypto market. Further users can receive these MAGIC coins through the complete mining process. Right from the launching till present the circulating supply is 4,102,283 MAGIC coins. Significantly, the live market value of MAGIC is \$0.001404. And it remains constant with the same price reflecting no changes over the past 24 hours. Recommended for You

- Huobi Token (HT) surged to 39% within a week. - Huobi Token is the native cryptocurrency of Huobi Global exchange platform. - It has surged from \$7.37 to \$10.67 in a week. The adoption and count of cryptocurrencies are increasing drastically without any fault in its flaw. The crypto market has become popular within a decade and it has gained billions of users. As cryptocurrencies surge in number, even crypto exchanges are growing in number parallelly. Significantly, exchanges also launch their native token to their users which is the beneficiary. The pattern of the crypto industry allows new entries to the crypto world by offering a wide range of options. Early investors wouldn't have knowledge about the trading chart so they invest in well-known cryptocurrencies. Thus exchanges offering their native token is a better option for investors to fit in. One such native token of a trading platform is Huobi Token (HT) which surges up to 39% in a week. Huobi Token (HT) is the native cryptocurrency of the Huobi Global exchange. It was founded in 2018, which facilitates on-platform governance, rewards, and special event access. It became popular among the early investors which let users invest in trading and Initial Coin Offerings (ICOs). Current Market Status At the time of writing, the trading price of Huobi Token (HT) is \$10.51 with a trading volume of \$213,968,354 in the last 24-hours. According to Coinmarketcap, the price value of Huobi Token (HT) has risen to 39% within a week and 13% up in a day. Moreover, it holds the 71st rank and has the current circulating supply of 161,829,295 HT coins. The chart pattern depicts a bullish run for the past week. The price value of HT has surged from \$7.37 to \$10.67 within a week. The chart is moving in an uptrend towards its all-time high at \$39.66 where the current price is 73% lower. Besides, HT is available in top exchanges such as Huobi Global, FTX, CoinTiger, ZBG, and HitBTC. However, the Huobi Token users are experiencing a sweet spot as the price chart displays a bullish pattern. The advancements and integration of new features in its ecosystem have supported the price surge of HT. Users expect more highs as the current trading chart is in an uptrend towards its ATH. If the trend continues then it may set up a new ATH in the near future. Recommended for You

- The price of ETH has dropped by nearly 2% to \$4,112. - Bitcoin has lost over \$5,000 in a single day. - Cardano prices have dropped roughly 3 percent to \$2.16. Two days after the launch of the first bitcoin futures marketplace fund in the United States. Bitcoin fell from its all-time high, causing cryptocurrency values to collapse, which has continued into today. Bitcoin has lost nearly \$5,000 in one day, whilst Solana has gained approximately 10% since the previous trading day. It is now trading for \$4,112 per token, a decrease of approximately 2 percent. Compared to the previous day, Cardano prices have dropped roughly 3 percent to \$2.16, while dogecoin values have dropped 3 percent to \$0.24. Although Bitcoin (BTC) has just reached new highs and has experienced other swings. Crypto analyst and trader Michal van de Poppe is optimistic about the future of various alternative currencies (altcoins). He explains his most recent analysis on Chainlink's native assets in a new strategy session, which marks the beginning of the new planning session for the prominent trader (LINK). At this point, I believe that Chain Link will still be in the field of concern if interested in taking a strategy on this one.æ The way I see it, everything is perfectly OK; itæ's just waiting for the right moment to explode.æ Traders æw attention now turns to the Curve DAO Token (CRV) the asset that drives the automatic market maker protocols of the same name. The currency, he predicts, will move sideways in the short future before making a significant breakout. In his opinion, the Curve has been witnessing a nice retest, a lovely structure in which we will most likely see continuing toward opposition here, before some minor comprehensive and multidimensional phases into the area here. Then we will break out at some point later on. Next, Van de Poppe examines the Skale (SKL) decentralized internet protocol suite (DApp), a decentralized application (DApp) protocol that intends to aid developers in avoiding Ethereum congestion issues. The SKL, according to him, will begin to rise by the end of the month next. In the following section, Van de Poppe examines the charts for The Graph, a decentralized Blockchain Indexing Service (DBIS). THORchain (RUNE), a decentralized cross-chain liquidity protocol expected to post a higher bottom. Signaling that yet another upwards surge is in the works, according to the cryptocurrency researcher. Especially in the case of supply network VeChain (VET), van de Poppe says heæ's sticking to his prognosis from early October, anticipating that the coin will go below at least 0.00000149 BTC before a long-term rally can begin. - BN is ready to launch eNaira despite its previous failure. - CBN has released a document in which it repeats its commitments - CBN mentions eNaira will be available to offline users. Nigeria Central Bank planned to launch its CBDC eNaira on October 1st. But unfortunately, the mission was failed. But now, again the Central Bank of Nigeria (CBN) has released a document in which it repeats its commitments to launching the eNaira. In the document The Design paper for the eNaira, CBN mentioned that it is now ready to launch Nigeriaæ's CBDC. Accordingly, in the same document, the CBN appears to downplay the implications of the failure to launch as planned. However, the CBN highlights the points about the importance of getting things right the first time. And also made the effort to assure the digital currencyæ's success in the long term. Furthermore, The Design Paper for the eNaira document explains the CBNæ's position. æWhile the launch of the eNaira is an important event, it is one milestone on a long journey. The eNaira, a process, not a single step.æ And also added, æOver time, the CBN believes the robust ecosystems that will build on the eNaira platform will ensure Nigeria and Nigerians receive all the benefits from the eNairaæ. Henceforth, CBN is not only focusing on the launch of eNaira on time. But also it has made an effort by mentioning the spent time working in the eNaira design and architecture. Even more, categorized sharing with prospective eNaira users the digital currencyæ's functionalities, the effects of the eNaira and how they will mitigate, and the eNaira future implementation roadmap. As per CBN, this detailed information will provide trust and comfort to Nigerians, eNaira will be available to offline users. Therefore, CBN was ready to launch its cryptocurrency eNaira. - Investin (IVN) price soars over 91% in the last 7 days. - In a week IVN price has increased from \$0.85 to \$1.63. - A few days before Orca swap has incorporated on Investin. The first decentralized fund management protocol operates on Solana is Investin (IVN). It has soared over 91% in the last 7 days. Investin provides an open market for prospecting investors and seasoned traders to exchange their funds in a trust-less and non-custodial manner. Investin protocol governance token is the IVN token. IVN reflects the ownership in the protocol and the fees generated through protocol would evenly distributed among the fund managers. Accordingly, using the Investin protocol any fund manager can deploy a contract to start their fund. Meanwhile, the contract will serve as a vault where investors can invest without having to give away the custody of their belongings. IVN Current Market Status Furthermore, as per CoinMarketCap, Investin (IVN) price was waving at \$1.63 with a 24-hour trading volume of \$2. At the time of writing the market cap of Investin is \$4,49,105. In the last 7 days, IVN price has soared over 91%. The above chart displays the bullish trend for the last 7 days. In a week IVN has increased from \$0.85 to \$1.63 this was a tremendous increase. For sure, if this bullish trend increases we can expect more price gains in the upcoming days. And we can also expect IVN to hit his new all-time high (ATH). Orca Swap Incorporated on Investin Orca is the general-purpose decentralized exchange (DEX) on Solana. A few days before, Orca swap has incorporated on Investin. Investin can trade on Orca, along with Radiyum, unlocking a whole lot of new liquidity from the Solana ecosystem. Therefore this incorporating will allow a vast variety of tokens to be traded through Investin Funds. Following many other impressive updates, @orca_so swaps have now been integrated on @Investin_pro! This integration will allow a vast variety of tokens to be traded through Investin funds. æ" Solana News æ" (@SolanaNews) October 17, 2021 Check out the details: https://t.co/WsyekFahQ#Defi_crypto_Solana pic.twitter.com/IbsZ4tFEgu Henceforth, the collaboration might be one of the reasons for the price soar. With the upcoming announcement, collaboration, update, and upgrades in Investi Protocol we can expect IVN to reach more heights. Recommended for You

- Crypto scammers hijack famous YouTube channels - Channels are rebranded to Crypto exchange firms - Large users has been cheated according to Googleæ's Threat Analysis report Investing in cryptocurrency is a very challenging deal and the highest scope of risk for the users is getting scammed. Phishing scams are rising as the crypto industry is becoming more popular among the investors. In the crypto market people are digitally connected around the globe with a huge interest to invest on digital currencies. This crypto scam is a fraudulent act involving criminals stealing money from entrants hoping to invest their life savings in digital assets. As an example, hijacking criminals are hacking popular YouTube channels and rebranding it as a large tech or crypto exchange firm. More so, the Google threat analysis reports the hackers are breaking the accounts to broadcast crypto scamming contents. YouTube Channels and Crypto Scam Recently, a Google threat group found that a crew of hackers are hijacking the very famous YouTube channels. These channels consist of millions of subscribers with a huge popularity among the users. So the criminals hack these channels then rebrand the entire content to cryptocurrency exchange firms or large tech companies. Moreover, the group of hackers who were involved in disinformation campaigns were hired in a Russian-speaking forum. æ Hackers recruitment process was very professional with a job description offering two types of work. One is light advertising and full stack advertising preferring work roles into social engineering and different malware types. Besides, after hacking the accounts the scammers will either sell it to the highest bidder or use it to stream cryptocurrency scams. In addition, on the basis of subscribers list, the market offers a range of \$3K to \$4K per channel. Also, the hackers will release a short attracting video promising for crypto giveaways in exchange for initial funds, adds the Google group. Hackers Tactics and Strategies However, to target and hack a large number of accounts, the hackers very smartly planned and processed some tactics. Cookie Theft or æpass-the-cookie attackæ is a hijacking method which provides access to users accounts with the cookies captured in the browser. Through this, hackers used this technique to hack the accounts. Followingly, hackers used another way approaching all Social engineering YouTubers with advertisement offers. In this method, hackers prepared and sent business emails representing a popular existing firm requesting a video ads collaboration. Once the users accepts the offer a software download URL was sent via email or a PDF on Google Drive with phishing links. Through this, the Google analytics team traced around 15,000 accounts created to support the illegal campaign purposefully. Thus with all cunning strategies the hackers were smart enough to disrupt the life saving of many users. But now the entire group is caught red-handed and some precautionary methods are shared to all users from the Google threat analytics team. So all investors and users must be aware of all risks and deals rising in the cryptocurrency world. Besides, it is also mandatory to know all possible ways to avoid and escape from these cryptocurrency scams. Recommended for You

- The network will have a total supply of 10 million MOVR tokens. - The coin, MOVR, is used to support the Moonriver platform. Moonriver (MOVR) is the utility token of the Moonriver Network, and it is used for many purposes. The coin MOVR is used to support the Moonriver platform. Furthermore, it is also used to reward nodes, promote governance, and pay for transaction fees on the network. A smart-contract parachain for Ethereum atop Kusama is what characterizes Moonriver. Moreover, it is intended to be used as a companion network to Moonbeam, serving as a

persistent canary network in the process. Moonriver will be the first to get the updated code, testing and validating it in real-world situations. This code will then be sent to Moonbeam on Polkadot. It provides an EVM implementation, a Web3 API, and bridges to existing Ethereum network infrastructure. The conversion of existing Solidity smart contracts and Dapp frontends to Moonriver is a simple process. 10 Million MOVR Tokens Moonriver, a decentralised smart contract platform, needs a utility coin to work effectively. MOVR is a critical component of Moonriver's architecture and cannot be disabled. Moreover, the Moonriver Network will have a total supply of 10 million MOVR tokens, with a 5-percent yearly inflation rate, which will be issued. Moonriver (MOVR) is a cryptocurrency that is not yet listed on Binance, the largest cryptocurrency exchange in the world. Because of the rising popularity of the MOVR coin, it has emerged as a strong contender for inclusion on the popular exchange. Furthermore, if this happens, MOVR owners can expect a \$500 price level. According to CoinMarketCap, it is now trading at \$382.53 USD with a 24-hour volume of \$61,386,247 USD. Moonriver is up 24.61% in the last 24 hours. Recommended for You

- SHIB price dropped a zero and increased by almost 300 percent. - Shiba Inu has made it into the choices. After a big spike in recent days, the crypto market has cooled down. Other altcoins like Ethereum, Polygon, Solana, etc., followed Bitcoin close to \$70,000. Despite the market's apparent bullishness, the Shiba Inu price seems to have plateaued. If the spreading rumours are correct, SHIB stock may soon see another major surge. Since Shiba Inu began trading on Coinbase Pro, rumours of a Robinhood listing have been swirling. The Shiba Inu fans gathered to lobby for listing on Robinhood. But no encouraging developments or confirmations were seen. Many signs point to the listing being on its toes recently. Since the SHIB price dropped a zero and increased by almost 300 percent, the push to seek the listing has resurfaced. Despite the widespread appeal for listing, Robinhood indicates it will happen soon. Del Crpto just announced to his 278K Twitter followers that the coin has been listed. I have a source who has confirmed, @RobinhoodApp will be added to SHIB. æ Del Crpto (@DelCrpto) October 21, 2021 They say the atmosphere at @RobinhoodApp is high tension as company heads fear further SEC trouble can result from leaked info regarding \$SHIB launching on the platform. SEC Action According to the analyst, the listing has created a hot and hostile climate inside Robinhood. The platform fears SEC action owing to the disclosed listing information. Moreover, an insider from the Robinhood team indicated that the infrastructure is ready to launch SHIB, with rapid progress on the backend and frontend. An email purporting to be from the Robinhood staff indicates the listing is on its toes. A poll on the App also intends to know their consumers' crypto in the last three months. Shiba Inu has made it into the choices. The asset has rallied roughly 300 percent in only three days, reaching prices above \$0.0003000. Despite a slight decline, it is far over \$0.0002700. So showing the comeback of the bull rally likely to slay another zero. According to CoinMarketCap, the SHIBA INU price today is \$0.00028 USD with a 24-hour trading volume of \$1,239,401,147 USD. Acuity Atomic Swap DEX Price Is Close To Cross \$150 Soon - KuCoin Rolls-out KuCoin S, a Test Phase Social Trading Features - Terra & Solana Price at Critical Levels, Bullish Rally on the Cards? - Elrond (EGLD) Price Set to Sky-Rocket After Staking Pool Move on Binance - DogeDash (DOGEDASH) Price Up-surges More Than 750% Percent in a Week

- AXS prices must close above \$150. - Famous games like Pokémon and Tamagotchi inspire the platform. - The crypto recorded an over 112% growth rate in the past 30 days, an uptrend position. A quick technical, as well as analysis of the price of Axie Infinity, is shown below. In this section, FXStreet's analysts assess what AXS needs to continue rising. Only technical analysis has been used to get this Axie Infinity (AXS) price prediction for 2021. You will be able to view the significant indicators that we considered while developing our AXS price analysis and forecast in the next section. Axie Infinity is a trade and combat game that is partly owned or controlled by its users. It is based on blockchain technology. Furthermore, the platform was influenced by popular video games such as Pokémon and Tamagotchi. However, it does allow players to acquire, breed, raise, combat, and trade Axis, which are token-related creatures that may trade. More importantly, these Axes may take on a variety of shapes and sizes, with over 500 distinct body parts to choose from, including aquatic, beast, bird, bug, plant, and reptile parts, among others. Features from each kind of class are available in four different rarity ratings, which are as follows: common, uncommon, ultra-rare, and legendary. Particularly noteworthy is that the Axes may have any mixture of bodily parts, making them very varied and frequently unusual and unique. Axie Infinity (AXS) has maintained its position as one of the most active cryptocurrencies in the cryptocurrency market. To put it another way, according to CoinGecko, Bitcoin is now one of the top 50 most valued cryptocurrencies. Furthermore, the cryptocurrency saw an increase of almost 112 percent in the last 30 days, indicating that it is in an upswing. AXS has recovered from its bearish drop on July 26 and is currently trading at a high price of \$69. As a result of this, AXS has experienced a 17 percent improvement in performance over the last 14 days. If this upward trend continues, AXS might set a new all-time high in a short period. Each Axie is a non-fungible token (NFT) with a unique set of characteristics and advantages. Also available are 3v3 bouts, with the winning side receiving different experiences (exp) points, which may be utilised to level up an Axie's stats or evolve the body parts of the Axie's opponents. Axes may be mated together to create new and unique offspring, which can then be utilised or sold on the Axie market. Recommended for You - Acuity Token (ACU) Price Skyrockets Over 420% In a Day - KuCoin Rolls-out KuCoin S, a Test Phase Social Trading Features - Terra & Solana Price at Critical Levels, Bullish Rally on the Cards? - Elrond (EGLD) Price Set to Sky-Rocket After Staking Pool Move on Binance - DogeDash (DOGEDASH) Price Up-surges More Than 750% Percent in a Week

- It also simplifies the whole procedure for a crypto newbie. - KuCoin also improves the general UI to better fit Generation Z. In total, KuCoin supports over 400 cryptocurrencies. Users in 207 countries and regions may trade Spot, Margin, P2P fiat, futures, stake, and lend. IDG Capital and Matrix Partners invested \$20 million in KuCoin in 2018. Moreover, CoinMarketCap ranks KuCoin as the fifth-largest cryptocurrency exchange. Furthermore, Forbes named KuCoin Best Crypto Exchange for 2021. KuCoin, a prominent worldwide cryptocurrency exchange, added various social trading capabilities to its mobile app to meet the increasing demand from crypto users, particularly newbies. In KuCoin S, invited users may test new functionalities before officially launching on the KuCoin App. KuCoin's Long-Term Goal The launch of the social trading functionality aligns with KuCoin's long-term goal of introducing crypto to the people. Since its inception, KuCoin has had a thorough grasp of the obstacles to entry for non-crypto currency users. The combination of social and trading elements will help KuCoin become the biggest social trading platform in the crypto market. Users may engage with KOLs or community leaders, debate current crypto issues, and learn from others' trading experience and tactics in KuCoin S. It also simplifies the whole procedure for a crypto newbie by allowing quick purchase, portfolio check, copy trading, and more. All investors may access the crypto world with the most trustworthy crypto information for more effective trading decisions. With this version, KuCoin also improves the general UI to better fit Generation Z. The platform updated its colours, visuals, and interface components to reflect the concept of futurism. It also incorporates the node idea as an essential part of the blockchain ecosystem. The fact that each node is autonomous yet linked recalls KuCoin's social aspect. KuCoin will progressively give out additional invitation codes to let more users utilize the social trading capabilities. Less than a year from now, all users will be able to benefit from the features. - The asset may break over the \$283 barrier. - It just established a partnership with Woodstock Fund. The global crypto market cap has reached a new ATH of \$2.67 trillion. While Bitcoin and Ethereum are stealing the show with 3.70 and 9.75 percent increases in 24 hours, popular cryptocurrency Elrond has emerged to challenge. The Elrond pricing has been stable for some years now. On Thursday, the platform announced the opening of the EGLD staking pool on Binance. Also, the exchange just reached 100 billion transactions. The Elrond network's recent reputation boost provides it with an ideal future blow. The combination benefits traders greatly. Trades may earn up to 55.49 percent annual per yield (APY) and split 100 EGLD awards worth \$19900. Trading the token for 10, 30, 60, or 90 days earns traders amazing yearly interest rates. The locked staking cap is 0.2 EGLD. Partnership with Woodstock Fund Besides this, the platform is actively working on many initiatives to help the community. It just established a partnership with Woodstock Fund. The partner announced a massive investment in a non-custodial staking initiative. After a week of correction at \$225, the cryptocurrency traded at \$250, up 6.01 percent in 24 hours. On the 1-day chart, the altcoin has established an ascending parallel channel. The pattern is nearing its convergence zone. Therefore the altcoin may be about to break out. As additional buyers enter, the asset may break over the \$283 barrier. Buyers and sellers may again battle around ATH. This may push the price over \$300 if its latest staking program draws more users. If the current barrier breaks, the Elrond (EGLD) price may go below \$225. The remainder of the quarter looks promising for EGLD. It is concentrating on basics to dominate the coming technology revolution. According to CoinMarketCap, the Elrond (EGLD) price today is \$245.85 USD with a 24-hour trading volume of \$182,221,836 USD. - DogeDash has ten exciting levels that become harder as the player advances. - The game's goal is to Dash through all ten stages as quickly as possible. The popularity of gamified crypto projects skyrocketed in the summer of 2021. Among others, Axie Infinity, Crypto Blades, and Mist have experienced significant increases in recent months. Moreover, despite their popularity, they all have one flaw: they, too complicated for the ordinary individual. DogeDash is a Mario-inspired game where players may earn money by contributing to the environment. Furthermore, the game's goal is to dash through all ten stages as quickly as possible while collecting money. Moreover, those who finish all levels, receive coins earned credited. DogeDash has ten exciting levels that become harder as the player advances. Furthermore, it takes a lot of Dash to get to the Dog House and finish the game. Entry into each level costs 100 DogeDash coins. This money is refilled into the Game Rewards wallets for future participants. Each Dash has 10,000 coins accessible, which are put into the player's Crypto wallet and immediately tradeable. NFT Collection The game's beloved characters will be accessible as NFTs. Moreover, the artists manually create each sprite with meticulous precision to guarantee the finest degree of intricacy. DogeDash is the game's native token. Furthermore, it deploys three simple yet effective, which are re-distribution, deflationary, and marketing functions. Paul Caslin, a Grammy-nominated creative director, created DogeDash. Furthermore, the creator wants DogeDash to be a part of the BSC stack of applications and games. According to CoinMarketCap, the Doge Dash price today is \$0.000289 USD with a 24-hour trading volume of \$13,363,613 USD. Furthermore, the price has gained 785.73% in the last week. Each day a new set of cryptocurrencies are gaining attractions for its unique features and developments. In the entire crypto market, altcoins are playing a vital role with strong user support. Besides, more than half of the contribution to record a huge market cap for the crypto market is due to altcoins. To add more interest for the users, the top three trending crypto tokens are listed for the day. They are Solana (SOL), Rainbow (RAINBOW), and DogeDash (DOGEDASH). All these altcoins are performing on the green line with a surge in the last 24 hours. 1. Solana (SOL) Solana is a public blockchain platform which is the recent trend in the crypto market. SOL is the internal cryptocurrency for the platform. More so, it is the fastest growing ecosystem in crypto so far in 2021. In recent times, SOL reached its all time high hitting \$216 due to its wide scale adoption. At present, SOL is ranking 6th position in the crypto market with a live price value of \$181.95. Also, the value gained over 8.98% in the last 24 hours. Notably, for the past week, Solana (SOL) is maintaining a green graph with a hike in the prices. 2. Rainbow (RAINBOW) The most highlighted feature about this crypto RAINBOW is it takes 7 different colors and assigns them special protocols. Besides, Rainbow is a decentralized platform which enables the users to launch their own tokens in a secure way. In addition, RAINBOW is an ethical DeFi token which consolidates 7 features into a single crypto asset. Today, RAINBOW is holding a price value of \$0.0000001411 with a surge up-to 8.23% in the last 24 hours. This decentralized token specializes for its user friendliness and low fee cost among other crypto tokens. 3. DogeDash (DOGEDASH) DogeDash is a transparent, governing and a community run cryptocurrency utilized by its high-quality platforms. Moreover, DogeDash holds a special feature creating a new block every minute and emits five coins. Through this, DOGEDASH maintains a massive supply cap of 100 billion coins at present. Further, the live market status of DOGEDASH token is \$0.0002526 with a 24-hour trading volume of \$13.43M. Besides, the value of DOGEDASH gained over 785.73% during last week. However, if the users are interested in investing in virtual currencies, then DOGEDASH can be a profitable investment option. Recommended for You

OpenOcean positions itself as the go-to place for best-priced cross-chain swaps. Its combination of margin pools for greater capital efficiency and intelligent wealth management services have attracted institutional interest. There is a vast ocean of liquidity in the cryptocurrency world, and OpenOcean makes it possible for anyone to dive right in. The launch of OpenOcean V2, dubbed OpenOcean Atlantic, introduces a lot of new features. OpenOcean Atlantic runs across aggregated networks, including Binance Smart Chain, Avalanche, Polygon, Solana, and Fantom. There is also support for OXChain, Tron, Ontology, and Heco. Later on, we will support Ethereum. Users will benefit from maximized returns outperforming any other DEX aggregator on the market. More importantly, all of these benefits are accessible free of charge. OpenOcean Atlantic implements a superior algorithm and protocol upgrade set to trade for the best possible returns. The algorithm leverages multiple parameters, such as better price, lower gas fee & slippage, and optimized routing. As a result, users no longer need to worry about these aspects and potentially higher fees from exploring alternative routes. Instead, OpenOcean Atlantic will ensure you get the most out of each swap. The OpenOcean Atlantic solution underwent rigorous testing by the team. Over 4,587 test cases on BSC were conducted to determine if the higher-than-expected returns kept up. The result is showing Atlantic is better in 60% of the cases, giving it a strong competitive edge over other leading DEX aggregators. The OpenOcean team experimented with its native solution, ParaSwap, and inched across multiple batches with different trade volumes across different blockchains to conduct the tests. Even when tests were conducted in parallel, OpenOcean Atlantic came out top of the class rather regularly. Beyond the OpenOcean Atlantic upgrade, the team has also enhanced the routing algorithm, front page, and roadmap. The trading terminals will be overhauled soon and offer enhanced features. For example, a future update will bring stop-loss and limit orders to OpenOcean Atlantic, removing the need for users to wait around or certain market conditions. Another addition to look forward to in the future is grid trading for volatile assets. Furthermore, OpenOcean introduces a new feature to make deposits, swaps, and withdrawals to be instantly processed and confirmed. The focus lies with improving trading and private key management, and the team will generate trading opportunities for its users. The team also explores opportunities for improving trading and private key efficiency in this trading segment. Launched in September 2020, OpenOcean has achieved numerous milestones since then. The technology stack has run smoothly for over a year and currently aggregates ten networks and over 50 exchanges. Moreover, there are over 350,000 active addresses on the platform. OOE, the native utility token, launched in July 2021 and is used for governance voting, trading function and services, and supplying liquidity. About OpenOcean OpenOcean is a one-stop full chain aggregation protocol that acts as a bridge between DeFi and CeFi. It eliminates the fragmentation that exists within the DeFi ecosystem by giving users access to the entire crypto market via a single, user-friendly interface. Users enjoy full access to aggregated liquidity and best pricing from a wide range of centralized and decentralized exchanges. - SUNRISE uses a negative rebase mechanism. - DoraemonInu is a popular anime token. From a few digital currencies in 2013, there is a huge jump. Making a cryptocurrency is simple due to the open creation procedure. Indeed, the top 20 cryptocurrencies are estimated to account for almost 90% of the market which includes names like Bitcoin, Ethereum, and Solana to name a few. Letâ€™s look at the 3 New Crypto Tokens SUNRISE, HND, and DORAEMONINU. The Sun Rises (SUNRISE) The project team invites individuals to invest in the token that will provide security and capital growth. Its programming incorporates hourly deflation and a growing liquidity pool. SUNRISE uses a negative rebase mechanism to decrease overall supply and raise the market value of each token. The SUNRISE tokenâ€™s supply is therefore adjustable. It has launched a mathematical algorithm to make each coin worth \$21,000 BUSD while destroying portions of the token supply. According to CoinMarketCap, the Sun Rises price today is \$0.024306 USD with a 24-hour trading volume of \$484,336 USD. Hundred Finance (HND) Hundred Finance is a decentralized program that allows cryptocurrency lending and borrowing. Incorporating Chainlink oracles to guarantee market health and stability focuses on long-tail assets. HND is the platformâ€™s own token. The HND tokenâ€™s use in governance will enable protocol choices to be made decentralized once sufficiently dispersed among users. Depending on their contribution to the protocol, their distribution to users encourages engagement and helps to launch the Hundred Finance initiative. According to CoinMarketCap, the Hundred Finance price today is \$2.00 USD with a 24-hour trading volume of \$50,082.07 USD. Doraemon (DORAEMONINU) DoraemonInu is a popular anime token. Launched with 0 telegram members and a growing community. On the website, you may play a DoraemonInu game. Moreover, a leaderboard rewards the top players. Also, a buyback mechanism to assist the token market cap rise. Furthermore, there are many plans as of \$1,021,847 USD. Recommended for You

AscendEX is excited to announce the Kin token (KIN) listing under the trading pair KIN/USDT on Oct. 19 at 1 p.m. UTC. In celebration of the listing, AscendEX and the Kin team will launch several limited-time promotional events, taking place between 1:00 p.m. UTC on Oct. 19 and 12:00 a.m. UTC on Oct. 26, 2021. By depositing KIN to their AscendEX account, users will be provided a chance to share 50,000 USDT worth of KIN pooled rewards. The Kin protocol is built to scale for mass usage and supports an ecosystem-wide digital economy where app developers and mainstream consumers carry out millions of micro-transactions. Kin is one of the easiest and fastest pathways for developers to build innovative, cryptocurrency-based user experiences that result in greater engagement and shared economic benefits. App developers, of any kind, located in any market, can seamlessly integrate the Kin SDK into their native platform and therefore become active participants in the Kin ecosystem. Through the Kin Rewards Engine, developers are not only able to create unique user experiences, but also earn rewards for when users spend KIN within their applications, ultimately addressing a major dilemma facing the Web3 world: developer monetization. This process of developer incentivization and shared value across the ecosystem gives app developers, content creators, and users a new way to earn real value from their contributions to the shared digital space â€” the better application experience a developer creates, the more usage the app will see, the happier the users will be, and in turn, developers will see increasing financial gains. KIN, recently having migrated to the Solana blockchain, is utilized as a consumer token for day-to-day platform interactions on Kin such as chat functionality, social media engagement, payments, gaming, and the distribution of user rewards. With more than 2 million users earning and spending KIN every month, the Kin blockchain has seen immense growth in its three years of active participation, as now the platform has been incorporated into more than 20 third-party applications. During the month of August 2021, the Kin ecosystem completed an impressive 28M total transactions, averaging at about 933K on-chain Solana transactions per day. At its core, Kin is seeking to create a fair, digital world built by a diverse group of developers and users looking to better the decentralized economy. To learn more about the Kin ecosystem, and KINâ€™s functionalities, visit kin.org. About AscendEX AscendEX is a global cryptocurrency financial platform with a comprehensive product suite including spot, margin, and futures trading, wallet services, and staking support for over 200 blockchain projects such as bitcoin, ether, and ripple. Launched in 2018, AscendEX services over 1 million retail and institutional clients globally with a highly liquid trading platform and secure custody solutions. AscendEX has emerged as a leading platform by ROI on its â€œinitial exchange offeringsâ€ by supporting some of the industryâ€™s most innovative projects from the DeFi ecosystem such as Thorchain, xDai Stake, and Serum. AscendEX users receive exclusive access to token airdrops and the ability to purchase tokens at the earliest possible stage. - Investors have recently started eyeing Solana. - SHIB Price has been making headlines since early October. Investors and traders have flocked to the crypto sector in record numbers. While Holders choose popular currencies like Bitcoin and Ethereum. Fans praise the fundamentals and price fluctuations of other currencies. Polkadot (DOT) Polkadot is a top choice for investors. DOT has the 8th largest market cap. As per CoinMarketCap, the Polkadot (DOT) Price was \$41.83, with a market value of \$43,668,164,477. The 24-hour trading volume is \$1,883,772,401. It peaked at \$43.19 in the last 24 hours. The currency is approaching its short-term ATH of \$49.35. With the parashain auctions, it is anticipated to hit 3-digits this Bull Run. On the route to ATH, the coin must overcome a \$44 barrier. Conversely, DOTâ€™s support level is around \$39.5. Solana (SOL) Investors have recently started eyeing Solana. According to 2020, CoinMarketCap, the price of SOL was \$11.55. The coin is currently trading at \$115.1. The coinâ€™s significant resistance is around \$163.12, where it has been denied five times since October 15th. To climb the rankings, the coin must overcome this obstacle. But SOL is still below its ATH of \$213.47. Dogecoin (DOGE) Doge is again on the move. Popular in public platforms lately. According to CoinMarketCap, the meme coin has a market cap of \$33,838,750,457 and a value of \$0.257. The 24-hour trading volume is \$3,742,769,549. The coin is now ranked 9th on the market rankings. DOGE Price has broken its triangle. The currency is nearing its \$0.28 resistance, and then around \$0.3. Suppose it can overcome the approaching obstacle. However, the coinâ€™s crucial support level is \$0.2163. Doge is also breaking the downtrend line for the fourth time. SHIBA INU (SHIB) SHIB Price has been making headlines since early October. The coin has outlasted its misperceptions. Elon Muskâ€™s tweet has resurrected the Doge equivalent. According to CoinMarketCap, the Doge Killer is worth \$0.00002782, with a market value of \$13,431,045,943. The 24-hour trading volume is at \$3,216,772,645, regaining its 12th position recently. While the resistance stays at \$0.000029, the currency must hold above its support at \$0.000026. The high of \$0.00003791 is still far away. Altcoins continue to attract the attention of investors and dealers. Alternatives for the next alt season are much anticipated. This may happen as early as the first quarter of 2022. Altcoinsâ€™ growth has netizens optimistic. Recommended for You

Crypto industry is driving the interest of all individuals who are very eager to invest and earn with digital currencies. Thereby to attract the users, crypto market launches many promising projects which reflects a great impact on the industry. Besides, the month of October has brought in many crypto projects which surged the market capitalization of the industry. In Particular, people's interest in crypto has surged this year, becoming a popular digital culture in the world. Moreover, data from Token Terminal released a list of top 15 crypto projects evaluating their Annual revenue for the day. Promising Crypto Projects Crypto adoptions are constantly rising resulting in high usage of digital currencies in recent times. Large number of active users are accounted for trading and transacting their asset resulting in high profits for the crypto projects. Thus, the top 15 projects are Ethereum (ETH), Open Sea Axis Infinity (AXIS), Uniswap (ONLY), Binance Smart Chain (BNB), Bvdx (Bvdx), Aave (AAVE), SushiSwap (SUSHI), PancakeSwap (CAKE), Compound (COMP), Bitcoin (BTC), Trader Joe (JOE), Lido Finance (LDO), yearn.finance (YFI) and Filecoin (FIL). Interestingly, Ethereum (ETH) is the first one to enter the top list with total annual revenue of \$12,130 million. This crypto project is the only one which secured a high annual profit rate thereby leading the table. The second-largest digital currency is holding a current market value of \$3,767.74. On the other hand, the most popular and the crypto king Bitcoin (BTC) ranks in the eleventh position. The overall annual revenue of BTC is \$272 million and the current market price is \$61,950.96. But in the last few months, the entire crypto market was bearish due to a fall in BTC value. Thus, it can be the reason for Bitcoin to produce a low revenue. Since the crypto industry has the power to change in the blink of an eye which results in a lot of fluctuations. So the other crypto projects are also excelling in the market satisfying its users with high rate services. Through its innovative projects and events, the crypto industry records a tremendous amount of inflow of attention which will raise the growth of the industry in future. Recommended for You

- Cryptocurrency must not be allowed to become a boys club - In Crypto exchange just only 23% of investors are Women - Cryptocurrency investments are worth more than 3.3 trillion dollars Local crypto executive Tracey Plozman has advised that Australia's fast-growing cryptocurrency sector must not be allowed to become a "boys club" like the rest of the finance world. Ms. Plozman, the chief operating officer of Bamboo, a Perth-based crypto micro-investments technology company, told The Age and The Sydney Morning Herald that emerging assets like For women, Bitcoin, and Ethereum provided an alternative to the male-dominated financial sector. It gives individuals the opportunity to improve their finances and increase their wealth and but it also allows them to get involved in this relatively new industry. When considering their financial projects, the total market capitalisation of all cryptocurrency investments is worth more than 3.3 trillion dollars. Nevertheless, according to a recent report by BTMarkets, Australia's largest cryptocurrency exchange, only 23% of investors are female. This becomes even worse when viewed on a global scale, with additional research revealing that only 12 to 15% of Ethereum and Bitcoin dealers are female. However, industry leaders such as Ms. Plozman are working hard to reverse these statistics. She reveals that her first journey into the crypto realm was in 2018 when she worked at blockchain-focused investment firm DCM, where she was in charge of marketing and branding. Recommended for You

