

decline, trading spiked by 405.03% in day volume to \$32.31 billion. Thus, its market cap ratio is 18.21%, showing highly intense short-term trading pressures. The rest of the cryptocurrency market experienced a similar slip. The total market cap diminished by 11.04% to \$2.37 trillion, while the overall trading volume surged by 213.34% to \$131.36 billion. This high volatility resulted in cascading liquidations across the ecosystem. Most interestingly, a whale holding a 67,500 ETH leveraged position, valued at around \$105 million, got completely liquidated after ETH breached the \$1,650 mark. The injection of 2,160 ETH as collateral to defend the position proved insufficient for the price decline. Will ETH Bounce Back? Technically, Ethereum has broken through key support levels. The most recent candle shows a swift move from \$1,543.69 to a low of \$1,411.01 before closing at \$1,422.39. The next significant support threshold barely survives close to the \$1,380 mark. A breach below this level is confirmed for ETH reaching \$1,300. Resistance above that returns strength at the \$1,560 zone. Should bulls take that back, the token might try a recovery toward \$1,650, but the way remains unclear under the current macro pressures. Momentary indicators indeed support downward moves. The Relative Strength Index (RSI) has fallen significantly up to 13.50, deep in the oversold zone. The current moving average line is close to 36.83, representing how steep the decline is. This divergence is wide, indicating that the downtrend will probably be well extended as there are weak buyers. The Chaikin Money Flow (CMF) also indicates the gloomy scenario by printing a figure of -0.36. This value indicates that a capital exodus of substantial amounts takes place, resulting from traders' decreased belief. In this environment, even temporary rebounds could suffer from strict resistance unless mood changes among the markets. With a circulating supply of 120.67 million ETH Locked and total supply locked, Ethereum hangs its future on macro recovery from all angles with internal stability of its own.

- 7 Siblings whale purchased over \$42 million worth of Ethereum in the last 12 hours. - Whales are leveraging the market dip and accumulating Ethereum in unprecedented ways. Global macroeconomic conditions and trade wars among countries are causing crypto market turmoil. While Bitcoin has fallen below the \$80K price level, the Ether price is trading in the \$1.5K price range. Meanwhile, Ethereum whales are taking the present market dip as an opportunity to accumulate more ETH. On-chain analyst tracking platforms are reporting Ethereum whale activity for the past few hours. Popular Ethereum whale '7 Siblings' purchased more than 24K ETH tokens worth over \$42 million at an average price of \$1,700. Lookonchain reported that the whale bought 103,543 ETH tokens, spending \$229.7 million in the last couple of months. Another renowned on-chain transaction tracker, Spot On Chain, has also reported its findings on Ethereum whale activity. ETH whale '0x5f1a' bought 4,984 ETH at an average price of \$1,631. As the Ethereum price crashed to the \$1,500 price level, more ETH whales joined the Ethereum buying spree. Another ETH whale, '0x709', borrowed 8.25M DAI tokens to purchase more than 5,200 ETH at an average price of \$1,578 and received 6,924 ETH from Railgun. ETH Whale '7 Siblings' Holds Over \$1.2M Ethereum 7 Siblings whale holds more than 1.21 million ETH worth \$1.93 billion in 2 wallet addresses. The whale is at a loss of \$64 million at the current market price of ETH, as per Lookonchain. Its commitment to keep on purchasing Ethereum tokens irrespective of its market price is what made '7 Siblings' popular in the crypto market. This is not the first time the whale has bought a large volume of ETH at a low price. When the ETH market price plunged 20% on Feb 3, 2025, 7 Siblings bought \$14.5 million ETH. The whale's ETH accumulation strategy first came to the surface when it purchased \$66 million ETH in October, as reported by Spot On Chain. There are also multiple other instances where 7 Siblings grabbed ETH as soon as its price started to plunge. Market crashes are an opportunity to make the most of your investments. When the market price plunges, investors can get cryptocurrencies at a discount and benefit when prices start to soar again. However, this strategy may not work for low-cap and unpopular cryptocurrencies. Highlighted Crypto News Today:

Ethereum has long been a dominant force in the crypto market, performing as the backbone for DeFi, NFTs, and thousands of smart contract applications. However, its journey to \$5,000 has been slow, weighed down by using scalability concerns, high transaction fees, and growing competition. While Ethereum keeps evolving, modern and more agile projects are taking pictures of traders' interest. One such project is Ozak AI (OZ), an AI-powered cryptocurrency that is swiftly gaining momentum. With a rate still in its early stages, Ozak AI provides a possibility for exponential boom, with analysts predicting a potential 300x rally to \$1 in the coming bull run. Ethereum Struggles to Gain Momentum Ethereum's price moves had been fantastically slow as compared to some of the more modern, high-growth altcoins in the market. Although ETH remains a leader in smart contract technology, its scalability challenges and expensive gas fees continue to be a concern. The transition to Ethereum 2.0 and the Proof-of-Stake (PoS) version has helped improve energy efficiency, but it has yet to fully remedy transaction bottlenecks. Additionally, opposition from high-speed blockchains like Solana, Avalanche, and layer-2 solutions is putting pressure on Ethereum's dominance. While ETH may want to ultimately reach \$5,000, its growth trajectory is a ways from explosive, making it much less appealing for investors seeking speedy gains. Ozak AI's 300x Potential Gains Attention In contrast to Ethereum's gradual ascent, Ozak AI is making waves in the market with its AI-pushed blockchain solutions. By integrating artificial intelligence with decentralized networks, Ozak AI is creating a brand new frontier in crypto, supplying improvements in automatic buying and selling, AI-powered DeFi solutions, and predictive analytics. This unique use case has attracted a developing wide variety of buyers searching out the next big aspect. With Ozak AI presale pricing at just \$0.003 in line with token, the opportunity for huge returns is obvious. If the undertaking achieves its formidable roadmap and profits mainstream adoption, a price surge to \$1 or past "representing a 300x growth" should turn out to be a reality. Why Ozak AI's Growth Is Outpacing Ethereum One of the main reasons Ozak AI is seeing extended growth is its low market capitalization and early-stage investment potential. Unlike Ethereum, which already has a large valuation, Ozak AI is still in its early stages, making it a high-reward opportunity for those who get in early. Furthermore, the upward thrust of AI in various industries has fueled interest in AI-powered cryptocurrencies, giving Ozak AI a completely unique

advantage in a market that is hungry for innovation. The increasing demand for AI-based total blockchain solutions ought to catapult Ozak AI into the highlight, permitting it to attain exponential boom faster than Ethereum. While Ethereum stays a stronghold within the crypto space, its path to \$5,000 is sluggish and unsure. Ozak AI, then again, is displaying strong momentum, with the capability for a 300x rally to \$1 in the near future. As AI adoption continues to amplify, Ozak AI's innovative method positions it as one of the most promising crypto projects of the year. For investors looking for fast growth and high returns, Ozak AI offers an unparalleled possibility that would reshape the AI-crypto space. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. For more visit: - Website: <https://Ozak.ai/> - Telegram: <https://t.me/OzakAGI> - Twitter : <https://x.com/Ozakagi> Disclaimer: TheNewsCrypto does not endorse any content on this page. Growing excitement in the digital asset space shows that a prime market rally could be on the horizon. With the blockchain era advancing swiftly and institutional investors increasing their exposure, some crypto projects are emerging as frontrunners. Ozak AI (OZ), Solana (SOL), and Ethereum (ETH) are three standout cryptocurrencies that would pressure the next wave of boom. Ethereum continues to dominate the smart contract and DeFi sectors, Solana is revolutionizing high-speed transactions, and Ozak AI is pushing innovation via merging artificial intelligence with blockchain. As adoption hastens and new use cases emerge, those initiatives have the ability to lead the market's next explosive surge. Ethereum: The Undisputed Leader in Smart Contracts Ethereum remains a foundational pillar of the crypto space, powering decentralized finance (DeFi), NFTs, and thousands of smart contract applications. Despite dealing with scalability troubles and high gas costs, Ethereum keeps evolving, with ongoing improvements geared toward making the community extra efficient. The transition to Proof-of-Stake (PoS) via Ethereum 2.0 has already improved power performance, and the rise of layer-2 solutions like Arbitrum and Optimism is assisting to lessen transaction charges. Institutional interest is likewise developing, specifically with Ethereum ETFs gaining traction, making ETH a strong project for leading the next market rally. However, competition is heating up, and Ethereum ought to continue to innovate to preserve its dominance. Solana: The High-Speed Blockchain Challenging Ethereum Solana has emerged as one of the biggest challengers to Ethereum, presenting quicker transaction speeds and extensively decreasing prices. Its blockchain structure enables builders to create scalable and efficient decentralized applications, making it a desired choice for gaming, DeFi, and NFT projects. Despite past network outages and concerns about centralization, Solana has managed to construct a strong ecosystem with strong developer support. As the crypto market recovers, Solana's capability to deal with high transaction volumes with minimum prices may want to attract greater users and developers, pushing its price higher. If Solana continues to make its ecosystem bigger and cope with its technical demanding situations, it is able to see enormous profits in the next bull run. Ozak AI: The AI-Driven Crypto Set for Explosive Growth Ozak AI is rapidly gaining attention as one of the most promising new initiatives inside the crypto space. Unlike Ethereum and Solana, which focus on blockchain scalability and smart settlement functionality, Ozak AI integrates artificial intelligence into decentralized networks, establishing up new possibilities for automation, predictive analytics, and AI-based DeFi solutions. Moreover, the 3rd stage of the Ozak AI presale is currently going on, and the project is already making waves in the crypto community. With an impressive over \$900K raised so far, Ozak AI tokens are currently priced at just \$0.003 each, with the next stage price set at \$0.005. This early-stage opportunity is poised for significant growth, with projections suggesting that the token could reach \$1 by 2025. As AI adoption accelerates throughout diverse industries, Ozak AI is positioned at the intersection of two of the fastest-growing sectors—AI and blockchain. With a surprisingly low market cap, Ozak AI offers a possibility for early buyers to benefit from doubtlessly big gains. Its particular use cases, combined with growing institutional interest in AI-powered blockchain solutions, make it a strong project for riding the next crypto rally. While Bitcoin regularly dictates market movements, the next important rally might be led by innovative altcoins like Ethereum, Solana, and Ozak AI. Ethereum's DeFi ecosystem, Solana's high-pace network, and Ozak AI's groundbreaking AI integration make them high candidates for explosive growth. As investors search for the following big opportunity, those three initiatives are nicely-located to capitalize on market momentum, placing the stage for a new generation of crypto expansion. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. For more visit: - Website: <https://Ozak.ai/> - Telegram: <https://t.me/OzakAGI> - Twitter : <https://x.com/Ozakagi> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Ethereum is trading within the \$1.9K range. - The market has seen \$29.61 million worth of ETH liquidated. The mixed signals are keeping the traders on their toes in the crypto market, triggering both uncertainty and caution. Ethereum (ETH), the largest altcoin, remains under the bearish grip and has registered only a modest spike of 1.15%. The bearish region ETH created earlier seems unavoidable and the gradual upturn could materialize once the asset breaks and holds above \$2.3K. In the early hours, Ethereum traded at a high of \$1,832. The bears stormed in and pushed the price down to \$1,760.

At the time of writing, Ethereum traded at around \$1,817, with the daily trading volume reaching \$14.67 billion. Besides, the market observed a liquidation of \$29.61 million worth of Ethereum during this interval. How Soon Could Ethereum Enter Full Bull Mode? If the downside correction persists, Ethereum might retrace to the support range of \$1,776. A failure to hold this trading level could trigger the asset to form a death cross, opening the way toward a steady falloff to \$1.5K. Forecasting a recovery move, the altcoin could jump to \$2K. Upon breaking this level, a sustained bullish wave might emerge and send Ethereum toward the \$2,268 resistance, potentially driving a sustained recovery. The ETH/USDT trading pair's Moving Average Convergence Divergence (MACD) line and the signal line is found below the zero line. This infers a bearish crossover and the asset's potential to continue declining. ETH's Chaikin Money Flow (CMF) indicator at -0.10 signals that the money is flowing out of the asset, reflecting a potent bearish sentiment. Meanwhile, the daily trading volume of the asset has dropped by 5.34%. In addition, the daily relative strength index (RSI) stationed at 48.32 indicates the asset is in neutral territory. ETH's Bull Bear Power (BBP) reading of 3.38 suggests bullish dominance in the market. Disclaimer: The opinion expressed in this article is solely the author's. As established cryptocurrencies like Ethereum (ETH), Binance Coin (BNB), and Ripple (XRP) face challenges, investors are turning their attention to emerging alternatives. One such promising contender is Rexas Finance (RXS), which has recently gained significant traction in the crypto market. Ethereum's Waning Momentum Ethereum faced main difficulties in its development trajectory as it launched its operation as a blockchain leader. The price projection for Ethereum at 2025 published by Standard Chartered Bank currently stands at \$4,000 instead of \$10,000 illustrating the decreased optimism towards Ethereum's value. The price readjustment highlights problems regarding Ethereum's performance capabilities together with shifting market patterns. The base functions of decentralized finance (DeFi) and smart contracts within Ethereum have led investors to discover new platforms with better solutions and higher potential returns because of the platform's current difficulties. The value of Binance Coin maintained in the Binance system has struggled to preserve its upward trajectory. BNB pushed above \$550 resistance before it lingered at \$598 support as it aimed at reaching the \$606 resistance. The market currently demonstrates selling behavior since trading volumes decline alongside negative funding rates. The analysts predict a downturn to \$550 support if Binance Coin (BNB) struggles to break through its resistance at \$606 because of both regulatory challenges and market volatility. Ripple's Uncertain Trajectory The XRP of Ripple encounters major price changes due to speculation along with regulatory actions. Prices for XRP dropped to \$2.30 and lost 30% of its value from the previous high level at \$3.10. XRP faces ongoing challenges from legal battles alongside market acceptance barriers which prompt analysts to adopt mixed reactions regarding its future prospects. Factors identified in this report decrease the market's confidence in XRP's upcoming performance. Rexas Finance: A Rising Star Rexas Finance has gained attention as important competitor to established cryptocurrencies which confront numerous obstacles. Rexas Finance operates as a platform which tokenizes real-world assets (RWA) thus providing investors with opportunities to acquire fractional ownership of properties and commodities. The platform provides regular investors with equal opportunities to access high-value investments which served exclusively for institutional market participants. The presale of Rexas Finance tokens attracted substantial interest from investors which led to surpassing its target by raising over \$41 million while entering its last phase early. The RXS token established its price at \$0.20 following its value growth by 6.6 times from its initial cost of \$0.03 because investors believe in its potential. Rexas Finance provides users access to several features that ease the process of token creation. Users without programming experience can leverage the Rexas Token Builder tool to develop deploy tokens seamlessly through its interface. The AI Shield feature of the platform strengthens smart contract security by identifying and resolving customer-end vulnerabilities and external security concerns. The RXS token will list on major exchanges on June 19, 2025, starting at \$0.25 yet analysts predict investors will obtain considerable gains going forward due to this event. The investment potential of Rexas Finance becomes more appealing due to the existing problems that established cryptocurrencies face on the market. RXS represents a promising altcoin investment option for 2025 because it utilizes tokenized asset functionality and achieved successful presale outcomes and established a robust ecosystem. - Website: <https://rexas.com> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. Ethereum holders are starting to sweat. Recent on-chain data reveals troubling signs that ETH could soon revisit price levels not seen since the market turmoil of 2022. With investors on edge, attention is shifting to newer, more promising alternatives capable of explosive gains—like Lightchain AI, currently at a compelling presale price of just \$0.007 and already boasting an impressive \$18.9 million raised. Ethereum's Warning Signs — Trouble Brewing On-Chain? On-chain developments may be among the problems that Ethereum (ETH) is currently going through. After a significant drop in activity, the network saw the decentralized exchange (DEX) trading volumes go down by almost 30% in a week and record a value of \$16.8 billion. Still, Ethereum's Total Value Locked (TVL) has dropped by 9.3% in March making it the record low of \$46.37 billion and a great 47% downslide if compared to January. Another part of the analysis, technical indicators, are also signaling a stay-out mood. With the Relative Strength Index (RSI) unfortunately below 40.43, trading may be going bearish, and the Moving Average Convergence Divergence (MACD) still being a negative can hint to the downtrend in prices. Those are the factors testifying to the internal metrics of the Ethereum chain going through

