

investment products which help them to fly forward in their professional journey. Grayscale Explores Additional Moreover, Grayscale Investments planned to launch 13 more tokens as additional assets. In commitment to transparency, the updated token list includes, 1inch (1INCH), Bancor (BNT), Curve (CRV), Internet Computer (ICP), Kava (KAVA), Kyber Network (KNC), Loopring (LRC), NEAR (NEAR), Polygon (MATIC), Ren (REN), Solana (SOL), Universal Market Access (UMA), and 0x (ZRX). Grayscale Brings 13 More Tokens With DeFi Focus Under Consideration via @coindesk @JamieCrawleyCDhttps://t.co/M7IgsP3wKW æ" Barry Silbert (@BarrySilbert) June 18, 2021 Additionally, the CEO of Grayscale, Michael Sonnenshein shared that the firm is eager to extend their product offerings to better serve our investors. He also added, The digital currency universe is constantly evolving and we seek to identify bold, interesting, and innovative opportunities that satisfy our investorsæ" demand for differentiated exposure to this burgeoning asset classæ. Further, all these tokens are concerned under a decentralized finance platform. DeFi has the chance to make a historical impact, bringing decentralized finance to people across the world. This decentralized finance plays a vital role in providing real-time experience to all the crypto users. More so, Grayscale announced that not all of these tokens under consideration will come under their investment products. Based on the process, regulatory concerns and proper reviews the tokens will be taken into account. Therefore, the Grayscale community strives to bring innovative ideas on digital currency-driven financial systems. The users are provided safe and secured investment products in Grayscale platform. With all these initiatives, Grayscale is marching towards further adoption in the industry. Recommended for you

A DeFi platform states that it provides its first AI yield farming aggregator which is æ"KingDeFiæ" to interact with users also referred to as Knights, to work on Binance Smart Chain and Solana. Aggregators carry together multiple protocols and present them in a unified manner for easier use. Aggregation, when done correctly, can provide a perfect blend of decentralized finance and the power of centralized control. Moreover, with advanced analytics that monitors TVL, KingDeFi enables its users to easily monitor activity on these chains. KingDeFi can advise users on which farm is best suited to their needs. Once a user has chosen a pool, they can track yield returns, fees, and aggregated productivity. Safety Is the Major Protocol Safety is considered to be the major factor, its native token KROWN has experienced the security audit by Techrate, where no issues were found. According to KingDeFi, all of the farming contracts on its platform are pre-approved and rated as safe by experienced developers. All projectsæ" technical standards are highly regulated before they are listed, with highly reputable and well-known projects receiving priority access. KingDeFiæ"s community has changed through two highly skilled Solidity developers in the last two months. One of the priorities on the roadmap for the coming months is a crowd-sale which occurs from June-14 to June-18. Additionally, KingDeFi states that the firm looks for investors rather than short-term traders as this project is long-term. Besides, KingDeFi hopes to be knighted as one of the worldæ"s premier yield farming aggregators as its roadmap develops and evolves. Furthermore, an active page may assist the users who are new to the DeFi world with some complicated-terms to understand. Recommended for you

- Two DApps represent 86% of blockchain TVL. - Nearly \$1.98 billion or 73% of Hecoæ"s TVL locked in Mdex. - A daily transaction count of 1.67 million reported by Heco. The ecosystem for the Huobi group, Huobi Eco Chain attracting an admirable total value locked (TVL) that launch in December. But just two DApps represent 86% of the blockchainæ"s total value lock (TVL). Moreover, a decentralized application (dApps) is a digital application that exists and runs on a blockchain. There can be multiple users on one side, but the backend controlled by a single organization. Henceforth, nearly \$1.98 billion or 73% of Hecoæ"s TVL is locked in one of the decentralized exchanges. The mentioned data is according to the Cryptorank, a crypto data aggregator. Mdex is an automated market maker offering yield farming incentives to users. The decentralized exchange Mdex also launched on BSC to gain access to a higher range of tokens, that not supports the Heco Chain. Hence more, the second-largest DApp on Heco, the Yield aggregator. Filda represents a TVL of utmost \$400 million or nearly 13% of Huobi Eco chainæ"s combined value locked. So all remaining Dapps share the left 16% or nearly \$300 million in assets locked in Heco. To compete with among the emerging sector EVM-interoperable chains, Huobiæ"s Ethereum Virtual Machine (ECM)-the compatible public chain spread out in December 2020. Heco is currently beating out many of its opponents by TVL, which includes \$362 million TVL of performance-focused Solana blockchain, according to SolanaProject it has a total value locked of \$362 million. Moreso, according to Markr explorer Avalancheæ"s has locked up to \$225 million. Furthermore, the number of unique addresses that interact with the chain has leaped 390% in the previous three months to tag a record 12 million. A daily transaction count of 1.67 million reported by Heco. Binance also reports 1 million as a daily transaction. Recommended for you