Global cryptocurrency trading platform, Gate.io, announced a partnership with decentralized financial data provider, Pyth network, to provide reliable cryptocurrency pricing data on the platform. "Providing users with accurate and reliable cryptocurrency price data is one of our top priorities at Gate.io. Over 6 million users around the world rely on up-to-date, reliable data when trading on our platform and as such we have partnered with Pyth network to ensure the best possible trading experience for our users," said Marie Tatibouet, Chief Marketing Office at Gate.io. Established in 2013, Gate.io has grown to become one of the oldest cryptocurrency exchanges in the world. The platform serves over 6 million users, offering over 1,700 trading pairs with 1,000 different cryptocurrencies listed on the main exchange. Gate.io offers regular spot trading in addition to leveraged futures and derivatives trading. In addition to cryptocurrency trading, the Gate.io ecosystem also has an investment arm, Gate Ventures, a native blockchain ecosystem in GateChain, an NFT market place in NFT Magic Box and a DeFi platform known as Hipo DeFi. Pyth network is a Solana-based data aggregation platform for the decentralized finance (DeFi) market. It helps solve a problem faced by DeFi by making available high identity and time sensitive data. Gate.io believes as the DeFi market continues to grow and mature, the global financial market will change shape. By partnering with Pyth network, data providers such as Gate.io contribute constant, live market data and developers are able to access this data directly on the blockchain. By leveraging its position as a top 10 cryptocurrency exchange, Gate.io hopes to promote and contribute to the expansion of the global DeFi ecosystem. About Gate.io Gate.io allows blockchain enthusiasts to trade and store assets in over 890 of the leading cryptocurrencies for over 6 million users from over 190 countries. The exchange offers spot, margin, futures and contract trading in addition to DeFi products through Hipo DeFi, custodial services through Wallet.io, investments through Gate Labs and its dedicated GateChain platform. The company also offers a wholly integrated suite of products such as its Startup IEO platform, NFT Magic Box marketplace, crypto loans and more. For more information on Gate.io, please visit <https://www.gate.io/> About the Pyth Network The Pyth network is a specialized oracle solution for latency-sensitive financial data that is typically kept behind the "walled gardens" of centralized institutions. The Pyth network is focused on finding a new and inexpensive way to bring this unique data on-chain and aggregating it securely. For more information about the Pyth network, please visit <https://pyth.network/Contacts/Head-of-Diksha-Sharma> Gate.io - diksha@mail.gate.io Disclaimer: This is a paid Press Release. - New York becomes the most desirable state in the U.S for BTC mining . - 20% of BTC hash rates originate from New York . - Availability of renewable energy and cooler climate are major factors. The China BTC mining ban has completely turned the Bitcoin (BTC) mining industry overall. With China now out of the game, now the U.S leads the world in BTC mining. In spite of this, of all the states in the U.S, the state of New York becomes the most desired for BTC mining. Accordingly, the survey report states that 20% of the has rated for BTC mining is from New York, followed by Kentucky with 18.7%, Georgia with 17.3%, and Texas as the fourth with 16%. New York's BTC Mining Surge The Foundry USA, a finance-based advisory company in the U.S gives out reports from a survey stating that New York tops as the best place for BTC mining. Moreover, upon the survey, Foundry USA did not take into account all the mining farms in the USA. Rather they surveyed only the prominent ones in major cities. Furthermore, the CEO and Co-founder of Castle Island Ventures, Nic Carter states that only those who used Foundry USA were taken into the survey. This has clashed out many reputed mining farms like the Riot Blockchain mining firm and much more. In addition, Carter states the state of New York proves to be the best as a result of the survey. Also, the highlight of New York is the state's availability of renewable sources of energy in abundance such as hydroelectricity. Besides, the cooler climate compared to the other states is another major reason, which lessens the cost of cooling facilities and power supply. Also, the CO2 emissions in New York are comparatively the lowest too. Texas Neglected However, many analysts debate that Texas should deserve the title as many of the mining firms in the state were not taken into account. Accordingly, Texas has it all in the bundle, such as BTC favoring politicians, renewable wind-source electricity, vast abundant land areas, lower energy prices, and much more. On the other hand, Texas was the first place of choice for all the mining firms in China, when they decided to relocate at first. Besides, the executive from the Luxor Mining firm, Alex Brammer states that the cost of power in West Texas couldn't be compared to anywhere else in the world. Recommended for You

- Centric Swap (CNS) rockets up with 1000% gains. - Reaches ATH of \$0.001807. - Three major reasons owe to this rocket surge. Certainly, there's no doubt how prolific the month of October has been so far for the entire crypto industry. With many altcoins and Bitcoin (BTC) performing exponentially, most of them are expected to reach their all-time highs (ATH) within the end of October. On the other hand, few altcoins have already reached their ATHs and are upon making new records such as the Centric Swap (CNS). Accordingly, CNS has rocketed up with mind-blowing gains of 1000% in October, within a short time period. CNS's 1000% Gains The Centric Swap (CNS) is a dual crypto payment-based application network that was first upon the Tron (TRX) network. A few months back, CNS shifted to Binance Smart Chain (BSC). Moreover, once the CNS tokens are purchased, Centric Rise (CNR) will be rewarded and once CNR price rises over CNS, it could be converted back to CNS to yield the profits on an hourly basis. In spite of being dual model crypto, CNS has rallied all the way from \$0.0001352 to a whopping ATH of \$0.001807 within a few days. Accordingly, CNS has rocketed up with gains of 1000% which is impeccable. Also, this rocket surge ATH gains have taken place over a period of about just 1 month. Besides, from a low of \$0.000104 in the month of September, CNS surged to \$0.001807 ATH in October, witnessing gains of 1130%. Reasons for the Rocket Surge Three major reasons owe to be the major factors for the surge of CNS. Accordingly, CNS has partnerships with many entities which have current real-world usage of CNS. CNS is now being used as a prominent payment means with tour firms like Absolute World and Fourvest Travel Services. In addition, by partnering with Solobee, and of course swap, the CNS has added a new chain, add the BSC usage of CNS. Another major projects, this has led to increasing in CNS's trading volumes too. Furthermore, CNS has announced officially regarding its future projects and technological upgrades, which all ought to increase the platform's overall value to even further heights. Key Points: - Futures ETF approval is considered to be a game-changer for the market - The industry will accept and utilize ALT currency more readily - Bitcoin and other cryptocurrencies will see a rise in value as a result A lot of things have happened in the crypto space this month that has been interesting for traders. The U.S. Securities and Exchange Commission has approved Proshare's Bitcoin Futures ETF. Also, NASDAQ has approved Valkyrie, which is filed with the SEC. This will give Bitcoin and other cryptocurrencies in the space an additional boost. According to crypto proponents, in 90 days, 85% of the Bitcoin circulation quantity hasn't changed hands. Furthermore, inflation is escalating at a rate of over 5%. The results could be shocking for the company's wealth makers. Another expert at Altcoin Daily elaborates readers on the cryptocurrencies with the most upside potential. Organizations have placed a tremendous value on these coins. The coins may also follow the footsteps of Bitcoin inside the fourth quarter. It's only a matter of time before Ethereum, the second-largest cryptocurrency, joins the fray. As part of Fox's Masked Singer NFT giveaway, 20,000 NFTs will be given away. About the Ethereum blockchain, these NFTs are relevant. This might be a huge step forward for Ethereum. FTX, on either hand, is getting ready to roll out the NFT games on Solana. Because of this, Hispanic engineers stand to gain. Now working with Uniswap Labs is Hari Sevugun, a former senior spokeswoman for Barack Obama. For Hari Sevugun, helping the organization's relationship with new and existing clients is a top priority. And they were handling the firm's public statement. The final three months of the year appear to be an exciting time for crypto enthusiasts. The increasing dominance of Bitcoin is being accompanied by a steady increase in the popularity and acceptability of alternative cryptocurrencies. Investors and traders in cryptocurrencies are getting ready for the long-awaited upswing. Recommended for You

- The best crypto projects to explode in Q4 are EGLD, LINK, and SOL. - Bitcoin is now facing supply scarcity which might result in price surge. - Tiktok co-founder wants to launch social tokens on Solana. The bullish trend in the cryptocurrency market is continuing where BTC gains 14.8% within this week. On the other hand, Ethereum also experienced more profits followed by the king of cryptocurrency, Bitcoin. Significantly, the best crypto projects are set to explode in Q4, 2021 with huge gains. The few interesting best crypto projects are Elgorand (ELGO) and Chainlink (LINK), and Solana (SOL). According to Will Clemente, a popular on-chain analyst, as a result of the asset scarcity of Bitcoin and Ethereum, the price of these crypto-assets will rise in Q4. Bitcoin is lacking in supply as buyers are purchasing and holding their coins which leads to a shortage in supply. Will Clemente has shared the statistics for the supply of Bitcoin where 38.2% of BTC supply is lost. Additionally, 85.1% of supply is stable in 90 days, while on the other hand, 92% of supply hasn't been circulated in 30 days. This squeezed and scarcity of BTC supply might end up in a price surge in October. On the contrary, the price value of Ethereum is already nearing \$3,500 where its heavy resistance level is at \$3,521. Thus, ETH is on its track to break this resistance level so it might cross the level anytime soon. According to the recent analytics from Documenting Ethereum platform, on October 8th it is recorded that over \$402 million Ether outflows from centralized exchanges. This might result in a tremendous price surge of Ethereum in Q4. Altcoins Set To Boom Chingari, an Indian Tiktok challenger has raised \$19 million to launch a social token on the Solana ecosystem. Adding to this, the app's co-founder, Sumit Ghosh states that he wants to experiment with social media by launching social tokens on Solana. He also pointed out Axis Infinity for this scenario as it transformed the gaming industry. Surprisingly, big tech firms like Galaxy Digital, Alameda Research, and Solana Capital are driving this move. With a series of events planned for the asset in Q4, the altcoin could outperform expectations once the upgrades are implemented. Moreover, Chainlink has introduced a new unique feature of interoperability where dApps are built on their blockchain. It extends support to Ethereum to Avalanche or Elrond to Cardano as well as expands

support to layer 2 blockchain networks. The third asset on the list is Elrond, where EGLD is the native coin of Elrond. Elrond partners with Ardana to enable cross-chain smart-contract functionality. This platform acts as a bridge between Elrond and Cardano, while EGLS serves as the first cross-chain asset as collateral on the Ardana platform. This integration might step up for price hikes in Q4. However, the crypto market displays bullish signals while Bitcoin is moving in an uptrend. If it continues then it might set up a new ATH within the end of this month. Following the leading cryptocurrencies, altcoin would also continue the same pattern. Thus, Altseason could resume in November so the market can witness significant price surges for the above-mentioned assets by December. Distributed Global, an early investor in crypto startups Dapper Labs, Audius, and Solana, has to lead a \$3.5 million fundraising round with Yup, web3 social network that pays curators. The money will continue developing a revolutionary web3-native social networking platform and empowering curators all across the internet. Major participants in the blockchain and tech industries, Such as Dapper Labs, LD Capital, and several creator angels, participated in the fundraising round. Yup is a social media platform that pays and acknowledges content curators throughout web2 and web3 platforms. Such as Twitter, Youtube, Opensea, Mirror, etc. This protocol is designed to monetize the value created by influencers and people on social media who share high-quality content. Yup's CEO, Siddharth Ghosh, said, "The platform is designed to reward curators for their efforts in curating content. They are the backbone of the platform." Traditional social media sites depend on protected user data silos with limited access. They are essential to their business models. Yup has the potential to enable architects and dreamers of following huge social apps as completely open and modular. Web3 social network, says Alex Price, who well before Yup and is presently a Special Advisor at A16z Crypto. "I'm excited to see what types of feeds, interfaces, and some other things Yup's open social network will produce."

Chingari, a short-video app, has raised \$19 million to introduce crypto as a means of revenue for artists and subscribers. Among the investors in Series A were Republic Crypto, Alameda Research, Galaxy Digital, Solana Capital, and many others. The firm says the funds were obtained in USDC and Tether, which are less volatile and backed by dollars. This investment will help the business become a worldwide blockchain-based social infotainment platform. The current capital injection will create a new currency, \$GARI, in conjunction with the decentralized computing platform Solana. These coins would let the network monetize more creators. The funds will be used to test the live blockchain, Chingari Integration beta, and the forthcoming \$GARI token sale. Sumit Ghosh, CEO of Chingari, said after the fresh funding round: "The future of a platform lies in its creators. On one side, we have an immense talent pool that needs to be explored and rewarded with an ethical amount of monetization. On the other side, while Crypto experiences a rapid expansion in India, \$GARI is poised to make it mainstream. We are infusing the two, through robust strategies and incorporation of the most promising industry advances." For Chingari, the platform's non-fungible tokens (NFT) and the opportunity for fans to support their favorite artists are essential elements. The app has seen a 4x increase in download in the last six months after losing early traction to heavyweights such as MX TakaTak, Dailyhunt's Josh, and ShareChat's Moj. In April 2021, Chingari raised \$13 million from investors, including OnMobile, a mobile entertainment business. The software boasts 78 million downloads on Google Play and Apple App Stores, with 39 million monthly active users (MAUs). Aside from live blockchain testing, the near-term plan is focused on the forthcoming \$GARI token sale. The business hasn't said whether it will go online until the Indian government allows crypto. Moreover, Aditya Kothari, Biswama Nayak, Deepak Salvi, and Sumit Gosh created Chingari in 2018. Users may post videos, connect with friends, meet new people, trade material, and more. Content producers get Chingari Coins, which can be traded for money. Users enjoy: - Customized videos for them - Realistic AR filters - Mega-Song Library - More than 20 languages Content Chingari has received the "Times Business Awards 2021" for "Most Popular Social Media App." This outstanding award has inspired Chingari to surprise users with the best in entertainment, technology, and innovation. Chingari is India's first blockchain-based Social Infotainment platform, powered by token \$GARI. Chingari hopes to transform the industry for creator monetization with its inception and the fresh round of funding while empowering its skills. A cross-chain wallet extension XDEFI Wallet has launched its most awaited wallet to the public. At present, the wallet is available on the Chrome Store. XDEFI has been developed with decentralized finance (DeFi) and non-fungible token (NFT), power users in mind with many innovative unique features such as Ape Mode, it will redefine the experience of speed in a crypto wallet. XDEFI wallet is backed by many DeFi-centric funds and venture investors. Users of XDEFI can use Ape Mode a revolutionary approach that will make sure that transactions operate in the next block, across Terra, Thorchain, Ethereum, and EVM blockchains and Bitcoin. Accordingly, the Ape Mode of XDEFI Wallet uses a proprietary gas algorithm to make sure that transactions get into the next block, without wasted gas. Therefore users can utilize Ape Mode to get a fast and speed edge for their most important transaction even the network is more congested. Moreover, the CEO and co-founder of XDEFI & Mile Dubia stated, "Ape Mode will be an indispensable edge for XDEFI Wallet users with XDEFI, users should never again miss an opportunity due to a slow transaction." Henceforth, XDEFI wallets also show NFTs from all chains in a single Instagram-style gallery. XDEFI Wallet is designed for the multichain era, enabling users to move flawlessly over protocols and automatically add new chains. It supports Ethereum and most other EVM networks are built-in and soon XDEFI Wallet will start support for Avalanche, Arbitrum, and Solana. Even more, XDEFI Wallet is developed for NFTs, because NFTs became a larger part of the crypto landscape. Both automatic deduction of NFTs and a customizable drag-and-drop NFT display grid are offered by the XDEFI Wallet. It also added a new Buy Crypto option, enabling users to bring their fiat into DeFi through a third-party ramp. Recommended for You

Singapore, Singapore, 11th October, 2021, Ojamu is excited to announce the listing of its native OJA token on the Uniswap platform, after selling out its IDO in minutes in the first ever triple-IDO on the PAID/IGNITION Global, Asia and India platforms. The Uniswap listing marks an essential milestone for the MarTech platform which leverages AI (Artificial Intelligence), NFTs (Non-Fungible Tokens), and Blockchain technology, enabling Brands to reach their digital marketing goals. Ojamu, a MarTech platform bringing the power of Blockchain, AI, and NFTs to empower Brands in both the Blockchain/Crypto and non-Blockchain business spaces, has successfully listed its OJA token on Uniswap, a leading decentralized global exchange providing several potential trading pairs for the \$OJA token. The OJA token has been successful throughout its early lifecycle thus far. Ojamu raised \$1.7 million through an oversubscribed private sale earlier this month. The private sale participants included Ascensive Assets, A195, Protocol Ventures, Moonrock Capital, MarketAcross, Master Ventures, Morningstar Ventures, X21, Rarestone Capital, Waterdrop Capital, Chain Capital and others. The IDO sale of \$OJA occurred through multiple PAID/IGNITION launchpads. First, members of these platforms could acquire the token through an Initial DEX Offering (IDO) across Ignition, PAID Network India, and PAID Network Asia. Ignition is PAID Network's decentralized swapping protocol to help Blockchain service providers organize private and public auctions for tokens. During the IDO, investors could acquire tokens for a price of \$0.1180. About Ojamu Built to be interoperable across leading blockchains such as Ethereum, Polygon, Polkadot and Solana, Ojamu is a Singapore-based MarTech platform that automates and optimizes digital marketing campaigns across any industry vertical, utilizing real-time data, AI and blockchain technology. Ojamu enables Brands to reach their digital marketing goals with data-driven predictions and recommendations across all digital channels, both in the blockchain and "traditional" business space. - Headshotting opponents are one of the best ways to stack sats. - Star Atlas is probably the most awaited blockchain game. Thanks to the emergence of NFTs and the huge success of Axie Infinity, the play-to-earn model has been a hot topic in gaming this year. Rising desire for crypto-based, player-owned games where creators and publishers are not the real financial beneficiaries or decision-makers have lead developers to create and go beyond. Instead, they play. So a new type of game emerged where players may make money by trading in-game goods and characters in a year ago. Play-to-earn blockchain games debuted. Others, including Gods Unchained, Cryptoblades, Splinterlands, and ARCA, have exploded in popularity. Many early adopters earned substantial gains, encouraging both crypto investors and players to seek the next big success. Listed here are five of the most promising titles to date. Lightnite Headshotting opponents are one of the best ways to stack sats, and this game offers it. Lightnite is an online multiplayer battle royale game developed by Satoshi's Games where every player contact results in a monetary reward or punishment. In November 2021, the complete version will be released after the Beta version. Sandbox Sandbox is a virtual environment created by Pixowl Inc. that allows users to create, control, and monetize game experiences. A sandbox user may purchase land, create virtual worlds, and in-game exchange goods like NFT tickets to virtual concerts. Star Atlas Star Atlas is probably the most awaited blockchain game. It's a space-themed grand strategy video game set in 2620, developed on the Solana blockchain and powered by the revolutionary Unreal five video game engine. Star Atlas looks visually stunning in the teasers. Illuvium Illuvium is a new Poké-inspired RPG world where users may catch Illuvials, or NFT-based extraterrestrial creatures, and fight other players for Ethereum. The game will be published towards the end of 2021 on the Starkware-powered Immutable X platform. Guardians Guild It allows creating a dream squad of "Guardians" to compete in guilds, raid dungeons, and manufacture unique assets to win marketable prizes in Guild of Guardians. It was developed by Stepico and released by Immutable, the same company that created Stepico. It's due out in early 2022. Recommended for You

- XRP rises upto 10.34% highest in the past 24 hours. - XRP's current market shows complete bullish trends. - Analysts predict XRP to reach \$2 by the end of October. Being among the top ten cryptocurrencies obviously adds up immense pressure and responsibilities for the top ten. Besides fighting constantly to maintain their dominance, they have to profusely develop their technology too. Amidst all this, the 6th ranking upon the top cryptos, the XRP has been quite promising in recent times. The prices have been steadily on the rise for the past few days. In spite of this and also taking its graphs into consideration, many expect XRP to cross the \$2 target by the end of October 2021. October 2021 Trend of XRP Taking the last 24 hours into consideration, XRP has locked the highest of the week gains of 10.34% a few hours back. Accordingly, the price surged up to \$1.2082 making it the highest price for the past 1 month time period. Ever since the start of October 2021, XRP has been performing steadily, surging up in a rather composed manner. Moreover, the present overall market cap for XRP values about \$54.73 Billion. Moreover, taking the past 7 days into consideration, the value of XRP has spiked up about 12.42%. Also, the price has increased from \$1.037 to the highest of \$1.2. In addition, all the hype added to XRP's current market trend has made many analysts dig deeper. Accordingly, many predict that the graphs of XRP are showing a complete bullish trend throughout the month of October. In spite of this, if everything goes without the interference of any other external factors, then it's predicted that by the end of October, XRP will cross the mark of \$2 efficaciously. Factors Affecting XRP Price However, many external factors ought to be at play though for the price of XRP. Ever since the SEC lawsuit on Ripple, many exchanges feared and removed XRP from their listings, making its price plunge down. Moreover, Ripple's strong stand against the U.S Securities and Exchange Commission (SEC) lawsuit has recently persuaded the overall enthusiasts. Until any final judgment prevails in favor of the U.S SEC, then XRP price will be on the surge with Ripple's backup. On the other hand, constant trouble comes from the next-in-line rival, the Solana (SOL). Likewise, by the second week of September, SOL took the position of 6th place dethroning XRP. However, it was short-lived and just within a few days, XRP gained back its throne. Therefore, trouble from the SOL is also another added factor that will cause the price of XRP to fall. - XYO price climbs up over 51% in the last 24 hour. - XYO is a decentralized crypto-location and data blockchain network. - XYO price has gained from \$0.025 to \$0.037 within one day One of the well-known cryptocurrencies in the crypto market that operates on the Ethereum platform is XYO. XYO price climbs up over 51% in the last 24 hours. Accordingly, XYO is a decentralized crypto-location and data blockchain network. As forementioned XYO built on Ethereum blockchain for making it usable in smart contracts, non-fungible tokens (NFTs), and decentralized applications (dApps). More so, the XYO network has its special unique features among those is XYO users can have their smartphones become part of an XYO network node. In an

XYO network, against unique ERC-20 tokens, XYO tokens can be traded and staked for representing real-world locations. XYO price is increasing along with the growth in the user population of the COIN app. COIN app is for geo mining users can download from Google as well as in Apply Playstore. SO XYO crypto accumulates from its recent highs and then gradually appreciates. XYO Current Market Statut at the time of writing as per CoinMarketCap, XYO's price was waving at \$0.03751 with the 24-hour trading volume of \$175,875,028. In the last 24-hour XYO price has climbed up 51.01%. The circulating supply of XYO is 12.84B XYO. XYO can be traded in top crypto exchanges such as Coinbase Exchange, ZT, KuCoin, Gate.io, and HitBTC. The above chart clearly shows the continuous bullish trend of XYO in the past 24 hours. In the last 7 days, XYO price has gradually increased 17.41% and in the 30 days, it has surged over 10%. XYO price has gained from \$0.025 to \$0.037 within one day. So, if this uptrend is continuous we can expect XYO to hit his new all-time high (ATH) soon. Recommended for You

Decentralized Finance (DeFi) is now emerging at a lightning speed providing the users to experience digitized financial services. Through this, DeFi's contribution is expanding resulting in a rise in the crypto market capitalization. Grabbing the attention of the users into the digital space, DeFi is now incredibly succeeding the crypto market Recent times, non-fungible tokens (NFTs) and Blockchain technology were in trend evolving around the town. Besides, NFTs had a great power representing anything to digital which scored a massive hike in the market. And NFTs and blockchain were some of the trending subjects in the crypto industry. But, now DeFi increased its Total value locked (TVL) more than 80% reaching \$200B surpassing both NFTs and Blockchain crypto trends. Boom of DeFi DeFi assets are more likely providing a digital and a decentralized platform for all financial products and services. The main aim of the DeFi ecosystem is to break the traditional practice of all services related with funds. Rather, it is enhancing the system to work with smart contract technology on blockchain network. Besides, through its innovative technologies DeFi is seeking a lot of recent attention from notable investors around the world. Perhaps the decentralized financial systems help the investors to ease their digital transactions to the next phase. Thus, DeFi adoption by a large number of users booms its value and its market presence. Last week, DappRadar submitted a report to the Dapp industry regarding the developments of the blockchain ecosystem. The provided data is the developments in the blockchain in Q3 2021 along with latest trends of NFTs and games. Among all other digital platforms, DeFi space is more competitive by consolidating Terra, Solana and Avalanche as DeFi players. Besides the TVL crossing \$178.12 billion in the industry. DeFi -The Game Changer More so, DeFi initially started on Ethereum (ETH) blockchain and till now more than 70% of DeFi assets are associated with ETH for the smart contract feature. Thus, Ethereum is popularly known as the backbone of DeFi. Further, with all new technologies and developments, DeFi can become the future of the crypto world. The crypto networks aligned with DeFi empowers the investors to earn, trade and transact the assets without any intermediaries and paperworks. Therefore, DeFi protocol is delivering a world class decentralized financial services which benefits the investors on a large scale. Thus the performance of DeFi in the crypto market will make a game changing impact in the digital world. Recommended for You

- Cardano Summit 2021 outshines the whole platform. - The platform to be innovated in aspects of NFTs and DeFi. - Announcements confirm numerous partnerships on the rise. The Cardano Summit 2021 was a huge success, as far as the team from Cardano Foundation insists. But yet, many exciting news were announced officially, regarding the future plans for the platforms, numerous partnerships and more. Plans for the Cardano Platform The Cardano Foundation is said to have founded the Cardano (ADA) Summit too. Accordingly for the year 2021, the Cardano Summit was held in about six different countries in a period of two days. Upon this, the Cardano Summit 2021 held in the month of September in 2021 gave out a huge aura of positivity. In spite of all this, the CEO of Cardano Foundation, Frederick Gregaard states that the main notion of their platform is to technologically excel. This will be for adopting more and more new functions that could be enabled upon it. Also, the CEO states that numerous partnerships are being made. These are mainly focused on developing the platform in both technical aspects as well as business wise too. Furthermore, he terms that the platform is being extensively on profuse research and development in order to accommodate both Non Fungible Tokens (NFT) and Decentralized Finance (DeFi) extravagantly. The Partnerships Besides numerous partnerships which were announced, Cardano now ties up with Rival, an ESports platform. This in turn means that Cardano will be dealing in one or more ways with EPL, NBA and NFL teams profusely. In addition, Cardano will be serving as the technology partner for Veritree, an organization which uses blockchains and more environment oriented projects, specifically growing trees and much more. Furthermore, Cardano has also partnered with Union Bank of Philippines in terms of funds, finance technology wise with Venture Studios, and also with powerhouse technology firm AID-TECH. With all these into account it seems that Cardano is making itself even more solid and stable, at the same time, a pathway to grow profusely. Therefore, it all contradicts that Ethereum (ETH) will soon be at stake! Recommended for You

- Numerous Adolf Hitler based artwork NFTs are available on the OpenSea. - Many raise concerns upon certain disturbing NFTs. - OpenSea assures removal of any sort of disturbing NFTs to ensure trust. Controversies upon the crypto industry and among altcoins, one dragging the other and many such are a usual thing. However, a controversy upon one of its attributes, specifically the non-fungible tokens (NFT) platform is obviously not so. There have been certain disputes regarding the copyrights and stuff but nothing as much to this extent. Accordingly, the world's largest and most renowned NFT platform and marketplace, the OpenSea is now facing immense pressures. This is due to the fact that many NFTs, mostly artworks based on Adolf Hitler are prominently available on the platform. Hitler NFT Controversy The OpenSea is really an open sea for the NFTs. Being the largest and most well established NFT marketplace all over the world. Despite all this, OpenSea now faces certain controversial issues regarding the availability of certain artworks. The availability of Hitler based NFTs on a large number has kindled the fire. Apart from being available in large numbers, many NFTs possess titles which are quite disturbing. Titles such as "Heil Hitler", "Hitler did nothing wrong", "Hitler the leader" are a few of such. Also, digital artworks of the same based on Hitler are quite being best sellers upon the OpenSea platform. In spite of all this, numerous concerns and controversies were created upon the OpenSea NFT marketplace. OpenSea's Comments Indeed, the OpenSea platform handled the situation quite well. In spite of all the hustle and bustle created, OpenSea declared officially that any sort of disturbing or violent or offensive NFTs upon their platform will be removed immediately irrespectively. Moreover, they mentioned that their sole goal is to establish a wide range and availability of all sorts of NFTs of any relative topics. Also they term, they are in obligeance to the law and will always ensure maximum trust upon their customers. Recommended for You

- Since June, the total volume has decreased. - Charles Hoskinson revealed the Alonzo hard fork in August 2021. In October, the bitcoin market re-emerged. The total crypto market value has grown to \$2.3 trillion in eight days. Cardano's ADA coin is one of the best-performing cryptocurrency assets, owing to the overall market increase. Cardano's price has been trending downwards in recent weeks. However, a higher bottom was made at the end of September, indicating bullish momentum. It is retracing after failing to remain above the \$2.30 barrier, indicating a further decline. The pivot point support zone for the daily ADA currency technical chart and price trend is \$1.90, followed by \$1.65. Since June, the total volume has decreased. The volume has risen in recent days. End-of-September saw a significant drop in Cardano's average number of big transactions. Since the recovery began, the average transaction volume has remained below the 6-month norm. Charles Hoskinson revealed the Alonzo hard fork in August 2021, triggering a 116 percent increase in Cardano pricing the following month. The Cardano "Alonzo" hard fork launched on September 12, 2021, introducing smart contracts to the network. After the launch, over 100 smart contracts were deployed in 24 hours. Absence of Institutional Buying The layered blockchain team claims that their technology has proven useful in developing decentralized applications and smart contracts. Large transaction investors enable transfers of \$100,000 or more. As a consequence, a drop in major transactions indicates a drop in movement. This means that addresses with a balance have made fewer transfers since September 15. It also showed a lack of institutional purchasing. According to the same, Bitcoin received \$68.7 million while Ethereum received \$20.2 million. Cardano, on the other hand, only received \$1.1 million. According to CoinMarketCap, Cardano price today is \$2.27 USD with a 24-hour trading volume of \$1,930,950,478 USD. Recommended for You

- In the past 15 days, Ethereum has surpassed \$3000. - The PoS merger may have a significant effect on the ETH price. Ethereum has risen 126% in three weeks. Founder Vitalik Buterin expects PoS to debut before the end of the year. The PoS network will make the platform 90% more energy efficient than it is today. Thus, the ETH price will shortly reach \$20K. The token issuance factor connected with the update will shortly value Ethereum at \$20K. Currently, the asset issues approximately 13,500 ETH each day. It takes 27 million Ether each day to maintain this altcoin's price over \$2000. Token Issuance May Decrease by 90% However, after the PoS update is implemented, the token issuance may decrease by 90%. That is, just 1,350 ETH each day could keep the ETH price at \$20K. This will maintain the asset's average price over \$20K. In the past 15 days, Ethereum has surpassed \$3000. It recently created a rising wedge pattern. Sellers seem to be outnumbering purchasers in the asset. The second most popular cryptocurrency, \$3000 was rejected almost five times in a row. However, the candle's wick seems to have exceeded \$3,625. As a result, the asset may consolidate between \$3400 and \$3600. If this level is now held, the price is anticipated to go back to the original support level of \$3100. As the leading asset, Bitcoin reaches new highs. The Ethereum price rise seems to be more diversified. The PoS merger may have a significant effect on the ETH price, causing it to skyrocket. But the pricing goal for 2021 is still \$10,000. A longer rally with network improvements may push the price to the new goal of \$20,000. According to CoinMarketCap, Ethereum price today is \$3,598.16 USD with a 24-hour trading volume of \$13,261,914,283 USD. Recommended for You

- One of Fantom's main draws is its transaction speed. - The price may reach \$10 because of the 1.618 FIB Extensions. Numerous new cryptocurrency assets have garnered public notice before the current Bull Run. Aside from the well-known crypto assets like Bitcoin, Ethereum, Cardano, and XRP, other assets are gaining popularity. One of them is Fantom, which grew rapidly. Also, FTM pricing is anticipated to hit double-digits shortly. One of Fantom's main draws is its transaction speed. It can settle thousands of transactions per second. Transactional costs are typically insignificant. In May, Fantom had 3 million transactions, making it the fastest blockchain platform. May Reach the Double-digit Goal In the current trading year, the FTM price has risen almost 24000 percent from its low of \$0.0081. With a 100% increase in the last seven days, the asset is now in the discovery phase. According to an expert, The Wolf of All Streets, the price may rise to above \$3 in the following two weeks. \$FTM "The Wolf of All Streets (@scottmclker) October 8, 2021 There's the all time high resistance break and flip to support "to the penny. I discussed this possibility in detail in both the newsletter and on my morning livestream yesterday. Here's the newsletter: <https://t.co/c6hHKC3tFE> pic.twitter.com/eIOWr3p6F As said, the expert anticipates the asset to establish additional highs. If the asset's price trend continues, it may reach the double-digit goal in the following days. FTM pricing is presently in the discovery phase after hitting a fresh ATH of \$4.45 in early trade. With a 106.13 percent increase in volume, the asset currently stands at \$5 billion. Moreover, if the pace continues, it may reach the top 20. One prominent expert thinks the price may soon reach double digits despite a little rejection and a minor consolidation. Analyst Pontus Trader sees an Elliott wave pattern. The 5th wave may see the price reach \$10. According to the analyst's chart, if the current wave matches the 2-3 wavelength, the price may reach \$10 because of 1.618 FIB Extensions. Overall, Fantom (FTM) pricing is acquiring massive popularity. According to CoinMarketCap, Fantom price today is \$2.20 USD with a 24-hour trading volume of \$1,535,607,856 USD. Recommended for You

The world has emerged into the trend of cryptocurrencies as the technology grabs the attention of investors on a large scale. Moreover, in recent times, meme-currencies were the talk of the town which created a buzz in the market. Dogecoin was the first meme-currency that was trending with the support from Elon Musk. Initially, it all started as a joke coin, but as the support from Musk was trending, the coin also began to trend in popularity and price value. Following that many memes, cryptocurrencies began to rise and from those, some had the potential to reach heights. One such coin is Shiba Inu (SHIB) which has risen in popularity as well as in price value. Shiba Inu (SHIB) is an Ethereum-based token that aspires to be an Ethereum-based solution to the popular meme coin Dogecoin (DOGE). It was established by an anonymous individual named Ryoshi, and the coin's website describes it as a decentralized meme token that developed into a vibrant ecosystem. Current Market Status The current trading price of Shiba Inu (SHIB) is \$0.000026 with a trading volume of \$9,117,315,771 in the last 24-hours. Moreover, SHIB has surged to 273% within a week and it is the 20th biggest cryptocurrency in market value. The current circulating supply of SHIB coins is 394,796,000,000,000. The price chart of SHIB depicts the bullish pattern for the past week. The price value of SHIB has surged from \$0.0000077 to \$0.00003366 within seven days. Consequently, SHIB is 26% up in the last 24-hours, whereas, 273% up in the past week. SHIB is available in top exchanges such as Binance, Mandala Exchange, OKX, Huobi Global, and Frx. SHIB Partners With NowPayments Shiba Inu has announced its partnership with NowPayments which will be onboard soon. SHIB users can use NowPayments for burning SHIB, \$LEASH, and \$BONE. NowPayments is a non-custodial payment process platform that

provides an easy way to accept online payments with various cryptocurrencies. Considering the recent update, the firm's announcement on partnering with Nowpayments might be the reason for the price surge. However, SHIB is a popular token that has already created an impact among investors. Users are experiencing a sweet spot over the past week and they expect more price hikes in the upcoming days. With the ongoing developments and updates, SHIB has the potential to reach heights. Recommended for You