rough times, presenting the possibility of investor and stakeholders conducting the most careful monitoring of the on-chain situation themselves. Investors Shift Focus to the Rising Star – Lightchain AI – an innovative project that combines blockchain and artificial intelligence to transform the industry. With advanced features such as Zero-Knowledge Proofs (ZKPs), Lightchain AI safeguards sensitive data during computations, fostering trust among developers and everyday users alike. Additionally, it leverages Homomorphic Encryption, enabling the processing of encrypted data without ever exposing it – ensuring security at every step. As blockchain technology continues to evolve, its applications extend far beyond finance, with promising use cases in healthcare, supply chain management, and government systems. Lightchain AI is at the forefront of driving a smarter, more secure future. Currently priced at just \$0.006 during its presale phase, this project has already caught the attention of investors who see the potential for significant growth, with a possible 34x upside. Why Gamble on ETH’s Uncertainty? For those watching Ethereum anxiously, this might be the perfect moment to diversify into promising projects poised for rapid appreciation. Instead of hoping Ethereum defies bearish data, investors can position themselves now in presales like Lightchain AI – capturing early-stage prices before mainstream attention sends them soaring. In crypto, timing is everything. Lightchain AI’s presale offers investors an attractive entry point, powerful technology, and genuine upside. With Ethereum’s immediate future looking shaky, perhaps now is the time to bet on something with clear momentum, not uncertainty. Don’t miss the next big crypto breakthrough – Lightchain AI might just be the smartest play you make this year. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. As the cryptocurrency market continues to evolve, 2025 has started with a wave of enthusiasm. Those looking for reliable long-term cryptos have various options offering stability and the potential for substantial growth. With well-established names like Bitcoin and Ethereum, and newcomers making waves, this guide introduces the six best cryptos to buy today for those aiming for long-term value.

- 1. Bitcoin (BTC)** Bitcoin, the pioneer of cryptocurrencies, remains the most well-known digital currency worldwide. Dominating the market with a valuation of over \$1.7 trillion, Bitcoin comprises more than 60% of the entire cryptocurrency market value. Its straightforward design, limited availability, and increasing acceptance are its core appeals. Following the U.S. SEC’s approval of several spot Bitcoin ETFs in early 2024, Bitcoin became more accessible, attracting significant capital inflows and driving the price to peak at over \$109,000 by early 2025. Although the price has adjusted to about \$87,000, Bitcoin is still considered digital gold. The halving event, which occurs every four years, cuts mining rewards in half, often catalyzing significant price increases within the following 12 to 18 months. With the most recent halving in April 2024 and growing support from U.S. politicians, Bitcoin is a prime choice for those seeking durable value and broad adoption.
- 2. Ethereum (ETH)** As the second-largest cryptocurrency in terms of market capitalization, Ethereum serves as a fundamental pillar of the decentralized internet. It facilitates smart contracts, DeFi protocols, NFTs, and Web3 applications, extending its utility beyond mere currency. The transition of Ethereum from proof-of-work to proof-of-stake has notably decreased its environmental impact, aligning it with a more sustainable future. The SEC’s nod to spot Ether ETFs in mid-2024 has enhanced its credibility, broadening access across the market. Although Ethereum has experienced a 40% decline over the previous year, its ecosystem is swiftly growing. Anticipated scalability improvements like sharding suggest that Ethereum remains a prime choice among the best cryptos to buy today, appealing widely to those engaged in technological development.
- 3. Solana (SOL)** Recognized for its superior performance capabilities, Solana has established itself as a go-to blockchain for decentralized applications, thanks to its exceptional speed, minimal cost per transaction, and a vibrant ecosystem supporting meme coins. The platform’s revival is partly thanks to popular new entries like Dogwifhat (WIF) and Bonk (BONK), alongside a meme token inaugurated by President Donald Trump. Past challenges with network stability have been addressed, boosting confidence and lifting Solana’s valuation to over \$70 billion. With its robust infrastructure and increasing cultural impact, Solana continues to be one of the best cryptos to buy today, especially attractive to those investing in the ongoing popularity of dApps and meme-driven assets.
- 4. Avalanche (AVAX)** Avalanche Analysis: Known for its distinctive subnet architecture, Avalanche supports the creation of specialized blockchains for diverse applications, from finance and gaming to enterprise solutions. While AVAX is rebounding from significant losses in 2022, its prospects are promising. Ava Labs remains committed to a vision of a scalable, multi-chain ecosystem, positioning Avalanche at the forefront should bespoke blockchains become mainstream. With a current market capitalization around \$8.5 billion, AVAX offers a potentially lucrative but high-risk opportunity. For those exploring the best cryptos to buy today with a focus on foundational blockchain technology, Avalanche merits consideration.
- 6. BlockDAG (BDAG)** BlockDAG (BDAG) is quickly gaining attention as an advanced force in the cryptocurrency world. It has successfully raised over \$210.5 million during its ongoing presale and is often referred to as a “Kaspa killer” because of its cutting-edge Directed Acyclic Graph (DAG) technology. This technology allows BlockDAG to handle transactions concurrently, which results in extremely fast processing times and no traffic jams. It is also compatible with EVM and WASM, enhancing its appeal to developers. Among its features is the Token & NFT Wizard, designed to simplify the entry process for creators. Currently, as of Batch 27, BDAG’s price has risen to \$0.0248 from an initial \$0.001, marking a 2,380% increase for early participants. With its beta testnet already live in March 2025 and ten major exchange listings anticipated, there is a strong expectation that BDAG could climb to \$1 post-launch, making it one of the best cryptos to buy today with significant potential for returns.

Final Thoughts The cryptocurrency market remains unpredictable, yet it still offers substantial profit opportunities, particularly through projects

that boast robust technology, clear development plans, and dynamic communities. While Bitcoin and Ethereum continue to be prominent players, emerging entities like BlockDAG are making significant inroads and have the potential to surpass others in future market cycles. For those weighing risk against potential rewards, these six cryptocurrencies provide a balanced array of stability, cutting-edge innovation, and prospects for long-term growth. Caution is advised, as market fluctuations can be harsh. Itâ€™s essential to conduct thorough research before making any decisions. New York, New York, April 3rd, 2025, Chainwire Moving Beyond Layer 2s Through Native Parallel Execution on Proof of Work (PoW) Kadena, the industry leader in scalable blockchain technology, has announced Chainweb EVM with the addition of 20 EVM-compatible chains to its multi-chain network. Chainweb EVM positions Kadena as a decentralized alternative to Ethereum Layer 2s, with near-zero gas fees, infinite scalability, and energy-efficient Proof of Work security. Kadena takes a unique approach to scaling by leveraging native parallelization for high-throughput execution and processing. Their horizontal scaling network can add new chains to absorb demand fluctuations, which reduces block time and keeps gas fees lower than all Layer 2s. Builders can deploy and scale dApps with Solidity smart contracts and leverage EVM tooling natively, all while benefiting from Kadenaâ€™s scalable, affordable, and decentralized Layer 1 infrastructure. The Chainweb EVM initiative has received interest from hundreds of builders who signed up for exclusive early access at ETHDenver, gaining the first chance to deploy on-chain. This initiative coincides with Kadenaâ€™s \$50 million in grants to support building on Chainweb EVM, tokenizing real-world assets, and AI development to drive ecosystem growth. Stuart Popejoy, Kadenaâ€™s co-founder and CEO, commented on the vision for Chainweb EVM, citing his enthusiasm for the buildout. â€œSpearheading this project alongside my co-founder, Will (Martino), has been the single biggest initiative at Kadena since its inception. We see Chainweb EVM as the long-lasting settlement platform for the world, from stock market trading to e-commerce payments. Our new chains will soon open what we have been building with Chainweb consensus to the EVM world. Solidity developers can now build with the security, efficiency, and cost-effectiveness of Kadenaâ€™s native parallel chains,â€ Popejoy said. About Kadena Founded in the U.S. in 2016 by Stuart Popejoy and Will Martino â€” creators of J.P. Morganâ€™s first blockchain and leaders of the SECâ€™s Crypto Committee â€” Kadena delivers industry-leading performance as the only scalable Layer 1 Proof of Work blockchain. Kadenaâ€™s innovative approach combines energy efficiency with unmatched scalability, making it an ideal infrastructure for mass adoption. With its pioneering smart contract language Pact, Kadena offers tools for building secure, efficient, and developer-friendly blockchain applications that address real-world needs. Kadena on X (Formerly Twitter) Contact Kadena Press Kadena LLC press@kadena.io

- An Ethereum whale withdrew over 2K ETH tokens from Binance a few hours ago. - The altcoin factored in a significant drop of 45% in Q1 2025. Amid spurring political actions, investors watch the crypto marketâ€™s movements with bated breath. However, prices seem determined to stay in the consolidation phase despite daily fluctuations. Meanwhile, Justin Sun has expressed disagreement with a financial institution in Hong Kong, the FDT. Reverting to the crypto market, other altcoins such as XRP have seen modest escapades from bearish trends. Ethereum traders, however, have been in utter dismay since the early market crashes of 2025. According to a recent report, the altcoin has experienced one of the worst quarters since 2018, with a 45% drop. Meanwhile, in the past few hours, one particular Ethereum whale caught market attention. Lookonchain, an on-chain monitoring platform, reported that this whale, with address `0x05fA`, withdrew 2,774 tokens worth approximately \$5.27 million from Binance. Furthermore, the whale has been withdrawing a total of 16,415 ETH since February. He currently has incurred a total loss surpassing \$13 million. According to Arkham Intelligence data, his total ETH holdings stand at 7.87K tokens. Ethereum Price Overview In the last 24 hours, Ethereum has factored in a modest price drop of 1.83%. This causes the altcoin to continue trading at the \$1.8K level, as it has been since last month. The cryptocurrency also tested an intra-day low of \$1,785 in the last 24 hours. Zooming out, onto its weekly chart, the altcoin has dropped nearly 10% as opposed to its monthly dip of 13.07%. At the beginning of March, Ethereum showed a modest recovery to the \$2K level but dipped shortly afterward. This price drop has caused the altcoin to see a mounting increase in selling pressures over the past few weeks. Its RSI value stands at 42.64 as per TradingView data, reconfirming the oversold situation.

Letâ€™s talk about three powerhouse coins that are shaking up the cryptocurrency space right now: Qubetics (\$TICS), Render, and Arbitrum (ARB). While all these projects have the potential to lead the pack in different ways, itâ€™s clear that each brings something unique to the table. Whether youâ€™re interested in decentralized VPNs, blockchain scaling, or revolutionizing how digital art is rendered and shared, these projects have you covered. One of the most buzzworthy names in the market right now is Qubetics. With a focus on solving real-world issues like privacy and accessibility, Qubetics seems to be drawing attention for all the right reasons. Meanwhile, Render and Arbitrum (ARB) are standing tall in their own right, with Render creating waves in the decentralized rendering space and Arbitrum pushing the boundaries of Ethereumâ€™s scalability. So, whatâ€™s the deal with these three coins? How can they shape the future of digital finance and blockchain tech? Letâ€™s break it down, starting with Qubetics. Qubetics (\$TICS): The Future of Blockchain with a Decentralized VPN As the cryptocurrency market continues to boom, Qubetics (\$TICS) is quickly becoming one of the most exciting and talked-about projects. With its crypto presale in full swing, the buzz around Qubetics is undeniable. With over \$15.5 million raised in its 28th presale stage, Qubetics is proving to be a major player in the crypto ecosystem. One key feature of Qubetics that sets it apart from the crowd is its decentralized

VPN. Think of it as a private, secure internet connection that anyone—whether you’re a business owner, professional, or everyday user—can easily access. This means your online activities are safe from prying eyes, while businesses can ensure the privacy of sensitive data, no matter where they are operating. But why should anyone care about a decentralized VPN? In today’s digital world, privacy is more important than ever. Hackers, government surveillance, and data breaches are constant threats to both individuals and businesses. Traditional VPNs aren’t foolproof, often relying on centralized servers that can be vulnerable to attacks. Qubetics solves this by offering a decentralized solution that’s far more secure and resistant to hacks or data breaches. The \$TICS token is integral to this system, providing the fuel to run the decentralized VPN infrastructure. And the numbers don’t lie—Qubetics has been selling tokens at \$0.14301 in its 28th presale stage, which has analysts predicting a 599% return on investment (ROI) by the end of the presale at \$1. Even better, once the mainnet launches, \$TICS could see returns up to a whopping 10,388%. What’s even more exciting is that the Qubetics presale is still ongoing, and there’s a chance to get in before the price skyrockets. As more users and businesses adopt decentralized solutions, the demand for \$TICS is expected to increase dramatically.