XinFin (XDC) and Ethereum are two names that stand out as prominent in the circle of smart blockchain contracts. Both top the charts in the blockchain biome. But in recent times the majority of the crowd turns towards XinFin because its tops the chart on transaction with 2000TPS. This is as most of the downsides of Ethereum proved to be utmost pragmatics in XinFin. XinFinæ"s Transaction Speed The XinFin started in the year 2017, is now rolling out stupendously in recent times. The XinFin is based on its XDPOs network which is directly powered by the XDC protocol. XinFin (XDC) has now fully evolved into the most popular blockchain for smart contracts owing to the networkæ"s extreme security, hybrid decentralized blockchain, and ascending performance. Among all the explicit features of XDC, the transaction and processing speed is the chief attribute of the triumph of XinFin. The transaction per second speed of XinFin mounts to 2000. This outmatches most others. Ethereum has a speed of only just 15 TPS making it suffer at the mercy of XinFin. This rated 2000 TPS alone makes XinFin surpass Ethereum and compete for head to head against other rising prominent networks such as Solana (SOL), Polygon (MATIC), Polkadot (DOT), and more. In the present digital market, unmatched speed and performance are the key factors to determine the future and survivability of any blockchain. XinFinæ"s Other Eminence XinFin (XDC) æ"s efficaciacies donæ"t stop only with its 2000 TPS alone. XinFinæ"s protocols are purely based on a framework of blockchains upon æ"semi-private, controlled user groups, but works across different organizations. This features XinFin to create cross-chain systems effortlessly. The hybrid blockchain technology XDC protocol enables XinFin to be effortlessly fast. This blockchain proves to be highly efficient, enables instant transactions and trades, secure to the topmost 1st tier. It becomes the choice for most financial firms due to its maneuverability on liquidation. The gas fees are extremely negligible, accounting for only 0.00001 USD. Another main aspect promoting XinFin XDC is its rated energy consumption of just 0.0000074 Twh making it get the status æ"Greenæ". Due to various new regulations and terms of environment-friendly aspects, it paves a separate path for XinFin for the future. Furthermore, upon all the above XinFin proves to be the most perpetuated and reliable blockchain at present compared to all the previous generations like Ethereum. Recommended for you

The cryptocurrency market at the moment accounts to more than 2% of the overall money supply globally. This has been made possible by the constant growth of the DeFi market and its platforms. This is a remarkable achievement for the complete crypto industry and market. DeFi paves the way even furthermore towards the development of the complete crypto industry. The DeFi completely transforms the crypto industry by every passing day. Growth of DeFi The price and rise of Dogecoin was the hot topic throughout recent times, overshadowing all other hot news. Delphi Digital, one of the most renowned research boutique and institutional-grade analysis firms made a detailed study on the DeFi platform based on the Ethereum (ETH) network. It depicted a constant rise in the DeFi accounts based on the Ethereum network. The 1st most growth goes to the DeFi based on the Ethereum networks. The foremost such platforms include Ethereum (ETH), BSC, Solana (SOL), Avalanche (AVAX), Polygon (MATIC) and Terra (LUNA) have all started to rise together. This alone accounts for nearly 34% of the total DeFi value stocked. Following Ethereum, BSC is the second fastest growing DeFi, owing most of its credits to the Binance network. Binance has helped BSC achieve this through its vast resources in getting a boost start with its native protocols. All the first top layer DeFi now counts to \$130 billion of the overall Total Value Locked (TVL), as per Defipulse data. Stablecoinsæ" Role Delphi Digital states DeFi stablecoins, primitively the native ones, have played a crucial role in this growth. It now mounts up to nearly \$10 billion of the overall market. DAI, the stable crypto which keeps as close as possible to the USD via Ethereum blockchain, now surpassed the \$4 billion benchmark. Now, DAI stands as the most circulated supply throughout DeFi. On the otherhand UST is also on the rise in the Terra platform. Due to the tremendous soars in the crypto market since mid-2020, the overall value of the crypto industry has witnessed 2% of the overall global money value. In this rapid growth, the Bitcoin-BTC alone supports 1%, whereas the other altcoins make up together the remaining 1%. With such increase in the crypto market, the investors have the firm rising every day, on a daily basis. In such growth the crypto industry is foreset, the DeFi value would also be on the rise. This will make the crypto market to exploit an equal share of the money distribution globally. Recommended for you