Non-fungible tokens are unique tokens that have exploded in popularity and sales this year. From digital arts or music to game characters or videos, these digital assets have been sold for millions of dollars. Each NFTs are different and unique which are typically held on blockchain technology. It paves way for the creators an opportunity to monetize. Additionally, the sale of NFT is direct between the creators and the buyer of NFT which leads them to get more profit. Thus, the adoption of NFT surged exponentially and the popularity of NFT reached heights. Now, let's dig into the three cheapest NFT tokens which are NFT, RONINGMZ, and SURE. According to CoinMarketCap, APENFT (NFT), Ronin Gamez (RONINGMZ), and InSure DeFi (SURE) are the three cheapest NFT tokens. As a matter of fact, the NFT sales have been recorded to be in billions this year. The market value that NFT has gained among the investors is huge. Among these NFTs where each unique art is being sold in millions, there are cheap NFTs also available in the market. Current Market Status The current price of APENFT is \$0.000003751 which has surged over 35% within the last 7 days. Whereas, Ronin Gamez (RONINGMZ) is now trading at \$0.002036 which has boomed over 390% within a week. The third NFT on the list is InSure DeFi (SURE) is currently trading at \$0.003509 that has risen to 13.71% in a week. The hype for NFT and investors falling for NFT artworks is increasing every day. As a result, the sales of NFT just boomed this year. The NFT sales for the first half of this year are over \$2.5 billion which seems astounding. Moreover, the well-known digital art Beeple's was sold for \$69 million at the auction house. However, NFTs are collecting millions of dollars for just one unique art. They are not only in the form of art, NFTs are also in the form of images, videos, game items, and video games. Furthermore, at one point the price value of NFT might surge in no time which may result in high profit for the buyer. As NFTs are the trend in the market the demand is and its adoption is getting high. Recommended for You

- Moneygram has collaborated with Stellar for Blockchain payments. - Banco Hipotecario has partnered with four new blockchain startups. Large IT companies are demonstrating a strong interest in crypto-based payments, garnering huge public attention. It will not be surprising if the crypto sector replaces conventional financial systems. On October 7th, 2021, the SEC approved the Volt Bitcoin Revolution ETF fund to promote blockchain technology. According to Volt creator, Tad Park, Tesla, Coinbase, PayPal, and Square are among the companies included in the fund. However, El Salvador's commercial national bank, Banco Hipotecario, has partnered with four new blockchain startups. AP13 is one of the revealed firms. This partnership will create blockchain solutions to provide consumers with Bitcoin-native DeFi products like trading and lending. Peer-to-Peer fund transfer service provider Moneygram has collaborated with Stellar for Blockchain payments. Circle's USDC stable currency would be used to enable quick money transactions, the firm said. Thus, many advancements are occurring in the crypto space. Most crypto assets are trending. Alcoins on the Rise Solana's spectacular Q3 performance pushed its price to an all-time high of \$214.96, a 400% increase. Because its ecosystem is focused on security, data tools, and analytics, Q4 should be a lucrative quarter for DeFi. Terra Luna, following its Columbus 5 upgrade on September 30th, saw excellent growth in Q4. Token trading at \$46.73 surpasses prior ATH. In Q3, Dogecoin volatility spiked. The trend appears to be continuing in Q4, as the meme coin's trade volume increased almost 400% last week. Moreover, it is also testing a key resistance level between \$0.24 and \$0.25, a breach of which may result in a new ATH. Shiba Inu, a recent market phenomenon, surged almost 500% in four days, hitting a high of \$0.00003502. Late Thursday, the dog-themed meme currency began to plummet. Furthermore, the asset has lost 30% in the past 24 hours. One of the whales just purchased over 1 trillion SHIB, prompting the price to soar. Because of this, the community believes now is not the time to purchase SHIB. The crypto industry is growing like no before. Still, major events like Bitcoin Taproot upgrade, Ethereum merger, and Cardano Hydra layer 2 scaling solution update are on the way. As improvements are planned for late Q4, now looks like a good opportunity to purchase crypto assets and take calculated risks. Recommended for You - DeFi Touches \$200B, Is DeFi the Future? - Fantom (FTM) Price Upsurges More Than 17% In the Last 24-Hours - Chingari's Crypto Token Will Be Empowered with Solana Blockchain - Ethereum to Outperform Its Rivals With the Launch of Altair Hard Fork - Litecoin (LTC) - Oldest Altcoin May Break Barriers and Rise to Its Potential

- Fantom is a smart contract-capable blockchain platform. - Fantom's DAG-based platform provides immediate payment, near-zero costs. Crypto investors are taking note of Fantom's recent rise. Fantom (FTM) was one of the major winners in the crypto market's summer rally. Its price soared throughout August, reaching an all-time high of \$1.93 on September 9, 2021. It has since cooled, but for fans of Fantom, this might be an excellent time to purchase. The aim is to provide reliable and secure transactions via an open-source, permissionless platform. Fantom's DAG-based platform provides immediate payment, near-zero cost, and unlimited processing scalability by integrating smart contract Dapp architecture. Fantom Rivals The potential for Fantom to be a better version of Ethereum (ETH), the second-largest cryptocurrency, is exciting. Fantom is a smart contract-capable blockchain platform. These applications enable blockchains to do more than transfer cryptocurrency from one user to another. The platform's native cryptocurrency is the Fantom token. The future may hold the most difficult task for Fantom. There are many Ethereum alternatives. Cardano (ADA) is the largest and has grown rapidly this year. Solana, too, is a growing platform with lightning-fast transactions. Fantom may be a good cryptocurrency investment due to its fast transactions and sophisticated smart contracts technology. Its price has fallen since its peak, and its market value is lower than some of its major rivals. It may yet have space to develop. However, it's difficult to predict which of these platforms will be the most long-lasting. According to CoinMarketCap, Fantom price today is \$2.29 USD with a 24-hour trading volume of \$2,970,596,604 USD. Fantom is up 17.19% in the last 24 hours. Recommended for You - DeFi Touches \$200B, Is DeFi the Future? - Worldwide Crypto Adoption All-set To Make Alcoins Breakout! - Chingari's Crypto Token Will Be Empowered with Solana Blockchain - Ethereum to Outperform Its Rivals With the Launch of Altair Hard Fork - Litecoin (LTC) - Oldest Altcoin May Break Barriers and Rise to Its Potential

- Ethereum already achieves two of the "trilemma" of blockchain. - Too many users on the blockchain mean more costly transactions. Altair, Ethereum 2.0's first hard fork, is scheduled to be live by the end of the month. So developers and programmers may start preparing for the upgrade that will replace the old proof-of-work Ethereum blockchain with Ethereum 2.0's proof-of-stake consensus mechanism. The change should decrease Ethereum's power usage by 99.9%. While this is excellent news for Ethereum and its native token Ether (ETH), it is bad news for Solana, Cardano, Avalanche, and others. Advantage of Being the First Mover These players, nicknamed "Ethereum Killers" because they promise to outperform Ethereum. In regards to the cryptocurrency world, this means cheaper and quicker. That may change with Ethereum 2.0, reducing their competitive edge. Ethereum introduced smart contracts, agreements that automatically execute when certain circumstances are fulfilled. By market cap, Ether (ETH) is the second-largest crypto and is Ethereum's native coin. This implies it is second only to Bitcoin in terms of user adoption. Overall, it has the advantage of being the first mover. Ethereum already achieves two of the "trilemma" of blockchain - decentralization, scalability, and security - but not scalability. Stated, too many users on the blockchain mean more costly transactions. Without PoS, the other altcoins won't attract as many developers to their blockchains, another area where Ethereum dominates. Ethereum has tens of thousands of developers. Most others have just a few hundred. The target market is the only thing that separates them. For example, Ethereum is mostly Western. Conversely, Cardano and Solana target the underdeveloped globe. The guess is whether the asset will end up growing and to stay because they will all have equal footing by 2022. Recommended for You - DeFi Touches \$200B, Is DeFi the Future? - Worldwide Crypto Adoption All-set To Make Alcoins Breakout! - Fantom (FTM) Price Upsurges More Than 17% In the Last 24-Hours - Chingari's Crypto Token Will Be Empowered with Solana Blockchain - Litecoin (LTC) - Oldest Altcoin May Break Barriers and Rise to Its Potential

- Litecoin price is considered to be undervalued. - Since early October 2021, the LTC price has been rising steadily. Bitcoin, the first cryptocurrency released in 2009. Within a few years, another asset emerged. The idea of alternative currencies or altcoins became considerably stronger from this currency than Bitcoin's. So which is the oldest altcoin? Litecoin, the lite version of Bitcoin, started its journey on October 13, 2011. The asset will shortly reach a decade of trading history, and the community is ecstatic. Charlie Lee, the inventor of Litecoin, has posted a thread on his Litecoin journey. Despite being one of the oldest cryptocurrencies, Litecoin price is considered undervalued. Unlike other assets like Bitcoin and Ethereum, Litecoin is presently battling to reach \$200. So many think the asset is kept out of the mainstream. Strong Consolidation Litecoin price was easily rising over \$220. However, when the China FUD spread, the value dropped sharply but remained over \$160. Since then, the asset has been consolidating strongly, with some downtrends. However, the transaction reversed at the start of the current month, raising \$140 to \$185. Since early October 2021, the LTC price has been rising steadily. The asset encountered resistance between \$187 and \$189. However, it has already retraced by rebounding off the uptrend line. So the primitive cryptocurrency must break past the resistance zone to quickly reach \$200. Compared to Bitcoin and Ethereum prices of \$50,000 and \$3000, respectively, Litecoin, significantly undervalued. However, with further development and acceptance, LTC prices may rise. And also compete with other famous cryptocurrencies in the crypto world. According to CoinMarketCap, Litecoin price today is \$181.82 USD with a 24-hour trading volume of \$3,542,804,171 USD. - Overall DeFi platform touched a TVL of \$200 billion this week. - Most of the DeFi tokens surged were based upon the Ethereum blockchain. - DeFi llama predicts for the first time DeFi has crossed the \$200B mark. With the rise of the crypto industry and the blockchain technology, many attributes have so far surfaced. Upon them, notably the non-fungible token (NFT) and the Decentralized Finance (DeFi) take up much of the essence. The NFT market has been making records and breaking records profusely. On the other hand, being a little dormant lately, the DeFi has also surged up immensely. In spite of all this, now the DeFi industry made a new record, touching its highest of \$200 billion in terms of the total value locked (TVL). ATH of \$200 Billion The crypto market steadily starts to pick up ever since the start of October. With this, together the DeFi has made its equal share of play too. Accordingly, DeFi industry has crossed \$200 billion, actually \$208.39 Billion to be more precise. Apart from this being its all-time-high for the industry, this is the first time for the DeFi ecosystem to cross the mark of \$200 Billion in terms of the overall TVL. Also, about more than 70% of all the DeFi protocols are based upon the Ethereum (ETH) blockchains. Moreover, taking the same into consideration for the beginning of the year 2021, DeFi amounted to only \$21.4 Billion TVL. However, in just a period of 7 to 8 months, it surged drastically about 825%. DeFi the Future Crypto With such an epic rise, all the crypto enthusiasts and analysts were taken to astonishment. And so, the fact is that the total market cap value of the DeFi based tokens alone amounts to about \$131 Billion. This is about 5.5% of the overall crypto industry's market capitalization. Furthermore, crypto analysts point out that the current standing and value of the DeFi tokens now is the same as that of the complete crypto industry 3 years back. Furthermore, with such a pacing rate many predict that DeFi would be the next in line to the crypto industry overtaking the NFT. - JP Morgan points out the behind the scenes of BTC's recent surges. - Liquidations upon BTC have increased over the past few weeks. - BTC legal tender adoption by El Salvador owes to be one major reason. The Bitcoin (BTC) shook the whole crypto industry on October 6, after peeking its head above the \$55K benchmark. The whole crypto industry danced in joy as many prominent altcoins too followed the surge, due to the rise of BTC. In spite of all this, JP Morgan, America's leading financial analyst and investment firm, shares their views and points out various aspects behind the surge of BTC. Aspects Behind Rise of BTC We all know that BTC reached \$55K on October 6 from about \$40K. This is the highest for the past few months for BTC to raise its head above \$55K. In spite of all this, the JP Morgan analyst team predicted various reasons behind this recent surge. Accordingly, they term that about three major factors are responsible for such drastic rise in BTC price. Firstly, JP Morgan points out that the U.S has officially made certain reforms upon the cryptocurrency and BTC. All these tend to be in favour of BTC profusely. Despite China's strict ban on BTC, the U.S seems to be not so. This is one major reason, kind of like an encouragement for people to invest in BTC. Secondly, El Salvador's BTC legal tender into complete action is also another vital reason. This is due to the fact that the partner for El Salvador's BTC legal tender, the Lightning Network along with various other 2nd layer payment solutions altogether surged up. Thirdly, the inflation fever has again caught up among the investors in recent times. In spite of this, the possibility of inflation of BTC has kindled the interest among investors to invest more upon BTC. Also, more investors now seek BTC as an inflation hedge evidently. AscendEX is thrilled to announce the listing of the Jet Protocol token (JET) under the trading pair JET/USDT on Oct. 14 at 1 p.m. UTC. To celebrate the listing of JET, AscendEX will host two separate auctions that will take place simultaneously on October 13 between 1 p.m. and 2 p.m. UTC. Jet Protocol will be launched as an open-source, non-custodial, borrowing and lending protocol on the Solana Blockchain. It engineers new possibilities for capital efficiency, performance, and scalability. Jet allows users to participate in lending pools where they deposit supported tokens to receive interest, or "yield" over time, as participation incentive. Those deposits remain in a pool used for issuing loans to other users for as long as the assets remain delegated. Jet believes that borrowing and lending protocols are integral to the DeFi ecosystem. The decision to build on Solana was based on its unmatched transaction speed and low fees. The Solana integration will allow Jet to contribute and grow on-chain DeFi lending. The project anticipates a gradual integration of broader interest and more efficient trading. In addition to lending, Jet will introduce interest rate products and secondary markets on Serum, facilitating ongoing, community-driven lending, product, research, and development. Through these methods, Jet makes it easy for users to earn interest with their JET tokens. Jet is planning to launch with a dedicated governance system that leverages their founding team's unique and extensive experience in protocol governance. This governance-oriented approach aims to work with the community to set a clear precedent toward how the Protocol will operate. Jet will innovate on tested governance models from existing protocols while focusing on community ownership and engagement. The most important aspect of this approach is to build an inclusive community to research, design, and implement useful lending products. So, the token holders will have a say in the future of the platform. This focus on community is core to Jet's mission of bringing DeFi protocols into the mainstream. Prior to a successful mainnet launch this week, Jet recently completed a follow-on funding round that included AscendEX among other partners bringing in a total of \$6.8mm to the project. This latest fundraiser has highlighted the strong support for Jet from a variety of stakeholders including AscendEX. About AscendEX AscendEX is a global cryptocurrency financial platform with a comprehensive product suite including spot, margin, and futures trading, wallet services, and staking support for over 200 blockchain projects such as Bitcoin, ether, and ripple. Launched in 2018, AscendEX services over 1 million retail and institutional clients globally with a highly liquid trading platform and secure custody solutions. AscendEX has emerged as a leading platform by ROI on its "initial exchange offerings" by supporting some of the industry's most innovative projects from the DeFi ecosystem such as Thorchain, xDai Stake, and Serum. AscendEX users receive exclusive access to token airdrops and the ability to purchase tokens at the earliest possible stage. To learn more about how AscendEX is leveraging best practices from both Wall Street and the cryptocurrency ecosystem to bring the best altcoins to its users, please visit www.AscendEX.com. For more information and updates, please visit: Website: <https://ascendex.com> Twitter: https://twitter.com/AscendEX_Global Telegram: <https://t.me/AscendEXEnglish> Medium: <https://medium.com/ascendex> About Jet Protocol Jet Protocol will launch as an open-source, non-custodial borrowing and lending Protocol on the Solana Blockchain. Jet re-engineers what's possible in terms of capital efficiency, performance, and scalability on Solana. The Protocol allows users to participate in lending protocols where they deposit supported tokens to the platform and then receive interest on their deposits to incentivize participation. - 100 million XRP transferred between various exchange accounts. - Value of \$107 million has been so far transferred. - All these have been transacted in just 6 transactions. Recently, getting a notification regarding a whale alert is nothing new or a surprise though. It has become almost an everyday event these days. In spite of this, on October 7, 100 million XRP was transferred in just 6 transactions. XRP Whale Alert According to the blockchain service, the Whale Alert, on October 7, about nearly 100 million XRP has been transferred. All these transfers are as usual anonymous. In addition, the information received is that, all these are not from the same account or crypto wallet. Also, the transfers were between accounts of different crypto exchanges. Moreover, the total value of the XRP transferred amounts to about \$107 million, approximately. On the other hand, the whale alert shows that if these XRP transfers were done through a crypto transfer service, recently, Ripple has also transferred about 20 million XRP from its own crypto wallets to the Bitstamp crypto exchange. However, just the starting of this year, this exchange banned XRP from its stables. Besides, being banned by the exchange, again transferring XRP to it, is now a mystery. Also, it is evident that XRP was banned upon the exchange due to the U.S Securities and Exchange Commission (SEC) filing a case on Ripple for XRP. The Bitter News for Ripple Amidst all this, Ripple also undergoes a new trauma now. Just a few hours back it was officially announced that Moneygram and Stellar (XLM) have closed a deal with each other. In addition, the complete project from this partnership is expected to hit roads soon by the mid of 2022. Moreover, it's known very well that Stellar (XLM) has been Ripple's competitor since the beginning. Owing to the fact that Stellar was actually developed by Ripple's former developer. - Shiba Inu (SHIB) surges up drastically this week. - SHIB reached a peak of \$0.000035 just a few hours before. - SHIB will soon destroy Dogecoin and take its place. A new member entering into the top ten crypto rankings is something which is not common. There ought to be competitions, one place up and back upon the top ten. However, entry of a completely new altcoin into the top ten is a rather rare event. Accordingly, on October 7th, witnessed such a similar event. The Shiba Inu (SHIB) which is actually a meme based coin, on other terms an exact copy of the Dogecoin (DOGE) has surged up in the rankings to the 12th place, straight from the 20. All owing to its total market capitalization on October 7, 2021. Stupendous Surges of SHIB The SHIB has been quite promising, to be even more abrupt, actually it was a lot more than any could expect. Ever since May 2021, after witnessing its All-time-high, SHIB remained dormant for the next couple of months. And so, it completely started to sprang up out of nowhere totally unexpectedly since the beginning of October. Accordingly, by the end of the week SHIB touched \$0.000035, an epic high after a long time. The surge was standard upward axis graphs since October 1, such that even those who invested just a few days back, would have made a fortune by now. In addition to this, the overall market capitalization raised upto \$14 billion on October 7. Also, this made the headlines as SHIB became the 12th upon the crypto rankings in terms of market cap. Moreover, the past week alone SHIB has witnessed a surge of a whopping 300%. Also, the overall surge compared to last year amounts to a mammoth 8000%. Killing of DOGE Despite being launched with the sole tag line of "DOGEKILLER" at the time of launch, it seems it's soon going to be a reality. In spite of all the surges, the major reason is from the drastic coin burns by SHIB. Also, at such a rate throughout the week, many crypto enthusiasts predict that SHIB will destroy DOGE and take its place soon! Recommended for You - JP Morgan Comments on Bitcoin (BTC) Above \$55K - Solana Is Now Available To Buy And Sell Via Skrill & NETELLER - 100 Million XRP of \$107M Transferred in 6 Whale Transactions! - NZ Cryptopia Exchange Moves to Stage 2 of Its Claiming Process - Cryptocurrency Market Hits a Monthly High of \$2.3 Trillion in Capitalization

Crypto hacking is one of the recent topics evolving in the town affecting the life savings of many users around the world. A lot of cryptocurrency exchanges have been caught up in this hacking losing millions of dollars in the market. However, digital currencies are gaining more popularity in the industry and are also being affected through scammers and hackers. Thus, Cryptopia, a well-known cryptocurrency exchange based in New Zealand was hacked in May 2019. In this case, the exchange lost multi- millions dollars and a large number of users were affected in this massive hack. Further, the Cryptopia team raised a claim in the court which is now heading to Stage 2 which is the identity verification process. Cryptopia's Massive Hack Honestly, the Cryptopia exchange did not expect such a huge loss affecting the lives of its valuable users. Surprisingly, the total users strength of Cryptopia trading platform is almost 900,000 connected around the globe. As the users were not ready to accept their assets' loss, they directly fought in court for their properties. So on behalf of the users' concern, the court announced a 4 stage process for this case to move forward. 1/3: Today, 7 October 2021, the Liquidators announce the launch of stage 2, "identity verification" of the claims process. Account holders' should expect to receive an invitation email to login into the claims portal when their country is ready for verification. " Cryptopia Exchange (@Cryptopia_NZ) October 7, 2021 In regards to supporting the team, there were official updates given about the current status of the case plans. Notably the last notice was released in June 2021 stating the claim process is at stage 1. Thus, a solid number of users are following up the registration process successfully. And nearly, 55,000 users have been guided to the 4 stage process through our customer service team. Claims Four-Stage Plans Initially, the clients have to claim their registration disclosing the account holder details and to raise a claim for their balance. The second step is the identity verification process where the submitted documents will be verified for quality work. Thirdly, it reflects the claim acceptance notice which agrees that Cryptopia will represent the due amount. Finally, after all these verifications, the assets will be transferred to the appropriate accounts. Hence the entire Cryptopia team was strongly supporting its users and guiding them through the efficient process. Further to enhance more crypto projects, Cryptopia community is planning to secure the cryptopia wallets to assist the transfer process of the assets. Cryptopia faced a worst time in the marketplace by going through many challenges. Besides, million dollar hack, the former employee of Cryptopia cheated nearly \$250K of digital assets. The employee smartly made duplicate keys of the customer's wallets and stole this huge amount. Now this is also an additional case filed in the court which will be commencing by the end of this month. Recommended for You

- The total value locked (TVL) in the Bitcoin Lightning Network grows. - The global economic situation remains unpredictable. The cryptocurrency market hit a monthly high of \$2.3 trillion thus stayed in green on Thursday morning. The crypto market is now worth \$2.28 trillion, up 4.57 percent from yesterday. Furthermore, the total crypto market volume rose by 13.67 percent to \$144.33 billion in the last 24 hours. Moreover, DeFi volume for the last 24 hours was 12.72% of the entire crypto market volume. Whereas all stablecoins combined volume totals \$113.40 billion or 78.5% Compared to this, the price of Bitcoin (BTC) has steadied below \$55,000. Thus, extending advances from Tuesday and Wednesday to a new high. The main digital asset is now selling at \$54,119. Its up 5.35 percent in the past day and 25.98 percent in the last week. If BTC continues to rise at the same rate as it did this week. It may soon be trading around its all-time high of \$64,863 set on April 14, 2021. The total value locked (TVL) in the Bitcoin Lightning Network rises as BTC grows. The network has expanded over 1,000% in a year, reaching \$165 million in locked BTC, with 2,998 TVL as of October 7, 2021. The second-largest crypto by market value, Ethereum (ETH), is also up 5.56 percent in the last 24 hours and 21.02 percent in the last week. Global Level Adoption and Rejections On October 7, 2021, it was revealed that Auto1 FT, a German financial partner in the automotive industry, is utilizing Ethereum smart contracts to facilitate vehicle purchase financing. While the global economic situation remains unpredictable, with rising interest rates and more fragmented financial systems, Bitcoin continues to show its resilience. Millennials and younger generations understand the importance of Bitcoin and other cryptocurrencies, but recent failures on Instagram and Facebook demonstrate the world's reliance on centralized systems. - BTCST is based on BEP-20. - It is a Binance Smart Chain cloud mining platform. BTCST was launched on Binance Smart Chain (BSC). Each token represents 0.1 TH/s of Bitcoin mining power at a 60 W/TH efficiency. As a result, miners trade their computing power for BTCST tokens. Bridge liquidity to Bitcoin mining is the aim of BTCST. This gives consumers affordable access to mining earnings and hashpower of any scale. The app's ultimate aim is to improve market liquidity and efficiency. Industrial-scale Bitcoin miners, which accounted for 13% of the global hashrate in February 2021, supports the BTCST currency. By staking BTCST, holders may earn daily Bitcoin contributions equal to the staked mining power. Thus, BTCST enables users to mine Bitcoin inside the DeFi ecosystem. No Private or Public Sales Those that want to standardize and tokenize Bitcoin hashrate may get BTCST. This is why no private or public sales have taken place. All staked BTCST tokens set the overall supply cap. Furthermore, it is based on BEP-20. Every hour, user and total pool balances are collected to compute user incentives. The APY and total amount of each pool are updated in real-time, and tokens may only be staked in one pool at a time. Users may unstake their funds at any moment and join any of the other pools. Moreover, BTCST is a Binance Smart Chain cloud mining platform. It provides daily payments through a decentralized application (Dapp). According to CoinMarketCap, today's Bitcoin Standard Hashrate Token is \$34.10 USD with a 24-hour trading volume of \$429,307,852 USD. Bitcoin Standard Hashrate Token has been up 103.49% in the last 24 hours. DAO Maker governance token is DAO. For startups, DAO Makers develops technologies and funding frameworks. In the last 24-hour DAO Maker (DAO) price surges over 20%, also it is displaying a continuous bullish pattern. DAO Maker is developed on the Ethereum blockchain, enables users to govern the ecosystem. A multi-investment platform DAO Pad that enables DAO Maker's platform members to stake DAO tokens into the DAO Maker Vault. DAO Maker encourages the users to participate in the progress and growth of projects hosted on the platform via social mining. More so, social mining enables startups to support token holders to become great and successful DAO, decentralized autonomous organizations. This develops the economic growth of token holders, decreases free-ridership problems, and turns flippers into holders. The newest, game field space which is governed by a Gamestarter produced DAO is Dark Frontiers. Dark Frontiers will be having a SEED SH0 in DAO Maker launchpad this starts 1st October 2021. The goal of Dark Frontiers is to drive mainstream adoption by creating the usability of NFTs via staking. Henceforth, DAO Maker consists of a complete solution, particularly in crowdfunding, community building, and blockchain marketing. The unique features of DAO Maker pushers DAO price to increase high and high. Current Market Status of DAO As per CoinMarketCap, DAO Maker (DAO) price was waving around \$3, with a 24-hour trading volume of \$17,770,112. DAO price was increased by over 20% in the last 24 hours. The circulating supply of DAO is 36,839,435.85 DAO. The DAO price chart depicts the bullish trend for the last 24 hours. In 24-hour DAO has increased from \$2.57 to \$3.09. DAO can be traded in crypto exchanges such as OKEx, KuCoin, Gate.io, XT.COM, and Uniswap (V3). If this bullish trend continues then DAO will soon hit its new all-time high (ATH). Recommended for You - Reasons Behind Current Price Drag of Bitcoin (BTC) - Cardano Network Launches New NFT Auction of Digital Music - TRON (TRX) Ranks Second for Total Transactions on Major Blockchains - Luna's Columbus 5 Upgrade Could Make Solana Price Explode to \$500 - Will Cardano (ADA), Polkadot (DOT) & Polygon (MATIC) Surpass Ethereum (ETH)? .

- Bitcoin (BTC) fails in surpassing \$50K amidst recent surfacing back. - Many factors prevail as major reasons for BTC plunging down. - Three major factors altogether play vital for BTC price downfall. After suffering immensely upon the crypto market crash, Bitcoin (BTC) surged back evidently. During this full period till last BTC managed to remain fluctuating drastically between the price range of \$45K to \$49K. Also, since the start of the month of September, 2021, many speculated BTC will surge high above \$50K for sure. Accordingly, until the past few days BTC portrayed a decent soldui surge in its price. However, everyone's expectations of BTC surpassing the \$50K target failed miserably for this month. Besides various reasons, there were three major factors responsible for the price fall of BTC. If even any one alone prevailed BTC would suffer for sure, but all these factors at the same time have completely drowned BTC like anything. Chinese Crypto Mining Ban the recent Chinese regulations and ban of crypto mining has affected not only the crypto industry of China, but the whole crypto industry vividly. Accordingly, China officially stated their China ban on mining in the month of May. And so, ever since then, it has been complete chaos. In spite of such news, the hash rate of BTC started to fall down rapidly. Besides, plunging down from 198EH/s to just 56EH/s, almost everyone got affected. On the other hand, apart from miners, traders, long term holders, recent investors, everyone including exchanges too got affected due to this. Unlock of Grayscale The Grayscale Bitcoin Trust (GBTC) has recently opened up to the market. Besides, owing to being a partner like auro, the GBTC is evidently a BTC price killer like anything else. Accordingly, the GBTC functions with respect to the market demand. The GBTC plays a major role in increasing and decreasing the price of BTC at certain times. Giant investors and holders often fear and mostly act according to the GBTC open ups. Besides, when the demand for BTC is high, the prices tend to rise up. In addition, it's exactly at this point where the GBTC comes to play. Moreover, at such times of demand, GBTC opens itself and unlocks its BTC stock creating a secondary market. And so, with surplus amounts obviously the price tends to fall. The taproot hard fork of BTC to come up with hard forks, it's like rain in a desert. Accordingly, the taproot hard fork upgrade was well said in advance that it ought to be a lighter one. With hard-forks, we expect price surges, whereas here it's vice-versa. Furthermore, to the mass BTC holders and investors, such a negligible upgrade showed no interest. Moreover, the BTC investors were quite skeptical upon this upgrade. And so, to their expectations as no proper upgrade was there and it was all just a showcase illusion. This owes to be another factor for the down price of BTC. Recommended for You - DAO Maker (DAO) Price Surges Over 20% in Last 24-hour - Cardano Network Launches New NFT Auction of Digital Music - TRON (TRX) Ranks Second for Total Transactions on Major Blockchains - Luna's Columbus 5 Upgrade Could Make Solana Price Explode to \$500 - Will Cardano (ADA), Polkadot (DOT) & Polygon (MATIC) Surpass Ethereum (ETH)?