Render: Redefining the Future of Digital Rendering Render is another coin to watch in 2025, focusing on the growing demand for decentralized cloud computing in digital art and 3D rendering. It’s a project that directly addresses the needs of artists, designers, and anyone involved in creating high-quality digital media. Before Render, digital artists had to rely on centralized cloud services or expensive on-premise computing power to create complex renderings. This process was often slow and costly. With Render, users can tap into a decentralized network of GPUs, dramatically speeding up the rendering process while significantly reducing costs. Whether you’re a small indie developer or a massive animation studio, Render offers an innovative solution to an age-old problem in the creative world. For crypto enthusiasts looking to diversify their portfolios with coins that have real-world utility, Render is an excellent pick. As digital art and VR experiences continue to evolve, Render is poised to capture a massive share of the market, making it one of the best coins to join now.

Arbitrum (ARB): The Ethereum Scaling Solution When talk about the best coins to join now, Arbitrum (ARB) deserves a spot near the top. As the second-largest blockchain after Bitcoin, Ethereum has long been hailed for its potential, but it’s no secret that scalability has been a major issue. Enter Arbitrum, a layer-2 solution designed to help Ethereum scale without compromising security or decentralization. Arbitrum works by processing transactions off-chain and then submitting them back to Ethereum’s main chain. This reduces the congestion on Ethereum’s network and dramatically lowers transaction fees—something that has plagued the Ethereum ecosystem for years. By providing a more efficient and cost-effective solution, Arbitrum is helping to bring Ethereum’s full potential to life. For businesses and developers, Arbitrum offers a way to build and deploy decentralized applications (dApps) without worrying about slow transaction speeds or high gas fees. It’s one of the most promising Ethereum scaling solutions available today, and its continued growth could make ARB one of the best coins to join now for anyone looking to capitalize on the Ethereum ecosystem.

Decentralized VPN: The Game-Changer for Crypto and the Digital Age The idea of a decentralized VPN is a game-changer that could have a profound impact on the crypto space. By removing the need for centralized servers, decentralized VPNs provide enhanced privacy, security, and freedom for users around the world. In simple terms, a decentralized VPN allows people to securely access the internet from anywhere, without relying on a single point of failure. Whether you’re accessing personal data, communicating for business purposes, or simply browsing the web, the security and privacy of a decentralized VPN make it an invaluable tool in the modern digital age. The demand for decentralized VPNs is growing as more people and businesses realize the importance of maintaining their privacy online. With the rise of cyberattacks, government surveillance, and data breaches, using a decentralized VPN to protect online activity is quickly becoming the standard. Qubetics, with its focus on a decentralized VPN, is positioning itself at the forefront of this trend. As blockchain technology continues to evolve, solutions like decentralized VPNs will play a crucial role in shaping the future of the internet.

Conclusion: In 2025, the best coins to join now are those that address real-world problems with innovative solutions. Qubetics, Render, and Arbitrum (ARB) are all examples of how blockchain technology can change industries for the better. Qubetics stands out with its decentralized VPN, offering users and businesses a secure and private internet experience. Render is revolutionizing the digital art space with decentralized cloud rendering, while Arbitrum is solving Ethereum’s scalability issues to make dApp development more accessible. So, if you’re looking to jump into the world of crypto, these coins are worth your attention. Get in early with Qubetics before its presale ends, and keep an eye on Render and Arbitrum as they continue to grow and expand.

For More Information: - Qubetics: <https://qubetics.com> - Presale: <https://buy.qubetics.com> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics>

FAQs: What is Qubetics and why is it so popular? Qubetics (\$TICS) is a blockchain project focused on providing a decentralized VPN to improve privacy and security online. The ongoing presale has raised significant funds, indicating strong demand. How does Render work? Render uses a decentralized network of GPUs to speed up and reduce the cost of 3D rendering, making it accessible for digital artists and developers worldwide. What is Arbitrum (ARB) and why is it important for Ethereum? Arbitrum is a layer-2 scaling solution for Ethereum that helps reduce transaction costs and increase speed, solving Ethereum’s scalability problems. Why should I consider a decentralized VPN like Qubetics? Decentralized VPNs, like Qubetics, provide more security and privacy compared to traditional VPNs by removing centralized points of failure, making them ideal for businesses and individuals alike. What are the benefits of investing in Render, Qubetics, and Arbitrum now? These projects solve real-world problems—Render in digital art, Qubetics in privacy, and Arbitrum in blockchain scalability. All three are poised to grow significantly, making them strong choices for those looking to enter the crypto space.

TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

- Ethereum DEXes led with \$64.62B in March, surpassing Solana's \$52.62B. - Uniswap led Ethereum's DEX surge with \$30B in volume. Ethereum has regained its position as the top decentralized exchange (DEX) chain, overtaking Solana for the first time since September. The shift happened in March as bearish market sentiment, especially in the memecoin sector, led to a decline in activity on Solana-based platforms like Raydium and Pump.fun. Ethereum-based DEXes recorded \$64.62 billion in trading volume, beating Solana's \$52.62 billion by 22%, according to Defillama. This marks Ethereum's return to the top, pushing Solana to second place. Raydium, Solana's leading DEX, struggled throughout March. It failed to surpass \$1 billion in daily trading volume, a sharp decline from its \$13 billion peak on January 18. Additionally, its daily volume averaged less than \$100 million, down from \$390 million in mid-January. The surge in Solana's DEX activity earlier in the year coincided with the launch of Donald Trump's TRUMP token. Ethereum's dominance was driven by Uniswap, which recorded over \$30 billion in trading volume. Fluid followed with \$9 billion, securing a distant second place. Ethereum (ETH) in Today's Market Ethereum is currently trading at \$1,869.11, with a market cap of \$225.52 billion and a 24-hour trading volume of \$15 billion, reflecting an 8.12% increase. The market cap ratio stands at 6.67%, indicating solid trading activity. ETH's price movement shows key support at \$1,820, while resistance is forming around \$1,900. A breakout above this level could push prices toward \$1,950, while a drop below support might see ETH testing \$1,780. The Relative Strength Index (RSI) stands at 51.78, suggesting a neutral market with neither overbought nor oversold conditions. The RSI average remains at 33.56, which previously indicated bearish pressure but has started recovering. The Chaikin Money Flow (CMF) is positive at 0.06, signaling mild buying pressure and potential accumulation. Moving averages indicate potential shifts. The 14-day RSI moving average is recovering, hinting at a possible trend reversal if momentum strengthens. If moving averages form a bullish crossover, it could support upward movement. However, ETH remains susceptible to macroeconomic factors and market sentiment. Ethereum's return to the top DEX position strengthens its long-term outlook, but short-term price action depends on breaking resistance and sustaining higher trading volumes.

- Ethereum (ETH) fell to a weekly low of \$1,834, marking a 7% decline and approaching its yearly low of \$1,760. - ETH formed a bearish flag pattern, with MACD and PPO indicating weak momentum and high selling pressure. After an eventful week, the crypto market is experiencing high volatility today, with Bitcoin (BTC) dropping to \$82K once again during Asian trading hours. Ethereum (ETH) is also facing significant price swings, falling below \$2K and hitting a weekly low of \$1,834, a 7% drop. This brings it dangerously close to its yearly low of \$1,760, recorded on March 11. One major factor behind ETH's decline is the latest inflation data from the US. The Core Personal Consumption Expenditure (PCE) Index rose from 2.7% in January to 2.8% in February while the headline PCE increased to 2.5%, exceeding the Federal Reserve's 2% target. This suggests that inflation is still a concern, which could keep interest rates higher for longer. Additionally the impact of upcoming tariffs by Donald Trump may further influence market conditions. In the past 24 hours, Ethereum has dropped 4%, falling from an intraday high of \$1,911 to a low of \$1,834. At the time of writing, ETH is trading at \$1,849 with a market cap of \$223.15 billion. Despite the price dip, Ethereum spot funds saw an inflow of \$4.68 million after 17 consecutive days of outflows since March 5, as per SoSoValue data. Will Ethereum (ETH) Continue to Decline or Gain Momentum Above \$2K? From a technical perspective, Ethereum's chart shows a bearish trend. It had formed a triple-top pattern in the weekly chart with resistance at \$4,000 and key support at \$1,760. The ETH price dropped below this support level earlier this month and recently retested that confirming a bearish continuation. The formation of a bearish flag pattern signals potential further downside. On the 4-hour ETH/USDT chart both the MACD and PPO indicators are below the signal line that confirms the bearish trend for Ethereum. Zooming in, the Relative Strength Index (RSI) sits at 26.71 that indicating Ethereum is in oversold territory. This suggests weak momentum, increased selling pressure, and further price declines. Looking ahead, if Ethereum failed to hold above \$1,800 and drop below \$1,750 ETH could decline further to \$1,550, a key support level last seen in October 2023. However, if buyers manage to push the price above \$2,120, it could invalidate the bearish outlook and spark a recovery.

Crypto market is constantly evolving, with innovative projects rising to venture mounted gamers. Ethereum (ETH) and Chainlink (LINK) have long been dominant in their respective areas - Ethereum because the leading smart contract platform and Chainlink because the go-to decentralized oracle network. However, a new AI-powered crypto, Ozak AI (OZAK), is gaining momentum, with a few analysts predicting a capability 300x surge. Could Ozak AI outperform these giants within the next bull run? Ethereum's Strengths and Challenges Ethereum remains the spine of decentralized applications (dApps), smart contracts, and DeFi. Its huge adoption has brought about large institutional interest and non-stop network enhancements, including Ethereum 2.0 and the transition to proof-of-stake (PoS). However, Ethereum faces numerous demanding situations. High transaction prices and network congestion have led developers and customers to explore options like Solana, Avalanche, and Layer-2 solutions. While Ethereum's long-term potential stays strong, its ability to maintain dominance relies upon scalability upgrades and persevered innovation. Chainlink's Critical Role in DeFi Chainlink has mounted itself as the leading decentralized oracle company, securing billions in DeFi smart contracts. It performs a vital function in connecting real-world information with blockchain applications, allowing steady price feeds, smart contracts, and automation across more than one networks. Despite its utility, LINK's price growth has been slow compared to a few more modern crypto initiatives. Competition from emerging oracle solutions and evolving blockchain architectures could restrict its long-term upside. While Chainlink will likely remain a crucial part of the crypto surroundings, its boom potential may not suit that of AI-driven projects. Why Analysts Are Bullish on Ozak AI Ozak AI is an AI-powered blockchain project that merges predictive analytics, machine learning, and decentralized community innovation. Unlike Ethereum and Chainlink, which typically focus on smart contracts and oracles, Ozak AI is designed to transform monetary markets with real-time AI-pushed insights. In

addition, the 3rd stage of the Ozak AI presale is currently going on, and the project is already making waves in the crypto community. With an impressive over \$900K raised so far, Ozak AI tokens are currently priced at just \$0.003 each, with the next stage price set at \$0.005. This early-stage opportunity is poised for significant growth, with projections suggesting that the token could reach \$1 by 2025. Some key advantages of Ozak AI include: AI-Powered Market Predictions: The platform offers real-time, actionable insights for traders and buyers, making it a game-changer in the financial sector. Scalability and Efficiency: Ozak AI leverages Decentralized Physical Infrastructure Networks (DePIN) and Ozak Stream Network (OSN), ensuring rapid, stable, and cost-efficient transactions. Customizable Prediction Agents: Users can create tailored AI models to shape their funding techniques, supplying a degree of flexibility that Ethereum and Chainlink currently lack. Ozak AI's low initial market cap in comparison to Ethereum and Chainlink makes it a high-upside investment. If AI-pushed crypto adoption quickens, Ozak AI may want to attain a 300x surge faster than those established projects. Could Ozak AI Outperform Ethereum and Chainlink? Ethereum and Chainlink are well-mounted and unlikely to be replaced in their respective fields. However, Ozak AI operates in a special area of interest, targeting AI integration with blockchain—a zone that is swiftly expanding. If AI-powered blockchain initiatives continue gaining traction, Ozak AI should see exponential growth that outpaces Ethereum and Chainlink in percentage profits. While ETH and LINK may nevertheless respect appreciably, Ozak AI's early-level positioning and AI-driven approach give it the capability for a way more upside. For crypto enthusiasts seeking out high-reward opportunities, Ozak AI affords one of the maximum exciting prospects in the AI-crypto sector. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. For more visit: - Website: <https://Ozak.ai/> - Telegram: <https://t.me/OzakAGI> - Twitter : <https://x.com/Ozakagi> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

- Hackers dumped 27.5 million worth of Ethereum in exchange for DAI. - Ether is trading at \$1,906 with a 6% drop in the last 24 hours. On-chain analysts have always been super active in the crypto industry. For a market that operates 24/7/365, on-chain trackers are more than necessary to keep on eye on unusual transactions. Recently, two prominent on-chain tracking platforms found an unusual activity regarding Ethereum dumping. Hackers are dumping \$ETH! — Lookonchain (@lookonchain) March 28, 2025 2 new wallets (likely related to hackers) received 14,064 \$ETH from #THORChain and #Chainflip, then dumped for 27.5M \$DAI at an average selling price of \$1,956.<https://t.co/hSP1PRGpuL><https://t.co/6axvL6d7Dg>  As per the latest update from renowned on-chain analyst, Lookonchain, 2 new wallets dumped 14,064 Ether tokens. They received 27.5 million worth of DAI tokens in exchange for selling ETH at an average price of \$1,956. What made the tracker suspicious of the transactions is that they had just received these Ether tokens from THORChain and Chainflip. While another on-chain tracker, Spot On Chain, raised a suspicion saying, “Coincidence or laundering?” Whereas Lookonchain predicted that the two wallets belong to hackers. How did the Ether price impact? Ether price is trading at \$1,895 with more than a 6% drop in the last 24 hours, at press time. The token was trading slightly above the \$2,000 price level yesterday and lost that support. Its chart clearly shows a sharp price drop in the Asian morning hours, which plunged the ETH price from \$2,003 to \$1,913. The Ether price drop might have something to do with the dumping of hackers. However, the broader crypto market is also witnessing a drop in its volume today. While Bitcoin is down by 2.27%, overall market cap dropped around 3%. Ethereum has been on a disappointing downtrend for the past few months. During the short bull run at the end of 2024, Ether witnessed gains but failed to record a new ATH value. Meanwhile, on-chain development and upgrades are also slowing down the network. Ether recorded an all-time low value of daily burn rate last week, as per TheBlock statistics. This demonstrates the decrease in on-chain activity. On the other hand, exchange reserves of Ethereum also hit a yearly-low value last week. Whether Ether affirms its position as the second-largest cryptocurrency or loses its position to other blockchain platforms remains a question.