AscendEX, formerly BitMax, an industry-leading crypto exchange platform built by Wall Street quant trading veterans, congratulates PlotX æ" a cross-chain prediction market protocol on their v2 Mainnet launch on the Polygon Network on May 14 at 12:00 p.m. UTC. PlotX Version 1 (æ"ev1æ") was launched in October 2020 as a decentralized non-custodial prediction market protocol on the Ethereum Blockchain. PlotX allows crypto-traders to use their skills to predict the future value of digital assets like ETH, BTC. Markets on PlotX v1 were automatically created in intervals of 4 hour, 1 day and 1 week. The v2 has been under development since December 2020 and the testnet was released on April 13th, 2021 for the public. After rigorous testing by the community, the launch of PlotX v2 on the Polygon Mainnet is now scheduled on May 14th, 2021. PlotX v2 has focussed heavily on simplifying the prediction-making experience for users thanks to a consistent dialogue with their community via the research forum and their official community telegram group. It brings the experience closer to mainstream applications while retaining the DeFi ethos of being non-custodial and permissionless. This can be seen in the marquee features that PlotX announced via their recent blog post about the mainnet release: - Gasless prediction-making æ" via meta-transactions that abstract the process for users so they only have to make a single transaction while making predictions - Smooth token bridging æ" via cross-chain swap technology, that enables users to move \$PLOT between Ethereum, Polygon and other EVM compatible chains like BSC & Solana, from within the application itself - Guaranteed liquidity provisions æ" via incentive alignment of market creators for providing liquidity for new markets making it lucrative for users to participate in Simple onboarding experience æ" for users, especially ones who are not familiar with metamask and RPC changes, to login using their email addresses without compromising on the non-custodial nature of the dapp The team has built a class product and is highly receptive to the community. As per the roadmap, upgrades in V2 do not end here; numerous new features are slated to be introduced that will equip users with exciting new prediction opportunities. Ish Goel, co-founder PlotX, shares his thoughts æ"t has been an exciting journey for us since the launch of PlotX v1 in October 2020. Prediction markets have always been an exciting derivative for crypto traders. However, they have always faced the challenges of a complex UX, high gas fees & low market liquidity that has also resulted in a lack of growth of the space. With PlotX v2 we have worked alongside our community to solve these challenges by introducing an overhauled UX, deploying on Polygon and introducing liquidity bootstrapping mechanisms for new markets. The community has reacted positively to these features and weæ"re super excited to reveal the mainnet app to them as well as the larger crypto trading community!æ About AscendEX Originally founded in 2018 as BitMax.io, AscendEX is a leading crypto and digital asset financial platform catering to both professional and retail traders. Our venue offers spot, futures, margin trading and staking products and incorporates key elements from the DeFi space to foster a unique market structure for users. AscendEX is led by a team of Wall Street veterans who have applied traditional marketsæ" rigor to create a robust, secure, and reliable experience for all participants; and a consistent source of liquidity for primary offerings. For more information and updates, please visit: Website: https://ascendex.com Twitter: https://twitter.com/AscendEX Global Telegram: https://t.me/AscendEXEnglish Medium: https://medium.com/ascendex About PlotX PlotX is a cross-chain Prediction Market protocol built by the ex-CTO of Nexus Mutual (>\$1bn mcap). It enables crypto-asset price predictions, like æ"what will be the price of BTC/USDT in the next 1 hour?æ Dubbed as the Uniswap of Prediction Markets, PlotX is the simplest and most fun DeFi derivative for crypto traders. - Many small-cap cryptocurrencies are acquiring market caps in millions. - Dogecoinæ"s rapid price rise has fueled by Elon Musk. - Shiba Inu also has a decentralized exchange called æ"Shiba Swapæ. Since late 2017, many small-cap cryptocurrencies are acquiring market cap in millions of dollars, without any valuable reason. Initially, Dogecoin created as a joke, but now its value surges to a market cap of about \$100 Billion. Dogecoinæ"s rapid convention value has fueled by Elon Muskæ"s regular tweets about DOGE and set as the host for the SNL show titled æ"The Dogefatheræ. As a result, meme-based cryptocurrency value raise has given the blind trust to many other useless tokens which deploy every day in