- Developments with the blockchains of Cardano (ADA), Polkadot (DOT) & Polygon (MATIC) have skyrocketed. - Ethereum (ETH) blockchain may run out of the blockchain race soon. - ETH 2.0 launch getting delayed will be the reason for ETH's downfall. The current trend in the present world is development and technology adaptation. If anything which fails to do the two will get out casted for sure without a future. In such terms, with the digital era at its brimming peak, the competition among the blockchain ecosystem is getting heated like anything. The past 2 years has witnessed numerous developments among various blockchains. Apart from this, with the coming out of new tokens, so do new and improved blockchain platforms too. Moreover, most of the blockchain platforms at present are trying to establish themselves by bringing out new features, technologies, easier scalability and adaptivity in all aspects. With such profuse developments, the big daddy of the blockchains, the Ethereum (ETH) blockchain may soon be outrun and dethroned. Accordingly, owing to competition from highly scaling blockchains like the Cardano (ADA), Polkadot (DOT), Solana (SOL), Polygon (MATIC), and much more. Until or unless ETH 2.0 gets launched, the clock for the ETH blockchain is ticking. In spite of all this, the three most prominent blockchain platforms which ought to overtake ETH are the Cardano (ADA), Polkadot (DOT) & Polygon (MATIC). Cardano (ADA) with developments upon its blockchain platform, the Cardano (ADA) platform has been the hot news for the month. In spite of all this, it's a moment to be listed upon the history of Cardano, with the launch of its Alonzo Mainnet Upgrade. In addition, the new upgrade now enables the Cardano blockchain to enable smart contracts upon it. This new upgrade could be quite a trouble for ETH, as it's the major gameplayer for smart contracts. Moreover, Cardano's development roadmap, which it has devised itself, shows a focused and solid path towards the future. This consists of five timeline periods, out of which now Cardano is in the third, the Goguen phase. The five timeline of developments are Byron, Shelley, Goguen, Bashi, and Voltaire. Accordingly, the Byron signifies the initial foundation, the shelly the decentralization time period, the Goguen the smart contracts, the Bashi the scalability and the Voltaire the management and governance. With still two more to go, it seems the first and biggest threat for ETH would be the one next in line to it! Polkadot (DOT) The next in line for the battle with ETH for the ultimate blockchain throne, is the Polkadot (DOT). In terms of developments, the Polkadot has well established itself. Besides being an open sourced and decentralized platform, Polkadot specializes in profuse services for all DeFi projects. Also it includes the other financial services too. Apart from this, the blockchain platform also allows efficient running for NFTs, and smart contracts too. In fact almost all the entities of the blockchain are available with the Polkadot platform effortlessly. On the other hand, the major key feature of Polkadot and the reason for its hype is due to its DApps services and developers. Developers find the Polkadot platform to be more efficient, user friendly and faster for building their projects. In spite of this, statistics shows that when questioned by 10 developers which platform they would choose, 6 out of 10 preferred Polkadot. Moreover, recent times has seen a shift among the developers from the ETH platform to the Polkadot. In addition to all this, the Polkadot platform also has many new features and upgrades which are expected to be launched one after the other in the following months. Polygon (MATIC) The third contender would be the Polygon (MATIC) which has been already compared with the ETH blockchain numerous times. Moreover, the Polygon itself is based upon the ETH platform, basically being a Ethereum layer-2 protocol platform. In spite of all this, the Polygon platform majorly consists of ETH blockchain networks like the separate network chains and also the secured network chains. And so, the Polygon is similar to the Polkadot platform in many aspects too. In addition, Polygon extends its service and adopts all sorts of blockchain entities. These profusely are the smart contracts, DeFi, DApps, NFTs and also blockchain gaming too. Moreover, the point where Polygon excels over the ETH is the gas fees. As the gas fees of ETH have been hiked up recently, most developers and programmers prefer Polygon over ETH. Therefore, it's highly evident that the ETH 2.0 has to be launched as soon as possible, otherwise it may be the end for the ETH blockchain platform! Recommended for You

- TRON claims 2,000 TPS. - Justin Sun is the Founder and CEO of TRON. According to a recent Tron community tweet, the blockchain-based ecosystem made it to the top of the list for total transactions on significant blockchains. Furthermore, Tron came in second with 2.46 billion transactions. TRON is a blockchain-based operating system designed for everyday usage. TRON claims to be able to process 2,000 transactions per second, compared to Bitcoin's 6 TPS and Ethereum's 25 TPS. Total transaction on popular blockchain platforms as i.#TRON ranks second 8y^a pic.twitter.com/etI0z3Y42i @TronixTrx September 28, 2021 Moreover, Justin Sun is the Founder and CEO of TRON, one of the biggest blockchain operating systems available today. Furthermore, Sun is a University of Pennsylvania alumnus and Ripple's Ex-Chief Advisor. Moreover, this is why he offers significant experience and understanding to his first crypto asset venture. This project is a decentralized network centered on content sharing and entertainment, and in 2018 it acquired the file-sharing service BitTorrent. TRON Power Moreover, owners of TRX may freeze their coins to gain TRON Power, which allows them to vote for "super representatives" who act as block makers. These block producers get

TRX incentives for validating transactions, which are subsequently divided among the voters. TRON's expansion map includes Strategic Alliances: - oBike, Singapore: A bike rental business using Tron network to run its own Ocoin. - An innovator in ASIC chips for Bitcoin mining, Bitmain joined TRON. - ZAG-S&W, a prominent corporate law firm, joins TRON to safeguard its clients' digital assets. - BitTorrent, a \$140 million American corporation, invests in TRON. - Poloniex, an American cryptocurrency exchange, and many others. Thus, with so many vital collaborations in the TRON blockchain ecosystem, the price of TRX may soon reach \$1. TRON (TRX) price is trading at \$0.08727, with a 24-hour trading volume of \$1,220,410,964 as per CoinMarketCap. - Several altcoins prove to be a vital part of the crypto industry. - Dogecoin (DOGE), Shiba Inu (SHIB), UniSwap (UNI) and Dash (DASH). - The following are short history of DOGE, SHIB, UNI and DASH. For an average person, when taking the topic of cryptocurrency, the first which comes to their mind and those who are clueless regarding it too, is the Bitcoin (BTC). However, the times have changed with the rise of the altcoins profusely. The developments in regards with the blockchain technology has completely catapulted the altcoin industry. Moreover, not taking in regards to the top most altcoins, let's catch a glimpse of how and reason behind the start of certain prominent altcoins of the industry. Dogecoin (DOGE) The "accidental coin", "the People's coin", "the meme coin" are often few alternatives for this altcoin. Yes, the Dogecoin (DOGE) is one altcoin which rose to epic fame and market capitalization in recent times. Besides, from being adored by all, the overall market cap of DOGE has increased so much that now DOGE ranks 10th place. The altcoin was launched in the year 2013 merely as a joke, by Billy Markus and Jackson Palmer. Surely, till date the developers both of them couldn't believe where their crypto stands. They still proclaim they had absolutely no intentions of any sort, except for making fun of the crypto industry. In addition, no wonder why it's adored by all, as it has the Japanese breed dog, Shiba Inu's face for the coin. Furthermore, the overall market cap of the DOGE stands at more than \$26 billion. Also, DOGE current price is at \$0.199 with a decrease of 0.29% at the time of writing. Shiba Inu (SHIB) This altcoin could be said to be a complete replica of the popular Dogecoin. In addition, the Shiba Inu (SHIB) was solely started only for destroying the DOGE. Moreover, the SHIB was launched only last year, 2020. Despite such a short term the current market cap of SHIB accounts for about more than \$7 billion. On the other hand copying the same Shiba Inu dog image, sort of even cuter than DOGE though. Likewise, the SHIB was also considered as a meme based crypto. Many speculated it would fail adversely. However with the backing up from Elon Musk, who tweets every now and then, SHIB has reached prominent heights. Moreover, SHIB has a loyal fan base who expects it to rise up like DOGE similarly. In spite of all this, the current market price of SHIB stands at \$0.000007 at the time of writing. UniSwap (UNI) As we spoke about technological advancements, the UniSwap (UNI) is one of the best examples. Apart from being a decentralized platform, UniSwap is solely dedicated to all sorts of finance based services, basically DeFi. In spite of the platform being launched in the year 2018, owing to its profuse decentralized finance services, UniSwap has spiked up profusely. It was only 2 years later that the platform bought out its native token, the UNI. Moreover, the liquidity pools with the finances ought to be the most important and vital factor for UniSwap platform's rise. In addition, it eliminates all sorts of issues with liquidity pooling giving out automated solutions. Also, UniSwap made sure none of the defaults saw that other first generation decentralized exchanges were present with UniSwap. With all this, the current value of UNI stands at \$23.15 at a dressing range of 3.69% at the time of writing. Besides, the overall market cap of UniSwap accounts to about more than \$14 billion. Dash (DASH) Another one in our list in regards to the technology driven aspects is the Dash (DASH). The open sourced blockchain platform is extremely unique when compared to other altcoins. In addition, the uniqueness is that instead of using the conventional transaction protocols, Dash uses "MasterNodes". On the other hand these masternodes work at an amazing speed, with all transactions taking place almost instantaneously. Moreover, looking at its history, the DASH which is the native token of Dash platform was actually launched as a hard fork for Litecoin (LTC) in the year 2014. In spite of all these factors, the Dash platform is now one of the most traded platform, offering amazing transaction speeds and extremely low costs compared to others. Amidst all, the sole goal of the Dash platform is to produce a crypto dedicated for payments at extreme speeds. Besides, now the price of DASH stands at about \$154.55 at the time of writing with an average surge of 2.81%. Also, the overall market cap accounts to about \$2.93 billion. - The regulator claims Kraken accepted client trades and funds. - Kraken was the sole margin provider and held all client assets physically. The CFTC fined crypto exchange Kraken \$1.25 million for illegally offering some products. Between June 2020 and July 2021, Kraken, fined for facilitating margined retail commodity transactions in digital assets. Including bitcoin, to non-eligible customers. The company also failed to register as a futures commission merchant (FCM). Kraken is a global cryptocurrency exchange. Furthermore, exchanges have been penalized in the past for selling products that did not meet regulatory requirements. The CFTC regulates the U.S. derivatives market and commodities, forex, fixed income, and some crypto assets. Moreover, according to the regulator, a client purchased a digital asset using borrowed money from the exchange, which then sold it to the seller. Held All Clients Assets Physically From June 2020 to July 2021, Payward Ventures Inc, doing business as Kraken, offered non-eligible U.S. customers, the CFTC said in a statement. Moreover, the firm also traded futures without registering with the agency. The regulator claims Kraken accepted client trades and funds, thus acted as an ECP without registering with the CFTC. Moreover, worse, Kraken was the sole margin provider and held all client assets physically. Thus, the platform is now one of the most traded platform, offering amazing transaction speeds and extremely low costs compared to others. Amidst all, the sole goal of the Dash platform is to produce a crypto dedicated for payments at extreme speeds. Besides, now the price of DASH stands at about \$154.55 at the time of writing with an average surge of 2.81%. Also, the overall market cap accounts to about \$2.93 billion. - Ukraine has passed legislation regulating cryptocurrency. - The government is optimistic about the crypto economy's growth. Ukraine is the sixth nation in recent weeks to set regulations for the cryptocurrency industry. Thus, indicating that governments worldwide recognize bitcoin's permanence. The Ukrainian Parliament voted almost unanimously in September to legalize and regulate cryptocurrencies. The measure was introduced in 2020 and now goes to President Volodymyr Zelenskyy. After El Salvador and Cuba, Ukraine has passed legislation regulating cryptocurrency. Trading in cryptocurrency was not prohibited before the legislation. Although there were no regulations. Earlier this year, Eesti Pank, Estonia's central bank, collaborated with the ECB, Spain, Germany, Italy, Greece, and the Netherlands to test a blockchain-based digital euro. Using the same blockchain technology as Estonia's now-famous e-state, a digital euro can handle up to 300,000 payments per second, with money reaching recipients' accounts in under two seconds. Luukas Ilves, former Estonian EU digital affairs counsellor and current strategy director at Guardtime, a business and government blockchain firm, believes Estonia could significantly gain from participation. Poland and Ukraine are two nations that have already started to establish a national CBDC. Legalization of crypto According to Marek Dziel, CEO of the Warsaw Stock Exchange, Poland can choose between joining the eurozone (and creating a digital euro) or creating its digital zloty. Ukraine is another developing European nation seeking to profit from a digital currency. When Estonia's Eesti Pank was researching digitalizing the euro, Ukraine's Ministry of Digital Transformation released a roadmap detailing how to transform the country into "a leader in cryptocurrency integration," aiming to make digital currency functional by 50% of Ukrainians by 2024. Ukraine's daily digital asset turnover reported being about \$37,000. The government is optimistic about the crypto economy's growth. The legalization of crypto in Ukraine reflects the global growth of the digital currency. - The validators (stakers) are also paid with the freshly minted coin. - Polkadot is a heterogeneous multichain exchange blockchain. Crypto staking is becoming one of the most profitable methods to earn, invest, and profit. It is the process of verifying "locked up" digital assets in a decentralized crypto network to guarantee the network's integrity, consistency, and security. The validators (stakers) are also paid with the freshly minted coin to assist and protect the network. Here are the best five cryptocurrencies to stake in 2021. Cardano (ADA) The co-founder of Ethereum developed Cardano. Thus they have certain similarities. Smart contracts are digital agreements that utilize blockchain technology to verify transactions. Some investors think smart contracts would change society, especially the legal industry. Cardano is more energy-efficient than Bitcoin. Bitcoin miners utilize powerful computers to solve increasingly challenging puzzles to verify transactions and earn tokens. Cardano (ADA) staking is possible on Crypto.com and Binance. A more secluded location to stake may be found in Voroi wallet or Daedalus wallet. According to CoinMarketCap, the Cardano price today is \$2.08 USD with a 24-hour trading volume of \$2,808,791,362 USD. Polkadot (DOT) Polkadot, a heterogeneous multichain exchange blockchain created by Ethereum co-founder Gavin Wood. In this way, several blockchains may communicate with each other. Staking this asset may be a fantastic choice as the platform expands to accommodate additional projects. According to CoinMarketCap, the Polkadot price today is \$27.10 USD with a 24-hour trading volume of \$1,540,743,956 USD. VeChain (VET) VeChain, a blockchain platform, aims to record every step of the supply chain. It is still up over 600% year-to-date compared to December 2020. So, this cryptocurrency has been on a roll, despite a drop this year. This is a great result and may indicate a strong future for the coin. According to CoinMarketCap, the VeChain price today is \$0.084943 USD with a 24-hour trading volume of \$302,011,017 USD. Solana (SOL) Solana (SOL) is a scalable Open Technology blockchain and cryptocurrency. Soon after its debut, Solana built a PEX which the Serum protocol. Furthermore, the Solana platform is a powerful Ethereum alternative. So the greatest SOL burst may occur in late 2021. According to CoinMarketCap, the Solana price today is \$130.74 USD with a 24-hour trading volume of \$2,516,287,186 USD. Cosmos (ATOM) Several crypto analysts and professionals believe Cosmos (ATOM) is a superior investment to other major cryptocurrencies and DeFi coins due to its first-mover advantage as an interoperable blockchain platform. Despite Cosmos's ups and downs, experts expect ATOM's price to increase over time. Moreover, Cosmos will always have an edge as an interoperable blockchain. According to CoinMarketCap, the ATOM price today is \$35.37 USD with a 24-hour trading volume of \$1,079,176,926 USD. Altcoins for October as per Michael Van de Poppe - Crypto Analyst Immortal Predicts New AHT for FTT, ATOM & LINK Soon - 16 Percent Urban Indians Are Investors in Cryptocurrency as per Survey

- Ethereum gained the most, about 10%. - ATOM has been one of the superior performers. Major currencies witnessed low-level purchasing on Monday following China's ban on all cryptocurrency transactions, rising to 11%. Among the top ten currencies, Ethereum gained the most, about 10%. Solana, XRP, and Bitcoin all rose 4-7%. Others were also green. A prominent crypto analyst known as Immortal forecasts significant rises for three cryptocurrencies on his Twitter account. FTX (FTT) Crypto derivatives trading FTX's native cryptocurrency coin is FTT. Alameda Research, a leader in crypto trading and a significant liquidity provider, backs FTX. As such, FTX is a product developed by industry experts. FTX Token (FTT) of crypto exchange FTX is closely monitored by Immortal as informed on his Twitter account. From its current value of \$54, Immortal believes FTT is showing many encouraging signs. Immortal predicts FTT will soon reach \$100. According to CoinMarketCap, today's FTX token price is \$51.28 USD with a 24-hour trading volume of \$465,133,226 USD. Cosmos (ATOM) Cosmos (ATOM), called the "internet of blockchains," is also on the list of traders. According to Immortal, ATOM will surpass the booming cryptocurrency Avalanche (AVAX). Since the dip, ATOM has been one of the superior performers (between others like AVAX or SOL). So far, the bounce is 46%. Immortal expects ATOM to produce a new ATH shortly, like AVAX. According to CoinMarketCap, Cosmos price today is \$36.56 USD with a 24-hour trading volume of \$1,101,523,127 USD. Chainlink (LINK) Chainlink is a decentralised Ethereum blockchain oracle network. The network's purpose is to transmit tamper-proof data from off-chain sources to on-chain smart contracts with ease. Immortal predicts Chainlink (LINK), a decentralised oracle network, would rise 66% after regaining critical support at \$24. On Chainlink, Immortal mentioned: "Easy trade. Send LINK to \$40 ASAP." As per CoinMarketCap, Chainlink price today is \$23.25 USD with a 24-hour trading volume of \$1,061,157,648 USD. - A popular cryptocurrency exchange just added Cosmos. - Cosmos is termed as "Blockchain 3.0". Some in the crypto sector are worried about the amount of fragmentation in blockchain networks. Moreover, there are hundreds, yet few can converse. Furthermore, This is something that Cosmos hopes to alter by making it accessible. Cosmos is termed "Blockchain 3.0". Thus, as previously said, ease of usage is a major objective. In order to this aim, the Cosmos SDK focuses on modularity. As a result, a network may be rapidly constructed by using preexisting code. Now, in the long term, it is anticipated that sophisticated applications will be simple to build. Cosmos (ATOM) would have been worth \$4,690 now if you purchased \$1,000 worth on Jan. 1. According to CoinMarketCap, \$1,000 would buy 154.08 ATOM. Moreover, As of Sept. 21, each ATOM is worth \$30.44 and almost 370 percent gain. Also, Cosmos peaked at \$44.70 last week (Sept. 20) but has since dropped. To put that in perspective, here's what \$1,000 worth of other cryptocurrencies, including its rivals, would be valued in similar conditions. - Bitcoin (BTC) purchased for \$1,000 would be worth \$1,404 - Ethereum (ETH) purchased for \$1,000 would be worth \$3,747 - Dogecoin (DOGE) purchased for \$1,000 would be worth \$42,940 - Solana (SOL) purchased for \$1,000 would be worth \$82,086 - Polkadot (DOT) purchased for \$1,000 would be worth \$2,833 - Avalanche (AVAX) purchased for \$1,000 would be worth \$18,737 The Market is Always Volatile and Unpredictable The author estimates are based on CoinMarketCap data, prices from Jan. 1 to Sept. 21. As a result, these pricing comparisons may be deceptive. Furthermore, unpredictable occurrences like Elon Musk's comments on Dogecoin may significantly affect pricing in the highly speculative cryptocurrency market. A popular cryptocurrency exchange just added Cosmos to their list of supported coins. Moreover, its network hosts over 250 apps, including Binance Smart Chain and Crypto.com. According to CoinMarketCap, Cosmos price is \$38.63 with a 24-hour trading volume of \$1,373,110,982. Recommended for You

- Despite a long wait, finally WallStreetBets enters into the cryptocurrency industry. - Discussions to be mainly focused on Bitcoin (BTC), Ethereum (ETH) and other prominent coins. - Discussions regarding scams, predictions and crypto fanning are not allowed. Even a random novice into the stock market industry will be knowing the WallStreetBets! The WallStreetBets is a subreddit platform which is vividly into all discussions regarding the stock market. In addition, the WallStreetBets are a vital reason for the stocks of GameStop to spike up profusely, recently. However, almost everyone who is into the WallStreetBets so badly wanted them to start discussions upon the cryptocurrencies too. Yet the WallStreetBets has been avoiding it and once even strictly announced that crypto discussions wouldn't take place. On the contrary, a few days back on September 22, the WallStreetBets (WSB) finally gave out officially regarding their crypto discussion entity. WallStreetBets Views In spite of their much awaited and epic entry into the crypto industry, many are eagerly on what crypto the discussions would start. Moreover, the expectations on WSB into cryptocurrencies is extreme though. Furthermore, WSB terms that their new crypto entity will be by the same team, by the same people and by the same system and protocol as that of their stocks. Amidst all this, WSB does put up certain limits and restrictions regarding what to be discussed and what not too. They tend that these rules and regulations are necessary for them to maintain their standards. On the other hand, people are expecting so much on WSB when it comes to cryptos. This is because the GameStop was in fact absolutely nothing at start, but with the WSB, it is now at its all time high. This in fact, no one ever even dreamt of! Crypto Rules of WSB Besides the expectations, the WSB is so strong in maintaining their standards. Accordingly, they have devices with certain rules and regulations upon the cryptocurrency discussions. In addition, one of their rules depict not to discuss any sorts of market bear or bull, scams and smart contract schemes etc. Moreover, they tend to stick to their discussions with renowned coins such as the Bitcoin (BTC), Ethereum (ETH), the Dogecoin (DOGE) and so on. Furthermore, they tend to concentrate more upon recent hot trends like the China crypto ban, developments of Solana (SOL), and further on. Recommended for You

- Despite the odds, the Altcoin space has done well. - Bitcoin has recently gained widespread recognition and popular usage. This year, the crypto market had a wild ride from the Bull Run to the Evergrande disaster and FUD. The charts have swung. Professional traders, however, are experts. And await the fourth-quarter Bull Run. Despite the odds, the Altcoin space has done well. Several investors have made fortunes from their assets. Netizens have been comparing the year's data to 2017. Possibly announcing a bull run. According to CoinMarketCap, BTC is now worth \$42,709.97, up from \$29,022.42 on January 1, 2021. The star coin has returned 300 percent this year. ETH is now worth \$2937.52, up from \$738.62 on January 1st 2021. The year's returns are 740 percent. ADA is now \$2.37, up from \$0.182 on January 1st. The returns are 2750 percent. Other coins have also risen rapidly. Here are some reasons why ALT coins potentially outperform Bitcoin: - Higher volatility equals faster gains. - Scalability, transaction time, costs, interoperability, smart contracts, and more. - The layer-1 protocol is preferred over the layer-2 protocol. - Dapps, DeFi and NFTs launch. - Communities and conferences development. Others like Cardano, Polkadot, and Solana influenced the sector. Furthermore, Cardano, for example, is presently rising despite famous ones fading. But the movement is linked to the upcoming Cardano Summit. Moreover, other platforms may have similar events, boosting the ecosystem. Bitcoin Still the Choice for Novice Traders Bitcoin has recently gained widespread recognition and popular usage. This has made the ecosystem less volatile as an inflation buffer. Consequently, BTC is acquiring enormous popularity among novice crypto traders. So, BTC is still the preferred currency for holders. Moreover, netizens expect it to skyrocket in the future, like compounding on long-term investments. We are excited about Altcoins' meteoric rise and ability to provide real-time solutions. BTC still has the upper hand. - Kiyosaki emphasized the significance of Coinbase Inc. going public. - This is the first time Kiyosaki mentions Ethereum as a safe-haven asset. Private equity firms are buying precious metals mining companies like American businessman and billionaire Warren E. Buffett. He allegedly sold JP Morgan Chase and other Wall Street stocks. And it wasn't the first. A significant stakeholder at Goldman Sachs, he sold his shares in May. After selling the stock, Berkshire Hathaway purchased almost \$564 million worth of Barrick Gold stock, a mining company. So investors sense the catastrophe coming. Robert Kiyosaki, author of "Rich Dad Poor Dad," now buys cryptocurrency instead of gold and advises his email subscribers to do so. Moreover, Kiyosaki, who owns BTC and ETH, has long backed Bitcoin. He regularly urges young people to invest in cryptocurrencies and precious metals, citing the US dollar's demise. Furthermore, he thinks the dollar is a fraud. He argues that Bitcoin makes individuals wealthier, wiser and allows Americans to combat corruption. Finally, cryptocurrencies teach millennials. Kiyosaki emphasized the significance of Coinbase Inc. going public earlier this year. He said he won't purchase the company's shares in the future, but the IPO indicates "cryptocurrency is entering the mainstream." Dire Prediction for Global Financial Markets He also said that he thinks there is still time to learn about cryptocurrency. According to him, novices may still invest as educated investors rather than gamble with digital assets. This week, the multi-millionaire businessman and novelist warned on Twitter. Given the condition of US politics and Evergrande's debt, he issued a dire prediction for global financial markets. Kiyosaki is well-known for his dislike of fiat currencies and preference for equities, real estate, and metals as a store of wealth. He included Bitcoin on this list a while back and considered purchasing more during this year's down market. But this is the first time Kiyosaki mentions Ethereum as a safe-haven asset. In the near run, Ethereum's price is more volatile than Bitcoin's. But it has generally tracked the main cryptocurrency's fluctuations. - Twitter is also exploring NFT authentication. - Twitter also stated that the functionality would soon be available for Android users. Users will be able to transfer bitcoin amongst one another using Twitter's new capabilities. Twitter is adding Bitcoin to its Tips feature, which previously enabled users to donate money to others through PayPal and other third-party services. Starting today, users may connect their bitcoin wallet to their profile. And transfer bitcoin straight from the app via Strike, a third-party payment tool based on the Bitcoin Lightning Network. Tips were previously only available to select users but will soon be available to all iPhone users. Twitter said customers in Africa might not have access to conventional carriers; therefore, bitcoin is "one of the best solutions" available. In a recent video, the lightning network platform demonstrated how Twitter is one of the world's more effective value-transmission platforms. Twitter also stated that the functionality would soon be available for Android users. Tipping is completely on third-party systems. Therefore, it does not get a share of contributions. In the case of a bitcoin lightning wallet invoice, Twitter will send a notice to the recipient that may be responded to using a predefined message or emojis. Strike CEO Jack Mallers wrote: "Starting today Twitter will allow all iOS users around the globe to send tips over the lightning network." NFT Ownership on Twitter Twitter is also exploring NFT authentication, allowing users to immediately link their crypto wallets and show off their NFT ownership on Twitter. Users may now unsubscribe followers, which was previously done through "soft blocking," when someone blocks and then unblocks a user. This will bring about a huge change as users will exchange bitcoin with minimal fees almost instantly across borders through the lightning network integration on Twitter. - The total number of cryptocurrencies has exceeded 12,000. - The coronavirus epidemic has also heightened interest in digital assets. According to new statistics, over 5,000 additional tokens were created in the past 12 months, averaging over ten each day. In recent weeks, the total number of cryptocurrencies has exceeded 12,000, according to CoinMarketCap. The site registered about 7,100 coins in September of last year, indicating at least 4,900 additional digital assets, produced in the past year. Influencers Increase the Sector's Potential This is the biggest YoY increase in cryptocurrency numbers since Bitcoin's launch. During this period, the digital asset sector grew to a \$2 trillion market value. Moreover, the recent rise in Bitcoin's price and increased institutional participation have fueled interest in crypto production. Furthermore, big names like Elon Musk and Jack Dorsey promote the sector's potential, more creative and financial interest, pulled in. This boosts markets and encourages developers to create their coins to capitalize on future profits and demand. The coronavirus epidemic has also heightened interest in digital assets as a way to hedge against inflation. While stocks fell in September 2020, cryptocurrencies largely maintained their value. Maybe more creators will start investing and growing in this new asset class. An ever-increasing quantity of coins may be unproductive or even harmful to the

crypto industry's progress. For example, the sheer amount of tokens makes SEC head Gary Gensler wary. Recognizing that there is no space for hundreds of currencies, he intends to regulate the sector better to safeguard investors. Many of these tokens seem to be risky investments or blatant frauds. In the first half of 2021, Australians lost almost \$25 million to crypto scammers. - Simply HDL Bonus Cake to receive Cake rewards HOURLY. - LOUD Market is the NFT Music Market. Cryptocurrencies, constantly evolving, and the next big digital token might be launched tomorrow. While Bitcoin is generally regarded as the first cryptocurrency, analysts use various methods to evaluate other tokens. Moreover, due to the high volatility of most cryptocurrencies, investing in them requires caution. Let's look at the five trending crypto coins today. Cardano (ADA) in contrast to the proof-of-work method used by Bitcoin, Cardano (ADA) is one of the largest blockchains to utilize a proof-of-stake consensus mechanism. Furthermore, the layered blockchain team claims that the technology has proven useful in developing decentralized applications and smart contracts. According to CoinMarketCap, Cardano price today is \$2.39 USD with a 24-hour trading volume of \$6,159,197,075 USD. Bonus Cake (BonusCake) BonusCake is the biggest CAKE reflection token on Binance Smart Chain. Moreover, it is the only CAKE reward token with auto-claim. Moreover, CAKE rewards go straight to the wallet. Simply HDL Bonus Cake to receive Cake rewards HOURLY. According to CoinMarketCap, the Bonus Cake price today is \$0.000021 USD with a 24-hour trading volume of \$3,960,488 USD. Loud Market (LOUD) LOUD Market is the NFT Music Market. Moreover, the token designed to assist the NFT Market. To enable musicians and artists to sell their work immediately as NFTs at reasonable rates with no hidden costs! Their platform allows artists to showcase their work while earning immediate cryptocurrency payouts. According to CoinMarketCap, the Loud Market price today is \$0.127452 USD with a 24-hour trading volume of \$5,886,503 USD. ForeverFOMO (FOREVERFOMO) To match the price of Bitcoin, ForeverFOMO's supply adjusts. Rebasings transforms price-elastic tokens into synthetic commodities with changing prices and supplies that eventually settle. Finally, rebases are intended to be traded and possibly lucrative. According to CoinMarketCap, ForeverFOMO price today is \$0.000822 USD with a 24-hour trading volume of \$3,513,793 USD. Pamphther (PAMPHTHER) Pamphther is a Binance Smart Chain deflationary BEP-20 token. 1% is burned per transaction, 1% is redistributed to holders, and 0.10% goes to Binance Charity. The Pamphther team merged crypto memes with NFTs (Non-Fungible Tokens). The outcome of combining these two growing marketplaces is a game. According to CoinMarketCap, Pamphther price today is \$0.000631 USD with a 24-hour trading volume of \$595,741 USD. - Binance coin \$357.98, down 4.7% in 24 hours. - Dogecoin, Polkadot, and Solana were all in the red. Bitcoin prices fell 3.95 percent to \$42,732.98 on Saturday. As per CoinMarketCap estimates, the biggest cryptocurrency's market cap stood at \$801.92 billion. On Saturday, cryptocurrencies plummeted on the heels of China's new crackdown. The country's central bank stated digital currencies "cannot be used as money" and barred businesses from operating cryptocurrency exchanges. According to Bloomberg, the Peoples Bank of China said, "All crypto-related transactions, including services provided by offshore exchanges to domestic residents, are illicit financial activities." China is One of the World's Biggest Cryptocurrency Marketplaces The threat of a payment failure by China's housing giant Evergrande caused a cryptocurrency crash last week. The Evergrande issue and the US Fed meeting where a possible decision on reducing asset purchases was anticipated led to a significant decline in the cryptocurrency market last week. Ethereum was worth \$343.18 billion, with a price of \$2,918.16 per token on Saturday. Cardano rose 2.46 percent to \$2.39, whereas the currency fell 0.83 percent in the previous week as per CoinMarketCap. In the past, on April 13, Bitcoin reached \$63,729.5. The value of Ether, the second most valuable cryptocurrency behind bitcoin, had risen to \$2,317. Recently, the cryptocurrency soared to an all-time high due to favorable news developments globally. However, current developments in China surrounding cryptocurrencies are causing a market decline. In May, the Chinese State Council pledged to clamp down on bitcoin mining and trade, causing a massive sell-off of cryptocurrencies. Furthermore, China is one of the world's biggest cryptocurrency marketplaces, and its swings frequently affect worldwide prices. Binance coin \$357.98, down 4.7% in 24 hours. However, Binance currency has lost 13.19% in the past week, bringing its market value to \$59.76 billion. Dogecoin, Polkadot, and Solana were all in the red. - Axie has 1.8 million active players. - Signing an Axie scholarship agreement is a significant commitment. What is the largest NFT project? Not NBA Top Shot or CryptoPunks in terms of the trading volume. No, it's Axie Infinity, a monster-battling Ethereum-based game that surged in popularity last summer. Game Only for the People Who Can Afford According to DappRadar, the transaction volume for Sky Mavis's game topped \$2 billion last week. In a game with over 1.8 million daily active users, players are splashing ETH on cartoon monsters, land plots, and other goods. Tokens like Axie's native AXS also have risen in value, approaching \$4 billion. But it's not a cheap game. Unlockable digital items such as interacting creatures and customizable landscapes may be purchased with NFTs. Axie Infinity requires three monstrous NFTs, each costing between \$150-200 ETH. Although a large initial expenditure, it hasn't slowed recent project development. That's the goal of Axie Infinity, a video game created by Sky Mavis in Singapore. The Axie Infinity community has grown steadily since late 2017 but exploded this summer with the introduction of Ronin, an Ethereum sidechain. It reduces transaction costs and avoids Ethereum network congestion, allowing participants to quickly purchase, trade, and breed Axie NFTs. In May, Axie announced a \$7.5 million Series A financing round. It's a modest sum compared to other crypto industry rounds, but it drew in heavyweights like Mark Cuban, owner of the Dallas Mavericks, and Reddit co-founder Alexis Ohanian. The latter has been vocal about the game and its crypto-based play-to-earn concept. The company now has a \$4 billion pool of AXS tokens set aside to drive future development. The extended play-to-earn effort will involve staking AXS for incentives and token-based governance, according to Zirlin. While Axie has 1.8 million active players, the hefty initial fee prevents Axie from reaching potentially millions more. Buying three Axie NFTs is costly, and signing an Axie scholarship agreement is a significant commitment. - The price of XRP has risen over 10% in the past 24 hours. - Ripple's CBDC Private Ledger allows central banks to access a network of CBDC ledgers. To pilot a central bank digital currency (CBDC) utilizing Ripple's CBDC Private Ledger, Ripple announced a partnership with Bhutan's Royal Monetary Authority (RMA). The RMA will test retail, cross-border, and wholesale payment scenarios for a digital Ngultrum built on Ripple's long-term blockchain technology. This will help it achieve its goal of 85% financial inclusion in Bhutan by 2023. The RMA's dedication to creating a safe and reliable payment system has made it a financial innovator. The central bank introduced the Global Interchange for Financial Transactions (GIFT) system in 2019. To make transactions easier, it integrates with the government's Electronic Public Expenditure Management System (e-PEMS). Ripple said: "Beyond privacy, the CBDC solution is also custom designed to handle payments at the volume of transactions required by a successful retail CBDC." Bhutan, the world's only carbon-negative nation, shares Ripple's dedication to sustainability. The CBDC Private Ledger is carbon neutral and more efficient than proof-of-work blockchains by a factor of 120,000. XRP Rises Over 10% in last 24 Hours Deploying a CBDC strategy without jeopardizing financial stability or monetary policy goals is made possible by the CBDC Private Ledger. To ensure monetary and technical independence, Ripple's CBDC Private Ledger allows central banks to access a network of CBDC ledgers. The RMA became an independent Central Bank with increased powers under the RMA Act (2010). Due to Ripple's latest statement, the price of XRP has risen over 10% in the past 24 hours. XRP is currently trading over \$1 with a \$47 billion market value. XRP is the 6th largest cryptocurrency. Last week, XRP's market cap surpassed Solana's as per CoinMarketCap. Recommended for You

- 5 newly added tokens: C4G3, BLIZZ, FREE, PKD, BRIGHT. - CAGE is a new decentralized meme revolution. - PetKingdom (PKD) was developed on Binance Smart Chain (BSC) Crypto markets have been adding many new tokens to the crypto industry. Now let us see the 5 newly added tokens: C4G3, BLIZZ, FREE, PKD, BRIGHT. 1. CAGE (C4G3) CAGE is a new decentralized meme revolution. It has launched its governance token C4G3. The team behind C4G3 aims to influence the marketing power of using memes and build products with them at the core. Henceforth, the foremost goal is to launch the Cage meme Index which will be used by the Cage network. According to CoinMarketCap, the C4G3 price is trading at \$0.01719, with a 24-hour trading volume of \$474,743. In the last 24 hours C4G3 has dropped 5.99%. 2. Blizzard Network (BLIZZ) The second newly added token is Blizzard Network (BLIZZ). Blizzard network is a yield accumulator that provides easy and simple farming options at the same time for users enabling some crypto trading experience. More so, on the Blizzard network, the BLIZZ token is utilized as a governance token. At the time of writing, BLIZZ price has surged \$2.18 in the last 24 hours. According to CoinMarketCap, BLIZZ's price is trading at \$5.17 with a 24-hour trading volume of \$579,553. 3. FreeRiver (FREE) A Decentralized Exchange (DEX) on the MoonRiver blockchain is FreeRiver. FreeRiver also provides a portfolio management tool. The native utility token of FreeRiver is FREE. According to CoinMarketCap, FreeRiver price is trading at \$18.66 with a 24-hour trading volume of \$2,186,972. At press time, FREE has gained 35.60 in the last 24 hours. 4. PetKingdom (PKD) PetKingdom (PKD) was developed on Binance Smart Chain (BSC). Players of PetKingdom can spend \$PKD non-fungible token (NFT) to purchase incubators, so it will help to unlock the character. Furthermore, PetKingdom is a Non-fungible token (NFT) game that enables players to an entirely new level. In that, players can complete the tasks and join in battles to collect \$PKD. At press time, PetKingdom's (PKD) price is trading at \$0.2749. As per CoinMarketCap, the 24-hour trading volume of PKD is \$497,503. 5. Bright Token (BRIGHT) The last newly added token is Bright Token (BRIGHT). BRIGHT is the token behind a powerful community BrightDAO. More so, the best ways to allocate \$BRIGHT are a fair drop and an ongoing fair distribution mechanism. Bright token (BRIGHT) can be traded in the crypto exchanges such as Bkex, Uniswap (V3), ADEX, LBank, and Bibox. Accordingly, as per CoinMarketCap, BRIGHT price is trading at \$0.8569 with a 24-hour trading volume of \$1,651,208, at the time of writing. Recommended for You

- The top 3 crypto tokens on fire now are GALA, TRX, KIRO. - GALA is the utility token of the Gala Games Ecosystem. - TRON uses delegated proof-of-stake consensus mechanism. In the crypto market, the top 3 crypto tokens on fire now are Gala (GALA), TRON (TRX), and Kirobo (KIRO) 1. Gala (GALA) GALA is the utility token of the blockchain gaming project, Gala Games ecosystem. More so, Gala Games seems to be one of the best performing cryptocurrencies. GALA tends to use emerging trends in the blockchain industry, so the players in the Gala Games can experience more control over the trending and popular things in the gaming industry. Players of Gala Games can own non-fungible tokens (NFTs). According to CoinMarketCap, GALA's (GALA) price is trading at \$0.09384 with a 24-hour trading volume of \$190,437,409. At the time of writing the circulating supply of GALA is 6.98B GALA. 2. TRON (TRX) Blockchain-based decentralized digital platform TRON has its cryptocurrency TRX. Henceforth, the features that are utilized by Tron are blockchain and peer-to-peer (P2P) network technology. TRON uses delegated proof-of-stake consensus mechanism. TRON working to organize a global entertainment system for the cost-effective sharing of digital content. Accordingly, as per CoinMarketCap, TRON's (TRX) price is trading at \$0.09197 with a 24-hour trading volume of \$1,862,431,358. At press time, the circulating supply of TRX is 71.66B TRX. 3. Kirobo (KIRO) Kirobo (KIRO), a cryptocurrency token designed on top of the Ethereum platform. It prevents users from cryptocurrency transaction risks and makes crypto management as easier, simple, and secure as online banking. Furthermore, Kirobo has created logic layers over the Bitcoin and Ethereum network, it will provide a unique transaction code. The code has to be entered by the recipient to receive the funds from the sender. More so, at the time of writing, Kirobo's (KIRO) price is trading at \$0.3641. As per CoinMarketCap, the 24-hour trading volume of KIRO is 1,163,247. Recommended for You