Crypto market is gearing up for what may be one of the maximum massive bull runs in records. With institutional adoption developing, regulatory clarity enhancing, and blockchain improvements advancing swiftly, buyers are questioning which property should deliver the most important gains in 2025. Among the top projects are Ozak AI (OZ), XRP, and Ethereum (ETH)—3 tasks which can be created to capitalize on distinct elements of the blockchain era. But can these cryptos actually see a 1000% rally in the next bull cycle? Ozak AI: The Rising Star in AI and Blockchain Ozak AI is one of the most interesting projects inside the AI-pushed crypto area. The mixture of artificial intelligence and blockchain technology has become a hot fashion, and Ozak AI is mainly the way with its predictive analytics, decentralized infrastructure, and AI-powered trading solutions. The project's progressive approach permits users to get entry to real-time market insights, optimize trading techniques, and enhance data security through decentralized storage. With the AI region experiencing a fast boom, many investors accept that Ozak AI has the capacity to skyrocket. If demand for AI-driven blockchain solutions keeps increasing, OZ could see a 1000% surge, in particular as more establishments and traders combine AI-powered equipment into their decision-making processes. The low presale price of OZ makes it an appealing opportunity for those seeking to get in early than mainstream adoption takes to the air. Moreover, the 3rd stage of the Ozak AI presale is currently going on, and the project is already making waves in the crypto community. With an impressive over \$900K raised so far, Ozak AI tokens are currently priced at just \$0.003 each, with the next stage price set at \$0.005. This early-

stage opportunity is poised for significant growth, with projections suggesting that the token could reach \$1 by 2025.

XRP: The Comeback Story? XRP, the crypto asset powering Ripple's cross-border payment system, has been a key participant in the crypto space for years. Despite regulatory demanding situations, XRP has maintained a strong function in the market and continues to advantage traction with global financial institutions. One of the largest catalysts for a 1000% rally in XRP would be good regulatory results within the ongoing SEC lawsuit. If Ripple secures a decisive win, XRP should see a major influx of institutional investment. Additionally, with growing partnerships in the banking zone and the ability for XRP for use as a bridge currency in the global monetary system, a massive price rally is not out of the question.

Ethereum: The King of Smart Contracts Ethereum is the backbone of the decentralized finance (DeFi) and NFT ecosystems, and its transition to Ethereum 2.0 has drastically advanced its scalability and strength performance. As extra projects are constructed on Ethereum's network, demand for ETH continues to rise. Several factors could drive Ethereum's price up 1000% through 2025:

- Mass adoption of Ethereum-based Layer 2 solutions
- Institutional interest in Ethereum's staking mechanism
- The upward thrust of real-world assets (RWAs) on Ethereum's blockchain
- A broader crypto market rally that pushes ETH to new highs

If the market enters a full-scale bull run, Ethereum ought to potentially attain 5-figure price ranges, making it one of the top-appearing assets of the cycle. Which Crypto Will Rally First? While all 3 initiatives have strong growth ability, their performance in 2025 will depend on market conditions, adoption rates, and technological advancements.

Ozak AI is a high-chance, high-reward investment because of its emerging reputation in the AI area, even as XRP and Ethereum are extra established, making them rather more secure bets. With bullish momentum constructing within the crypto market, a 1000% rally is feasible—however the largest question remains: Which of these belongings will reach their top first? Investors might be looking carefully as 2025 unfolds, hoping to trip the wave of the next major surge.

About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. For more visit:

- Celo transitions to Ethereum L2 with 1 seconds block time and \$0.0005 fees
- Migration enables native bridging, boosts speed, and lowers security risks
- Vitalik and Coinbase support Celo's shift to enhance Ethereum integration

After two years of process, the Layer 1 blockchain Celo has officially transitioned to an Ethereum Layer 2 platform as part of an update on March 26. The migration utilizes Optimism's OP Stack for scaling and EigenDA for data availability. With the activation of the Celo L2 Mainnet at block height 31,056,500, the network is now fully operational, supported by Forno nodes. This major technological shift marks a new phase of growth and deeper integration with the Ethereum ecosystem.

“Today's the day. We clabs | aCf (@CLabs) March 25, 2025 Celo hits block 31056500 and enters the L2 era. Celo L2 Mainnet is coming” and it's just the beginning. In SF? Celebrate with @VitalikButerin, @Marek_, @RegenRene, @Optimism, @EspressoSys, @ElectricCapital & more:

<https://t.co/VatengDbhe>

Celo Boosts Speed, Security, and Features With L2 Upgrade The Celo team celebrated the successful migration, highlighting how it strengthened Celo's technical framework. The transition enhances interoperability with Ethereum, allowing Celo to better leverage Ethereum's infrastructure. Despite the shift, Celo maintains its reputation for ultra-low transaction fees of \$0.0005 and quick processing times. The technical advancement introduced block time reduction from 5 seconds down to 1 second. As part of its technological enhancements Celo incorporated native Ethereum bridging to eliminate security risks that stem from using external bridging services. By bringing its 1,000 projects onto Ethereum through this upgrade, Celo will enhance both network activity and innovation. Celo upholds its foundational components, such as SocialConnect for phone number payments and fee abstraction, which lets users pay fees through ERC-20 tokens. CEL0 tokens now reside natively on Ethereum, but layer 2 CEL0 represents the bridged tokens, so Celo continues to establish deep connections with Ethereum's blockchain network.

Vitalik and Coinbase Back Celo's Smooth Ethereum L2 Shift Ethereum co-founder Vitalik Buterin expressed praise for Celo because he saw how the platform brought Ethereum together with improved globalization for cryptocurrency acceptance. The move would boost both the overall ecosystem and decentralized finance growth according to him. Further, Coinbase provided support to Celo's migration process by stopping deposits and withdrawals of its native token CGLD temporarily. User CGLD tokens would transform automatically during the migration without any user intervention under the assurance of the exchange. Coinbase requested its users to stop CGLD token deposits since they could delay transaction processing times.

Highlighted Crypto News Today:

Bulls have shown increased momentum this week as they push the Ethereum price above the \$2,000 mark. They are currently fighting to maintain the level despite the volatility in the market. Meanwhile, Dogecoin investors are now investing in a new DeFi platform known as DTX Exchange (DTX). As a new-generation hybrid trading platform with over 700k users, DTX seeks to revolutionize the trading space. It is currently in the cryptocurrency ICO phase and has soared by 800%. The price of DTX is expected to rise by 10x in the months ahead.

Ethereum (ETH) Bulls Seek To Turn \$2K Into Support The Ethereum price is currently trading above the \$2,000 level after a little upsurge on March 19. Data from CoinMarketCap reveals the Ethereum price has risen by 7.1% on the weekly timeframe. Meanwhile, Ali Martinez notes the Ethereum price must conquer the resistance at \$2.4k for a bullish flip to occur. Another analyst called Marzell also reacted to the Ethereum price breakout. Telling his followers the altcoin has broken out, he forecasts the Ethereum price might surge to \$2.8k in the coming weeks. Drawing parallels between the Ethereum price chart of 2020 and that of 2025, MerlijnTrader notes the

altcoin is about to shock the world. He forecasts the Ethereum price might mirror the same pattern and soar to \$7k. Despite the latest uptick, the coin's relative strength index is below average. While it could mean that bears have not given up, it gives the Ethereum price enough room for a massive uptrend. Dogecoin (DOGE) Under Mixed Sentiment The Dogecoin price is showing mixed sentiment on the charts as bulls and bears battle for control. While the Dogecoin price has soared by 3.5% on the weekly timeframe, its value has plunged by 29.9% on the monthly chart. CoinMarketCap data reveals the Dogecoin price has been consolidating between \$0.25 and \$0.15. Meanwhile, analysts have posted bullish forecasts for the Dogecoin price. Trader Tardigrade notes the Dogecoin price has broken out of a symmetrical triangle in the 4-hour chart. The analyst predicts the Dogecoin price might soar to \$0.19. Another expert, Rose Premium Signals posted three potential Dogecoin price targets in the case of an uptrend. They include \$0.38, \$0.48, and \$0.60. Meanwhile, technical analysis shows that selling pressure is still high. The Fear and Greed Index displays Fear which means that investors are not optimistic. Also, the relative strength index is below the 50 mark, a sign that bears are in control. DTX Exchange (DTX) Gains Massive Interest From Investors While the Ethereum price gains momentum, DTX Exchange (DTX) has piqued the interest of investors. DTX Exchange is a revolutionary trade platform that combines TradFi and DeFi where users can trade more than 120,000 products such as cryptos, stocks, forex, and ETFs. Meanwhile, DTX Exchange is built on a Layer-1 blockchain, VulcanX, which has shown high performance of up to 200,000 TPS. This high-performance infrastructure also helps in fast and secure transactions, which in turn increases the confidence of the users and the reliability of the platform. It also provides the Phoenix Wallet, a decentralized asset management service that has been built to meet institutional standards of security, so that the users can retain full control over their funds and do not have to rely on third-party service providers. The DTX token that is at the center of the platform has also attracted a lot of attention from investors. DTX Exchange is in the presale phase and is trading at \$0.18. It has gathered more than \$16.1 million in funding, which indicates the high interest of the community in the project. The Best Altcoins To Watch While the Ethereum price remains stable above \$2k, Dogecoin holders are showing interest in a new DeFi coin called DTX Exchange. The price of this new entrant could rise by 10x this year as adoption rises. With the upcoming crypto bull ahead, investors who are looking for the best coins to invest in could turn to low-cap tokens like DTX. Find out more information about DTX Exchange (DTX) by visiting the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. Ethereum held strong near \$1,861 for the past two weeks, shaking off bearish pressure and sparking a 7% recovery. Hovering around \$1,980 now, Ethereum is pushing toward reclaiming its March highs. With the RSI creeping up and MACD flashing green, the bulls are eyeing \$2,258 next. But the catch? Holding above \$1,861 is crucial, or it's a slippery slope back to \$1,700. Meanwhile, Bitcoin is throwing punches of its own. Smashing past its 200-day EMA at \$85,502, the price is now teasing \$85,600. If support holds, \$90,000 is on the table. RSI is crawling toward 50, MACD's bullish crossover screams momentum, and the community is buzzing. Still, a drop below \$85,000 could drag it down to \$78,258 real quick. The big question is who's got the stamina for the next leg up? Now, while Bitcoin and Ethereum dance with technical levels, Qubetics (\$TICS) isn't just following the trend. It's busy rewriting the rulebook. Unlike its predecessors stuck in the same old loop, Qubetics is building real-world solutions for businesses, professionals, and individuals tired of clunky platforms and high fees. With AI-powered tools like QubeCode IDE, Qubetics isn't just aiming for market share—it's gunning for mass adoption. Perfectly positioned for the future of blockchain and digital finance, Qubetics is that one project daring enough to shake things up. Qubetics (\$TICS) is Revolutionizing Blockchain Utility with QubeCode IDE Qubetics kicks off this list of top cryptos to hold for short term because it ain't playing around. Designed for real-world applications, Qubetics offers the AI-powered QubeCode IDE, making blockchain development smoother than ever. Professionals, businesses, and everyday users can build smart contracts, dApps, and entire ecosystems without the headaches of outdated systems. Imagine dragging and dropping complex functions, automating smart contracts, and slashing development time like slicing through butter. This is where Qubetics leaves others eating dust. It simplifies everything. Need enterprise-grade security? It's baked in. Want seamless integrations? That's standard. For South American businesses juggling cross-border transactions, Qubetics offers a no-brainer solution—efficient, secure, and lightning-fast. Presale Buzz and Insane ROI Potential Here's the kicker—The crypto presale is in its 27th stage, and the numbers are off the charts. Over 503 million tokens sold, 23,700+ holders strong, and \$15.4 million raised. Right now, \$TICS is priced at just \$0.1300. Early adopters who snagged tokens at \$0.01 are sitting on a juicy 1200% return already. But the game's not over. There's still a shot to jump in and grab serious returns. Adopters entering now can still ride a wave of ROI that's hard to find elsewhere. Analysts predict \$TICS hitting \$1 post-presale, locking in a 669% ROI. If it touches \$5, that's 3,745% ROI. The stakes climb—\$6 brings a 4,514% return, and if \$TICS hits \$10, backers are staring down 7,591%. The real jaw-dropper? A potential 11,437% ROI when the mainnet launches and \$TICS cracks \$15. Blink, and it might be too late. Bitcoin (BTC) is The Undisputed Heavyweight Targeting \$90K Bitcoin isn't just back—it's clawing its way to the top again, earning its place as one of the top cryptos to hold for short term. After breaking the 200-day EMA at \$85,502, BTC holds steady around \$85,600. The bulls are pushing, looking to smash through the psychological \$90,000 barrier. The technicals are lining up. RSI is flirting with neutral territory, while MACD's bullish crossover last week lit up buy signals. With green histograms building, momentum is shifting north. But there's no room for error. If Bitcoin loses ground and falls below \$85,000, it could tumble fast toward \$78,258. For community members and early adopters stacking sats, this is the zone to watch. Bitcoin's proving again why it's the go-to store of value and a top crypto to hold for short term. High volatility? Sure. But that's where the biggest paydays come from. Ethereum (ETH) is Bouncing Back with a Target on \$2,258