exchanges like Solana and Binance Smart Coin. Huge Profits on Replicas Shibu Inu(SHIB) also has a decentralized exchange called “Shiba Swap”, which hasn’t even launched yet, still, users continued buying it. Moreover, SHIB token has raised to 500% within a week, with no fundamental item excluding enormous hype in purchase volume. Additionally, the website peruses that it’s proposed to be “Dogecoin Killer” and gives hope to people that they can hold in billions or trillions of tokens. Many replica coins gained profit but the majority of coins often end up popping whereas WRAFT INU “inspired by DOGE on BSC is steeped down to 95% from its greater value. More so, it’s unpredictable to judge the market cycles where most coins with no fundamentals or valid use cases are driven towards zero. Recommended for You

AscendEX, formerly BitMax, an industry-leading digital asset trading platform built by Wall Street quant trading veterans, has announced the listing of the Unmarshal Token (MARSH) under the pair USD/MARSH on Apr 26 at 1:00 p.m. UTC. Unmarshal is a Chain-Agnostic blockchain protocol consisting of a network of blockchain indexes to curate customizable data for DeFi applications. Synergistically built with the support of Binance Smart Chain, Polkadot Network, and Solana, Unmarshal intends to revitalize data collection, distribution, and interpretation to propel the DeFi economy forward. It is an advanced solution that aims at transforming raw and unstructured blockchain data into a meaningful form to ease the integration of real-time blockchain data into decentralized applications, thus unmarshalling the potential of DApps. Compared to other data providers in the Crypto Market, Unmarshal stands out by providing simplified and structured data in multiple formats like APIs, GraphQL, websockets, and notifications for users. Unmarshal does all the heavy lifting for Dapps by decoding the on-chain data, including NFTs, and providing simplified data. MARSH, the Unmarshal utility token, will be required for staking services on Unmarshal. MARSH tokens will incentivize network contributors for their contributions to the network. Unmarshal aims to become the go-to destination for any digital asset on-chain data across multiple chains. About AscendEX Originally founded in 2018 as BitMax.io, AscendEX is a leading crypto and digital asset financial platform catering to both professional and retail traders. AscendEX, formerly BitMax, an industry-leading digital asset trading platform built by Wall Street quant trading veterans, has announced the listing of the Crowny Token (CRWNY) under the pair USD/CRWNY on Apr 21 at 1:00 p.m. UTC. Crowny has created a new platform by aligning blockchain and digital assets with the world of advertising. The platform will allow brands to develop effective campaigns to reach audiences who are enticed to listen to their messages. Users will be able to connect to their favorite brands through a smartphone application without the risk of privacy breaches. It has become a challenge for brands to reach and interact with their potential customers through digital and traditional media. The Crowny proposition brings the right tools to help advertisers reach customers with ease while rewarding the customers with tokens for engaging with ads. Rewards play a key role on the Crowny platform driving users to interact with brands. Crowny offers a variety of product features, including a free loyalty system for business owners, and the most compelling part of their product offering is the CRWNY token. Users can convert tokens to fiat currencies, use them to purchase products, or set them aside to be held in a wallet. The CRWNY token will first launch on the Ethereum blockchain as an ERC-20 token. Crowny will be using the Wormhole bridge to Solana to support the functionalities on their platform. Crowny connects and rewards users for engaging with their favorite brands, supporting brands to reach the right target audience while protecting users’ privacy. Users receive relevant content and offers based on their preferences, allowing them to earn CRWNY and loyalty points for interacting with those brands.