- Cardano (ADA) is considered as one of the top 5 cryptocurrency in the market. - The price of ADA is expected to hit back its new ATH soon. Cardano (ADA) is considered as one of the top 5 cryptocurrency in the market. Currently, ADA holds 4th position on CoinMarketCap. ADA is on a weekly bounce right now from the \$1.9 mark to ATH of \$3.16. Moreover, ADA sellers pushed the price down to \$1.89. On August 16, this level stands as the start of the last two weeks' rally. As per CoinMarketCap, the Cardano (ADA) price is trading at \$2.11 with a 24-hour trading volume of

\$4,750,535,352, at the press time. An ascending channel is created by joining the swing lows with a lower trend line and the swing highs with an upper channel line. A breakout above an ascending channel may represent that the upward trend will continue, whereas a breakdown below an ascending channel may indicate that the trend will change. The price of ADA is expected to hit back its new ATH \$3.10 soon. Even more, the price of ADA can reach great heights soon. Sidney Vollmer of the Cardano Foundation asked the community members of Cardano to keep an eye on some mind-blowing partnerships at the Cardano Summit. This will occur in the upcoming weekend on September 25-26. Don't really want to brag or anything but some of the partnerships we're announcing at the Cardano Summit will blow people's minds. Really grateful for the changes we've made. @CardanoStiftung have to change the order of the list. I'd have fully logged in. pic.twitter.com/NDK9v9cW Sidney Vollmer (@SidneyVollmer) September 14, 2021 Furthermore, the announcement could be a sign of the upcoming things to come. More so, upcoming discoveries can make the ADA price higher. Recommended for You

- Top 3 NFT tokens of the week include GALA, WEMIX, LUKSO. - Gala is a blockchain-based gaming platform. There is growing interest among crypto investors in the Non-Fungible Token (NFT). Now, let us look into a few NFT token highlights of the week. Gala (GALA) Gala is a blockchain-based gaming platform. Moreover, GALA takes the gaming industry into different directions by providing gamers the ownership to play games. More so, the Gala games main aim is to make all blockchain games you will actually want to play. GALA is considered as the top NFT token of the week. This is because of its 140% price surge. According to CoinMarketCap, the GALA price is trading at \$0.102 with a 24-hour trading volume of \$208,447,240, at the time of writing. Wemix (WEMIX) Wemix is considered as the blockchain related Global Gaming Platform. In fact, the platform is created by Wemade Tree which is the subsidiary platform of WEMADE as its flagship blockchain gaming services arm. Moreover, Wemix is a platform for gaming DApps offering users with wallets and a crypto asset marketplace. Wemix is the second top NFT token of the week, as its price surged over 98% in the last 7-days. As per CoinMarketCap, the WEMIX price is trading at \$2.10, with a 24-hour trading volume of \$123,640,706, at the time of writing. LUKSO (LYXE) LUKSO is considered as a multiverse blockchain platform where the fashion, gaming, design, and social media platforms intersect. Moreover, LUKSO aims to bring blockchain to the masses via its smart contract related blockchain. LYXe holds the third place in the top NFT token of the week. The price has surged over 50% in the last 7 days. According to CoinMarketCap, the LYXe price is trading at \$19.88 with a 24-hour trading volume of \$11,993,717, at the press time. - A loss of this defence would reduce ADA to \$2. - Bitcoin rises and altcoins like Cardano (ADA) fall. Cardano (ADA) has had a fantastic year in crypto. Relating to performance, the ADA has crossed a significant milestone on its way to become one of the top 10 cryptos by market valuation. Every week, the third-largest crypto falls 5.8%. The crypto underwent a wave, with a big dip on September 7th, followed by a rapid rebound to its current high range. Cardano (ADA) was trading at \$2.70, with \$2.60, \$2.47, and \$2.30 providing support. The bears' last stumbling hurdle is the latter support mark. A loss of this defence would reduce ADA to \$2, according to Analyst Bennet. Cardano (ADA) may potentially rise if the bulls expect to hold levels. If not, it may trade below a recent trend. Moreover, Cardano (ADA) seems to be heading down. Bitcoin (BTC) is the crypto king. It remains unaffected by news. More so, Bitcoin is a digital gold. Some see Bitcoin as a safe haven for future cryptocurrencies. Analyst Justin Bennet said: "As such, Bitcoin's (BTC) price action could be a determining factor for other altcoins in the crucial days for the entire crypto market." Monitor Bitcoin Dominance ADA may continue its upward trajectory if the bulls regain higher levels. However, as seen, Cardano has been sliding below a recent trend line, increasing the possibility of a weekend drop. However, there are situations when Bitcoin rises and altcoins like Cardano (ADA) fall. Thus, to minimize risk, the expert-recommended investors monitor Bitcoin (BTC) dominance. Investors seem to be uncertain about the crypto market's trajectory. According to CoinMarketCap, Cardano (ADA) price today is \$2.35 USD with a 24-hour trading volume of \$1,734,126,865 USD. With a deflationary governance token, CORE, CVault.finance is a decentralized finance system. Also planned are Automated Strategy Vaults, which would automate profit-generating methods for staked tokens. CVault.finance claims their governance approach is the strongest and most involved in DeFi. CORE token holders vote collectively to modify the protocol, including adding new liquidity pools or removing old ones. The platform went live on Ethereum mainnet in September 2020, and CORE followed seven days later. In October 2020, CVault.finance added a Telegram channel before joining the team. CVault.finance wants to differentiate itself from other DeFi protocols by concentrating on deflationary yield farming. The initiative argues that minting additional tokens to compensate liquidity providers is unsustainable since it devalues the token. It has called this kind of incentive flawed and short-minded. As it called deflationary farming by CVault.finance. Instead, a 1% fee is levied on token transfers, which goes to liquidity providers. The protocol also prohibits liquidity withdrawal from Uniswap, ensuring a stable market. These built-in safeguards, it claims, will guarantee platform longevity. CORE Can Never Go Below a Set Price The CVault.finance development team gets 7% of token transfer fees, while the rest goes to liquidity providers. Tokens can't be redeemed for assets like Uniswap pairs, thereby locking liquidity within the system. As a result, users may exchange LP tokens for other assets. The CVault.finance development team claims this results in a price floor, meaning CORE can never go below a set price. CVault.finance reports that the development team receives no CORE tokens from LGEs. According to CoinMarketCap, CVault.finance price currently is \$14,208.92 USD with \$71,128.24 USD trading volume and had a fantastic week. It gained more than 50 percent last week. - California ranked to be the most crypto-ready US state. - Unique Crypto related measures have been implemented. - Installation of BTC and Cryptocurrency ATM's in the state. California is one of the top states of the United States of America which is on recent trend for its fast crypto adoption services. The state ranks top as the most crypto-ready index of the US for its unique crypto measures. As cryptocurrency adoption is growing at a fast pace, many countries are better understanding the value of the digital market. Crypto market in California has grabbed the interest of its state's population. As a result, at present it ranks highest for its crypto-friendly services for its people. In a crypto ready index scoring within the US state, California ranks top with a score of 5.72 out of 10. And other states like New Jersey with 5.44, Texas with 5.28, Florida with 5.03 and New York with 4.29. It clearly displays that California is leading the scoring table with 2.54 points higher than other states. Crypto-Related Measures Moreover, there are some unique crypto related plans being implemented in the state based on the population's digital interest. California took the initiative to offer its state people to explore the cryptocurrency space. So it integrates many smart metrics focusing on the crypto industry and its services. Further, the interest of California crypto users were found by recording the search volume of cryptocurrency in Google engine. The scoring index was listed with a calculation upon these factors. High Bitcoin (BTC) related google searches, cryptocurrency ATM's, and the number of blockchain related payments within the country. More so, as per the record California ranks higher for crypto related google searches per 100K and in the number of crypto ATMs. These two top metrics were the pillars for California to be named as a most crypto-ready jurisdiction in the US state. In comparison with other US states California pops up as the primary state for crypto usages. Thus, California becomes the crypto spotlight ranking first for the remarkable crypto ready index. With smart strategies California encourages its people to traverse and utilize the digital world with digital currencies. So, California can continue to support and develop crypto adoption in its state resulting in a massive growth in the market. Recommended for You

- Uniswap commanded \$9,620,102,739 in swaps last week. - There are 270,783 bitcoin in TVL. The total value locked (TVL) in decentralized finance (DeFi) has grown significantly to \$171 billion in mid-September. There are 270,783 bitcoin in TVL valued at over \$13 billion on the Ethereum network, and \$15 billion has been traded across 14 Ethereum-based decentralized exchange platforms. According to a recent DeFi weekly report, \$23.8 billion has been exchanged across blockchain protocols. While bitcoin (BTC) and ethereum (ETH) have risen in value over the past month, Solana (SOL) and avalanche (AVAX) have dominated the previous 30 days. Uniswap commanded \$9,620,102,739 in swaps last week, accounting for almost 62% of the \$15 billion worldwide trade volume. Ethereum currently leads the TVL Uniswap has a lot of volumes, while the Binance Smart Chain Dex PancakeSwap has a TVL of approximately \$5.55 billion. \$5.4 billion Sushiswap has more connections than the BSC network. According to Coin98 Analytics, the total weekly Dex trading volume is \$23.8 billion. Metrics indicate \$171 billion in TVL spread over several blockchains. While Ethereum currently leads the TVL, other chains have seen increased activity in the past month. According to Coin98 Analytics' latest DeFi report, there are now 68.3 million Polygon wallets worldwide. For example, Bune Analytics' "across the Bridge Away (LI) Ethereum" data indicate that Harmony Bridges have \$7.71 billion TVL on them; similarly, Rainbow Bridges have \$7.71 billion TVL, and Solana Wormhole has \$7.71 billion TVL. Wormhole announced on Friday that their ETH-SOL token bridge is now operational. Coin98 Analytics found last week that the total lending value locked on Ethereum is about \$44 billion. Also, out of seven different Ethereum-based bitcoin projects, TVL has 270,783 bitcoin worth almost \$13 billion. WBTC, TBTC, SBTC, IMBTC, PBTC, HBTC, and RENBTC, included in the measurement. The Wrapped Bitcoin (BTC) project and its participants utilize 76% of the 270K bitcoin (\$13 billion) worth of wrapped or synthetic BTC. Recommended for You

- Cosmos' creators call it an "internet of blockchains." - ATOM also launched a bridge to Ethereum at the end of August. Cosmos (ATOM) blew up 10.74 percent overnight to establish a new price of \$39.58, according to CoinMarketCap. It surpassed \$40 yesterday, reaching \$40.76. Despite today's minor decline, Cosmos' price was still ten dollars more than seven days ago, and twenty dollars higher than this time last month. Its creators call it an "internet of blockchains." It's an interoperability network that allows various blockchains to connect, exchange data, and interact with one another. In short, Cosmos claims to address some of the "hardest problems" in the blockchain sector. It seeks to provide an alternative to "slow, costly, unscalable, and ecologically harmful" proof-of-work protocols like Bitcoin by connecting blockchains. On August 18, Cosmos rose 25% from \$15 to \$20 after the introduction of Emeris, a cross-chain DeFi interface. It also launched a bridge to Ethereum at the end of August. The inter-blockchain communication protocol (IBC) allowed trade across the Cosmos and Ethereum networks for the first time, along with the integration of Sifchain. Cosmos Might Soon Over Take FTX Token Cosmos is "Blockchain 3.0" thus, as previously said, ease of usage is a significant objective. To this aim, the Cosmos SDK emphasizes modularity. This enables a network to be created quickly using existing code. Long term, it is anticipated that sophisticated applications would be simple to build. Cosmos now has the twenty-first largest market value, but at this pace, it would only take \$0.8 billion to flip FTX Token and make a bold entry into the top twenty. Some in the crypto sector, much worried about the amount of fragmentation in blockchain networks. There are hundreds, yet few can converse. Cosmos wants to change this by making it feasible. Recommended for You

- On August 18, Avalanche protocol announced Avalanche Rush. - Husky gains a lot from operating on Avalanche. A growing DeFi ecosystem and a new low-cost Ethereum bridge are just a few reasons why AVAX is up 200% in August. Moreover, in recent months, Avalanche has seen significant gains in prices and popularity, like Ethereum, the dominant smart contracting platform, battles with high transaction charges and bad processing times. On August 18, Avalanche protocol announced Avalanche Rush, a \$180 million liquidity mining incentive campaign launched with Aave and Curve. Thus brings new apps and assets to its expanding DeFi ecosystem. The top 3 avalanche tokens this week are OIN, TIME, and HUSKY. OIN Finance (OIN) OIN touted, the first DeFi platform to offer liquidity mining and loans on Ontology with cross-chain capabilities. Furthermore, by integrating Ethereum into its ecosystem, the platform will open up to the whole existing DeFi sector. After all, conventional finance combines the globe, its currencies, and financial systems as cross-chain technology is very important in DeFi. According to CoinMarketCap, OIN Finance price today is \$0.511066 USD with a 24-hour trading volume of \$977,347 USD. Chrono.tech (TIME) A blockchain-based recruiting, HR and payment platform, Chrono.tech helps people find employment and securely transfer money globally. Furthermore, the TIME token is the native token of the Chrono.tech ecosystem and can be used to ensure premium account status or staked on TimeWarp.finance to collect all service profits. According to CoinMarketCap, Chrono.tech price today is \$34.45 USD with a 24-hour trading volume of \$95,207.55 USD. Husky Avax (HUSKY) First Avax merchandise token now available on BSC! Husky Avax, a token on the Avalanche C-chain. Furthermore, it has a fixed starting supply, no team allocation, and no airdrops. Moreover, Husky gains a lot from operating on Avalanche because safe, decentralized transactions are quick, cheap, and green. According to CoinMarketCap, Husky Avax price today is \$1.09e-7 USD with a 24-hour trading volume of \$242,861 USD. Recommended for You

- Complaint filed on tech firm Apple for permitting fraud application "Toast Plus." - Toast Plus application scam loots away all digital assets of the users. - XRP looted profusely, from the wallets of Toast Plus users. For the tech giant Apple hits the limelight profusely just after the

recent launch of its iPhone 13. This time, the news is rather hard and Apple is imposed to be bad here. Accordingly, a file sheet has been charged upon Apple, as its æApp Storeæ™ has allowed a fraudulent crypto application by the name æToast Plusæ™. The æToast Plusæ™ application is basically an XRP wallet promoting itself as simple and safe. However, the Toast Plus is said to be a fraud application wallet, as it looted away all the digital assets of its users. The Toast Plus Fraud As mentioned, the Toast Plus is a completely XRP based wallet completely open sourced. Besides being started in the year 2017, Toast Plus has over 100,000 users by the end of 2017 alone. In addition, this application wallet is available in both android and iOS. On the other hand, Toast Plus has simply looted all its usersæ™ assets. These looted digital assets are still yet to be calculated on a consolidation, owing to huge numbers of victims. In spite of this, the XRP holders took charges against the tech giant Apple. Also, the users of Apple are agitated as they are using a fake application. App Store is a very important application store, therefore, the users of Toast Plus got extremely agitated on Apple as its App Store continued to support and permit the æToast Plusæ™ despite numerous allegations put forth. Mourns of Investors Many tend to hold Apple as responsible, as about 30% of all the transactions upon all applications in its App Store will go to Apple. In addition, the XRP holders took on Apple in agitations as Apple knew that the Toast Plus was a scam and a fake application, yet they continued it in their App Store. In spite of all this, the charges filed against Apple states that all those who were users of Toast Plus or even registered before the incident, are to be compensated with \$1000 to \$100 every day, counting to the days of the violation. This is true under many terms of breach of information, breach of profits earned, etc. Recommended for You

- Ethereum (ETH) burns tokens profusely even after London hardfork. - Prices of Ethereum are expected to rise up. - The token burn is said to boost the London hardfork- EIP 1559. One of the profuse highlights of this year in the crypto industry is evidently the London hard fork of Ethereum (ETH), aka EIP-1559. In spite of this, many hot news stories were on rounds throughout. The ETH blockchain spiked up with the EIP-1559 live upon its platform. With all such amazing things completely power packed, ETH seems to still not be satisfied. In spite of all this, yet ETH continues its token burn even after the London hard fork. Effects of ETH Burn To surprise, now the overall value of ETH burned, including those after the London hard fork, foresees to about more than \$1 billion. Accordingly, the latest hard fork which took place last month on August 5, turned out to be about 320380.7. This amounts to about \$1,103,734,591 approximately. Moreover, most crypto enthusiasts know that these coin burns are usually done to raise the price of that particular coin. In addition, by destroying the coins, shrinks the overall volume of coins resent. Accordingly, this creates reduced supply, thereby making their prices rise up. Furthermore, if you see the growth of ETH so far, itæ™s comparatively more steady and solid unlike that of Bitcoin (BTC). Also, the price of Ethereum (ETH) has now surged up to the mark of \$3,500 alternatively in and around the figure. Other Factors for Price Hikes As you watch ETH closely, itæ™s evident that ETH is not solely dependent upon such coin burns alone. Taking ETH, there are many factors for why ETH is always able to withstand steady surges. On the other hand, the blockchain-based entities like the DeFi and the non-fungible token (NFT) also play a crucial role, as evidently they are majorly based upon ETH blockchain. In spite of this, the recent rise of the NFT market over the past month also tends to be a reason for the surge of ETH. On the contrary, the launch and live release of the ETH 2.0 will be the most revolutionary step for ETH. The ETH 2.0 is full of speculations, promoting that once launched ETH will soar beyond and beyond many ATHs. Recommended for You

- NFT marketplaces continue to grow rapidly. - Fantom has minimal transaction costs. Several currencies have lately surged with the cryptocurrency market. Since lately, FTM has gained traction in its climb, and its bullish rally appears to be gaining momentum at the current time. Fantom is a smart contract platform with a directed acyclic graph (DAG) that provides decentralized finance services for developers using their own unique consensus algorithms. The NFT is a blockchain token type. NFTs are vital in the creative world. This refers to networks that independent producers utilize to monetize their material and directly reach consumers without advertising agencies or corporations. The Non-Fungible Token (NFT) marketplaces continue to grow. NFT sales reportedly hit \$363.8 million in July, up 506 percent from June and almost 1,300 percent since January. The NFT explosion reflects widespread acceptance aided by improved technology. Fantomæ™s cheap costs and quick transaction speeds have facilitated simple NFT development, modification, and trading. Ethereum to Fantom Token Bridge Being Developed The Fantom Foundation is currently finalizing, Artion a specialized NFT marketplace and infrastructure with zero fees. Transaction costs for creating, selling, and buying NFTs often are high, restricting access to the affluent. Yearn finance and Keep3r Network creator Andre Cronje is working on a token bridge between Ethereum and Fantomæ™s ERC-721 NFT. Fantom users reacted positively to the news, praising it as a major victory for the FTM ecosystem on Twitter. With all of the above issues, Fantom comes in as a savior. Because Fantom has minimal transaction costs, all NFT transactions remain cheap and accessible to all. Then thereæ™s the factor of time. No one wants to pay a transaction charge and then find out that their transaction failed after a 30-minute delay. Fantomæ™s speed and efficiency guarantee fast confirmations without annoying artists and fans. According to CoinMarketCap, the Fantom (FTM) price is \$1.29 USD with a 24-hour trading volume of \$412,077,000 USD. Recommended for You

- BSC is a blockchain network that enables smart contracts. - In the last 24 hours, CELR is up 5.88%. Binance Smart Chain is a significant and popular platform. We all know it is the worldæ™s top trading platform. BSC is a blockchain protocol used for lending. Letæ™s take a look at the top three BSC tokens by weekly gains on CoinMarketCap. Furthermore, BSC is a blockchain network that enables smart contracts to build a DeFi environment. Alitas (ALT) It is a developing infrastructure of a new generation of trustworthy network protocols and offering efficient, easy, secure, and reliable development and deployment environments to clients globally. No conventional chain structure is used in its design. A breakthrough in traditional directed acyclic graph theory (DAG). According to CoinMarketCap, Alitas price is \$8.29 USD with a 24-hour trading volume of \$2,284,686 USD. Celer Network (CELR) Celer Network is a contemporary cryptocurrency that combines peer-to-peer transactions, mining, and other technological advances. It can handle billions of safe off-chain transactions per second, unleashing the full potential of blockchain and decentralized applications. According to CoinMarketCap, Celer Network price today is \$0.114671 USD with a 24-hour trading volume of \$288,616,618 USD. In the last 24 hours, it is up 5.88%. Avalanche (AVAX) Avalanche boasts the most validators of any proof-of-stake protocol and the quickest time-to-finality of any smart contract platform. Moreover, it is quick, cheap, and green. Any smart contract-enabled software can dominate its rival on Avalanche. According to CoinMarketCap, Avalanche price today is \$68.57 USD with a 24-hour trading volume of \$2,181,992,965 USD. COTI (COTI) In order, to save time and money, COTI bills itself as the worldæ™s first enterprise-grade finance platform. Also, COTI is the worldæ™s first modified blockchain technology for decentralized payments to corporations, governments, and stablecoin issuers. According to CoinMarketCap, COTI price today is \$0.419249 USD with a 24-hour trading volume of \$222,293,758 USD. In the last 24 hours, it is up 8.62%. Mask Network (MASK) Mask Network is a protocol that encrypts communications sent through Twitter and Facebook. Moreover, it serves as a link between the internet and a decentralized network. This includes funds directly from Twitter for the Gitcoin award campaign, peer-to-peer payments, and a decentralized storage. According to CoinMarketCap, Mask Network price today is \$10.91 USD with a 24-hour trading volume of \$79,237,584 USD. In the last 24 hours, it is up 2.18%. Recommended for You

- Aleph.im is an open-source cross-chain network. - CELR is a well-constructed layer-2 scaling solution. Today, every significant currency, including Bitcoin, Ethereum, and Binance Coin, started off trading for pennies on the dollar. Their high market caps prevent their prices from skyrocketing too quickly now that theyæ™re popular. But, not so for altcoins, which are cryptocurrencies created after Bitcoinæ™s popularity. Many of the 11,000+ altcoins are failing to acquire momentum. Although, not for a few rare gems that promise great risk and tremendous return. Here are the Top 3 DOT Tokens of the Week. Celer Network (CELR) As fascinating as blockchain is, transaction rates and throughput may be slow. CELR is a well-constructed layer-2 scaling solution that handles off-chain transactions. Moreover, the Celer platform enables quick, easy, and secure off-chain payments and smart contracts. The Polkadot ecosystem project was one of the first to use the Substrate platform. Also, the networkæ™s design provisions for maximizing blockchainæ™s potential and efficiency. According to CoinMarketCap, Celer Network price today is \$0.116857 USD with a 24-hour trading volume of \$250,719,388 USD. In the last 24 hours, it is up 1.62%. Polkadot (DOT) Polkadot is a decentralized domain and NFT marketplace based on Polkadot. Moreover, it is a decentralized domain secured by the Polkadot network. And provide people control over their data and resources. According to CoinMarketCap, PolkaDomain price today is \$0.343995 USD with \$7,434.48 USD 24-hour trading volume. Aleph.im (ALEPH) Aleph.im is an open-source cross-chain network with a decentralized database, computation, and identity architecture. Furthermore, the primary goal of Aleph.im is to assist decentralized applications and protocols strip off the centralized parts of their stack. For example, Imagine a decentralized AWS or Firebase. Aleph.im aims to turbocharge the DeFi ecosystem. According to CoinMarketCap, Aleph.im price today is \$0.507474 USD with a 24-hour trading volume of \$2,699,887 USD. Recommended for You

- Binance composing new changes to work better with regulators. - Exchange has been hiring human resources to strengthen its compliance game. - Binance hired a former Europol Dark Web specialist. The worldæ™s largest and popular cryptocurrency exchange, Binance, has announced it is composing new changes to work better with regulators according to their requirements. In an interview with South China Morning Post, Changpeng Zhao, CEO of Binance has made an announcement, which published on September 16. He mentioned, æAs we run a centralized exchange, we have come to realize that we need to have a centralized entity to work well with regulatorsæ. More so, this is a clear quitting from the existing policy that crypto exchange Binance had applied before, noting it wasnæ™t headquartered globally because Bitcoin (BTC) wasnæ™t either. Eventually, this was the policy, which created trouble for Binance with regulators, that have criticized the shortage of registration for operation in many countries. According to the interview, it understandable that the latest regulatory issues the Binance exchange has facing, have changed Changpeng Zhaoæ™s plans and goals about how things must handled for compliance purposes. Even more, he stated, exchanges need to maintain a clear EOFB about stakeholderæ™s ownership, transparency, and risk controls. As the largest crypto exchange, Binance has composing changes, so it will be easier to work with regulators without any issues. Furthermore, Binance has been effectively hiring human resources to strengthen its compliance game and maintain high control over the funds exchanged on the Binance platform. On Friday, Binance announced the hiring of a former Europol Dark Web specialist, Nils Andersen- RÄfied, to build effective investigations and audit team. In the last month, U.S. Treasury criminal investigator, Greg Monahan has appointed as Ninanceæ™s Global Money Laundering Reporting Officer, to strengthen AML policies inside the Binance Exchange. - Fantom, like SOL, is an Ethereum-killer. - The Fantom DeFi ecosystem is worth \$1.3 billion. The cryptocurrency market has recently risen, and several currencies have followed suit. Fantom (FTM) has recently gained traction in this rise, and its bullish rally seems to be gaining strength. After Solana (SOL) and Cardano (ADA), Fantom has been dubbed the æEthereum killeræ™ (ADA). Fantom is a robust blockchain project that allows users to create bespoke decentralized apps (Dapps) and non-fungible tokens (NFT). A more democratic and efficient future is sought by the Fantom Foundation, while older blockchain initiatives like Bitcoin confront difficulties. Fantom seeks to improve decentralized cryptocurrency performance, security, and scalability. Fantom, like SOL, is an Ethereum-killer that utilizes the Direct Acyclic Graph (DAG) smart contract architecture. Its scalability has increased to 300k transactions per second. Lachesis, a blockchain-based system, powers FTM. Leading blockchain projects including Chainlink, Raviton, and Band Protocol have partnered with it, triggering a price spike. FTM has been rising for a month. Its market value was \$47 million, and each token cost \$0.0182. FTM was the 92nd biggest crypto asset six months later, with a market value of \$869 million, and Fantom (FTM) price of \$0.3418. FTM token priced at \$1.26 as per CoinMarketCap. The price of FTM has grown by 7098% this year, while the market cap has risen by 6,942%. Thatæ™s a lot of money for a project thatæ™s just been around a year and keeps growing. Growing faster than TVL According to DeFi Llama, the Fantom DeFi ecosystem is worth \$1.3 billion. Moreover, this figure has increased by 108,000% in 5 months. Also, Curve Finance and Sushiswap, both based on different protocols, are accessible on the Fantom network. Daily Fantom network transactions have also increased significantly. Transactions and active addresses are growing faster than TVL. This is potentially positive since it shows new Fantom users are engaged rather than passive. This should increase costs and token velocity. The keywords search worldwide of æFantom cryptoæ™ and æFTM coinæ™ have risen to new all-time highs in recent weeks. Recommended for You

- MonoX Protocol raises \$5 million through mass fundings. - Focuses on bringing projects with superior DEX features. - All new projects to be upon single sided pools featuring only one token. When it comes to the world of Decentralized Finance (DeFi) and all its protocols, the MonoX Protocol is one of the most renowned and prolific platform which cannot be left out. It offers all sorts of DeFi based services upon its platform including extremely cost efficient automated market makers (AMM). In spite of all this, the platform looks into building more and more projects all completely

Based on Decentralized Exchanges (DEX). The Raise of \$5 Million In a bid to come up with a single side pooled DEX, based solely on one token, the MonoX has been working on its proficiency. However, the need for funds was essential too. In spite of this, an open fundraising program was started. Furthermore, for this fundraising, MonoX partnered with the blockchain entity, the Kryptical group. Besides, being led by the Kryptical group, the fundraising saw my blockchain entities and crypto technology companies together. These ventures were, RareStone Capital, Divergence Ventures, Youbi Capital, Axia8 Ventures, OP Crypto, and much more. As a result, the overall funds raised to about \$5 million. In spite of this, the MonoX platform will be developing a new technology for DEX which uses only one single side tokens. On the contrary, most DEXs consist of a minimum two tokens for the complete exchange transaction to facilitate. Moreover, this will be in new projects which could launch tokens without adding an extra token as in regards to the previous DEX models. The Founder's Comments Besides, the epic news on the circle, the CEO of MonoX Protocol, Ruyi Ren states that plenty and plenty of developments and innovations are going on in the DeFi industry. In spite of this development, high rates of collateralization have become hectic, he adds. In addition, he states with such findings, the entire MonoX ecosystem could do well in terms of innovations, as that in Solana (SOL). Moreover, such a single side tokenized system will reduce the transactions costs too, as the transaction time reduces evidently. - The crypto market has risen by nearly 2.3% in the past 24 hours. - Cardano (ADA) has gained 6.55 percent in the past 24 hours. - Binance Coin (BNB) has yet to reach the long zone. Anyone acquainted with cryptocurrencies knows that Bitcoin is by far the most well-known coin. It was the first cryptocurrency and is still the largest in terms of market value. With increasing recognition of the benefits of blockchain, many cryptocurrencies have developed with modifications to Satoshi Nakamoto's original whitepaper. Binance Coin and Cardano are two of the most popular. Since the market bottomed out, just a few coins remain in the red. Solana (SOL) and Polkadot (DOT) are still bearish. The whole crypto market has risen by nearly 2.3% in the past 24 hours, surpassing \$2.19 trillion. Analysts are split on the market's long-term trend. The value of bitcoin may reach new all-time highs in late 2021 or early 2022, while some predictions suggest it may fall below \$20k by year's end. Bitcoin Yesterday, buyers broke past the two-hour EMA55 barrier, bringing Bitcoin back above the POC. Volumes fell today, but the price rose, approaching the 61.8 percent fibo mark. Bulls may be able to breach the next resistance barrier if daily trade volumes rise. Bitcoin was worth \$47,570.50 as per CoinMarketCap. Cardano Cardano (ADA) is currently the third biggest cryptocurrency behind Bitcoin and Ethereum, as blockchain fans seek more eco-friendly alternatives. It has gained 6.55 percent in the past 24 hours. As per CoinMarketCap, it is trading over \$2.40, indicating that bulls are attempting to take the mid-term initiative. Also, one may consider a trend reversal when ADA fixes over the crucial \$3 level. Binance Coin Binance Coin is one of just a few cryptocurrencies that has received widespread support from outside the cryptocurrency industry. Its market value surged to \$40 billion in February. Thus, reigniting anticipation that BNB might be the token that ultimately topples Bitcoin. 5.77% less than Cardano, Binance Coin (BNB) has gained (ADA). However, Binance Coin (BNB) has yet to reach the long zone. Currently, investors have the opportunity to take the initiative for \$456. If they succeed, the increase may reach \$500. BNB was at \$434.7 as per CoinMarketCap. Again yet it's the same wine in a new bottle though! Ever since the surge of the Bitcoin (BTC) and becoming the most influenced cryptocurrency in the world, debates on 'BTC Vs. Gold' have been common. Moreover, the irony is that even till date a consolidated statement on this regard which is better as an investment still remains speculative. In such terms, which is the better option to invest upon either gold or BTC is still now the most profuse question asked to financial advisors and investing advisors. In spite of all this, and for the topic and question which still now has no solid 'Yes or No' answer, the managing partner of Incrementum AG, Ronald-Peter Stoeferle puts forth his views. Regarding the Bitcoin (BTC) Being the partner of a renowned asset management and investment management company, the views of Ronald-Peter Stoeferle are to be looked upon. When put forth the question to Peter, which is better in terms of investments, BTC or gold? Peter replies that both the gold and the BTC are two completely different entities and they should not ever be compared with each other. This is a rather contradicting statement put forth by him. Moreover, Peter depicts the BTC to be the new kid in the street. He implies that as being new compared to gold, BTC sure has got a lot of attention. BTC may be of high volatility and so be the reason why it's quite controversial, he adds. Furthermore, he terms, one can either love BTC or dislike it, but never be in the middle. Also, he states that if BTC remains for the next five to ten or even more, then BTC will be at a place completely unimaginable! Solidity of Gold On the other hand, when turning to the yellow metal, Peter terms it to be solid and standard. Moreover, he states that the potential is so high for gold, that in order to attain such status will take plenty of time for BTC. In spite of this, taking the market cap into account gold stands at \$10 trillion which is extremely standard. However, that of BTC is between the range of \$800 to \$900 billion, which is obviously small compared to gold. In addition, the CEO of Microstrategy and an avid BTC fan, Michael Saylor states that he did the best for the past year investing on BTC rather than gold. Furthermore, he states that if he had invested upon gold, it would have been a billion dollar mistake for him. And so, he proved this by tweeting regarding it with statistics comparative to gold as follows. If I had chosen gold instead of Bitcoin, last year it would have been a much bigger dollar mistake. It doesn't seem to change the problem of you don't investing in BTC for over a year, so far the returns are 376.64%, which is obviously astonishing in terms of returns over the investments. Mina Protocol is designed to reduce computing needs for Dapps. Mina, described as the world's lightest blockchain, with a constant size despite increased use. Moreover, it also balances security and decentralization. Coda Protocol became Mina in October 2020. Users may natively validate the platform from the genesis block using Mina's distributed payment mechanism. Its whitepaper calls it a 'succinct blockchain.' The system platform back to its genesis block, which allows someone to authenticate information without exposure, and an extensively complex sharing that only focus on the past few blocks. MINA, the native currency of Mina protocol, is used as a utility coin and a means of exchange. Furthermore, it is a cryptocurrency that uses the accounting concept found in Ethereum. Revolutionize the Existing Blockchain Environment The state of the Bitcoin blockchain includes a list of unspent coins, while the form of Ethereum, made up of account balances. Unlike a miner, Mina employs a prover (or snarker) to verify each block commits to the state. Mina uses the Ouroboros Samasika, a PoS method intended for short decentralized networks that start with a genesis block. Briefly, blockchains validate and update data. The update function interacts with consensus and chain summary, while verification interacts with blocks. Aside from the solutions mentioned above, the project utilizes a parallel scan state to improve transaction processing performance. Mina aims to revolutionize the existing blockchain environment by eliminating third-party verifiers such as miners/stakers and light clients. A user initiates a trade, then sends to the mempool a pool of legitimate but unconfirmed transactions. As per CoinmarketCap, its price has increased 11.92 percent to \$6.18. The current trading volume is \$430,709,845. \$MINA has a market cap of \$1,457,848,484. It reached the all-time high of \$6.48 today, September 14. Recommended for You