Ethereum isn't sitting on the sidelines either. After grinding down to \$1,861, ETH found its footing and rebounded nearly 7%. Now circling \$1,980, Ethereum is positioning itself as another top crypto to hold for short term. The chart looks decent. RSI is slowly picking up, working its way to that crucial 50-level, while MACD flashed a bullish crossover. Momentum's leaning bullish, but ETH needs to hold that \$1,861 level like life depends on it. Crack that, and it's heading down to \$1,700. Stay above, and \$2,258's the March 7 high isn't out of reach. For buyers hunting for solid projects with smart contract dominance, Ethereum continues to be a heavyweight contender. Technical upgrades, DeFi dominance, and a vast ecosystem keep Ethereum in every savvy backer's portfolio. Conclusion: Get In Before the Window Shuts Bitcoin and Ethereum are flexing their muscles, battling key levels and setting up the next big moves. Both deserve their spot among the top cryptos to hold for short term. But Qubetics? That's a whole different beast. With its AI-driven QubeCode IDE, Qubetics is solving problems Bitcoin and Ethereum never even touched. The presale is rolling, the ROI potential is off the chain, and real-world use cases make it the one crypto no smart participant should ignore. Backers still have a window to jump in, grab \$TICS at \$0.1300, and potentially ride it all the way to \$15 post-mainnet launch. The future's not waiting. Neither should anyone looking to level up in crypto. Dive into Qubetics while the door's still open, or watch from the sidelines as others cash out big. For More Information: - Qubetics: <https://qubetics.com> - Presale: <https://buy.qubetics.com/> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Ethereum price rises in past week amid broader crypto market recovery. - Exchange reserves drop to 18.32 million ETH, down 7% from February peak. - Rising leverage ratio indicates increased trader optimism despite year's volatility. Ethereum (ETH) has shown notable resilience with a 9% price increase over the past week as the cryptocurrency market attempts to recover from its recent downturn. While the second-largest cryptocurrency by market capitalization benefits from improving general market sentiment, two key on-chain metrics suggest this upward momentum could be more than a temporary bounce. On-chain data reveals that Ethereum's exchange reserve has declined to its lowest level of 2025, currently standing at 18.32 million ETH. This represents a substantial 7% reduction from the year-to-date peak of 19.74 million coins recorded on February 2. This metric, which measures the total amount of ETH held in exchange wallets available for immediate trading, provides significant insight into holder behavior and potential price pressure. The declining exchange reserve indicates that traders are moving their ETH off exchanges and into long-term storage, staking solutions, or spot ETH ETFs. This reduction in readily available supply can create upward price pressure, as lower selling liquidity combined with steady demand typically drives prices higher. The consistent outflow from exchanges suggests growing confidence in Ethereum's long-term prospects despite recent market volatility. Ethereum's ELR has been on the spike Simultaneously, Ethereum's Estimated Leverage Ratio (ELR) has been climbing, reaching a year-to-date high of 0.686 on March 21 before experiencing a minor pullback to its current level of 0.683. This metric, calculated by dividing the asset's open interest by the exchange's reserve for that currency, measures the average amount of leverage traders are employing in their positions. The surging ELR signals increased risk appetite among Ethereum traders despite the cryptocurrency's price challenges since the beginning of 2025. This trend indicates that many market participants remain optimistic about a near-term rally and are willing to leverage their positions to amplify potential gains, a sign of growing confidence in Ethereum's immediate prospects.

Ethereum has experienced a notable price decline in the year-to-date as it struggles to rise above the \$2,200 level. The crypto trades around the \$2,100 DeFi crypto price, down by over 22% in the past month. Given Ethereum's apparent struggle to break through key technical levels, the crypto may now be at risk of more price declines. While analysis on Ethereum trying to rebound springs up, investors are heralding the new crypto ICO, DuragDoge (\$DURAG). This meme coin has hit new highs as it focuses on cultural prowess, blending community and innovation to deliver the good tidings to the "underdogs". This article entails DuragDoge's path and propositions as it hits new highs. Ethereum (ETH): Fails To Breach Long-Term Resistance Ethereum now struggles to gain momentum above \$2100, and despite multiple attempts, it has been unable to break through other key technical levels since the beginning of this year. Ethereum's price action over the past two weeks has shown more weakness. An interesting analysis from analyst Tony "The Bull" Severino on X noted ETH's persistent failure to overcome major resistance levels and is now at risk of more catastrophic price drops. Tony "The Bull" Severino pointed out that Ethereum has been unable to tag the quarterly (three-month) Parabolic SAR despite more than a year of attempts. This indicator, often used to determine the direction of an asset's trend, shows that Ethereum is locked in a prolonged struggle against resistance on a larger downtrend. "This feels like it sends a message" resistance won't be broken," the analyst highlighted. DuragDoge (\$DURAG) Presale: Highly Rewarding Venture The native token of this new crypto ICO, \$DURAG has hit new highs and is ready to offer incredible benefits and profits to its users. The coin's tokenomics has a total supply of 2 billion tokens, which is well allocated for beneficial purposes to support its ecosystem. 62% is allocated to its presale journey, where users can buy coins at a discounted rate, and 8% is kept aside for community rewards. DuragDoge has its window of purchase open to aspiring investors with a transparent presale, complete with a smart contract audit by Coinsult. The presale is selling at a DeFi crypto price of \$0.0009, promising a 1000% return to early backers by its launch. A short-term 155% profit is guaranteed to current buyers by stage 2 when the token's value will reach a new high of \$0.0025. DuragDoge is the best crypto to buy now as investors and fans rally to follow its journey to dominance, away from an era of being underestimated. With bold moves, creative push, and exquisite features, this underdog is turning

humble beginnings and small moments into a movement. This global movement goes beyond monetary value, but aims to instill confidence, and shared energy and ambition in its community. DuragDoge has a no-buy-and-sell tax policy, as well as no imposed minimum presale purchase, to make it inclusive for all investor types. Interestingly, locked liquidity is also up for grabs, and staking protocols from which token holders can enjoy up to 20% APY. This new meme coin is the best crypto to buy now, as it aims to augment its investors' portfolios. Conclusion Ethereum continues to trade in the reds over the year-to-date and fails to overcome barriers despite several attempts. DuragDoge hits new highs following its immersive mission, and its ongoing presale is only a step to bask in its potential. \$DURAG is for everyone, whether you're just starting or have been in the crypto game for the longest. With the current low entry price, \$DURAG beckons investors to participate in the meme coin revolution. Follow Durag Doge on X and Telegram for the latest news and updates. - The Ether price reclaimed the \$2K price level as the crypto market shows recovery signs. - Ethereum daily burn rate hit an all-time low of 53.07 ETH as on-chain activity reduced. The crypto market is showing recovery signs as Bitcoin is trading above the \$86K price level. Ether's price also reclaimed the \$2K mark with a noticeable increase in its daily price movement. However, when it comes to the on-chain activity Ethereum is still lagging behind. While increased institutional interest is pushing the BTC price, the rise in the Ether price is purely based on positive market sentiment. The ETH price touched the \$2K mark last week as well, but couldn't keep up with the price rise. As per the recent on-chain data, Ethereum recorded an all-time low in terms of daily burn rate. Ether is trading at \$2,049 at press time with a 2.78% surge in the last 24 hours. Its market cap is hovering around \$247.25 billion while 24-hour trading volume increased by around 50%. Community sentiment shows 77% bullish and 23% bearish today. Ethereum Daily Burn Rate Hits All-Time Low as On-chain Activity Drops As per TheBlock data, Ethereum recorded an all-time low daily burn rate of 53.07 ETH on March 22. On similar lines, the seven-day moving average of active addresses reached a low value of 417,760 last week. This demonstrates the decrease in the on-chain activity of Ethereum. The platform has already been raising concerns among the community for its increasing irrelevance in the crypto industry. This further intensified with the present drop in ETH daily burn rate. Ethereum was once the top blockchain platform for dApp development. However, the rise of more sophisticated blockchains seems to be dominating the platform. Highlighted Crypto News Today: Fidelity Enters Tokenized Treasuries With Ethereum-Based Fund on May 30

Ethereum (ETH) has long been a cornerstone of the crypto market, solidifying its position as the leading smart contract platform. Yet, despite its dominance, ETH has struggled to surpass the \$2,000 mark, leaving investors eager for a bullish breakout increasingly frustrated. As Ethereum remains in a holding pattern, attention is shifting to an emerging contender—Lightchain AI. This promising project is quickly gaining momentum, with its presale already generating an impressive \$18.1 million. Currently priced at just \$0.007125 per token, Lightchain AI is attracting early investors positioning themselves for what many believe could be a significant market breakthrough. Why Is Ethereum Stuck at \$2,000? Understanding ETH's Stagnation The amount of Ethereum is unable to break over \$2,000, as the group of factors has had an impact. The growth of Layer-2 scaling solutions, which are exemplified by Base the blockchain's release by Coinbase, has steered away from the main Ethereum network of transaction fees, thus reducing the income and valuation of the latter. Moreover, the respective outflows of ETFs reveal the lack of institutional interest meaning price stagnation. The other reason for the fall of the widespread cryptocurrency market, which was already stoked by the recent breach-in security incidents, such as the \$1.5 billion case of Bybit, with digital assets is the reduction in the trust of investors. The elements jointly have drawn a line to stop Ethereum at the point of the \$2,000 and thus, have made the price stand still. Altcoin Poised for Massive Growth As Ethereum struggles to gain momentum, Lightchain AI is capturing attention with its groundbreaking advancements. This innovative platform introduces a Transparent AI Framework, ensuring AI operations on the blockchain are open, accountable, and easy to audit. It also offers Decentralized Governance, empowering the community to drive smarter decisions for platform upgrades and development. On top of that, Lightchain AI is transforming the digital economy with its Memecoin Launchpad, a secure, AI-driven platform for creating and monetizing meme-based tokens. With these cutting-edge features, Lightchain AI is establishing itself as a leader in the blockchain space, drawing strong interest from both investors and developers. Is Lightchain AI Future of Crypto? While Ethereum continues to dominate the blockchain space, Lightchain AI is quickly emerging as a strong contender with enormous growth potential. Here's why it's generating buzz—Ethereum faces increasing challenges from regulations and resistance, while Lightchain AI is at the beginning of its adoption curve. This early stage is where sharp investors often see the greatest returns. The excitement is growing rapidly, with early adopters already securing their stakes, betting that Lightchain AI will drive the next big movement in crypto. Don't miss your chance to get in on what could be the next major breakthrough. Are you ready to make your move? - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Fidelity plans to tokenize its \$5.3B money market fund on Ethereum by May 30. - Tokenized U.S. Treasury market surged 500% YoY to \$4.77B. - BlackRock's BUIDL holds \$1.5B; Franklin Templeton's

on-chain fund at \$689M. Fidelity Investments is joining the tokenized asset space by submitting with the SEC to offer a blockchain-based money market fund on Ethereum. The fund, called the Fidelity Treasury Digital Fund (FYHXX). Which will consist of U.S. Treasury securities and cash and utilize blockchain technology for its transfer agent. Subject to approval, the fund will be live on May 30th, which is a huge milestone for traditional finance adopting tokenization. The Rise of Tokenized Treasuries Fidelity's action follows an increasingly popular trend of financial institutions venturing into blockchain for real-world asset (RWA) tokenization. Total U.S. Treasury market tokenized has grown close to 500% year on year to \$4.77 billion. BlackRock is leading this space with its BUIDL fund, which has \$1.5 billion in assets. While Franklin Templeton's tokenized fund has \$689 million. Why Tokenization Tokenization of assets such as Treasuries facilitates quicker settlements, 24/7 trading, and lower dependency on intermediaries. As much as skepticism regarding the viability of tokenizing some assets has surrounded this issue. Big institutions are now increasingly adopting blockchain-based financial instruments. The SEC filing suggests possible future peer-to-peer trade, further enhancing accessibility. Regulatory uncertainty that once deterred institutions from moving into the sector has been dispelled by BlackRock's success and changing U.S. policy. Visa, Mastercard, and JPMorgan have all introduced blockchain programs, indicating increased confidence in the future of tokenization. Challenges and Outlook While tokenization provides efficiency and liquidity advantage, critics reason that certain assets "such as real estate and private equity do not lend themselves to blockchain. But the Boston Consulting Group estimates tokenized fund assets could grow to \$600 billion by 2030, from \$2 billion currently. Fidelity's move into this space reflects the traditional finance industry's embrace of blockchain technology. Its Bitcoin and Ethereum ETFs are already booming, and the company's entrance into tokenized Treasuries might further catalyze mass adoption of digital assets. In a rush by institutions to tokenize financial markets, Fidelity's Ethereum-based fund is yet another landmark in bringing traditional and decentralized finance together. Highlighted Crypto News Today Crypto Scam Alert: Fake Jury Duty Warrants Used to Demand Bitcoin Payments