After the latest wallet release announcement, SafeMoon is up 23.44% and has a market value of over \$1 billion. But has the Token grown larger and better? Discover the latest altcoin news. Most other cryptocurrencies are down today, but SafeMoon has made progress. In only three months after its beta release for developers and testers, SafeMoon's price has soared, and the wallet has reached the Google Play Store. Lost 84 Percent of Its Value in Three Months The price of this cryptocurrency asset has risen in the last 24 hours but has dropped in the last three months. SafeMoon is a Binance Smart Chain token that is neither a governance token nor a voting token. Utility reports enhance the log it's like trading and speculating on meme cards like Shiba Inu. SafeMoon creators launch their crypto wallet on Google Play. Three months after announcing the beta version for testing. As a result, the cryptocurrency asset's price rose 20% in 24 hours. The Token, on the other hand, lost 84 percent of its value in three months. A few features set SafeMoon apart from other meme currencies. For example, it taxes holders 10% when they sell. Furthermore, based on the number of SafeMoon owned, half of the 10% tax is divided among owners. A liquidity pool holds the other half. Finally, SafeMoon tokens are burnt to deflate the asset. However, compared to other top 100 cryptos, SafeMoon trades in modest volumes. Because it is not traded on major exchanges, the price will fluctuate. According to CoinMarketCap, SafeMoon price today is \$0.000002 USD with a 24-hour trading volume of \$15,396,683 USD. It is up 23.44% in the last 24 hours. The cryptocurrency market continues to fall, with nearly all currencies in the red. CoinMarketCap values the global crypto market at \$2.04 trillion, down almost 2% from yesterday. BTC/USD The crypto collapse has retracted Bitcoin. Bitcoin has just risen over \$45,000 USD. On Saturday, the price of Bitcoin (BTC) stabilized around \$45,000, and on Sunday, purchasers attempted to break over \$46,000. This level was broken, but the volume was light, and the pair could not break the two-hour EMA55. This morning, the BTC price dropped below \$45,000. During the day, buyers attempted to break past the average price barrier and test \$47,745 again. However, buyer weakness may trigger another wave of bearish momentum, pushing the price back to \$42,447. Ingves stated that Bitcoin and other cryptocurrencies could not escape the regulatory eye as the adoption rises. The Bitcoin price today is \$46,800.44 USD with a 24-hour trading volume of \$38,413,281,546 USD as per CoinMarketCap. ADA/USD Cardano started 2021 strong, surging over \$1.3 in February on public crypto excitement. ADA's price rose steadily throughout the spring, reaching \$2.46 in May. Cardano's price fell as the overall crypto market trend reversed and prices fell. Since the start of the year, ADA/USD has shown a strong trend with some pullbacks. On Apr 14, 2021, it hit a new high of \$1.56. Cardano (ADA) is the biggest loser today, down 7%. However, sellers have failed to take the initiative as Cardano (ADA) remains above the crucial \$2 mark. If bears break it and fix below, the decline may reach \$1.30, concentrated on most liquidity. Today, the Cardano (ADA) price is \$2.39 USD with a 24-hour trading volume of \$4,276,089,671 USD as per CoinMarketCap. BNB/USD Binance is a worldwide cryptocurrency exchange. It aims to elevate bitcoin exchanges to the global financial forefront. Binance Coin (BNB) has also dropped in the last day. It fell 4.30 percent. Binance Currency (BNB) has nearly tested the \$385 level again, but the native exchange coin is still trading above it. If sellers break out, a severe drop to \$340 is possible. Today, the Binance Coin (BNB) price is \$407.53 USD with a 24-hour trading volume of \$1,544,365,353 USD as per CoinMarketCap. Recommended for You

A golden cross is a chart pattern that indicates a strong rally. It happens when the short-term moving average of a stock crosses over its long-term moving average. A death cross indicates a price movement in the opposite direction. Since the market began the current bear phase in March, the cryptocurrency community has been divided on how it will go. But there are signs that the market is poised to resume a bull run. After a rough start to the year, the August rally has led to a 'Golden Cross' of the 50-DMA and 200-DMA. To validate the 'bullish signal,' Bitcoin must maintain current levels and go higher. If it does, a return to \$60,000 is probable. @TheCryptoLark famous crypto Twitter user Lark Davis has posted a 'golden cross' expectation tomorrow for bitcoin. The tweet says: The same metric forecast that in January 2019, January 2020, March 2020, and December 2020 that Bitcoin will increase. Charles Edwards, the founder of Capriole Investments, a licensed Bitcoin asset management company, invented hash ribbons. The Bitcoin hash ribbon measures the network's hash rate. Amount of processing power entering the Bitcoin Network at any one moment. Bitcoin Rally on the Cards? A golden cross and hash ribbons both indicate a rising Bitcoin price. During Bitcoin price drops, miners earn less and sell their coins to raise cash. They also switch off machines to save money, which lowers the network's total hash rate. A golden cross like this typically precedes an increase in Bitcoin values, so traders may start placing money in anticipation of the climb. The crypto-crash retracted Bitcoin. Bitcoin recently surpassed \$45,000 USD. On Saturday, Bitcoin (BTC) traded at about \$45,000, and on Sunday, buyers tried to push it over \$46,000. The current Bitcoin price is \$46,800.44 USD with a 24-hour trading volume of \$38,413,281,546 USD as per CoinMarketCap. There is a possibility that bitcoin may rise following tomorrow's golden cross confirmation, allowing investors to get back in. Recommended for You

Polygon. The most popular crypto mentions on Twitter are Bitcoin, Ethereum, Velas, Cardano, Hedera Hashgraph, Solana, Tezos, Dogecoin, Polkadot, and Polygon. 1. Bitcoin (BTC) Crypto giant Bitcoin is a decentralized system that tracks and records transactions in a distributed ledger which is blockchain. Moreover, Bitcoin has the highest mention on Twitter. Accordingly, as per CoinMarketCap, the BTC price is trading at \$46,593.97, with a 24-hour trading volume of \$43,350,741,652, at the time of writing 2. Ethereum (ETH) Ethereum, the second-largest cryptocurrency. The main goal of Ethereum is to become a global platform for decentralized applications (dApps), enabling users globally to write and run software that is opposed to censorship, downtime, and fraud. Additionally, at the time of writing, the Ethereum (ETH) price is trading at \$3,349.49. 3. Velas (VLX) Velas takes third place in the crypto mentions. Velas's coin (VLX) can be utilized for transactions, payments, fees, and for supporting Proof-of-Stake (PoS) consensus. Furthermore, according to CoinMarketCap, the 24-hour trading volume of VLX is \$4,846,841 and the price is trading at \$0.1381. 4. Cardano (ADA) Cardano is an open-source and decentralized public blockchain platform. Henceforth, the main aim of Cardano is to solve the scalability and sustainability problems. Hence, Cardano (ADA) price is trading at \$2.36 with a 24-hour trading volume of \$4,821,481,622. 5. Hedera Hashgraph (HBAR) Hedera Hashgraph is a public platform that enables individuals and businesses to create a quality and powerful decentralized application (dApps). Hedera Hashgraph's price trades at \$0.4641 and according to CoinMarketCap HBAR surges over 10% in the last 24 hours at the time of writing. 6. Solana (SOL) Solana is found to be a web-scale blockchain. It facilitates fast, secure, scalable, decentralized apps (dApps) and marketplace. Accordingly, as per CoinMarketCap, at the time of writing Solana (SOL) price trading at \$159.73, with the 24-hour trading volume of \$4,705,948,168. 7. Tezos (XTZ) Tezos is the decentralized blockchain platform that provides peer-to-peer transactions and behaves as a platform for deploying smart contracts. More so, at the time of writing Tezos (XTZ) price is trading at \$7.37. According to CoinMarketCap the circulating supply of XTZ is 859,417,966 XTZ. 8. Dogecoin (DOGE) Dogecoin is one of the most mentioned crypto tokens on Twitter. Initially, Dogecoin, utilized for tipping users on Reddit and Twitter, later it was also accepted as a payment method by some merchants. According to CoinMarketCap, Dogecoin (DOGE) price is at \$0.2372 with a 24-hour trading volume of \$1,199,021,991, at the press time. 9. Polkadot (DOT) Polkadot can process many transactions on various chains in parallel. Therefore, it is referred to as a sharded multichain network. According to CoinMarketCap, the Polkadot (DOT) price is trading at \$37.92 and gained 12.49% in the last 24 hours. 10. Polygon (MATIC) Polygon takes tenth place in the crypto mentions. Eventually, it is self-possessioned as a layer 2 scaling solution. The native token of the Polygon network is MATIC. More so, as per CoinMarketCap, the Polygon (MATIC) price is trading at \$1.31 with a 24-hour trading volume of \$914,550,786 at the time of writing. Recommended for You

The cryptocurrency market is trending positively. New coins, introduced to the crypto market every day. Therefore, we are thus here to discuss and offer a brief look at five cryptocurrencies newly introduced. Bake Coin (BAKECOIN) Smart Chain Built and deployed on Binance blockchain. Furthermore, the Bankcoin protocol, a DeFi-experiment and also community inspired. Also, being an NFTs curator, it produces and attracts Bakecoin NFTs, prominent NFT influencers. Moreover, it has burned 50% and more of the entire supply throughout time. Also, it provided a smart contract audited, performs audits using Tenderly, Col, and more. Moreover, it is managed by the entire community. CoinMarketCap shows that, today, Bake Coin price is \$0.000025 USD, with a 24-hour trade volume of \$218,627 USD. Citadel.one (XCT) Citadel.one focuses on delivering high-quality decentralized financial solutions which are embedded in a single platform. Furthermore, the team will develop four key features that make the Crypto Super App the first. The essential element of the Citadel.one idea is its business model, Staking-as-a-Service. Currently, over 20 networks, including Tezos, Cosmos, Solana, etc., are validated by Citadel.one. The current Citadel.one price, according to CoinMarketCap, is US\$0.392882 for a 24-hour trading volume of US\$525,583. Gain Protocol (GAIN) The Gain Protocol, DeFi passive income system built on the Binance Smart Chain that is community-driven. The smart contract protocols execute all tasks of the Gain Protocol, including the distribution of static incentives, price stabilization, and daily sweepstakes. The pricing of the Gain Protocol is \$0.000002, with a 24-hour trading volume of \$131,086 USD, according to CoinMarketCap. Corgiswap (CORIS) Corgiswap is a decentralized finance platform that enables users to exchange tokens and supply liquidity through farming and generating fees. Users trade with a liquidity pool under the automated market maker model of Corgiswap and deposit money into these pools in return for tokens used to fill the pools by liquidity provider tokens. CoinMarketCap reports that the price for Corgiswap today is US\$0.285904, with a 24-hour volume of \$477,689. SeaDog Finance (SEAD) SEAD token, intended to guarantee the owner may participate in a charitable event to enhance the world. Moreover, SeaDog Finance has also established an innovative blockchain trading network featuring NFT charity events. SeaDog Finance currently is \$0.048900 USD, with a 24-hour trading volume of \$ 7,286.55, according to CoinMarketCap. Recommended for You

- The participating teams will be eligible for a 9,000 SigUSD prize fund. - Amid the Event Anticipation, the price of ERG will soon reach new heights. A job interview with the Ergo development team for exceptional competitors. Ergo established a strong blockchain that aims to change the future of decentralized money. Last June, the Ergo ecosystem held a hackathon in which developers suggested advanced new tools and dApps. The first hackathon resulted in many developments and implementation initiatives inside the Ergo Ecosystem. These included the creation of data notarization tools and NIPoPoWs. A team had also developed a unique idea that some of the revenues are given to charity. In contrast, another team had designed a web application to review Ergo's blockchain and trading. Following the success of the first hackathon event, Ergo is hosting another one this year in October. In the second round of its hackathon, ERGOHACK II, talks will be held on the subject of social change and an entirely new degree of engagement with the world's top crypto experts. At this hackathon, interested teams of 2-5 developers will present and workshop ideas for solutions to enable blockchain technology to be adopted globally. All initiatives undertaken during the Hackathon will be considered in developing the Ergo ecosystem for deployment globally. The participating teams will be eligible for a 9,000 SigUSD prize fund. In addition to the prize money, a job interview with the Ergo development team may be given to exceptional competitors. For individuals who wish to enhance and test their abilities in blockchain programming, ERGOHACK II promises to be a great chance. ERG Prices All Set to Rise Amid Ergo Hackathon II. ERGOHACK II invites all developers and DeFi enthusiasts to design applications to build a better financial future for the globe. ERGOHACK II is planned for 8-10 October. Don't miss the opportunity to feel like a genuine entrepreneur or meet like-minded individuals to build a project team. This event will assist you in improving your skills and knowledge in the realm of blockchain and DeFi. September 15, 2021 is the deadline for registering the application and interested participants can apply here. With the forthcoming development, improvements, and innovation, the price of ERG will soon reach new heights. Ergo's native token ERG ranks at 120 on CoinMarketCap when writing. The ERG price is at \$17.13 with a 24-hour trading volume of \$9,963,012. Financial sectors are now adapting and accepting digital payment services through cryptocurrencies. Also, it helps users who already trade crypto assets and makes transitions even more simpler. Thus, to offer its customers, MVB bank is joining with NYDIG to provide white label BTC solutions to its customers. Besides, the main aim of this partnership is to offer the industry's first white label bitcoin and banking services to Fintechs. Thus, it integrates the Bitcoin products and services as a solution to its customers. Additionally, it even enables the external parties to process transactions with Bitcoins without any intermediaries. BTC as White Label Solutions As MVB bank is a popular financial corporation which empowers more than 50 fintechs, gaming clients who utilize its Victor network to satisfy the customers. More so, this Victoria platform is capable of providing multiple solutions for fintech companies. Besides holding millions of clients and customers, MVB now attracts its customers by offering real-time solutions with BTC payments. Also, as an additional super power, integrating BTC into their offering services the customers can experience both traditional and digital products. In addition, this collaboration of NYDIG and MVB bank supports the financial firms to be adaptable and brandable in the industry. And the customers can enjoy numerous transactions with Bitcoin payment services. Further, the Chief Innovation Officer of NYDIG, Patrick Sells happily shared a tweet about the partnership with MVB bank. And till now, only few financial companies were able to offer BTC services. But with this partnership, the entire fintech industry is eligible to provide white label solutions along with Bitcoin products hand-in-hand. On behalf of the NYDIG community, the CIO announces, "Bitcoin will reach a huge milestone through our partnership with MVB. I am eager to see how this collaboration works and helps MVB's clients across fintech, gaming and beyond" to continue to innovate. A major upgrade over the weekend gave the Cardano network the ability to execute smart contracts, giving it a boost over competitors like Ethereum. The hard fork update done yesterday allows smart contracts to be authored in Plutus scripts, which have been under development since May 2021. Pooltool, a Cardano data aggregator, reports 825,755 ADA staking wallets today. This is a 35%+ rise since June. Stake pool ADA totals \$ 59.86 billion or 71.4 percent of total ADA supply (\$ 83.9b). This means that the bulk of the Cardano native coin, ADA, is staked on the network. Delayed Smart Contract Draws Criticism The Cardano blockchain now supports NFTs. It offers minimal minting and transaction costs on the network and does not need smart contracts to generate. On its testnet, the first decentralized application (dApps) launched in early September came into problems with concurrent transaction processing. Despite debuting in September 2017, Cardano criticized for not delivering smart contract capabilities. Dominic Williams, the creator of Internet Computer (ICP), slammed Cardano for its late smart contract debut. He stated: "It amazes me that this chain had been in the market for 2 years, and is only just adding support for smart contracts, and people are happy with this progress." Despite criticism, ADA, the native of Cardano, reached \$3.10 at the beginning of the month, an All-Time High. Although Cardano (ADA) price dropped over 10 percent on the launch of its smart contracts. Furthermore, ADA is now trading at \$2.39 a token as per CoinMarketCap. Recommended for You - NYDIG Joins With MVB Bank To Integrate BTC Services - Ripple's XRP Thrashes Solana (SOL) Gaining Back Its Throne! - Ergo Hackathon II "The Most Awaited Ergo Hackathon Event" - Solana Enters Million-Dollar NFT Club By Sale of Degenerate Ape - CIO of World's Largest Asset Manager Says Bitcoin Could "Increase Significantly"

During an interview with Rick Rieder, managing director at BlackRock, the world's biggest asset manager, revealed why he owns bitcoin when asked a few days back. The most intriguing aspect of the conversation is that BlackRock seems to have revealed the first time that it owns Bitcoin. The BlackRock CIO stated back in November 2020 that he did not hold Bitcoin in any of his portfolios. BlackRock was established in 1988 and began operating in one room with just eight employees. On 1 October 1999, it placed its Initial Public offering on the New York Stock Exchange for \$14 a share. The Chief Investment Officer of BlackRock, the largest asset management worldwide, thinks that bitcoin may grow considerably. This time, Rick Rieder, BlackRock's Global Fixed Income Chief Investment Officer (CIO). Was questioned in an interview with CNBC Friday about his opinion on Bitcoin. Now that cryptocurrency is legal in a nation. Considering cryptocurrency as "an alternative currency," he mentioned: "Part of why I own a small piece of bitcoin is I do think there are more people who are going to enter that fray over time." I like assets that are volatile that have higher growth potential and are more difficult to value. Even before, said the world's largest asset manager, BlackRock is the world's largest asset manager and at the end of the second quarter controlled approximately \$9.5 trillion (AUM). Rieder is also Head of the Basic Fixed Income Business and Head of the Global Investment Allocation Team. The assets are about \$2.4 trillion. He said that bitcoin is here to stay, last year in November and may even substantially replace gold. Recommended for You

NFTs have been around since 2014 and are currently gaining prominence in the digital art trade. Since November 2017, NFTs have been valued at \$174 million. NFTs are also usually one-of-a-kind, limited run, and feature unique identification codes. With the Alonzo update, Cardano (ADA) will be able to use blockchain smart contracts. On 1 September, Alonzo Purple received its smart contract live, enabling new dApps and NFT minting on the testnet before the mainnet launch. While many doubters remain, the Cardano network has managed to complete critical updates on schedule. In terms of the transfer volume, Cardano NFTs (CNFT) are already coming up to Ethereum NFTs. With the scalability problem and high gas price for Ethereum, several alternative "Ethereum killers" have emerged, such as Solana, whose NFT marketplace generates headlines with multi-million NFT purchases. Cardano Derangement Syndrome Cardano wants a piece of the market after the smart contract is implemented tomorrow by integrating the mainnet. It has overcome all odds to become the third-largest cryptocurrency. The skeptics are still opposing and inventor Charles Hoskinson labels this the

Cardano Derangement Syndrome (CDS). A CoinDesk writer stated it was difficult to mint NFTs on Cardano, to which Hoskinson called out. Cardano user mined an NFT for the tweet claiming NFT minting was ~~impossible~~. When it comes to trolling disguised as criticism, Hoskinson has not held back, even warned of an impending ~~FUD~~ Storm~~ae~~. Charles Hoskinson mentioned in a tweet: In contrast, the Cardano (ADA) price has risen 2.5X since August, claiming third place, just like Solana, the altcoin was poised to enter the price discovery phase before the Tuesday market flash collapse. ADA is now trading at \$2.67, down 0.53% in the last 24 hours as per CoinMarketCap. Like Ethereum, the price of altcoin may rise after the Alonzo upgrade on Sunday. Recommended for You

The crypto market is currently sloping down and results in depression for investors displaying bearish patterns. The mainstream cryptocurrencies have also sloped down in price value where Bitcoin is 9.33% down, Ethereum is 12.58% down, and Cardano is 9.71% down in the past week. On the other hand, among the top cryptocurrencies in the market, some altcoins have performed out of the box. One such coin which didn't follow the chart of leading cryptos is Polkadot (DOT), it doesn't seem too bad in the price chart. The major question which arises for investors would be ~~ae~~ Is there hope for full recovery of Polkadot? Significantly, some cryptos like Cardano, Solana, and Polkadot did not follow the suit of Bitcoin during this market decline. These tokens were highlighted among the top cryptocurrencies in the market. Besides, DOT has the potential to reach \$50, so with its on-going advancements, it may reach \$50 level soon. Developments In Polkadot Ecosystem As a matter of fact, collaborations, updates, developments in the ecosystem are the key-component for the growth of every network. Whereas, Polkadot actively grabs attention in this area as the network aims to generate more updates for its users. For instance, PolkaBridge, a decentralized all-in-one financial application platform that integrates with Polygon's full-stack scaling solution. Additionally, Polkadot's hackathon which began on September 8 might also be a reason for the price upsurge. Following the hackathon event on the 8th, DOT presented a 40% hike in price within the next couple of days. Significantly, the price of Polkadot (DOT) surged from \$22 on the 7th to \$32.10 in two days. The launch of parachains, layer-1 blockchains which are already set to run alongside Polkadot and Kusama Networks, has also aided DOT's upsurge. DOT's on-chain operating activities have boomed mainly due to the recent Parachain auction due to ecosystem-centric updates and high social volumes. As the developments in the DOT's network are increasing steadily, the metric for DOT displays a positive chart. However, considering the updates in the ecosystem, healthy growth will assist to reach highs. Thus, Polkadot will stay up towards an uptrend for a while, and this could push other altcoins to move further. - Top 5 crypto to buy this month ~~ae~~ BTC, ETH, ADA, BNB, SOL. - Bitcoin (BTC) is the prime crypto asset in the trending market. Digital assets have been the top-performing asset class for most of this year as the world struggles with the global pandemic. Surpassing a \$2 trillion value, the nascent industry sees more interest from global investors. This article highlights the five top cryptos to buy this month. Bitcoin (BTC) Bitcoin (BTC) is considered as the prime crypto asset in the trending market. Notably, BTC is the best performing crypto-asset worldwide. Since the launch of BTC in 2009 for a price of \$0.08, BTC has raised over 9 million percent. More so, the benchmark crypto not only increased in value but led the crypto market to a \$2.5T value. All-in-all, BTC's intrinsic capacity to stay as a store of value has seen retail and institutional investors to add BTC to their portfolio. Currently, the BTC is trading at \$45,921.64 with a 24-hour trading volume of \$27,930,956,168, at the time of writing. Ethereum (ETH) The second most valuable virtual asset is Ethereum (ETH). Moreover, ETH is considered as the official home of few of the top decentralized application (DApps) platforms in the crypto industry. More so, the proof-of-work (PoW) plays a major role in the growing adoption of decentralized finance (DeFi). This is considered to be the future of financial services and NFTs. In addition, the growing DeFi and NFT sub-sectors has created many interests in ETH. This is because ETH is utilized as a crypto asset to facilitate exchange of both the sub-sectors. Added to this, the ETH's gradual transition to a proof-of-stake (PoS) protocol has seen it become popular for ESG-minded investors. As of the time of writing, Ethereum (ETH) price is trading at \$3,417.36 with a 24-hour trading volume of \$17,248,557,773, at the press time. Cardano (ADA) Recently, the price of Cardano has increased, rising to the top three most important crypto asset rank followed by a huge price rally. In fact, Cardano has raised over \$92 billion in market cap. Notably, ADA is one of the top digital assets to purchase this week. The platform is said to be an Ethereum killer. The most anticipated release of smart contracts functionality has pushed its price to rise over its previous all-time high (ATH) of \$3.10. According to CoinMarketCap, ADA price is ranging at \$2.66 with a 24-hour trading volume of \$7,144,222,254, at the time of writing. Binance (BNB) Binance Coin (BNB) is connected to the world's biggest digital asset exchange Binance. The token is utilized mainly as a discount token, BNB is utilized to reduce transaction fees on the Binance exchange. Moreover, the BTC exchange's expansion and incorporation of BNB in most projects has seen the BEP-20 token value to surge. According to CoinMarketCap, the Binance Coin (BNB) price is trading at \$418.19, at the press time. Solana (SOL) Solana plans to generate adoption of DeFi products and solutions like Ethereum and Cardano. Moreover, the recent surge in NFTs has also divided into hybrid-powered blockchain. More so, the Solana blockchain enjoys major adoption in the past month, with many Dapps connected with the Ethereum killer because of its quick block finality and low fees. Solana helps the protocol increase the Total Value Locked from \$1.2 billion to \$3 billion. Solana is considered as one of the crypto assets in the market which has risen over 100% since the start of August. In addition, SOL has broken above the previous ATH of \$55.9, rising over \$214 this month. As per CoinMarketCap, Solana (SOL) price is trading at \$179.05 with a 24-hour trading volume of \$3,170,308,080, at the press time. Recommended for You - Elrond (EGLD) On the Rise for an All-Time New High - Inclusion Still Far Away Although Ethereum More Popular Than Bitcoin - Celer Network (CELR) Uprises Over 25%, While Leading Cryptos Still Down - Stellar (XLM) Fights With XRP and Ethereum ETH ~~ae~~ Will it Hit New ATH \$0.93 Soon? - Polkadot Highlighted As One Among Top Crypto in Market ~~ae~~ Will DOT Hit \$50 Soon?

Despite the worldwide pandemic's economic impact, the crypto market continues to rise. Elrond (EGLD) is one of the most dynamic cryptocurrencies making waves. As a consequence, Cryptocurrency is keenly watched by investors worldwide. EGLD empowers developers, validators, and companies to create a new internet economy. In this manner, the network's users may benefit from the platform's enormous scalability, high security, and developer-friendly environment. Traders and investors may buy EGLD on Crypto.com, VCC Exchange, and Binance. Of course, these are only a few of the crypto exchanges. The price of Elrond is rising for many reasons. The current Ethereum-killer season is a season of strong positive trends for most Ethereum-compatible coins. Elrond is one of the crypto market's unexpected coins. The crypto is like a sleeping tiger that wakes up with booming thunder. Currently, it is one of CoinMarketCap top 50 cryptocurrencies. The Elrond (EGLD) coin price has gained over 20X in the past and may continue to rise. The EGLD/BTC combination may also experience significant future gains. Elrond's price is on the rise and may soon reach a new peak. Lark Davis of @TheCryptoLark tweeted on the surge of EGLD: Demand for Ethereum Alternatives EGLD's transaction speed attracts purchasers globally. The platform has recently gained popularity due to its ability to accept credit cards and fast verification. Fiat users always have to wait longer. EGLD is all about speed. For example, as per the ranking on CoinMarketCap, Solana has just risen from obscurity to become the sixth-largest Cryptocurrency. Not alone. Binance Coin is now the fourth largest Cryptocurrency, while Polkadot is now the ninth. Avalanche has also risen. As a result, demand for Ethereum alternatives with quicker and scalable platforms has increased. Recommended for You

Countless digital currencies are accessible in the world of cryptocurrencies. Some of them have fallen significantly, some have gained immense popularity. There are now three top gainers in which you can opt for investing. You can opt for QNT, ALGO, and ONE. These cryptocurrencies are in the gaining session and have huge potential. QNT, QNT, also known as Quant, was launched in 2018. It has a goal of connecting blockchains and networks on a worldwide scale. It does it by working on efficiency and interoperability. Also, it is the first project that has solved the interoperability problem by creating the first blockchain operating system. Although it will not happen overnight, Quant has the potential to have the best and incredible value. The current price of QNT, according to CoinMarketCap, is 378.26\$. ALGO It is a decentralized network that helps solve the blockchain trilemma to achieve speed, security, and decentralization all together. ALGO was launched in 2019, with Silvio Micali being its founder. Algorand is an independent, decentralized network built on blockchain that enables a variety of applications. The latest and newest price of ALGO, according to CoinMarketCap, is 2.12\$. Moreover, has seen a 76% increase in price in the last seven days. ONE It is a blockchain platform that is designed to facilitate the use and creation of decentralized applications. Also, its aim is to develop Dapps by concentrating on random state sharding and generating blocks in seconds. The current price of this cryptocurrency is 0.1959\$, according to CoinMarketCap. Furthermore, the price of this currency has grown by 5,000% since the beginning of the year. It positioned itself as a fast and secure platform for Dapps and made big waves in the blockchain community. Recommended for You - 5 Best Crypto Token by Volume: USDt, BTC, ETH, SOL, BNB - Sam Bankman-Fried Made a Famous Offer to Buy Solana Tokens - ~~ae~~ Dune's NFT Collectibles Falls Out Due to ETH Environmental Impact - Anticipating Launch of Cardano (ADA) Smart Contract & Specialties! - ADAlend.finance Brings Decentralized Lending to Cardano Blockchain

The next few hours may be considered one of the most important times in the history of the world's third largest cryptocurrency, the Cardano (ADA). The news has been on rounds for a long time until a few days back being announced officially. In spite of this, the whole cryptocurrency and blockchain industry are all set for the countdown launch. The whole cryptocurrency industry speculates that this is the most biggest step for Cardano in its history so far. The Smart Contract Hard-Fork In a few hours, it will be a moment in the history of Cardano (ADA). The epic launch of the platform's hard fork smart contract launch will be out on September 12, owing extreme expectations among the industry. The hard fork will feature the new smart contract which will enable the support to almost all the entities of blockchain like Decentralized Finance (DeFi), non-fungible tokens (NFT), and also Decentralized Applications (DApps). Besides, Ethereum (ETH) being the number one in terms of blockchain and its applications, the platform so far values to about \$400 billion. However, many are now at the tails of the ETH blockchain profusely. In addition, at times there are high chances for those blockchain platforms to overcome ETH. Namely, these are Cardano (ADA), Solana (SOL), Polkadot (DOT), Avalanche (AVAX), and much more. In spite of having lower transaction fees and higher transaction speeds, the Cardano (ADA) seems to be the biggest competitor to the ETH platform. Also, the upcoming hard fork with ~~ae~~ Alonzo's upgrade will entrust Cardano's blockchain to heights it has never reached before. On the contrary, all this makes everyone speculate that ADA will pass by ETH soon, to the least by this year's end. The Goguen phase of Alonzo In spite of being the leading for Cardano, the Alonzo is said to be made of five different phases. The phases are said to determine the evolution of the Alonzo. These phases are Byron, Shelley, Goguen, Basho, and Voltaire. The phases are said to be in the Goguen phase. Yet, according to the developers, the Shelly phase is still on work and once the Goguen phase works are complete, the platform will enable services for smart contracts profusely. Despite all such surprises all packed in a bundle, the past few days the price of ADA has dropped to about 16% down. However, just a few hours back from the time of writing, ADA has shot up to \$2.72, with a spike of 14.41% on rise. Therefore, all this shows that the price of ADA will be on the rise till the launch in a few hours! Recommended for You

Non-Fungible Tokens (NFTs) are the recent trend which is gaining huge response with more popularity in the marketplace. It is quickly attracting more users and has become a more admired crypto token. At present NFTs huge fan bases are digital artists, gaming companies, and crypto investors. Legendary Pictures Productions is now releasing the unique NFT collectibles on its new futuristic film. The title of the movie is ~~ae~~ Dune, a blockbuster film produced in partnership with MakersPlace at the end of September. Moreover, the production partners will present an official Dune NFT collection of digital artifacts. These digital characters are inspired by the rich world of Denis Villeneuve's highly futuristic film. Iconic Digital Sculptures Dune's most iconic characters are crafted depicting all the stars in the movie, grabbing the viewers attention. Every digital sculpture is with a unique design with a special limited-edition piece of artwork. Also the exciting concept of Dune: Future Artifacts will continue to thrill the entire digital museum. Besides these digital artifacts are planned to be sold in Ethereum blockchain where the NFTs acts as a purchasing receipt for those items. So, Legendary and MakersPlace are planning to sell those digital film characters as NFTs minting on ETH platform. However, due to the Ethereum environmental impact resulted in negative responses from ~~ae~~ Dune's fan club. Introducing Dune: Future Artifacts, the digital NFT collection of works unearthed from the shifting sands of Arrakis. The first collection drops September 22nd on @makersplaceco. [@HansZimmer @RealChalamet @Zendaya pic.twitter.com/hx0300lib0](https://t.co/kd1xc1hd7r@dunemovie) ~~ae~~ Legendary (@Legendary) September 10, 2021 ~~ae~~ Dune's NFT Launch In addition, the NFT collection is about to launch on September 22nd, 2021 with even more exciting artifacts to be released in October. And this, increases huge hype among the Dune fans for legendary masterpiece. Also, the entire Legendary production team is happy that these digital collections are set to present new NFT space. The Executive Vice President of Legendary Entertainment,

James Ngo shares, “We are thrilled to create a new collectible experience for the fandom by using exclusive assets. As it is taken directly from the film to give enthusiasts a whole new way to not only acquire film memorabilia but also further immerse themselves into the world of Dune.” However, the entire Dune team is excited about the NFT launch, but also concerned about the negative feedback from fans. As NFTs are growing huge beyond Ethereum blockchain, the present ETH environment is unsupportive. But, Ethereum’s upgrading version of ETH 2.0 will present the blockchain platform more efficiently with a proof-of-stake model. Thus, it will produce innovative results performing safer and simple transactions.

- ADALend.finance has just sold out its private sale in a few hours. - It brings decentralized lending to the Cardano-based blockchain. - ADALend protocol will enhance the new wave of flexible financial markets. ADALend.finance has just sold out its private sale in a few hours. Moreover, seven private angel investors have bought the whole seed allocation of 1.8M Cardano native ADAL tokens for \$540k. Notably, ADALend.finance is a protocol which brings decentralized lending to the Cardano-based blockchain. As a result of high demand for good quality Cardano native DeFi projects. This is perfect timing with the launch of ADA smart contracts around with the Alonzo upgrade. Notably, the ADALend seed round was oversubscribed for 400%, and users who have not made it into the seed stage level have been whitelisted for the private sale. DAO Governed ADALend ADALend develops a scalable and decentralized lending protocol on Cardano. Moreover, the platform is DAO governed and it is based on a pure Cardano native token ADAL. In fact, Ethereum related platforms like Aave have dominated the DeFi lending industry. However, the team at ADALend thinks the time is right to change the guard. Moreover, the speed and low transaction value of Cardano makes it the perfect blockchain. This creates a democratic lending space for anyone in the world who needs to borrow dollars without spending their digital assets. In addition, the ADALend protocol will enhance the new wave of flexible financial markets. More so, the Cardano is the PoS market leader as a collection of protocols for economic support to many people. Over the last decade, the DeFi space has been forced to develop. In order to keep pace with the development of the crypto market. All-in-all, the ADALend protocol will offer the new wave of flexible financial markets by offering a layer for instant approval of loan, automated collateral, trustless custody, and liquidity. - Many crypto seen a great surge with the boom of the entire market. - Best 5 crypto tokens by volume are USDT, BTC, ETH, SOL, BUSD. The cryptocurrency market has seen a great surge with the boom of the entire market finally after a long time. With this great surge in the crypto market, there are few top altcoins based on market volume. Let us discuss about them here: 1. Tether (USDT) Tether (USDT) stands in the top list of crypto tokens by volume. Moreover, USDT is a stablecoin which is the same as the US dollar. In addition, the token is delivered by a Hong Kong-related company Tether. Added to this, the token’s peg to the USD is attained through maintaining a sum of commercial paper, cash, reserve repo notes, and treasury bills in reserves which is equal in USD value to the number of Tether in circulation. According to CoinMarketCap, the USDT price is trading at \$1 with a 24-hour trading volume of \$94,257,517,832, at the time of writing. 2. Bitcoin (BTC) Bitcoin (BTC) is called the King of cryptocurrencies. BTC takes the second position in the crypto list. Moreover, the BTC was developed in 2008 by an individual or a group of people named Satoshi Nakamoto. As per CoinMarketCap data, the BTC price is trading at \$45,628.83 with a 24-hour trading volume of \$48,587,883,679, at the press time. 3. Ethereum (ETH) Ethereum (ETH) takes the third place in the best crypto by volume. The platform is a decentralized open-source blockchain platform which has its own crypto named Ether. Moreover, ETH works as a platform for many digital assets also for the execution of decentralized smart contracts. According to CoinMarketCap, the ETH price is trading at \$3,293.80 with a 24-hour trading volume of \$22,691,877,393, at the time of writing. 4. Solana (SOL) Solana protocol is developed to offer decentralized app (DApp) development. In fact, the platform offers to improve scalability through a proof-of-history (PoH) consensus together with the underlying proof-of-stake (PoS) blockchain consensus. As per CoinMarketCap, the SOL price is trading at \$181.21 with a 24-hour trading volume of \$6,988,404,490, at the press time. 5. Binance USD (BUSD) Binance USD (BUSD) takes the fifth place in the ranking by volume. Moreover, BUSD is considered the same as stable coin Tether. The platform was launched on Sep 05, 2019. BUSD aims to weld the dollar stability with blockchain technology. As per CoinMarketCap, the BUSD price is at \$1, with a 24-hour trading volume of \$6,949,206,192, at the time of writing.

Despite the tragic market crash in the first half of the year, 2021 could be termed as a year of vast surprises. These surprises are both positive market booms as well as sudden unexpected market crashes! In spite of all this hustle and bustle so far this year, making a name for itself in the crypto industry has become quite a challenge. However, one altcoin has so far made remarkable progress throughout the entire year. Many speculate that this could be the next Solana (SOL) owing to its rather standard and astonishing progress so far. With such praises is the Algorand (ALGO), which has spiked more than 3 times the previous price in this year alone. ALGO Best Altcoin For 2021 With the whole market collapsing again profusely on September 8th, both Bitcoin (BTC) and Ethereum (ETH) are dwindling down. One altcoin performed rather surprisingly, this took the whole crypto market to awe on September 8th, the following day. This particular altcoin spiked up to 34%, seeking the all-time highest ever since its initial launch in June 2019. Making the hot headlines for the week, this is the Algorand (ALGO). In addition, the altcoin touched \$1.84 in the first quarter of the crypto trade hours on September 8th. In spite of such remarkable shoot-ups, many crypto enthusiasts took this on to various social media claiming it to be the next Solana (SOL). Also, they tend to compare ALGO with SOL as ALGO is performing in the same way as the SOL this year profusely, both touching their all-time high this year. Furthermore, ALGO touched its ATH of \$2.47 just a few hours back from the time of writing. All this makes ALGO the most promising altcoin for the year 2021. A Sneak-Peek Into Algorand (ALGO) Algorand is a completely decentralized blockchain-based network platform launched in the year 2019. In addition, it offers profuse support to numerous applications. Also, the blockchain-based services of Algorand are secure, efficient, and more scalable comparatively. Moreover, within just a year the Algorand platform witnessed more than 1 million transactions upon the platform network in just a single day. The ALGO is the native token of the Algorand platform. Furthermore, the uniqueness of the platform is all due to its extreme transfer speeds, efficiency, and low transaction fees too. Also, itâ€™s a no-mining platform with a completely permissionless proof-of-stake blockchain protocol.

Numerous blockchains remove Ethereum from its positions as the top leading network for Decentralized Apps, NFTs, and DeFi. Algorand is also amongst them, and it is the native ALGO currency that is now amongst the Solana-like price surge. According to the reports, the price of the ALGO has reached a high of \$2.44 according to CoinMarketCap. Before reaching its current price, the ALGO price was \$1.20, according to the one seen on Tuesday during a market-wide morning flash crash. It is the first time since the launch of Algorand that the price has gone this high. ALGO vs. Solana Algorand was launched in 2019. According to the data, the all-time high price of ALGO is 3.58\$. After that, the price fell to \$1.10, the level and stayed in that range until recently. The price has hiked up to 35% over the last 24 hours alone. Algorand is more beneficial than Solana as it is supported on various platforms, such as SaaS, iPad, iPhone, Android, whereas Solana is supported only on SaaS. ALGOâ€™s core technology is built to support and incorporate all kinds of financial futures, including Non-Fungible Tokens, or NFTs. In a new age, NFTs will provide the long-term benefit of digital assets. NFTs will bring in the long-term benefit of digital assets in a new era. Central Banks are also in their research as they want to host their Central Bank digital currency. In short, it is also known as CBDCs, Algorand is the viable option, and it has been chosen to host the Marshall Islands.

There are countless cryptocurrencies that are coming out every now and then. We all have heard about the Dogecoin going to the moon. It has not been trending since then. Other than Dogecoin, here are the top 3 crypto tokens that are now trending in the world of cryptocurrencies. Fantom (FTM) It is a decentralized, open-source, and permissionless smart contract platform for Dapps or Decentralized Applications and digital assets. It is amongst the many blockchain networks that are built to serve as an alternative to Ethereum. The Fantom Blockchain went live in December 2019. The network architecture is designed to provide a viable solution to the blockchain trilemma by offering a steady security, scalability, and decentralization balance. With its in-house token FTM, it aims to solve issues associated with smart-contract platforms, specifically transaction speed. The developers claim that they have reduced the speed by 2 seconds. Currently, the price of FTM is \$1.52, with a 24-hour trading volume of \$981,629,051 USD according to CoinMarketCap. Kalata (KALA) A DeFi platform supported by the peer-to-peer engine where you can trade virtually any asset, regardless of whether a stock, commodity, or any derivatives. The system will read in stocks, commodities, and asset prices through a decentralized price. The Kalata price today is \$0.398371 USD with a 24-hour trading volume of \$2,225,050 USD as per CoinMarketCap. Solana (SOL) Solana is believed to be the fastest-growing blockchain network in the cryptocurrency world. It has a block time of 400 milliseconds and transaction fees of fewer than 0.01 Dollars. The token is a virtual denomination of a cryptocurrency. In short, known as SOL. Moreover, it has got to the 7th spot amongst the worldâ€™s top 10 largest virtual coins. This token can be the potential long-term rival of Ethereum. The Solana price today is \$175.36 USD with a 24-hour trading volume of \$7,971,303,609 USD as per CoinMarketCap.

- Top performing crypto of the week includes FTM, NEAR, SOL. - Fantom is described as a directed acyclic graph (DAG) smart contract platform. Despite the crypto marketâ€™s price drop this week, there are few crypto that show bullish performance over the past week. Altcoins donâ€™t care about Bitcoin today. â€”Ran Neuner (@cryptomanfan) September 9, 2021 1. Fantom (FTM) Fantom is described as a directed acyclic graph (DAG) smart contract platform that offers decentralized finance (DeFi) service to developers utilizing its own bespoke consensus methodology. More so, along with its in-house token FTM, Fantom aims on solving issues associated with smart-contract platforms. In addition, this mainly focuses on transaction speed, which developers explain that they have decreased to under two seconds. Notably, the Fantom Foundation that looks at the Fantom product offering is originally developed in 2018, with the development of OPERA, Fantomâ€™s mainnet on Dec 2019. As per CoinMarketCap, the FTM price trades at \$1.90 with a 24-hour trading volume of \$2,182,790,766, at the press time. The price of FTM spikes over 110% in a week. 2. NEAR Protocol (NEAR) NEAR Protocol is a decentralized app platform which is developed to create apps which are usable on the web. Moreover, the platform runs on a Proof-of-Stake (PoS) consensus methodology known as Nightshade which focuses on providing scalability and stable fees. According to CoinMarketCap, the NEAR price trades at \$11.36 with a 24-hour trading volume of \$2,191,574,295, at the time of writing. The price of NEAR surged over 100% in the last 7 days. 3. Solana (SOL) Solana is a highly working open-source platform that works on blockchain technologyâ€™s permissionless nature to offer decentralized finance (DeFi) solutions. Moreover, the idea and initial work on the project starts in 2017, Solana was officially developed in March 2020 by the Solana Foundation with its headquarter in Geneva, Switzerland. The price of Solana shows a bullish trend in the last few days. More so, the project focuses on improving scalability by introducing a proof-of-history (PoH) consensus together with the underlying proof-of-stake (PoS) blockchain consensus. As per CoinMarketCap, the SOL price is trading at \$210.75, at the press time. The price of Solana rose over 75% in the last 7 days. Cardano (ADA) needs no further introduction I hope so, being the third in line to the overall cryptocurrency rankings next to Ethereum (ETH). The Cardano (ADA) has evolved itself all thanks to its profuse blockchain protocol platform. In terms of its efficiency and ability to support almost all sorts of blockchain attributes upon its platform, Cardano is just one step away from beating the Ethereum blockchain. In spite of all this, the much awaited Cardano smart contract launch, the â€”Plutusâ€” on its mainnet is finally here! The launch of Plutus This yearâ€™s most anticipated smart contract launch is the Cardano smart contract launch. Ever since the announcement of the news and rumorsâ€” regarding it, the whole crypto industry has been looking forward impatiently for any updates regarding its launch. Accordingly, the Input-Output Global (IOG) under which the Cardano blockchain platform comes, finally brought out the news a few hours back. In spite of this, the IOG announced it officially through a tweet upon its official Twitter page. In addition, upon the tweet, IOG reveals that the much anticipated Cardano smart contract launch will take place on September 12, 2021. Also, the Cardano smart contract will be completely upon Cardanoâ€™s own blockchain platform. Moreover, this is the third avatar and third evolution update for the Cardano blockchain platform in establishing even more epic smart contracts. This hard fork is termed as the â€”Alonzoâ€”. Besides, the IOG terms this Alonzo hard fork combinator as the most revolutionary upgrade with well-established concrete foundations for providing smart contracts based on Cardano. In addition, the â€”Plutusâ€” will be the first Cardano smart contract on the Alonzo HFC. The launch of Cardanoâ€™s very own smart contract platform with its latest upgraded Alonzo HFC, has triggered attention for the whole crypto industry eyeing on it. Speculations on â€”Plutusâ€” As much as the wait for the Plutus was eager, equally certain speculators started taking on Plutus defaming it technically. Accordingly, many crypto analysts speculate that Cardano will not be able to withstand such transactions which take place commonly on all smart contracts. In spite of this, many crypto enthusiasts took such views on most of the social medias profusely. On the

other hand, the founder of Cardano, Charles Hopkins justifies that the Plutus will not be as per the speculations. Also, he adds such negative criticisms will not affect the Plutus. And so, Plutus will be the solid answer against all such rumors and speculations raised on it, fights back Charles Hopkins. Moreover, the IOG also defends terming and pointing out the positives of its latest blockchain platform, the Uppspent Transactions Output (UTxO).

In recent weeks, the entire crypto market is bullish resulting in a price rise for all the digital assets. Ethereum which is the second largest digital asset is now buzzing into the ears of all investors through its price surge. Thus, ETH holders are very excited and believe it is a valuable asset in the near future. On September 3rd, the value of Ethereum skyrocketed nearly to \$4000 and thereby maintaining its standard till today. Thus, Ethereum performance in the crypto market attracts large users making them predict that ETH can exceed BTC. Through this ETH is gaining more popularity with its innovative developments in the marketplace. Three Eminent Reasons for ETH Surge One of the main reasons for Ethereum to be the recent trend is because of the Non-fungible tokens (NFTs). The unique specialty of Ethereum is its open source blockchain system which works as a platform for other crypto assets as well. Many creative NFTs are based on ETH blockchain technology. As a real example, the CEO of Tron Justin Sun shared his purchase of expensive artworks for a massive amount of \$2M. The beautiful masterpieces were owned by Sun for the NFT allocation over \$30 million. Along with this, in mid August, NFT CyberKongz burned 1,240 ETH in just 5 hours which recorded the highest ETH burning fees. So, NFTs are a valuable asset for Ethereum price rise as it increases both its transaction fees and gas prices. The second important reason is the launch of the Ethereum 2.0 token burns, hard fork, and an upgrade to its users worldwide. More so, the ecosystem secure and healthy for everyone. According to CoinMarketCap, the current HONEYPAD price is \$9.61e-9 USD. Based Gold (BGLD) Bloom, a community-owned project, is represented by the money \$BLGD. Moreover, Bloom is a free text-based building block project. The Bloom Global Development Fund, created to oversee the economics of Bloom initiatives (BLGD). Also, it was available as a free claim for Bloom holders. Based Gold has a current price of \$0.521884 USD, a 24-hour trading volume of \$42,663,332 USD, and a maximum supply of 80,000,000 BGLD coins, according to CoinMarketCap. GLYPH Vault (NFTX) GLYPH Vault is an ERC-20 vault token that represents NFT assets in an NFTX vault. Using vault tokens, NFTX may create liquid markets for illiquid Non-Fungible Tokens (NFTs). Poloniex is presently the most popular cryptocurrency exchange for trading GLYPH Vault (NFTX). Current prices are \$2.082,865, with a 24-hour trading volume of \$135,164 and a maximum quantity of 8.00000000 GLYPH coins available to buy, according to CoinMarketCap.

Cryptocurrencies are raining for investors to play with and we are not talking about Cardano or Solana. Thus, the first half of 2021 proved an addition to the number of new cryptos on the crypto-tracking platforms and crypto-related data aggregations. For example, in H1 2021 CoinMarketCap added 2,655 additional crypto assets to its database from 2,000 currencies in 2018 to 10,810 coins, according to CoinDesk. In contrast, just 1,538 coins, added on average for the six months of 2019 and 2020. Lets, take a peek at CoinMarketCap's three newly added crypto. HONEYPAD (\$HONEY) An innovative use-case token with cutting-edge features and the potential to serve as an umbrella brand for several different use-cases. Moreover, token holders who use HoneyPad get auto-BNB payouts from transaction taxes. Also, are shielded from big sell-offs by the unique Honeylock function. Furthermore, aiming to make the bitcoin market more efficient and secure for the consumers, the launch of HoneyPad The bees are preferred hive! With no launch fees, token burns, hard fork, and a revolutionary buy-back mechanism help keep the ecosystem secure and healthy for everyone. According to CoinMarketCap, the current HONEYPAD price is \$9.61e-9 USD. Based Gold (BGLD) Bloom, a community-owned project, is represented by the money \$BLGD. Moreover, Bloom is a free text-based building block project. The Bloom Global Development Fund, created to oversee the economics of Bloom initiatives (BLGD). Also, it was available as a free claim for Bloom holders. Based Gold has a current price of \$0.521884 USD, a 24-hour trading volume of \$42,663,332 USD, and a maximum supply of 80,000,000 BGLD coins, according to CoinMarketCap. GLYPH Vault (NFTX) GLYPH Vault is an ERC-20 vault token that represents NFT assets in an NFTX vault. Using vault tokens, NFTX may create liquid markets for illiquid Non-Fungible Tokens (NFTs). Poloniex is presently the most popular cryptocurrency exchange for trading GLYPH Vault (NFTX). Current prices are \$2.082,865, with a 24-hour trading volume of \$135,164 and a maximum quantity of 8.00000000 GLYPH coins available to buy, according to CoinMarketCap.

- Ethereum (ETH) hits \$4,000 for the first time since May. - Ether has massively outperformed Bitcoin (BTC) this year. - Reese Witherspoon has tweeted that she had invested in Ether. On September 3, 2021, Ethereum (ETH) hits \$4,000 for the first time since May, and the price seems to be at a 3 month high. Against month-to-date gains of \$600, Ether regained the historic level, nearly three months ago ETH had lost in the dramatic trend reversal that stunned the crypto market. Accordingly, yesterday Ether broke out of its three-month trading level, with \$4,025, eventually only \$350 is way from all-time highs. Ether has massively outperformed Bitcoin (BTC) this year, rising fivefold in price and pushing its market capitalization to about \$465 billion. According to its weekly performance Ether secured third place out of the top 10 cryptocurrencies by market capitalization, behind Solana's SOL and Polkadot's DOT tokens. At the time of writing ETH holds the 2nd position on CoinMarketCap, ETH price is trading at \$3,918.01 with the 24-hour trading volume of \$24,728,282,445. Ethereum (ETH) has increased 3.06% in the last 24 hours. Moreover, Ether's successes have delighted the traders, but the move has also delivered some murmurs from critics. Went to send somebody \$100 in USD to an ERC-20 address. The Wolf of All Streets (@scottmelker) September 2, 2021 Gas fee \$84. Seems sustainable! Furthermore, the Ethereum gas fees still annoying the traders, there was a sense of difference as ven the actress, Reese Witherspoon has tweeted that she had invested in Ether. Welcome aboard Reese! 0YwD5e https://t.co/1crjCmi1Nv Tyler Winklevoss (@tyler) September 2, 2021 On a note, the opinions approached that the last months of 2021 may deliver the rush to the finish of 2013 and 2017. More so, the popular Twitter account Lark Davis mentioned, "Regardless of when exactly it comes the next few months will probably be insane beyond what most of you can imagine but also one day during all that mania the music will stop."

As simple as it seems, the reach of cryptocurrencies around the world is astonishing. The count of investors is growing day-by-day and investments are in multiple terms. Significantly, the enhancements in the crypto industry are expanding at a rapid pace. Integrating new technology into the platform has become an additive feature which grabs the attention of investors to invest on their native coins. The market is witnessing an enormous amount of crypto-assets, with new coins being introduced every week. Furthermore, adding tokens to the list has become a regular occurrence, and each ecosystem takes steps to expand their developments. Solanium is a decentralized platform built on the Solana blockchain. The platform will bring to the Solana ecosystem decentralized fundraising, time-weighted token staking, and governance voting. A DEX UI, staking, wallet management, governance, and a launchpad are all part of the platform. Users can receive xSLIM by staking SLIM tokens. Current Market Status At the time of writing, the trading price is \$2.71 with a trading volume of \$7,150,363 in the past 24-hours. According to Cointageco, SLIM has surged to 251% within a week and it holds 390th rank. Moreover, the current circulating supply of SLIM coins is 46,000,000. The chart depicts the bullish trend over the past week. With the 30-day statistics, the chart displays that price has surged to 559% and with the 14-day chart, the price has risen to 258%. The top exchanges that trade SLIM are ZT, Gate.io, Raydium, MEXC, and Serum DEX. Phantom into Solanium On August 31, Solanium integrated Phantom wallet which is built for DeFi and NFTs. It is a friendly Solana wallet with great support for NFTs. Following the integration of Phantom wallet, the DeFi and NFT users would have risen in numbers. A wallet for DeFi and NFT in a trustable platform is a sweet spot for users. Considering the recent updates, the integration of Phantom wallet into Solanium might be the reason for the price surge of SLIM. However, users are expecting more price highs following the developments in the system. It would be a piece of cake for users with ongoing advancements. Significantly, investors anticipate additional hikes in the future. Recommended for You

If Bitcoin were listed on the New York Stock Exchange (NYSE), the 7th biggest market capitalization would be in place. However, the oldest cryptocurrency in the world is not the only one that gives conventional inventories competition. Furthermore, taken combined, the top 9 cryptocurrencies are worth more than \$1.2 trillion. Moreover, Ether, Cardano, Ripple XRP, amongst the top 10 popular cryptocurrencies. Specific currencies, trade-in more significant quantities on any day. But these currencies are typically in the top 9 of their overall market capitalization. Tether (USDT) USDT is a stablecoin that replicates the U.S. dollar price issued by Tether, a Hong Kong corporation. Tether, meant to be attached to the dollar. Whereas, other cryptocurrencies frequently vary in value. The price of Tether is usually \$1. This is not always the case, though, and tether fluctuations have frightened investors in the past. According to CoinMarketCap, the price for Tether today is US\$1.00, and the trading volume is US\$85,514,982,340. Bitcoin (BTC) It is the first decentralized cryptocurrency to acquire a follow-up and become big enough to produce selected scenarios utilized as an online means of exchange. Bitcoin still dominates the portfolio and gets the news, helping to boost the awareness of other cryptocurrencies. According to CoinMarketCap, the current Bitcoin price is \$49,655.39 with \$39,273,756,818 US\$ in 24 hour trading volume. Ethereum (ETH) Not just a currency, Ethereum uses the blockchain to allow additional crypto-applications. As Capgemini consultancy has stated, it serves as a framework for "intelligent contracts" that improve financial governance. Additional crypto "tokens" are based on existing Blockchains such as Tether (USDT) and Binance Coin maintain a high profile and are based on Ethereum technology. According to CoinMarketCap, the price of Ethereum today is US\$3,761.32, with a 24-hour volume of trading of US\$30,278,123,221. Ethereum Classic (ETC) Ethereum Classic (ETC), an Ethereum hard fork released in July 2016. Its primary purpose is to host and facilitate decentralized applications (Dapps) as a smart contract network. Its original token is ETC. Since its inception, Ethereum Classic has tried to distinguish itself from Ethereum, with the technological route map of the two networks separating over time. According to CoinMarketCap, the current price of Ethereum Classic is \$67.94, with a 24-hour trading volume of \$5,885,779,706 USD. Cardano (ADA) Cardano, considered the "environmentally friendly" cryptocurrency as it tries to avoid the energy-intensive elements of the Bitcoin mining process. It is the first significant cryptocurrency based on the Proof-of-Stake concept. This approach implies that every one of the 3,472,297,880 ADA coins is backed by the Cardano price. According to CoinMarketCap, the current Cardano price is \$3.89 USD, with a trading volume of \$31,331,237,880 ADA coins. Binance (BNB) Binance is a cryptocurrency issued by Binance, a today's Cardano price is \$3.89 USD. It is approved and governed by the National Financial Department (NYDFS) of New York. Moreover, the BUSD Monthly Audit report can be accessed from the official website. Stablecoin plays a significant role in transactions, payments, settlements, and decentralized finance, based on price stability (DeFi). According to CoinMarketCap, the price of Binance USD today is US\$0.999 with a 24-hour trading volume of US\$5,759,226,862. XRP (XRP) Ripple is the blockchain network name, while XRP is the currency name. It is one of the largest cryptocurrencies on the market. Moreover, scrutinized by the SEC because of its effect on fiat currencies. The ongoing lawsuit will decide whether XRP under U.S. Securities Law is an investment agreement and, therefore, security. The decision may also establish the precedent for how XRP is handled elsewhere in the globe. According to CoinMarketCap, today's XRP price is US\$1.25, with a trading volume of \$5,128,921,471 over 24 hours. Solana (SOL) Solana, designed for decentralized financing solutions (DeFi) operating on top of its blockchain. Furthermore, its integration with tokens from other networks enhances the app developers' appeal. Unlike other blockchains, which utilize either Proof-of-Stake or Proof-of-Work to authenticate transactions, Solana is important as to employ Proof-of-History consensus where every computer processes and agrees on the sequence of occurrences. According to CoinMarketCap, the price of Solana today is USD \$112.00 with a 24-hour volume of \$3,736,756,365 dollars. Coin USD (USDC) USD Coin (known as its USDC ticker), a stablecoin attached on a 1:1 basis to the U.S. dollar. Moreover, each unit of this outstanding cryptocurrency, backed by \$1 in reserve in a mixture of cash and short-term U.S. Treasury bonds. The consortium behind this product states that approved financial institutions issue USDC. Overall, the objective, to establish an environment where USDC acceptance increased, often by wallets, merchants, service providers, and Dapps. According to CoinMarketCap, the price of USD Coin is \$0.998 USD today, with a trading volume of \$3,239,284,172 USD over 24 hours. Recommended for You

AscendEX, a global digital asset trading platform with a comprehensive product suite, is thrilled to announce the listing of the Only1 token (LIKE) under the pair USDT/LIKE on Sept 2 at 1 p.m. UTC. In celebration of the LIKE listing, AscendEX and the Only1 team will jointly launch four limited-time promotional events, taking place between Sept 2, 1:00 a.m. and Sept 9, 12 a.m. UTC, offering pooled rewards worth up to 90,000 USDT! Only1 is the first NFT-powered social media platform built on Solana. They aim to target social media users who want to feel more connected with content creators and creators who want to monetize their content more directly. Only1 has created solutions for these user types through two innovative NFT applications, Genesis-NFT and Content-NFT, both of which provide users the ability to earn rewards for holding them. Only1 encourages social engagement by providing opportunities for asset holders to earn income while creators share content and fans engage with it. Each onboarded creator can mint one Genesis-NFT. Each content creator will have their own staking pool that produces LIKE tokens that are distributed to staking users, the creator, and the Genesis-NFT owner. Users can stake tokens in creator staking pools with APYs that correlate to the creator's platform activity. The APY calculation algorithm is continually updated to optimize for maximum social engagement and fair rewards distribution for all

users. When calculating the APY, the algorithm considers metrics such as daily logins, frequency of posting content, DM responses, fan engagement, and NFT minting activity. Creators can post exclusive content in the form of NFTs (Content-NFTs) that users can trade on the Only1 marketplace. Content-NFTs are available for purchase and are unlockable, meaning a user can buy the Content-NFT to own the content, and other users can pay a small unlocking fee to view the content. The unlock fees are then distributed to the creator and the Content-NFT owner. LIKE tokens are the native token of the Only1 platform and can be used for staking in creator staking pools, minting NFTs, and trading NFTs on Only1's marketplace, unlocking content, and as a governance token for the protocol. It is also the token used to reward staking users and NFT holders. Additionally, there is a token burn mechanism built into every transaction that contributes to the overall price of the LIKE token. AscendEX is committed to and supportive of the NFT community and has listed 11 NFT projects thus far including. By providing a platform to list NFT-based tokens, AscendEX has empowered its community to get more actively involved with NFT projects like Only1. About AscendEX AscendEX is a global cryptocurrency financial platform with a comprehensive product suite including spot, margin, and futures trading, wallet services, and staking support for over 150 blockchain projects such as Bitcoin, ether, and Rippie. Launched in 2018, AscendEX services over 1 million retail and institutional clients globally with a highly liquid trading platform and secure custody solutions. AscendEX has emerged as a leading platform by ROI on its initial exchange offerings by supporting some of the industry's most innovative projects from the DeFi ecosystem such as Thorchain, xDai Stake, and Serum. AscendEX users receive exclusive access to token airdrops and the ability to purchase tokens at the earliest possible stage. To learn more about how AscendEX is leveraging best practices from both Wall Street and the cryptocurrency ecosystem to bring the best altcoins to its users, please visit www.AscendEX.com. An altcoin is a term used to define or refer to any non-bitcoin cryptocurrency. Nowadays, we wonder how many altcoins exist, but the precise number is impossible to estimate due to the huge amount of tokens produced regularly to finance different activities and projects. Furthermore, blockchain organizations, which are often obliged to utilize their services, generate their cryptocurrency tokens. Also, if a platform provides value and people want to use it, they must purchase their token, which will increase the price of the asset. Let's look at the top five altcoins of the past 24 hours today. Celo (CELO) Celo is an ecosystem blockchain aimed at boosting the use of cryptocurrencies among smartphone users. Thus, by utilizing public telephone lines, Celo aims to expose billions of smartphone users worldwide to bitcoin transactions, even those with no access to banks. Moreover, the network also enables intelligent and decentralized contracts (Dapps) in the decentralized finance (DeFi). The platform consists of two indigenous tokens. CELO is a proof of stake (PoS) token used for transaction charges, participation in governance, and related activities. Moreover, in the future, the platform intends to host several stablecoins, with one currently in operation, the Celo Dollar (CUSD). According to CoinMarketCap, the current price of Celo today is \$5.69 USD, and a trading volume of \$891,352,140 USD is 24 hours. In the past 24 hours, Celo has fallen by 25.80 percent. Arweave (AR) Arweave, a decentralized storage network aimed at providing a platform for indefinite data storage. The network mainly has the PermaWeb - a permanent, decentralized Internet, with many community-driven applications and services. Furthermore, the Arweave network utilizes an indigenous cryptocurrency AR to pay seeding, seed, and retain information forever. According to CoinMarketCap, the Live Arweave price is US\$66.02, with a trading volume over 24 hours of US\$692,890,706. In the past 24 hours, Arweave is up 14.99 percent. Harmony (ONE) Harmony is a blockchain platform for decentralized application development and use (Dapps). The network, designed to revolutionize decentralized apps' operation by concentrating on random state sharing that enables blocks creation in seconds. Harmony should create cross-shard agreements and cross-chain infrastructure by the end of 2021. The mainnet of Harmony seeks to reinvent block generation to focus on processing speed and validity. By implementing the sharding method, the business substantially decreased node validation times. According to CoinMarketCap, the live price for Harmony today is US\$0.117940 for a 24-hour volume of trade of \$385,579,732. Furthermore, over the past 24 hours, Harmony is up 0.16 percent. Fantom (FTM) Fantom, a smart contract-directed acyclic graph (DAG) platform that provides developers with decentralized financing (DeFi) services utilizing their specific consensus algorithms. In conjunction with its FTM token in-house, Fantom hopes to resolve smart contract platform issues, particularly transaction speed, which developers claim they have lowered to under 2 seconds. According to CoinMarketCap, the live price of Fantom today is US\$0.738615, with a 24-hour volume of sales of US\$695,676,004. Moreover, in the past 24 hours, Fantom is down 16.12 percent. Solana (SOL) Solana is a fully functional open-source project that uses blockchain technology's permissionless nature to offer decentralized financial (DeFi) solutions. The Solana protocol, intended to enable the development of a decentralized app. Also, it attempts to increase scalability by establishing a proof-of-history (PoH) consensus in conjunction with the blockchain's underlying proof-of-stake consensus (PoS). Solana appeals to both small-time and institutional traders because of its unique hybrid consensus methodology. According to CoinMarketCap, Solana today, priced at 109.47 dollars with a volume of 24-hour trading of 7,117,230,872 dollars. Moreover, the price of SOL has risen by 2.8 percent in the past 24 hours. It has 290 million SOL coins in circulation and a total supply of 489 million.

During the past 24 hours, markets have been falling, headed by Polkadot (down 9%), Dogecoin (down 8%), Binance Coin (6%) and Cardano (down 4 percent). The entire market value for cryptography has fallen by about \$90 billion from yesterday (4 percent). The remainder of the top 10 is also red, indicating that the market movement cannot be based on any specific development from a few coins or tokens. Instead, it is just a short-term market correction in financial terms. After a double-digit percentage gain from most of the significant cryptocurrencies last month. The markets seem considerably more optimistic than anytime else in August. For its 12 September implementation of smart contracts, Cardano has anticipated a price rise of 121% from 25 July. In the past month, Dogecoin bounced back over 50%. Promptly saying that the Dogecoin Foundation brought the band back together. With the assistance of Vitalik Buterin and Elon Musk's adviser Jared Birchall. Solana on the Rise In addition, Solana is developing success with its DeFi products, decentralized funding apps. Which eliminate the intermediaries for transactions, such as loans and asset exchanges. Over \$2 billion in money is currently being circulated via Solana DeFi protocols. And this week the token of SOL has reached an all-time high of \$80. But most market activity is linked to Bitcoin and Ethereum, the crypto-reserve currency. The former received \$50,000 monetarily in three months. While long-term investors continue to sit down and limit supply this week. According to Glassnode, transaction counts and volumes have lately been slow. As for Ethereum, the increased demand for NFTs has been boosted by based on blockchain that reflects ownership of digital goods such as art, collectables and, uh, rocks. Yesterday was a golden day for non-fungible tokens, a month that had already been high selling. NFT marketplace OpenSea achieved a 24-hour record sales volume of \$195 million. Which was \$90 million on the previous day. Recommended for You

The cryptocurrencies are showing bullish signs. Top most mentioned crypto includes Bitcoin, Solana, Ethereum, VeChain, Dogecoin, Cardano, Alchemy Pay, KuCoin token, XRP, Avalanche. The digital assets show bullish signals. Moreover, Twitter receives a great deal of power. This makes the price get influenced by huge rallies and sensational drops. We all know that Bitcoin was struggling to reach \$30,000 during the market crackdown. However, it managed to break through the heavy resistance level and begin to recover from its bearish state. BTC has been showing only upward momentum since May, and it has been trading above the \$40K mark for the past month. Significantly, Bitcoin has risen to a high level and tapped the \$50,000 zone now which seems to be the current interesting part of the crypto market. Besides, the largest cryptocurrency in the industry has a total market capitalization of \$943 Billion. The chart clearly depicts the upward trend after the crackdown in May. Long-term holders and institutional investors fueled their BTC holdings while prices remained low, according to on-chain metrics. Following its low track of \$30,000 level, BTC has gained momentum along with a series of highs and lows. Crypto Capitalization Hits \$2 Trillion The crypto market seems to witness larger capitalization this month since its fall in May. Currently, the total cryptocurrency market-capitalization is roughly \$2.2 Trillion whereas Bitcoin's capitalization alone turns out to be \$943 Billion. According to the Fear & Greed Index, Bitcoin's sentiment has flipped from "extreme fear" to "extreme greed" within one month. On the contrary, the total market-cap in the bearish month of July was below \$1.3 Trillion but now the market has recovered. However, after the bullish catalyst for Bitcoin, other altcoins also followed Bitcoin's suit. From the start of this month, BTC's price has surged while other altcoin's prices also have witnessed highs. At the time of writing, 7-day statistics show that Bitcoin is up 6.4% whereas Cardano (ADA), Polkadot (DOT), and Solana (SOL) each have double-digit weekly gains. Recommended for You

Blockchain TradeTech company, XREX, has raised over \$17 million in a funding round led by investment firm CDIB Capital Group (CCG) and many big-name investors. Moreover, the pre-Series A round, oversubscribed by 200%. According to Wayne Huang, co-founder, and CEO of XREX, the reason behind the decision of XREX to run its round as a pre-series A is they felt they hadn't raised enough revenue. Accordingly, Wayne Huang stated, "Originally we were targeting only \$5 million to \$8 million, which would give us enough of a buffer to cushion any COVID-caused uncertainty and to have enough revenue to do a Series A." Furthermore, the blockchain TradeTech company XREX has actively collaborated with local regulators and financial institutions to launch BitCheck and MyXchange and other tools to help businesses and small and medium enterprises in emerging markets and swap into dollars to reduce foreign exchange losses. Henceforth, a pre-Series A funding round allows companies to evaluate investor interest in the interim between the seed funding round and the Series A. The fund will be utilized to expand the firm's fiat currency portfolio, integrating additional licenses and furthering partnerships with financial institutions and digital wallet providers. Of note, the other investors included SBI Holdings subsidiary SBI Investment, Global Founders Capital, ThreeD Capital, E.Sun Venture Capital Systex Corporation, Metaplant Holdings, Appworks, Black Marble, New Economy Ventures, and Seraph Group. Hence more, XREX disclosed that it would also launch a user reputation index next year to enhance transactions security, transparency, and accountability. XREX has become one of the most secure encrypted fiat currency platforms.