Ethereum (ETH) remains a dominant force in the crypto space, but several promising altcoins are emerging as potential challengers. For investors looking to stack high-potential Ethereum killers priced under \$3, three standout projects are worth considering. Lightchain AI is leading the charge, having already raised over \$18.1 million at a presale price of \$0.007, positioning itself as a major player in AI-driven blockchain innovation. Cardano (ADA) continues to expand its smart contract ecosystem, while Ripple (XRP) offers lightning-fast transactions and scalability. With the next bull run approaching, could one of these altcoins outshine Ethereum and deliver massive returns for early investors? Top 3 Ethereum (ETH) Killers Under \$3 to Buy Right Now Investors seeking Ethereum alternatives under \$3 may consider Cardano (ADA), XRP, and Lightchain AI (LCAI), each offering unique features and growth potential. Cardano, trading around \$0.69, is a proof-of-stake blockchain platform emphasizing flexibility and eco-friendliness. Its recent surge in whale activity indicates growing confidence in its long-term potential. XRP, priced at approximately \$2.27, specializes in facilitating swift, cost-effective cross-border payments, making it attractive to financial institutions. Recent developments, such as discussions about including XRP in a U.S. strategic crypto reserve, have further bolstered its market position. AI, currently valued at \$0.007, integrates artificial intelligence with blockchain technology, offering innovative solutions for decentralized applications. Its successful presale, raising over \$18 million, reflects strong investor interest. While Cardano and XRP present viable options, Lightchain AI's low entry price and unique AI integration offer substantial upside potential, appealing to investors seeking high-risk, high-reward opportunities. Lightchain AI's Market Insights- Which Altcoins Have the Biggest Upside? Lightchain AI provides valuable market information to investors who want to benefit from altcoin potential. Cardano and XRP are both above their predicted value, its AI prediction suggests, so there will be a future downward correction. On the other hand, Lightchain AI (LCAI) appears to be underpriced compared to its expected growth trajectory. With an outstanding team and state-of-the-art technology, LCAI may be destined for explosive expansion in the short term. Its structured workflow delegates AI processing by smart contracts that are executed by AI contributor nodes and verified through cryptographic proofs. Gas optimization further makes AI processing affordable by adaptively adjusting fees, avoiding congestion. As more people adopt AI and Lightchain AI has more real-world uses, its 2025 price action will witness rising demand, scalability, and its solid market position. With its affordability, waiting now to invest in LCAI could reap enormous dividends as its market cap grows. Secure Your Lightchain AI Opportunity Today While Ethereum remains a dominant force, the growth potential of promising altcoins such as Cardano, XRP, and Lightchain AI cannot be ignored. With each project offering unique features and growth opportunities, investors seeking high-potential Ethereum killers under \$3 should consider adding them to their portfolios. Lightchain AI stands out as a particularly intriguing option, with its low entry price and innovative integration of AI technology. As its real-world use cases expand and demand for AI-driven solutions increases, investors could see significant returns on their investment in LCAI. Don't miss out on the potential profits - grab your Lightchain AI opportunity now before it's too late! - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. The crypto market is heating up fast, and some of the biggest projects are making massive moves. Binance just announced a major expansion, increasing its fiat trading support and rolling out enhanced features for global users. Meanwhile, Ethereum has surged past \$2,000, riding a wave of bullish momentum as Bitcoin also gains ground. But the real breakout project? Qubetics (\$TICS), which is

changing the game for Web3 with its interoperability-focused ecosystem and a presale that has already raised over \$15.3 million. While Binance and Ethereum are showing impressive growth, Qubetics is delivering groundbreaking innovation that is set to redefine blockchain interoperability. By uniting multiple chains into a seamless, scalable network, Qubetics removes the barriers that have limited blockchain adoption, making it the best crypto to buy in 2025. With a record-breaking presale, massive ROI potential, and revolutionary interoperability solutions, Qubetics is leading the pack. If you're looking for a long-term crypto with real-world impact and explosive growth potential, Qubetics should be at the top of your list.

Qubetics: Solving Blockchain's Biggest Problem with Seamless Interoperability

One of the biggest challenges in blockchain technology has always been interoperability—the ability for different blockchains to communicate and share data. Qubetics is solving this problem head-on, creating a seamless, cross-chain ecosystem where users can transfer assets, execute smart contracts, and interact across multiple blockchains without friction. Imagine a future where you don't need to swap tokens manually, use multiple wallets, or rely on centralized exchanges to bridge assets. Qubetics is making this a reality, offering a fully decentralized and scalable interoperability layer that eliminates the barriers between networks like Ethereum, Binance Smart Chain, and Solana. This changes everything for businesses, developers, and everyday users, unlocking faster transactions, reduced fees, and greater flexibility across the crypto space. From DeFi platforms needing smooth cross-chain liquidity to NFT marketplaces requiring seamless asset transfers, Qubetics is building the infrastructure to make Web3 truly interconnected. This is why it's one of the best cryptos to buy in 2025—solving a problem that has held blockchain back for years.

Qubetics' Record-Breaking Presale—Here's What You Need to Know

The Qubetics presale is on fire, with over \$15.3 million raised and a staggering 502 million \$TICS tokens already sold. With momentum building rapidly, the window to buy in at the current price is closing fast. Each presale stage lasts only 7 days, and every Sunday at 12 AM, the price jumps by 10%, pushing early participants into prime positions for massive gains. Right now, the \$TICS token is priced at \$0.1181, with a growing community of 23,500 holders who are stacking up before the next surge. And with mainnet launch set for Q2 2025, analysts predict a staggering potential ROI of up to 12,590.70%, making Qubetics one of the most explosive crypto opportunities of the year. So, what happens if you jump in with \$1,000 today? At the current price of \$0.1181, you'd secure 8,460 \$TICS tokens. When \$TICS hits \$1, that investment transforms into \$8,460, and at \$5, it skyrockets to \$42,300. If \$TICS reaches \$10, that same investment turns into a jaw-dropping \$84,600. But with the next price hike coming this Sunday at 12 AM, now is the best time to secure your spot before prices climb again. Join the Qubetics presale now before it's too late!

Binance Expands Fiat Trading, Strengthening Its Market Position

Binance has just expanded its fiat trading services, improving user experience and accessibility worldwide. With enhanced deposit and withdrawal methods, Binance is solidifying its dominance as the world's largest crypto exchange. The platform is now supporting a wider range of fiat currencies, making it easier for community members to onboard into crypto without the hassle of third-party services. This move is expected to drive even more adoption, cementing Binance's role as a gateway to the digital asset economy. Despite regulatory challenges in some regions, Binance continues to grow, proving its resilience and adaptability. However, as crypto becomes more decentralized, projects like Qubetics that remove the need for centralized exchanges are becoming even more attractive.

Ethereum Surges Past \$2,000—What's Next for ETH?

Ethereum has broken past the \$2,000 mark, showing strong bullish momentum as the overall crypto market rebounds. With Bitcoin gaining traction, Ethereum's price is riding the wave, attracting new liquidity into the ecosystem. This latest price movement is driven by increased on-chain activity, with Ethereum gas fees surging as demand for transactions spikes. Analysts are now watching key resistance levels, predicting that Ethereum could push toward \$2,500 in the coming weeks if this trend continues. However, Ethereum's long-term growth is still tied to Layer 2 solutions and its ongoing network upgrades. While ETH remains a solid investment, Qubetics' ability to facilitate interoperability between blockchains could make it an even more revolutionary player in the space.

Final Thoughts: Why Qubetics is the Best Crypto to Buy in 2025

While Binance's expansion and Ethereum's rally are making headlines, Qubetics is delivering the most groundbreaking innovation. With seamless cross-chain interoperability, a rapidly growing presale, and insane ROI potential, Qubetics is leading the way as the best crypto to buy in 2025. With the next crypto presale price hike coming this Sunday at 12 AM, now is the best time to secure your \$TICS tokens before they become more expensive. Join the Qubetics presale now and be part of the next crypto revolution!

For More Information: - Qubetics: <https://qubetics.com> - Presale: <https://buy.qubetics.com> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics>

FAQs

- Why is Qubetics one of the best cryptos to buy in 2025? Qubetics is revolutionizing blockchain interoperability, solving one of the biggest problems in crypto. Its fast-selling presale and massive ROI potential make it a must-watch project.
- How does Qubetics compare to Binance and Ethereum? While Binance is growing as a centralized exchange and Ethereum is leading in DeFi, Qubetics is solving interoperability, making Web3 more connected and accessible.
- How can I participate in the Qubetics presale? Qubetics' presale is live, and prices increase every Sunday at 12 AM. Join the Qubetics presale now before the next price hike!

Well, even the second-largest crypto in the market, Ethereum (ETH), is feeling the heat of the bear market. Ethereum continues to be on a prolonged downtrend, hitting a new yearly all-time low. This has derailed its holders and investors as ETH continues to dip despite the network's activity to raise its value again. On the other hand, another token, DuragDoge (\$DURAG), is shaking things up in the meme coin sector and already showing potential to take over. \$DURAG is an innovative meme token serving fun, utility, creativity, profitability, and cultural identity in one go. No wonder \$DURAG is

topping the charts as one of the best cryptocurrency presales. It is also the reason analysts are confident that DuragDoge is one of the best cryptos to buy now. Read on to discover why \$DURAG might become the next meme coin leader. Ethereum (ETH) Continues to Hint at New Price Drops as it Hits a New All-Time Low Ethereum has been in a downtrend for 357 days, and just recently, it hit a new all-time low of \$1,996. This is Ethereum's lowest value since November 2023. During this period of its new all-time low, about \$100 million in Ethereum was liquidated, and ETH's future open interest (OI) decreased by over 10% across various crypto exchanges. Ethereum declined by over 50% between December and March in just four months, causing it to lose over \$250 billion in market cap. This is taking a significant toll on ETH holders. Data from IntoTheBlock shows that about 70% of ETH addresses are out of money, and only 4.46% are at breakeven value. Ethereum's continuous decline is negatively impacting its holders and investors, who were hoping that recent network activity would boost ETH's price again and give them gains. Ethereum just deployed its Pectra Upgrade on the Sepolia testnet, and members and analysts hoped it would boost ETH's price. However, the price surge might not happen anytime soon as ETH continues to dip. DuragDoge (\$DURAG) is on the Verge of Becoming the Meme Coin Leader DuragDoge is a new meme coin revolutionizing the meme coin space with its utility-driven features. It is the best cryptocurrency for beginners, especially those from the hoods, seeking rewards for their hustle. DuragDoge is here to support its members' ambitions and encourage them to take bold moves by arming them with \$DURAG, one of the best cryptos to buy now. DuragDoge aims to be a force to reckon with in the meme coin space. This is why it promotes long-term values that will benefit its community members. DuragDoge's community will be for everyone daring to do great things and will reflect members' identity and creativity. DuragDoge is driving a cultural shift to prove there can be more to meme tokens. DuragDoge's vision and features are impacting its ongoing presale, making \$DURAG one of the best cryptocurrency presales in the market. It is still not too late to become an early holder and make gains, as there are 1,240,000,000 \$DURAG tokens up for grabs during this presale. DuragDoge (\$DURAG) Continues to Gain Significant Traction With its Rewards DuragDoge is fulfilling its promise of building long-term commitment for holders and investors. One way it is doing that is through its staking rewards. Token holders will earn up to 20% APY in rewards each time they stake their \$DURAG tokens. This alone is enough to add massive gains to holders' portfolios. It also makes it easy for new crypto users to earn without trading coins, making \$DURAG the best cryptocurrency for beginners. Community members will receive rewards as 160,000,000 \$DURAG tokens have been set aside for rewards to ensure members consistently gain. A burn mechanism will ensure \$DURAG's value continues to surge in the long term. This will regulate the quantity of \$DURAG tokens in circulation at any given point, making \$DURAG gold. With these features and reward mechanisms, it is easy to see why \$DURAG is topping the charts and moving to become the new meme coin king. Conclusion While Ethereum is still in the dip, DuragDoge is breaking records and profiting holders and investors. \$DURAG's features set it apart, and the ongoing presale is your best chance to tap into this rare gem. So join the presale now and elevate your hustle and drip! Follow Durag Doge on X and Telegram for the latest news and updates. Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market has steeply declined since January 20th, when Donald Trump assumed office as the U.S. president. The recent sell-offs have seen Bitcoin and Ethereum dip sharply as investors liquidate their crypto holdings. Analysts believe the sell-off could result from macroeconomic uncertainty in the U.S. following Trump's proposed economic policies regarding tariffs and taxes. As the two crypto assets decline, Ethereum and Bitcoin traders have shifted their focus to a new DeFi project with massive long term potential. Bitcoin price prediction Bitcoin's price recently fell to a four-month low, dipping below \$77,000 before recovering slightly above \$80,000. As of this writing, the crypto asset is trading at \$83,414. Analysts have observed parallels between current market conditions and the end of the 2021 crypto bull market, suggesting a potential further drop to \$73,000. Despite the recent selloff, many believe Bitcoin is undergoing a temporary correction, and the asset is set to rebound soon. Bitcoin could reclaim the \$100k mark in May. Ethereum price prediction Ethereum (ETH) is trading at approximately \$1,890 at the time of this publication. The digital asset has suffered under the prevailing bearish market sentiment. However, Ethereum is still one of the most utilized blockchain networks. Analysts expect a strong recovery once market conditions stabilize. The continued development of Ethereum Layer-2 scaling solutions and potential ETF approvals could drive a price resurgence shortly. Ethereum could surge to an all-time high before the year ends. According to analysts, Ethereum could see \$2,800 sometime in April. Why BTC and ETH Traders Are Turning to BinoFi (BINO) As Bitcoin and Ethereum remain under bearish pressure, investors seek alternative projects with strong growth potential. BinoFi (BINO) has emerged as a compelling DeFi opportunity for presale investors. The project is gaining traction among BTC and ETH traders due to its hybrid exchange model, cross-chain trading, gasless transactions, and high-yield staking incentives. Unlike traditional exchanges, BinoFi offers a hybrid model that merges the speed and liquidity of centralized exchanges (CEXs) with the security and autonomy of decentralized exchanges (DEXs). This means traders can enjoy fast trade execution without compromising transparency or security. This innovative model helps BinoFi solve the long-standing problem of liquidity and efficiency that has plagued both CEXs and DEXs. BinoFi's cross-chain compatibility is another major draw. The feature allows users to trade assets across multiple blockchain ecosystems without limitations. Gasless transactions significantly reduce costs, making trading more efficient and affordable. With Ethereum gas fees fluctuating unpredictably, many traders are eager to adopt a new platform that eliminates unnecessary transaction expenses and has lightning-fast transaction speeds. High-Yield Staking and Passive Income Beyond trading, BinoFi offers lucrative staking rewards, providing passive income opportunities for investors. Given the current market uncertainty, BTC and ETH holders are increasingly looking for ways to earn yield on

their holdings without taking excessive risks. BinoFi's staking program offers an attractive alternative, enabling traders to maximize their earnings while stabilizing the market. One of the most compelling reasons traders are flocking to BinoFi is its ongoing presale, where BINO tokens are priced at just \$0.02 per token. With a projected listing price of \$0.30, early investors can secure a 15x potential return before the token hits significant exchanges. The presale's ongoing phase 1 is on the verge of selling out and investors will need to pay more for BINO tokens in the next presale phase. - Ethereum Pectra mainnet upgrade faces delay beyond April 2025. - Developers prioritize thorough testing on Hoodi testnet before setting new date. - History Expiry implementation also affected by the postponement. The highly anticipated Ethereum Pectra mainnet upgrade has been delayed beyond its initial April 2025 target date, according to decisions made during Ethereum's All Core Developers Consensus Call (ACDC) #153 on March 20. This postponement reflects the development team's cautious approach to ensuring the network upgrade proceeds without complications. During the call, Ethereum's core developers reviewed Pectra's progress but opted against confirming a specific mainnet launch date. Instead, they decided to monitor the upgrade's performance on Hoodi, a recently launched testnet specifically designed to assess Pectra's stability under controlled conditions. This approach aligns with statements from Ethereum Protocol Support Lead Tim Beiko, who previously indicated that timing would depend on successful testnet implementation. "Pectra will be scheduled 30+ days after Hoodi forks successfully, pending infra and client testing. Fusaka planning will run in parallel, with a deadline of March 24 to propose EIPs, and a tentative date of April 10 for a scope freeze," Beiko explained in earlier communications. Pectra to go live on Hoodi in March The primary justification for postponing the upgrade centers on the need for exhaustive testing. Developers are utilizing the Hoodi environment to simulate real-world network conditions and identify potential vulnerabilities before activating Pectra on Ethereum's mainnet. The upgrade is scheduled to go live on Hoodi on March 26, with the development team planning to carefully observe its performance before committing to a mainnet release timeline. An additional factor complicating the Pectra timeline is History Expiry, a planned maintenance process originally scheduled for May 1. This procedure, linked to Ethereum Improvement Proposal 6110 (EIP 6110), would modify how validator deposit history is handled within the Ethereum network. Given Pectra's integral role in facilitating this process, the upgrade delay necessarily pushes back the History Expiry implementation as well, prompting developers to reconsider the timeline for this maintenance operation. The cautious approach follows a recent incident on the Sepolia testnet, where Pectra implementation encountered unexpected issues. "Sepolia's Pectra upgrade hit a snag because a node didn't upgrade in time" sounds trivial, but it's a reminder: Ethereum's decentralization is only as strong as its weakest operator. If one forgotten node can delay an upgrade, imagine what happens when real money is on the line," noted one community member, highlighting the stakes involved in network-wide upgrades. While Pectra testing proceeds, parallel discussions regarding Ethereum's subsequent major upgrade, Fusaka, continue to advance. Developers are evaluating additional improvements for inclusion in future updates to ensure Ethereum maintains its position at the forefront of blockchain technology.

- Ethereum's exchange supply hits a decade-low, reducing sell pressure on ETH. - ETH price drops 47% since December 2024, underperforming peers. - Fee revenue and total value locked decline, with Ethereum ETFs as a potential boost. The Ethereum supply on centralized exchanges stands as low as it has in nearly a decade at 8.97 million ETH, its lowest since November 2015. That precipitous decline in supply has been a result of increasing use of decentralized finance (DeFi) and staking activity, where investors lock their funds up rather than leaving them on exchanges. As a result, selling pressure decreased, demonstrating long-term accumulation patterns. For the past seven weeks, exchange-based Ethereum supply declined by 16.4%, demonstrating the market dynamics shift now that only 7.4% of total ETH supply remains in saleable form. Decline in Ethereum Supply on Exchanges Despite there being such a supply constraints, the price of Ethereum has yet to see the anticipated surge. Until the 21st of March, ETH has reduced by 47% from December 2024's high price of \$4,105 to \$1,990 today. This is among the worst recent performances of one of the largest cryptos. Standard Chartered analysts have trimmed their fourth quarter 2025 price target on ETH to \$4,000 from \$10,000 due to increased rivalry from Ethereum layer-2 options. Such layer-2 networks are cheaper as well, which is more attractive to users, siphoning off activity from the mainnet on Ethereum. The fall in the price and volume of trading of Ethereum has also helped to significantly contribute to its fee revenues. The fee revenue of Ethereum has fallen from \$218 million in December 2024 to a paltry \$46 million up to February 2025. Additionally, its TVL has fallen from \$76 billion in December to \$46 billion, indicating a fall in the general usage and adoption. But Ethereum might receive a lifeline someday with staking exchange-traded funds (ETFs). The Chicago Board Options Exchange and the New York Stock Exchange both submitted proposals to the U.S. Securities and Exchange Commission to allow Ethereum staking in ETFs, potentially attracting institutional capital. In short, though Ethereum is trying to cope with dwindling exchange supply and dipping price, its future lies in how it might attract more institutional investment and change its fee revenue model. The market is waiting, and it is only a matter of time to see whether Ethereum can come out of this challenging phase.

The Ethereum price has once again crossed the \$2,000 mark and this has triggered a bullish trend in

the market. However, while ETH rises, another crypto gem is taking center stage. IntelMarkets (INTL) is a new trading platform with advanced AI trading tools and a decentralized marketplace that investors believe will outshine the Ripple coin. It has raised over \$11.6 million in funding while giving investors 900% returns on their investments. IntelMarkets could be the next big coin that investors are looking for. Ethereum (ETH) Price Soars Past \$2,000 The Ethereum price reclaimed the \$2,000 level on Wednesday after a small uptrend on the weekly timeframe. Data from CoinMarketCap shows the Ethereum price has risen by 6.2%. Although the Ethereum price has dropped by 26.6% on the monthly level, technical indicators show that bulls are gaining traction. According to TradingView, the Stochastic Fast (14) and Williams Percent Range (14) are flashing buy signs that support an Ethereum price uptrend. Reacting to the recent uptick, James CryptoGuru told his followers the Ethereum price rally has started. He posted a chart where the ETH price soared to \$2.8k. Another analyst called Crypto General says the Ethereum price might skyrocket to \$6k in the coming months. According to him, the ETH exchange reserve has been declining due to increased whale accumulation. Looking ahead, the Ethereum price faces resistance at the 50-SMA (\$2.5k) and 200-SMA (\$3k) zones. Surpassing them could clear the way for the Ethereum price to hit \$6k this year. Ripple (XRP) Forecasted To Rise To \$6 The XRP price is showing a 5% increase on the weekly timeframe after a massive decline last week. CoinMarketCap shows the XRP price has been consolidating between \$2 and \$3 in the past month. Despite the XRP price uptrend during this period, bulls have not been able to breach the \$3 resistance. Meanwhile, the cryptocurrency's RSI is rising and could cross the midline soon. The rising RSI shows that buying pressure is increasing and an upsurge could be around the corner. Crypto Beast forecasts the XRP price might pump to \$6 before experiencing a little correction. The analyst told his followers the XRP price could surge to \$12 in the coming months. Another analyst called SolbergInvest predicts the XRP price could soar to the \$3 region. However, the XRP price must break out of the falling wedge it is trading in. IntelMarkets (INTL) Emerges As the Best Platform for Crypto Trading While the Ethereum price rises, a new DeFi project called IntelMarkets (INTL) is gearing up to become the best trading platform in the crypto market. It has been effective during the presale period as it has been established in the previous research. At the moment, the INTL token is at \$0.091 and this is a good price for those who are wise investors. It has also been able to attract more than \$11.6 million in funding. IntelMarkets is a new-generation trading platform that connects retail and institutional traders in the crypto trading market. Therefore, with the help of artificial intelligence, the platform provides the user with enhanced tools that were previously available only to the experts. The essence of IntelMarkets's innovation is the Rodeum AI's self-learning bots. These bots can purchase and sell cryptos by analyzing data to seek out the best chances of making profits. They can also learn from mistakes and be perfect with each trade. In addition, the Intelli-M AI system improves IntelMarkets by offering clients a predictive market analysis. With these capabilities, it can identify new trends, innovations, and shifts in sentiment that may not be apparent to other people. The features above make INTL the best DeFi project to look out for. Why IntelMarkets is the Best Altcoin To Watch While the Ethereum price struggles to sustain the current uptrend, IntelMarkets is gradually becoming the dark horse of the crypto industry. Thanks to its advanced AI and increasing investor interest, INTL is not only a worthy rival to Ripple but also a DeFi project that could change the face of crypto trading. Its price might soar by 10x in the coming months. For more information about IntelMarkets (INTL) visit the links below: - Presale: <https://intelmarkets.io/> - Telegram: <https://t.me/IntelMarketsOfficial> - Twitter: https://x.com/intel_markets Disclaimer: TheNewsCrypto does not endorse any content on this page. - Ethereum has declined by over 2%, slipping into the \$1.9K range. - The market experienced a wave of liquidations, wiping out \$33.12 million worth of ETH. Ongoing fear in the crypto market is sending mixed signals, with major assets like Bitcoin and Ethereum remaining in negative territory. Ethereum (ETH), the largest altcoin, has struggled under extended bearish pressure, slipping by a modest 2.17%. Ethereum has formed a bearish trend line earlier and couldn't escape it. The asset could only kickstart a recovery if it climbs above \$2.3K. ETH has attempted multiple corrections but ended up tumbling into a sharp fall. Before the bears gained enough strength to push the price down to \$1,952, ETH traded within the \$2,025 range. The altcoin should test the crucial resistance zones to initiate a positive breakout. At the time of writing, Ethereum traded at \$1,972, with the daily trading volume touching \$12.29 billion. In addition, the market observed a liquidation of \$33.12 million worth of Ethereum during this interval. Notably, a massive Ethereum whale made a move after 8 years, deposited 34,125 ETH, worth around \$67.2 million, into Coinbase. Back in March 2017, they bought those ETH for just \$46.30 each. If they sell now, they're locking at a profit of over \$65 million. When Will Ethereum Shift Back to Bullish Mode? The ETH/USDT trading pair's Moving Average Convergence Divergence (MACD) line is found below the signal line. This indicates a bearish crossover and the asset's price may continue to decline or stay under pressure in the market. Ethereum's Chaikin Money Flow (CMF) indicator positioned at 0.14 suggests that money is flowing into the asset, reflecting accumulation and a mild bullish sentiment. Meanwhile, the daily trading volume of ETH has declined by 37.44%. If the active downside correction persists, Ethereum might fall back to the support at \$1,945 range. A failure to hold this level may trigger to form a death cross and could open the gate for a steep falloff to \$1.8K or even lower. Assuming a reversal, the altcoin could climb to the \$2,164 level into a support. Breaking above this trading mark and a sustained bullish wave might send Ethereum toward \$2.3K, potentially driving a swift and sustained recovery. Moreover, the Bull Bear Power (BBP) value of 2.87 signals a bullish momentum and more upside. ETH's daily relative strength index (RSI) settled at 52.30 infers that the market is neutral, with no signs of being overbought or oversold. before investing. Highlighted Crypto News BNB Eyes Major Rally as Bullish Pattern Takes Shape “ \$700 Next?

Rising star projects always take the attention away from their predecessors in the ever-evolving crypto market. This is because investors always seek the next big opportunity to make massive gains. Blockchain data revealed that altcoins registered increased on-chain activity in February. Analysts highlighted that the increased on-chain activity suggests more investors are now shifting to altcoins instead of Bitcoin. This came as Bitcoin faced a downturn in the past month, falling below the \$80,000 mark. Investors have shifted to Ethereum, XRP and a new DeFi protocol’s presale. Ethereum, XRP, and BinoFi are the top crypto picks for 2025 Ethereum remains the backbone of decentralised finance and a top choice for developers due to its smart contract capabilities. Ripple’s XRP also appeals to investors as it gets integrated into cross-border payments in financial institutions. New projects are emerging daily to challenge the two altcoins’ dominance. One particular project has caused a storm in the crypto market. The project’s native token, BINO and currently retailing at \$0.02 is already capturing the attention of crypto-savvy investors. The token is proving to be a worthy contender against Ethereum and XRP in 2025. BinoFi appeals to the crypto market with its hybrid crypto exchange model which draws features from both centralized and decentralized exchanges. The dual approach provides the exchange’s users with increased speed associated with centralized exchanges and the security observed on decentralised exchanges. Altcoin holders are no strangers to the challenges presented by centralized and decentralized exchanges on either side of the spectrum. Therefore, they welcome the novel idea of a hybrid system that offers them genuine value by addressing the pains associated with crypto trading. Crypto enthusiasts also appreciate the growth potential of undervalued tokens such as BINO. The token is currently in the first phase of its presale. The project’s development team revealed that it will retail at \$0.3 once it is listed on major exchanges, projecting a 1200% price increase from its presale’s phase 1. The token presents a significant entry opportunity for investors looking for exponential gains. The team also added that it had already sold over 20 million tokens in just a few days signifying increased investor confidence. BinoFi carves out its niche in the crypto ecosystem, catching investor interest BinoFi appeals to the crypto market due to its strong utility and real-world application use cases. Unlike most altcoins today which are driven by speculation, BinoFi presents clear use cases from its onset. The hybrid exchange has carved out a decentralised finance and financial services niche. The team revealed the project aims to revolutionise the DeFi ecosystem by making lending and borrowing transactions easier. The crypto market expects the next wave of innovation in 2025 after the widespread institutional adoption of digital currencies. Foreseeing investors who recognise promising projects should position themselves in time for their imminent boom. Whether you are diversifying your portfolio or seeking to make a quick profit, keep an eye on BINO since it could be a game-changing investment in 2025. - Website: <https://binofi.com> - Whitepaper: <https://whitepaper.binofi.com> - Giveaway: <https://giveaway.binofi.com> - Telegram: <https://t.me/binofilabs> - Twitter: <https://x.com/Binoficom> - CoinMarketCap: <https://coinmarketcap.com/currencies/binofi/> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Ethereum price increased by 5% in the last 24 hours. - According to social metrics, ETH social engagement and X followers are increasing. Ethereum price took a bounce from a lower support of \$1,756 and broke above the \$2000 mark. ETH showcased a robust bullish momentum in the last 24 hours surging by almost 5%. According to Lookonchain an on-chain analytical platform, whales are returning to Ethereum. The platform reported that recently three whales withdrew 14,217 ETH worth \$29 million from Binance and deposited it into Aave. They then borrowed 12 million USDT from Aave and transferred it to exchanges, likely to buy more Ethereum. Moreover, experts are also looking bullish on the Ethereum price. In an X post, famous crypto analyst Ali Martinez highlighted that ETH smashed \$2,000. But conquering the \$2,400 zone is a must for a bullish flip. Ethereum’s on-chain data signal strategic whale repositioning where 25 top wallets relocated \$100M from CEXs. This data suggests a potential liquidity shift and positive whale activity. However, despite the positive whale activity, Ethereum’s options market points to negative sentiment, with current prices around \$1,895, down from \$2,032.9. Ethereum Social Engagements Increased According to the on-chain analytics platform Artemis, the activity on X has increased in recent times. In January 2025, Ethereum had 3.6 million followers and currently, it increased to 3.8 million. Moreover, According to social analytics platform Lunar Crush Ethereum (ETH) is among the top coins with the most social engagements. ETH have 62.27 million of engagement on all social media platforms. The data shows ETH engagements increased by 4.4 million in recent times. Ethereum’s recent whale activity, rising social engagement, and strong price momentum suggest the potential for a rebound. However, conquering the \$2,400 resistance is crucial to sustaining bullish sentiment and overcoming lingering options market negativity.