- There are top 3 micro-cap tokens to get rich by August/September. - Top micro-cap tokens include Handshake (HNS), Torum (XTM), Saber (SBR). Right now, we could see the bull run entering the crypto market. In order to take advantage of a bull market is to invest into some micro cap gems; these are coins that have a very small micro cap. More so, they have the potential to surge tremendously although they are more risky. TOP 3 Micro-Cap Tokens to Get Rich Soon There are various crypto assets that are performing in the market. Let's look into the top 3 micro-cap token to get rich by August/September. 1. Handshake (HNS) Handshake is possibly solving a trillion dollar problem and that is decentralized DNS. In case you don't understand, internet websites are things such as com all these names right here are stored on a centralized DNS server. They have one pretty much for each sector of the earth. Moreover, Handshake aims to be that but in a decentralized manner. In fact, weave is essentially the storage backbone of the web 3. Similarly, Handshake could potentially be the DNS part of that web 3. More so, this is a much needed thing to happen so you can see right here decentralized naming and certificate authority an experimental peer-to-peer route naming system so the internet as you know it right now is actually not very decentralized it is completely centralized as a centralized beings essentially you hold you know handshake.org.com google.com that is all in a centralized DNS server. According to CoinMarketCap, the Handshake (HNS) price is trading at \$0.3017 with a 24-hour trading volume of \$770,847, at the time of writing. 2. Torum (XTM) Torum is the world's first DeFi plus Non-Fungible Token (NFT) social media platform that is specifically developed for crypto users. Moreover, it is essentially Twitter but for the crypto space and now they already have around 83 000 crypto users on their platform already and it is growing every day. Basically their philosophy is that a crypto-centric social media platform is needed. This indicates that people use things like Twitter, Telegram, Discord to connect with other crypto users, however it is not specifically tailored to crypto users. However, Torum aims to utilize these social media tools to develop a strong crypto tailored social media sites. The project can help for new project launches and reach a wider audience. Users can do Torum airdrops, Torum NFT launch pads, and many more. 3. Saber (SBR) StableSwap is described as the first automated market maker which is optimized for trading pegged virtual currency on Solana. Moreover, our protocol allows Solana users and applications to trade between stable pairs of assets efficiently, and also earn yields by offering liquidity to the platform. Moreover, based on the use case users might require a specific stablecoin. Let us say for example, the lending rate for USDT might be more than the USDC they were presently holding. More so, users had to exchange between USDT and USDC on traditional AMMs and pay the standard slippage costs. According to CoinMarketCap, the Saber price is trading at \$0.267, with a 24-hour trading volume of \$264,086, at the time of writing. - The crypto assets are showing bullish signs. - Top most mentioned crypto includes Bitcoin, Near, Solana, Ethereum - Cardano, Dogecoin, Tezos, Request, Axie Infinity, XDC Network. The crypto assets are showing bullish signs. Moreover, Twitter gets a huge deal of power. This is the reason the price gets influenced by huge rallies and sensational drops. Notably, the AI calculation generates historical and present economic situations around crypto assets to help crypto trader's decisions. Now, let's look into the top 10 most mentioned crypto token on Twitter. 1. Bitcoin (BTC) Bitcoin, the king of crypto assets, has the highest mention on Twitter. The bull rally of BTC starts from the month of January. According to CoinMarketCap, the BTC price is trading at \$49,261.35, with a 24-hour trading volume of \$41,344,934,986, at the time of writing. 2. Near (NEAR) NEAR Protocol is a decentralized application platform developed to make apps usable on the internet. More so, the network runs on a Proof-of-Stake (PoS) consensus mechanism known as Nightshade, which aims to provide scalability and stable fees. The NEAR price is trading at \$5.48, with a 24-hour trading volume of \$254,307,681, at the press time. 3. Solana (SOL) Solana is an open source high functional project that banks on blockchain technology's permissionless nature to provide decentralized finance (DeFi) solutions. As per CoinMarketCap, the SOL price is trading at \$75.09, with a 24-hour trading volume of \$1,934,101,475, at the time of writing. 4. Ethereum (ETH) Ethereum is the second largest cryptocurrency. It takes the fourth place in the crypto mentions. According to CoinMarketCap data, the ETH price is trading at \$3,281.15, at the time of writing. 5. Cardano (ADA) Cardano (ADA) which is also showing bullish signs in the market, reaching a new ATH of \$2.58. As per CoinMarketCap, the ADA price is trading at \$2.45, with a 24-hour trading volume of \$5,432,308,118, at the press time. 6. Dogecoin (DOGE) Dogecoin (DOGE) which is a meme-crypto token also one of the most mentioned crypto tokens on Twitter. As per CoinMarketCap, the DOGE price is at \$0.322 with a 24-hour trading volume of \$2,859,192,552, at the time of writing. 7. Tezos (XTZ) Tezos is a blockchain network which is based on smart contracts, in a way which is not too dissimilar to Ethereum (REQ) In 2017, from the CoinMarketCap, the Tezos price is trading at \$3.89, with a 24-hour trading volume of \$186,247,956 at the press time. 8. Request Network token. According to CoinMarketCap, the REQ price is trading at \$0.29, with a 24-hour trading volume of \$61,839,328, at the time of writing. 9. Axie Infinity (AXS) Axie Infinity is a blockchain-related trading and battling game which is partially owned and worked by its players. As per CoinMarketCap, the AXS price is trading at \$78.03, with a 24-hour trading volume of \$1,844,172,202, at the time of writing. 10. XDC Network (XDC) XinFin is an enterprise-ready hybrid Blockchain technology firm which is optimized for international trade and finance. According to CoinMarketCap, the XDC price is trading at \$0.1828, at the press time. Recommended for You

In 2021/2022, what is the greatest cryptocurrency to invest in? Set to burst the top altcoins? As the prices of Bitcoin & Ethereum go up, let us talk about the finest cryptos with huge potential! Despite security problems, the market is very enthusiastic about Decentralized Finance (DeFi) coins, which have raised Solana's value to an all-time high during the last few days. Here we have the top 3 Altcoins all set to explode in August 2021. Solana Solana has increased by more than 32 percent. Trading above \$71 in the last 24 hours. That's an all-time high for Solana right now. The market is thus performing. Even with this downtrend, we find occasional outliers where they are outperforming the market. Solana is a fully functioning open-source project which provides decentralized financing (DeFi) solutions based on blockchain technology's permissionless nature. In the last 24 hours, it is up approximately 24 percent trading at \$71.50. It's more than 84 percent in the last week, from 39 dollars to nearly 74 dollars. It's 171% at some time in the previous month. It has a Market Cap of \$21,948,569,384 and trading volume at Volume at \$4,989,418,506 of last 24 hour Terra So the second Altcoin is going to be Terra. The native token of Terra, LUNA, is utilized to maintain the stablecoins prices of the system. In addition, LUNA holders are allowed to propose and vote on ideas for governance proposals. This is up about 13 percent. Very much the same momentum as Solana has had here. So 13 percent higher trade last week at 24.71 dollars, it's up more than 76 percent. In one week, we receive a return of 76 percent. That's something you'll never see in the stock market since stocks don't move fast. The market cap is 11,958,361,189 dollars, and the trading volume is 2,429,545,320 dollars in the past 24 hours. Dot Polka dot, commonly known as Dot, will be the third Altcoin. This is up about 17%, now trading nearly \$27. Polkadot is a multi-chain open-source sharding protocol that allows the transmission of any data or asset, not only tokens, making a wide range of blockchains interoperable. We see this boom continuing exactly as we spoke about the other two currencies. This currency gained 30% last month, 122% lower than the other currencies, but still growing more than 100 percent from the low on 20 July. So, on the one-year graph, it's 895 percent up from lower levels of \$2.90 last August. We had highs here at around \$49, nearly \$50. There is still a lot more potential. It has a Market Cap of \$24,329,490,553 and trading volume at Volume at \$2,688,966,429 of last 24 hour. Recommended for You

- Audius (AUDIO) has surged above 130% within 24 hours. - It is a crypto-powered music streaming and sharing platform. - AUDIO is one among the top gainers of the market in the last 24-hours. - Audius Partners With TikTok. Every day is an on and off for various cryptocurrencies. Some digital assets surge up, while others fall, which appears to be normal in the crypto-market. The majority of the world's population is turning to cryptocurrency, and the industry is advancing faster than ever before. The attention which the crypto market has gained is huge and many institutional investors are focusing on cryptocurrencies rather than stocks and shares. Digital currencies seem to be the future of financial sectors, as a result, other industries are paving the way for digital currencies to be integrated. Similarly, this day is for the Audius, which soars to 130% within 24 hours. The Audius (AUDIO) offers an open network platform governance and artist work security. The platform is built on the Ethereum and Solana blockchains which was founded in 2018 and launched in 2019. The Audius protocol also allows users to earn revenue by staking the platform's native token on hosted services. Current Market Status According to Coinmarketcap, the trading price of Audius (AUDIO) is \$3.95, at the time of writing. The trading volume of \$1,079,502,347 for the past 24 hours and AUDIO has surged to 133.21% within a day. The chart depicts the bullish price over Audius for the past 24 hours. AUDIO has surged from \$1.92 to \$3.95 within a day, which seems like a cakewalk for its users. The currency circulating supply of AUDIO coins is 400,244,277. It is available in top exchanges such as Binance, Tokocrypto, FTX, BitWell, and Hotcoin Global. Audius Partners With TikTok Audius, a blockchain-powered music platform, has announced a first-of-its-kind partnership with TikTok, allowing artists to directly upload sounds in the app. Audius users can now easily share their tracks on TikTok in under a minute. Significantly, Audius is the first music streaming platform that enables sharing directly to TikTok. This feature went live on Monday so that Audius users were able to use this feature from August 16. Considering the recent updates, the new partnership with TikTok might be the reason for the AUDIO price surge. However, the uptrend has provided AUDIO users with a sweet spot. With the developments on their system, users can expect more hikes in price. Besides, Audius is one among the top gainers for the past 24 hours. If this trend continues, AUDIO users will be rewarded handsomely in the near future. Recommended for You

This may be the first time ever since the last crypto market crash that the overall market is on a steady rise including both Bitcoin (BTC) and the altcoins altogether. However, the past week has seen a surge of growth, firm and steady for the altcoins profusely. This corresponds to almost all the altcoins though. In spite of this various market analysts, crypto critics, and investors have put forth their views upon the recent market trend. The Views on BTC's Surge The king of cryptos is now back in action as always though. Spiking up after a tragic downfall is nothing new for Bitcoin (BTC). And that's what defines Bitcoin (BTC) and distinguishes itself from all other altcoins. In spite of this taking the recent trends into account alone, BTC stood at about \$42,754 as the lowest and the price during the first of this week. However, throughout the week BTC struck upwards thrice and finally reached its all-time high for the week of about \$47,833 on Thursday. Likewise, it still maintains at about \$45k to \$48k profusely. Moreover, many speculate that BTC will reach its trademark of \$50K by this month and is further expected to move beyond it. Accordingly, is the chart of BTC revealing its touchdown to the \$50K benchmark soon. In addition, the market value of BTC is now fluctuating standardly between 0.88% to 1.3% rise throughout. Also, the current market price standing of BTC is \$46,826. However, the story gets completely different when taking the past few months into account. On the contrary, the overall chart for BTC has not been seen with a heavy shoot-up, but rather gradual, slow, and steady. On the other hand, the past months witnessed high daily volume trades whereas, the last month things were seen quite flat though. The General Opinions BTC Vs. Altcoins The Co-founder of Easy Crypto, Janine Grainger states that in recent days there are high atrocities of profuse trading happening upon the market with many active users and traders. Also, she says that there has been an overall rise in the trade activities compared to past weeks. Despite all this, during the same time, BTC has yet to gainer as fast. This depicts the fact that the majority of the trade activities account for the altcoins compared to BTC. In addition, Grainer points out the profuse rise of Ethereum (ETH) in comparison to BTC over recent times. Furthermore, the CEO of BCB Group, Oliver Von Landsberg-Sadie states the usual \$60K to \$30K to \$45k trademark flow of BTC wouldn't occur for this year. The CEO further reveals as the market has evolved itself, the BTCs trend will be different for this year. Besides Ethereum (ETH) many other altcoins are performing remarkably well taking the overall daily trade market activity into the account. Accordingly, the daily hot trending altcoins on a daily basis other than the ETH as standard now are joined by Cardano (ADA), Stellar (XLM), and Solana (SOL). On the contrary, it's evident that in recent days many have moved over from BTC to the altcoins, or either many new investors are pouring in for the altcoins rather than on BTC. Recommended for You

- Bitcoin (BTC) reached a multi-month high of almost \$47,000. - Other Altcoins have undergone a severe correction yesterday. - From yesterday's low Market cap has moved up to \$1.860 trillion. Recently increased volatility in the crypto market continued in the last 24 hours after Bitcoin (BTC) reached a multi-month high of almost \$47,000. And other altcoins also faced a price surge in recent days. Accordingly, for the past few days, the price of Bitcoin seems to be a roller-coaster that is it has faced many ups and downs in price. Similarly, on the weekend BTC's price from \$38,000 is raised to \$44,000 but backtracked somewhat on Monday as the Congress vote was supposed to take place. Bitcoin (BTC) falls below \$43,000.

After this fall in price, BTC raised to \$46,500. Again it dived to \$45,000. Also, within few minutes it spiked more than \$46,700. This price has become the highest point since the mid-may crash. As mentioned previously, price of the Bitcoin remains a roller coaster. According to CoinMarketCap, the price of BTC is \$46,025 with a 24-hour trading volume of \$33,831,959,471 at the time of writing. However, BTC spiked to 1.33% in the last 24 hours. Altcoins Price Surge Other Altcoins have undergone a severe correction yesterday after that the trend was reversed. On a 24-hour scale, Ethereum is among the best performers. Furthermore, it dropped from a multi-month high of its own at \$3,200 to just over \$2,900 in a day. But now it jumped to the price of \$3,150. Moreover, the cumulative market capitalization has added only \$100 billion from yesterday's low it has moved up to \$1.860 trillion. Other Altcoins also faced a price surge in recent days. Similarly, Binance Coin (4%) has also recovered some ground and is now remains at \$355. ADA (4%) has roughly \$1.5, Ripple (3%) remains more than \$0.80. Likewise, Bitcoin Cash (BCH), Dogecoin (DOGE), Polkadot (DOT), Solana (SOL), and Chainlink (LINK) have a noted similar raise of similar 5-6% Additionally, Ravencoin leads the trend, it has exploded 40%. Internet Computer (20%), Harmony (17%), Voyager Token (15%), Elrond (12%), Avalanche (12%), SushiSwap (11.5%), Telcoin (11%), and FTX Token (10%). Recommended for You

- Cardano (ADA) price shows a bullish signal. - ADA has a high possibility of overtaking its May all-time high price of \$2.46 soon. Cardano (ADA) price shows a bullish signal. However, it has a high possibility of overtaking its all-time high (ATH) price of \$2.46 soon. Cardano (ADA) Will Overtake \$2.46 Soon According to CoinMarketCap, the ADA is being traded at \$1.48, at the time of writing. The cryptocurrency held the fifth position on CoinMarketCap's crypto-rankings. Currently, ADA is in a bullish state. However, the ADA price is above 50 MA and 200 MA, so it is completely in a bullish state. Notably, RSI remains at 72.48. This shows that ADA's price is in an overbought state. This indicates that traders need to trade carefully, however, major price reversal could take place. The above price chart shows the Ascending Channel Trend pattern of ADA. Moreover, the chart indicates the bullish performance of ADA over the past few days. However, the trend will continue to reach \$2.04 soon, or even it can overtake its May ATH of \$2.46. On the contrary, in case the trend reversed then ADA might fall to \$1.28 indicating a bearish signal. A Quick Overview on Cardano (ADA) ADA, the world's fifth-largest digital asset was launched in 2017. The Hong Kong based blockchain infrastructure firm Input Output (IOHK) developed this platform. More so, the Cardano blockchain is one of the huge that utilized the proof-of-stake (PoS) consensus methodology, which other blockchains like Ethereum are adopting. In addition, Cardano has gone through a series of upgrades. In February 2021, the Mary hard fork upgrade went live which allows users to develop custom crypto assets that include native assets and Non-fungible tokens (NFTs). Furthermore, the date for the Alonzo hard fork is expected to be announced in mid-August. This is explained by Hoskinson in a recent livestream. Added to this, the Smart contracts will allow Cardano to include Dapps and DeFi functionality. All-in-all, these upgrades enable the ADA blockchain to compete in the DeFi space like other altcoins such as Ethereum (ETH), Polkadot (DOT), Binance (BNB), and Solana (SOL). Recommended for You

AscendEX, a global cryptocurrency financial platform with a comprehensive product suite, is excited to announce the Port Finance token (PORT) under the pair USDT/PORT on Aug 9 at 2 p.m. UTC. Port Finance is a money-market, non-custodial liquidity protocol on Solana. They aim to provide a comprehensive suite of lending products, including variable-rate lending, fixed-rate lending, and interest rate swap. Their idea is to take advantage of the growth in size and capability of the Solana network. Port Finance brings interest rate markets to the Solana ecosystem. It leverages the Solana blockchain's high speed and low latency with a product suite that includes variable rate lending, fixed-rate lending, and interest rate swaps. Port Finance takes a three-step approach; they provide a baseline lending protocol similar to Compound and Aave on Ethereum. Secondly, they launch a fixed rate lending protocol that utilizes the Serum order book. And finally, they build out an interest rate swap market that uses the Serum order book. Their focus is on leveraging the technological advancements of the Solana blockchain and the Serum ecosystem to bring lending products to the market that are difficult to implement on Ethereum. By utilizing the Solana blockchain's low latency network, Port Finance will allow the user to borrow more with the same amount of collateral compared to Ethereum products such as Compound and Aave. In the future, they plan to launch fixed-rate borrowing utilizing the Serum order book. This will allow the user to decide on a borrowing rate using a live market instead of a bond curve while also providing a fixed interest rate product. In addition, the native token PORT is utilized as a governance token and to share protocol fees with a buy and burn process. The team is made up of tech and finance veterans with strong technical backgrounds having previously worked at companies such as Google, Facebook, Microsoft, and trading firms. The team met in London while studying Computer Science at Imperial College. The team has also contributed to Solana and Serum open-source code development. About AscendEX AscendEX (formerly BitMax) is a global cryptocurrency financial platform with a comprehensive product suite including spot, margin, and futures trading, wallet services, and staking support for over 150 blockchain projects such as bitcoin, ether, and ripple. Launched in 2018, AscendEX services over 1 million retail and institutional clients globally with a highly liquid trading platform and secure custody solutions. AscendEX has emerged as a leading platform by ROI on its initial exchange offerings as by supporting some of the industry's most innovative projects from the DeFi ecosystem such as Inorchain, Soli Stake, and Serum. AscendEX users receive exclusive access to token airdrops and the ability to purchase tokens at the earliest possible stage. To learn more about how AscendEX is leveraging best practices from both Wall Street and the cryptocurrency ecosystem to bring the best altcoins to its users, please visit www.ascendex.com. For more information and updates, please visit: Website: <https://ascendex.com> Twitter: https://twitter.com/AscendEX_Global Telegram: <https://t.me/AscendEXEnglish> Medium: <https://medium.com/ascendex> About Port Finance Port Finance is a money-market, non-custodial liquidity protocol on Solana. The daily usage of Tether stablecoin USDT decreased at the Ethereum blockchain changed from Asian business hours to European and US market time later in the day, perhaps owing to China's crisis on crypto-monetary trading and the movement of USDT users to other blockchains, according to a recent study. Last year the majority of USDT activity on Ethereum was coordinated worldwide between 2 a.m. and 2 p.m. According to the Coin Metrics blockchain study company report, it was the busiest period between 6 a.m. and 8 a.m. UTC. However, this year's use has been reduced between 2:00 and 6:00 UTC and increased between 15:00 and 20:00 UTC. According to an analysis, the most USDT (-0.1%) activity happened between 2:00 and 14:00 UTC and 6:00 to 8:00 UTC last year. Usage between 2:00 and 6:00 UTC has decreased, whereas use between 15:00 and 20:00 UTC has risen. The chart displays the use of USDT at Ethereum. More extensive trade operations imply darker colors. In 2021, the pattern of use changed somewhat later in the day. Source: Data Pro for Coin Metrics Network Investors may trade cryptocurrency 24 hours a day, seven days a week. Still, local stock market hours can be used as a proxy when traders are active in any given nation. This gives them an extra edge, and traders normally lookout for such high volumes. A variety of factors may have contributed to the USDT's daily usage pattern shifting to Ethereum. Some commercial activity has moved to blockchains with lower transaction fees, such as Tron and Solana. China's Crypto-Mining Ban Additionally, with China's reaffirmation of its crypto-mining prohibition and the start of a crackdown on crypto-mining in May, crypto-miners and investors may have migrated to Asia's USDT operations. However, it is noted that this migration would not account for the swings until May. On Ethereum's DeFi protocols, USDT may also be used as collateral. In contrast, the dollar-linked competitor USDC stablecoin finds maximum use between 14:00 and 22:00 UTC according to American market hours. Bitcoin and ether are dispersed more evenly all day long. - Many crypto-assets with high potential are reaching new highs. - The top three richest crypto projects in 2021 are Solana, Flow and Algorand. - Solana has raised half a billion dollars since the start of 2021. The world is changing in terms of financial sectors. There have been numerous differences, and the adoption of new features has become the norm. Similarly, the world has embraced crypto-assets as a viable investment option. Many cryptocurrencies are now experiencing rapid exponential growth, and more well-known entities are becoming involved in the crypto market. Crypto Space has emerged as a new trend, and it is regarded as the financial system's future. Furthermore, there are massive digital assets with the potential to reach new highs. Now, let's take a look at the top three richest crypto projects with strong potential in 2021. 3 Richest Crypto Projects in 2021 All three crypto projects have recently witnessed an uptrend momentum in their price charts. The top three most valuable crypto projects are SOL, FLOW, and ALGO, all of which have the potential to reach new highs in the future. Algorand (ALGO) The third crypto project on the list is Algorand (ALGO). Like any other crypto projects, Algorand seeks to address the blockchain trilemma of scalability, decentralization, and security. Last month, the Algorand Foundation received a \$100 million grant to fund projects based on the Algorand blockchain. Surprisingly, this funding came from Arrington XRP Capital, a venture capital firm focused on funding projects in and around Ripple's ecosystem. This new funding will assist the Algorand Foundation in weaning itself off its structured selling programme and motivate its early investors to hold rather than sell whenever ALGO rises. According to CoinMarketCap, the trading price of Algorand is \$0.814 with trading volume of \$73,311,244 in the past 24-hours, at the time of writing. The price of ALGO has dropped to 5.01% in a day. Flow (FLOW) The second richest crypto project on the list is Flow (FLOW). Flow was originally intended to be a general-purpose smart contract cryptocurrency, but it appears that Dapper Labs has since embraced its blockchain's obvious NFT bend. The Dapper Zone NBA Topshots was a success, with over 1 million users and over 700 million dollars in NFT sales since its launch. Besides, in March, Dapper received \$350M from a VC firm, professional athletes and also from basketball-obsessed musicians. Since its launch, the supply of the trading volume of \$397,084,653 in the past 24 hours. The price of FLOW has dropped to 2.51% in the past 24 hours. Solana (SOL) Finally, the top one richest crypto project with high potential in 2021 is Solana (SOL). Most of the crypto investors would have not missed to know about Solana, as it is one of the cryptocurrencies having strong potential. It aspires to be a more advanced version of Ethereum, with a focus on decentralized financial applications and protocols. Solana has raised half a billion dollars in funding rounds since the beginning of 2021. It has a grand total of \$521 million; if we include the Solana Foundation, which helped raise funds for Korean expansion in June, the total rises to \$541 million. Solana clearly exhibits a bullish trend, with the price chart exhibiting a strong uptrend with no signs of sloping down. At the time of writing, the trading price of Solana is \$33.68 with the trading volume of \$453,449,384 in the last 24-hours, according to CoinMarketCap. The price of SOL has dropped to 3.88% in the past 24 hours. The craze for the crypto market is never-ending. As days pass by, the crypto industry is gaining more investors and it is noticeable that many youngsters are stepping into the crypto market. Significantly, cryptocurrencies are the new assets, and as investors see more gains, the crypto industry will never lose its luster. Disclaimer: The opinion expressed in this article solely author's. A decentralized application, EthSign is the one that captures signed electronic documents on the Ethereum blockchain. The Singapore-based startup has brought in \$650,000 up in a financing round. It was driven by funding firm Draper Associates. Signing contracts is quite unavoidable with regards to the job, leasing a condo, and other everyday cycles. Yet, consider the possibility that there was an approach to sign archives on a stage like DocuSign, however, in a completely decentralized way. Singapore-based startup EthSign is meant to do precisely that. Today, the startup reported that it brought \$650,000 up in a seed round in June. Driven by beginning phase funding firm Draper Associates, with support from blockchain financial backers including Hashkey Capital and ImToken Ventures. The EthSign group intends to utilize the new funds to develop its 10-man group. By recruiting more developers and legal advisors and also partners with different associations in the marketplace. The e-signing decentralized application is made with Web3 technology. It utilizes decentralized identifiers (DIDs), stockpiling, and smart contracts. To give similar usefulness as a Web2 application on the Ethereum blockchain. As per co-founder Potter Li, more than 200 contracts have been endorsed on the stage by in excess of 500 users. The group has conveyed EthSign on Layer 2 solutions Polygon and Arbitrum. Moreover, it plans to send extra L2s later on in the future. EthSign isn't the lone stage that is attempting to put contracts on the blockchain. OpenSig is another venture that could empower users to sign electronic records without utilizing a third-party outsider. It utilizes the Bitcoin blockchain rather than Ethereum. Notwithstanding, it's as of now just in the proof of idea stage. Automatic Processing Contracts Notwithstanding virtually signing contracts on

Australia's crypto fund manager, Apollo Capital reveals the firm's year-to-date returns since the start of the year with 119% growth. The crypto fund avoids DOGE and DeFi crypto projects. Apollo Capital is a multi- strategy fund which invests in crypto assets. The firm is powering the next generation of computing infrastructure. The investment firm returned 119% this year without involving DeFi and DOGE projects. The Australian crypto hedge fund chooses Ethereum and Bitcoin based crypto projects and manages \$75M under management in just more than a year. Moreover, Bitcoin crypto projects earn 19.96% growth in year-to-date. The financial firm opts for cryptocurrency platforms mainly Ethereum, to avoid the new and emerging projects. Additionally, Apollo Capital verifies the blockchain platforms it invests with the help of external experts. They also cross-check the crypto teams to be highly programmed and well versed. Drawbacks of DeFi and DOGE projects Notably, the company is not ready to work with decentralized finance (DeFi) and the DOGE coins. Recently, WhaleFarm, a DeFi project, traded above \$200 on crypto exchange which wiped its worth close to zero within 2 days. So it is the easy come and easy go DeFi project in the market. More so, Mark Cuban says he got hit by losing his money trading a DeFi token called Titan. The investment in the token made him lose 60 USD which crashes to zero in one day. The company also adds, it's better to avoid meme coins as they are unstable and have zero actual utility. Therefore these pitfalls in DeFi and DOGE are the reasons why the investment firm is not ready to deal. And avoids these newer crypto projects as they are not strong in the crypto industry. Thus, Australia's leading crypto asset firm Apollo Capital feels Bitcoin and Ethereum will become the keys to open the success in the crypto fund market. It also prefers cryptocurrencies like Polkadot, Polygon and Solana to make good productivity in the market. Recommended for You

The past year has been buzzing with increasing activities in decentralized finance (DeFi) and the blockchain ecosystem as a whole. From a total value locked (TVL) of \$500 million on March 12 (the much talked about Black Thursday), DeFi has grown tremendously to become one of the most significant forces behind the cryptocurrency bull run of 2020/21. At the time of writing this piece, TVL in DeFi stands at over \$50B. DeFi and the Promise of a Fair Financial System DeFi's growth can largely be attributed to several reasons: COMP's distribution of governance tokens, crypto awareness in general, and improved DeFi ecosystems over the past couple of months. However, many experts agree that growth in the sector can be mainly attributed to an understanding of it and its future potentials. The concept of decentralized finance is mainly hinged on the possibility of an autonomous, free, and fair financial system independent of the control of the governments. By eliminating third parties and financial intermediaries, DeFi brings the whole spectrum of lending, borrowing, saving, investing and a host of other financial functions to the unbanked and banked. Besides eliminating financial intermediation, Yield Farming, arguably the most famous aspect of DeFi, paves the way for maximum profitability when users keep and move their crypto assets in decentralized protocols. Challenges with DeFi while DeFi has thrived magnificently over the past couple of months, there are significant questions still being raised over the profit, structure and ultimately, longevity of DeFi protocols and the ecosystem as a whole. Indeed, some of the raised questions are a non-issue if you have a robust understanding of decentralized finance. However, as exciting as DeFi is, many questions are still yet to be answered. Rug pulls, smart contract bugs, complexity, and most importantly network congestion and unreasonable gas fees on the Ethereum network are standouts. As the DeFi ecosystem continues to grow as a whole, several solutions have been proposed and some executed. The emergence of decentralized finance can be primarily attributed to smart contracts, automated programs on blockchain networks that execute when predetermined conditions are met. The Ethereum network pioneered smart contracts in blockchain and ultimately, they opened up many use cases, including decentralized finance. New Layer Solutions or the Perfect Ecosystem? However, the increasing number of use cases, applications, and users joining the network has ultimately culminated in excessive gas (transaction) fees. To solve this problem, many developers are coming up with layer two solutions for the network. Essentially, a layer two solution is run on the main Ethereum network layer; layer two solutions work by taking most transactions off the main chain to a new layer (layer two). Some notable ones include channels, plasma, rollups, and sidechains. Ultimately, there's one goal, to decongest the main layer while maintaining the existing network. Alternatively, several alternative solutions in decentralized finance are known as layer one solutions; these solutions are natural alternatives to the Ethereum network. By building new ecosystems from scratch, projects like Solana, Fantom and Cosmos have built entirely new ecosystems (layer one solutions) to explore the same fundamentals of DeFi. While layer two solutions and the prospect of Ethereum 2.0 seems enticing, DeFi enthusiasts are seeking possible alternatives to rising gas fees as quickly as they can. However, the blockchain ecosystem is actively growing and multiple layer one alternatives are out there. Selecting an Ethereum alternative becomes another challenging quest. ERGO Platform and its Bitcoin-like Layer One Mainnet With multiple-layer one solutions offering their protocols for the furtherance of decentralized finance, Ergo stands out as a research-based protocol and a much-improved design still similar to the Bitcoin network. Using the Proof-of-Work (PoW) model of mining, Ergo prioritizes security across the network while maintaining scalability. Unlike the constant upping layer one solutions that are practically copycat models of existing networks, Ergo is the pioneer of the extended UTXO smart contract model. This is a smart contract model where crypto assets are recorded on a network in the form of a direct acyclic graph and users are guaranteed more scalability and privacy. Marking Ergo's Milestones in ErgoVesary Two years after the Ergo mainnet was launched in July 2019, Ergo is organizing an anniversary event on July 1, 2021 to mark the milestone. The event will educate DeFi enthusiasts, developers, and participants generally about the platform, current trends and the blockchain ecosystem as a whole. Experienced blockchain developer, educator and co-founder of Chainlink (then smartcontract.com) and founder of the Ergo platform, Alex Chepurinov, will be speaking on core background features, blockchain career, the UTXO model, Proof of Work, Layer two solutions, and a host of other features. ErgoVesary will feature significant announcements, including bounty programs, exchange listings and an NFT competition. Other features in the event will be propositions about a local exchange trading system on Ergo (LETS) and Ergo Meta, a cookbook for side-chain solutions. Ergo: Redefining Layer One Solutions Since its launch, Ergo has continued to show a commitment to improving the user experience on its platform and the blockchain network as a whole. ErgoVesary will educate, improve and unveil exciting packages that will ultimately drive growth in decentralized finance. Of financial YouTube has listed 5 cryptocurrencies that have potential in the crypto markets. The top 5 altcoins to invest, which were ICP, LINK, volatile, causing a market downturn, many cryptocurrencies follow Bitcoin (BTC). However, some crypto assets have surpassed Bitcoin in terms of potential. When it comes to digital currencies, investors keep their eyes wide open, but there are some unexpected breakdowns. Some experienced investors are very focused on making wise investment decisions. Dejan Mac, a financial YouTuber, has listed the top 5 cryptos to invest in right now in order to suggest and assist investors. Internet Computer (ICP) Furthermore, the YouTuber has ranked the coins based on their potential. So the first coin that shows up is Internet Computer (ICP), which has a high potential for investment now. In the video, he explains that ICP was down 27% in the past week, 75% down in the past month, and 36% up year to date. Consequently, it was trading at \$8 a year ago, and it's all-time high was \$750 before the market crash. According to Coinmarketcap, the trading price is \$55.11 with 24-hour trading value \$738,507,225, at the time of writing. The token soars to 30.76% in a day with the total market cap value of \$7,448,807,959. The circulation supply of ICP coins is 135,173,634. It holds the 17th position in Coinmarketcap. As a result, he believes that now is a good time to invest in ICP because it has the largest market capitalization. Also, the coin was trading in this price range in February and March, then reached its ATH and fell. Besides, it has a better chance of reaching the highest high and good investment for long-term investors to invest right now. Chainlink (LINK) Chainlink (LINK) is the second altcoin on the list. The token was up 1.5% in the last 24 hours, 17% down in the past week, 51% in the past month, and 286% up this year. Moreover, it was trading at \$4.50 a year ago and went high reaching \$53 in mid-May. Following that it started to fall down to \$19 then to \$16 and continued to trade sideways. The coin might pull back low and might rise quickly in no time parallel to Bitcoin. According to Coinmarketcap, the trading price is \$20.07 with 24-hour trading value \$945,795,707, at the time of writing. The token soars to 6.92% in a day with the total market cap value of \$8,771,567,345. It holds the 15th position in Coinmarketcap. Thus he says that this token is the best investment right now, which may perform well in the future. Solana (SOL) The third coin on the list is Solana (SOL). It is up 5% in last 24-hours, 15% lower in the last week and month, and 400% higher this year. It was trading at \$0.79 a year ago and reached a high of \$58 in May. Despite some lows, it has followed uptrends and performed significantly better than other altcoins. According to Coinmarketcap, the trading price is \$34.67 with 24-hour trading value \$631,100,839 at the time of writing. The token rose 17% to a day with the total market cap value of \$3,547,410,841. It holds the 14th position in Coinmarketcap. So he says that this coin is a good time to invest in when the total market cap value of \$3,547,410,841. Investors may admit that it is a good time to invest because it has the potential to perform well in the future. Litecoin (LTC) The YouTuber listed Litecoin (LTC) as the 4th altcoin. This token is up 2% in a day with \$126, down 17% in the last week, 36% in the last month, and 207 percent in the last month. It was around \$41 a year ago and reached highs of \$413 in May. According to Dejan Mac, it then followed a downtrend, and it is still in a downtrend when compared to Solana. According to Coinmarketcap, the trading price is \$147.16 with 24-hour trading value \$2,138,421,923, at the time of writing. The token soars to 7.97% in a day with the total market cap value of \$9,823,423,660. The current circulation supply of LTC coins is 66,752,415. It holds the 13th position in Coinmarketcap. Though the coin is not trendy like it was a couple of years ago, it still has the potential growth. So, according to the YouTuber, LTC is also a good investment right now for investors. Theta (THETA) The final coin on the list is Theta (THETA). It was down 27% in the past week, 15.43% down in the past month, and almost 3000% up this year. It was reading at \$0.22 a year ago and went to highs at \$15.90 in April. According to Coinmarketcap the trading price is \$7.19 with 24-hour trading value \$242,778,334, at the time of writing. The token soars to 3.21% in a day with the total market cap value of \$7,189,496,275. The circulation supply of THETA coins is 1,000,000,000. It holds the 18th position in Coinmarketcap. Furthermore, the YouTuber claims that if investors invest \$1000 right now, it could return \$30k in a year. A year of an investment may yield a profit of \$30,000, and theta is one of the greener coins that may rise quickly. Besides, it is a cheaper coin to invest in and has the potential to grow; additionally, many people prefer to invest in cheaper coins, so this may be a good option; thereby, it is ranked fifth on the list, according to Dejan Mac. However, he stated that investors must have a basic understanding of the current crypto market before investing. Significantly, he claims that none should use this as a guide for investing and advises people to do their own research before the investment. Disclaimer: The opinion expressed in this chart solely author's. It is not interpreted as investment advice. TheNewsCrypto team encourages all to do their own research before investing. - Meson Network raised \$3.5 million in funding round. - Other fintech companies are also involved in the funding round. - The Crypto industry has seen many funding rounds. In the funding round, the decentralized exchange and privacy platform, Meson Network has raised \$3.5million. The project is focusing to build an efficient bandwidth marketplace for Web3 Moreover, the fundraising round was led by Libertus, Mask Network, and Hash Global. Also, other fintech companies involved such as Digital Currency Group, Youbi Capital, Hashkey, Zonff, SevenX, Permanent Ventures, CMT Digital, Rarestone Capital, DHVC, and Sancto Capital. More so, Josh Hannah, Sam Williams, Thomas Bailey, Jack Herrick, Cecilia Li, and Meltem Demirs also made a huge contribution to the funding round. Through its marketplace Meson Network is working to connect followers to bandwidth, to reach more audiences. The CEO of Meson Network Sherlock Shi stated, "Uniswap has demonstrated the power of enabling long-tail assets. We are also in the market of serving long-tail assets and their markets. We aim to become the world's biggest marketplace in bandwidth." In recent months, the crypto industry has seen many funding rounds, with projects like Solana raising \$314 million in the private token sale. Even though the exact use of the \$3.5 million not yet revealed, Meson Network is currently running its Testnet-2.5. The press release also notes that the fund will be used to build a bandwidth marketplace on Web3. Furthermore, the Meson Network bandwidth marketplace will primarily serve as a computing power source. After this, it will execute a storage protocol for storing layer projects such as IPFS and Arweave. Hence more, the Meson Network team also aims to provide intuitive support for their users to monetize their saved bandwidth through its marketplace.