- Ethereum (ETH) rose 9% to reclaim \$2,000, hitting an intraday high of \$2,032.01. - Ethereum spot ETFs saw \$52.81 million in net withdrawals, marking a ten-day streak. Ethereum (ETH) surged above \$2,000 after eight days, reaching an intraday high of \$2,032.01 before settling at \$2,013.34. The cryptocurrency gained 6.09% in the past 24 hours, with its market capitalization rising to \$242.86 billion, reflecting a 6.11% increase. Trading volume also spiked 46.43% to \$14.52 billion, signaling renewed investor interest. The broader cryptocurrency market followed Ethereum’s bullish momentum, pushing the global market capitalization to \$2.75 trillion, a 2.23% rise in the last 24 hours. Total market trading volume climbed 6.55% to \$76.38 billion. Despite the positive sentiment, Ethereum spot ETFs recorded \$52.81 million in net outflows on March 18, extending a ten-day streak of withdrawals. Is ETH Poised For Continued Growth? The price surge comes amid new developments in Ethereum’s Layer

2 ecosystem. Offchain Labs introduced Onchain Labs, a platform designed to improve decentralized application (dApp) development and reduce fragmentation across Ethereum's scaling solutions. Meanwhile, Ethereum's integration with Cosmos EVM is enhancing interoperability, lowering transaction costs, and simplifying app deployment across networks. These advancements are strengthening Ethereum's position as a leading blockchain platform. Technical indicators suggest Ethereum could continue its upward trend. The cryptocurrency is currently testing resistance at \$2,050, with a potential move toward \$2,100 if bullish momentum holds. A pullback could see prices drop to \$1,950, a key support level. The Relative Strength Index (RSI) stands at 64.42, indicating growing buying pressure, while the Chaikin Money Flow (CMF) at 0.10 suggests capital inflows are increasing. Moving averages also show a bullish crossover, reinforcing the uptrend. Ethereum's recent gains reflect a strong recovery despite ongoing ETF outflows. With increasing market participation and positive technical indicators, ETH could see further price appreciation. Highlighted Crypto News Today Hyperliquid (HYPE) Price Jumps 12% Following Staking Tiers Announcement

According to holders and experts alike, Ethereum (ETH) is currently in free fall. As the crypto giant races towards a new low, Ethereum investors are looking to move their money elsewhere before ETH bottoms out. For some, Pi is the way to go. But for most, FXGuys (\$FXG) is the token of choice, presenting incredible perks and utility that Pi, and most other crypto projects, cannot match. Ethereum Drops Closer to \$1,400 Recent Ethereum movements have left investors and Ethereum holders looking back to the past. As the Ethereum bull market ends, the ETH price is in a downward spiral, currently trading at \$1,875. This ETH price level marks a 17% decrease over the past week. Ethereum's movements during the past month have taken many back to the 2020 crash, and experts say that we could see a repeat of it soon. Namely, they say that the ETH price will continue its free fall until it reaches \$1,400. And once it reaches this point, the crypto community is split on what will happen next. Some analysts say that Ethereum holders will see ETH bounce back after bottoming out at \$1,400. Others are not so sure as the recent Ethereum movements show just how volatile ETH is. And while there are Ethereum holders willing to hold out and see what happens, many are scrambling to replace their ETH tokens with \$FXG, which offers the stability and gains they expected from ETH. FXGuys: A New Crypto Trading Platform That Offers Stability, Gains, and Utility "All in One Place" FXGuys has not even hit exchanges, yet its \$FXG presale has drawn in investors worldwide looking for gains, utility, and stability. And now, with FXGuys releasing a free trial for its BETA trading platform, the demand for \$FXG has risen even more as investors who try out this new crypto trading platform for themselves subsequently invest in it. So what makes the FXGuys so special? First off, this new crypto trading platform provides same-day payouts and unlimited withdrawals, solving the years-long issue traders have had with delays and getting access to their money. Next, FXGuys provides excellent terms for funded traders, including an 80/20 profit split and access to \$500,000 in funding. With these terms, traders can make thousands in profits with only one FXGuys account. This new crypto trading platform is also a great place for traders to learn and improve their skills. FXGuys comes with features like charts, AI trading tools, and copy trading. Traders can also benefit from the FXGuys forums, where they can connect with more experienced traders and seek advice. This new crypto trading platform also offers great rewards. One of them is the FXGuys Stake2Earn program which enables traders to earn \$FXG tokens by simply making trades. The other is the FXGuys staking rewards program which allows traders to earn a share of the FXGuys trading volume and fees in return for staking their \$FXG tokens. Is Pi on Its Way to \$2? The Pi rumor mill has been running wild. From Pi potentially being listed on Binance to a frustrated Pi community, many things are happening all at once. Namely, while some Pi holders are taking the rumors that Pi will be listed on Binance as a done deal, the rest of them are frustrated as control remains in the hands of the core Pi team. This mix of emotions in the Pi community has left the future of the Pi price open to interpretation. Currently trading at \$1.63, Pi has dropped close to 10% in value in the past week. Some believe that, if Pi really does get a Binance listing, its price will skyrocket, not only reaching \$2, but rising to heights it has never reached before. On the other hand, most believe that this is nothing but a rumor and say that the growing centralization backlash will cause the Pi price to fall below \$1. Amid all of this uncertainty, many Pi holders have chosen to take their money to FXGuys, attracted by the utility, perks, and massive growth potential this new crypto trading platform offers. Join the \$FXG Public Presale for Massive Gains! The only place where you can get utility, longevity, and massive potential is the \$FXG public presale. Currently in Stage 3, \$FXG is available for \$0.05. However, as \$FXG nears the end of Stage 3 of its public presale, now is the perfect opportunity to stock up on \$FXG tokens before it enters the next stage and the \$FXG price jumps to \$0.06. Once \$FXG launches and hits \$0.10, a massive rally will begin, which experts predict will see the \$FXG price rise by 100x by Q2 of 2025. But this will be only the first of many rallies as experts say \$FXG will grow even more before the year ends! To find out more about FXGuys follow the links below: [Presale](#) | [Website](#) | [Whitepaper](#) | [Socials](#) | [Audit Disclaimer](#): TheNewsCrypto does not endorse any content on this page. Bitcoin, the world's first and largest cryptocurrency, is once again capturing headlines as it holds at \$83,925. With institutional players ramping up their exposure to the asset, Bitcoin's trajectory continues to maintain a steady upward climb. Recent data highlights the enthusiasm of hedge funds, corporations, and even sovereign wealth funds, who are growing their holdings as part of long-term investment strategies. Ethereum: A Stout Force in DeFi, But with Stagnant Growth On the other hand, Ethereum, the second-largest cryptocurrency by market capitalization, is priced at \$1,900. Known for its pioneering role in smart contracts, decentralized applications (dApps), and NFTs, Ethereum remains a juggernaut in the blockchain space. However, it's fair to say Ethereum's price movements have been less inspiring lately. Despite leading innovations and commanding dominance within the DeFi and

NFT ecosystems, Ethereum has struggled to break out of its recent price consolidation zone. Still, Ethereum's enduring utility and growing network adoption make it a mainstay in most portfolios. Its role as the backbone of decentralized finance ensures that Ethereum will remain relevant even as the broader market seeks greener pastures. Enter BinoFi (BINO): A Revolutionary DeFi Solution While Bitcoin and Ethereum anchor the crypto narrative, newer projects are emerging that aim to revolutionize how the industry operates. BinoFi (BINO) is quickly becoming one of the most intriguing names in decentralized finance. With a clear focus on solving real-world inefficiencies in trading, security, and cross-chain connectivity, BinoFi is positioning itself as a category leader in DeFi innovation. A Trailblazing Approach to Financial Systems BinoFi's most unique offering lies in its hybrid exchange model, which blends the liquidity and speed of centralized exchanges (CEX) with the transparency and control of decentralized exchanges (DEX). This hybrid approach gives users a smooth trading experience, free from the limitations of traditional platforms. Adding to its appeal, BinoFi introduces true cross-chain trading without bridges. By eliminating the risks of legacy bridging systems, which are prone to exploits, BinoFi enables direct swaps across major ecosystems like Ethereum, Binance Smart Chain, Solana, and Polygon. This innovation drastically reduces friction for traders and developers navigating different blockchain environments. Additionally, the inclusion of AI-driven trading tools elevates the user experience. These tools offer features like predictive analytics, portfolio optimization, and automated trading strategies, catering to both beginner and professional traders looking to gain a competitive edge. Understanding the importance of security in crypto transactions, BinoFi incorporates non-custodial MPC (multi-party computation) wallets. These advanced wallets remove the need for traditional seed phrases and add layers of cryptographic safety. With gas-free transactions and user-friendly recovery options, BinoFi ensures a seamless yet secure experience for all users. \$BINO Presale Sparks Excitement At the heart of BinoFi's ecosystem is its native token, \$BINO, which powers the platform's various functionalities. The ongoing presale has seen tremendous momentum, with 45% of the first phase allocation sold, amounting to approximately 20 million tokens. The success of the presale reflects mounting investor confidence in BinoFi's roadmap and market potential. Priced at \$0.02 per token during this first phase, \$BINO offers significant upside as analysts project a potential listing price of \$0.30 per token. This represents a staggering 1,400% return for early adopters, making the presale a focal point for both retail and institutional investors alike. The funds raised from the presale are earmarked for accelerating platform development, expanding partnerships, and scaling community engagement efforts. From governance voting to trading rewards, \$BINO holders stand to gain a wide array of benefits as BinoFi's ecosystem grows. Why BinoFi Could Be a Game-Changer The rise of BinoFi reflects the growing demand for platforms that deliver both innovation and accessibility. By addressing the critical pain points of traditional DeFi, such as liquidity limitations, high security risks, and lack of interoperability, BinoFi is carving out a distinct niche in the market. Its roadmap, which includes added staking features, yield optimization tools, and integration with major DeFi protocols, further cements its potential as a visionary project. By prioritizing user-centric solutions and offering real-world value, BinoFi is prepared to challenge longstanding incumbents in the space. Final Thoughts Bitcoin may remain the king of cryptocurrencies, and Ethereum the face of DeFi. However, the spotlight is increasingly shifting to next-generation platforms like BinoFi, which aim to redefine what decentralized finance can offer. With its hybrid infrastructure, cross-chain capabilities, advanced security and trading tools, BinoFi is positioning itself as a serious contender in the race to become the next big thing in crypto. For those looking to capitalize on the future of DeFi, BinoFi represents not just an investment, but a vote of confidence in innovation itself. - Website: <https://binofi.com> - Whitepaper: <https://whitepaper.binofi.com> - Giveaway: <https://giveaway.binofi.com> - Telegram: <https://t.me/binofilabs> - Twitter: <https://x.com/Binoficom> - CoinMarketCap: <https://coinmarketcap.com/currencies/binofi/> Disclaimer: TheNewsCrypto does not endorse any content on this page. Originally published in 2014 and under \$21 until 2017, Ethereum trades at \$2,400 and has an all-time high of \$4,891. Likewise, Bitcoin appreciated from just pennies to its current all-time high of \$109,114, which was useless at its original mining in 2009. These amazing increases made early adopters millionaires, confirming that cryptocurrencies are unusual but transforming investment opportunities. Rexas Finance (RXS), a self-made crypto millionaire, has found another altcoin ready to emulate ETH and BTC. With its creative approach to real-world asset (RWA) tokenization destined to alter the financial scene, this new Bitcoin is being praised as a once-in-a-lifetime opportunity. Rexas Finance (RXS): The New Once-In-A-Lifetime Altcoin in the Crypto Market Blockchain technology marks a new age, represented by Rexas Finance (RXS). Designed to democratize and simplify access to tokenized real-world assets, Rexas Finance enables people and organizations to easily produce, exchange, and oversee digital versions of tangible objects. These include real estate, art, intellectual property, and commodities, all of which RXS easily and transparently facilitates worldwide tokenization. Rexas Finance is a special investment because of its accessibility and creativity. Unlike most conventional cryptocurrencies, which only consider digital value exchange, RXS closes the gap between physical and digital assets, generating almost endless possibilities for investors. Its solid foundations and fast-expanding community help define it as the next major cryptocurrency breakthrough. Rexas Finance (RXS) Presale: A Record-Breaking Performance Rexas Finance's (RXS) presale performance shows its strength since it surpasses market expectations. Pricing at \$0.20, RXS is in its 12th and last presale round after having raised over \$46.76 million thus far. The tremendous investor demand indicates a strong conviction in its long-term potential even if 90.76% of its \$56 million presale target is already filled. The Rexas Finance team has chosen a public presale instead of many initiatives seeking venture capital money so that regular investors may
