- The Trump family expands its crypto involvement with Bitcoin mining. - Hut 8 owns 80%, supplying mining machines and hosting operations. The Trump family is deepening its involvement in cryptocurrency with a major move into Bitcoin mining. Eric Trump and Donald Trump Jr. have partnered with Hut 8 to launch American Bitcoin, a large-scale U.S.-based mining firm. Hut 8, a publicly traded crypto infrastructure company, will control 80% of American Bitcoin. It will supply nearly 61,000 mining machines and host operations across its 11 U.S. data centers. Eric Trump and Donald Trump Jr.'s company, American Data Centers, will merge with the new venture, holding a 20% stake. No cash was exchanged in the deal, according to Hut 8's press release. Eric Trump, serving as chief strategy officer, sees the venture as part of the family's focus on hard assets. He plans to build a Bitcoin reserve and potentially take American Bitcoin public. The company will be led by Matt Prusak, Hut 8's former chief commercial officer. The venture follows the Trumps' growing crypto footprint. Alongside Bitcoin mining, they have backed projects like World Liberty Financial, memecoins, and a planned stablecoin. President Donald Trump has also positioned himself as the "crypto president," pledging to support the industry. How Will American Bitcoin Compete in Mining? Despite environmental concerns over Bitcoin mining, Eric Trump argues that lower U.S. energy costs will make American Bitcoin competitive globally. Hut 8 CEO Asher Genoot emphasized the firm's scalable infrastructure and cost-efficient energy strategy. The American Bitcoin board will include Tinder co-founder Justin Mateen and FabFitFun co-founder Michael Broukhim. The Trump family will not handle day-to-day mining operations. Hut 8 will manage core business functions, including finance, compliance, and human resources. Hut 8's stock initially surged in premarket trading after the announcement but later settled at \$11.69. The company has faced a 42.8% decline in stock value this year. Donald Trump Jr. highlighted the advantages of mining over simply buying Bitcoin. He believes favorable mining economics create a larger opportunity. The company aims to establish itself as a major player in Bitcoin mining while expanding its Bitcoin holdings. American Bitcoin's long-term goal is a public listing to attract capital. After his re-election, he issued executive orders supporting Bitcoin and digital assets. Hut 8 will hold a conference call on Tuesday to discuss the venture. Highlighted Crypto News Today Elon Musk Confirms U.S. Government Has No Plans to Use Dogecoin

The cryptocurrency scene is alive with conjecture and changing trends, particularly among the Shiba Inu community. Recent statistics show that some of the largest SHIB holders—also known as whales—are shifting their assets to Rexas Finance. This movement has spurred interest and discussion about what these influential investors find in Rexas Finance, driving them away from the meme coin powerhouse, Shiba Inu. SHIB Whales Shift to Rexas Finance (RXS) Initially a parody coin inspired by Dogecoin, Shiba Inu has long stayed relevant depending on its active community and speculative buzz. Since its August 2023 launch, Shibarium, with its layer-2 solution, is approaching a milestone of 1 billion transactions and is moving beyond its meme origins. The coin has had difficulties; from almost 4 million to barely 151,090, ShibariumScan reports, daily transactions have dropped significantly, and the price has fallen 22% this month alone. Despite hopeful expert forecasts of a breakout to \$0.000081 or even loftier targets linked with token burns and market cap comparisons with top-tier cryptocurrencies, this volatility has left some investors wondering about SHIB's long-term viability. Meme coins like SHIB can suffer because they rely on social media hype and speculative trading, which causes excellent price swings. Though initiatives like Shibarium and SHIB: The Metaverse have helped Shiba Inu try to grow its ecosystem, these efforts have not yet shown consistent price appreciation. Rexas Finance provides a more methodical approach with a defined path map, including tokenized real-world assets, passive income prospects, and institutional alliances. RXS may be seen by SHIB whales as a hedge against the erratic character of meme coins, therefore guaranteeing exposure to a project with clear use cases. Rexas Finance is priced at \$0.20 in its last presale phase (Stage 12) and has successfully garnered nearly \$47.3 million—an admirable achievement for a nascent cryptocurrency. Investors who participated in previous rounds have already experienced a 6.6x increase from the initial price of \$0.03, and analysts anticipate much greater returns following the launch. Specific forecasts indicate that Rexas Finance may exceed \$10 within a year, signifying potential return on investment values from 175x to 25,000%. The swift expansion and robust initial uptake indicate confidence from retail and institutional investors, a sentiment that SHIB finds challenging to sustain in the face of rising competition from emerging meme coins. Rexas Finance (RXS): The Emerging Token Transitioning Toward Fundamental Value The transfer of SHIB whales toward RXS highlights a more general trend in the crypto market: the growing favor for utility-driven initiatives over speculative assets. Although meme coins will always be in demand, investors are searching for tokens with actual use and steady potential growth more and more. Rexas Finance's emphasis on RWA tokenization targets a trillion-dollar sector that is still in its early years. The concept that someone from anywhere in the globe could have fractional ownership of invaluable assets—such as tokenized commodities or real estate in big cities—fits the more significant push toward financial inclusion. Unlike meme coins, which sometimes depend on exact timing to maximize gains, Rexas Finance offers a disciplined investment possibility supported by actual economic value. By guaranteeing Tier 1 exchange listings and hence ensuring robust liquidity and pricing stability, Rexas Finance (RXS) has positioned itself advantageously for long-term success. This action gives investors an easily accessible and trustworthy trading environment and shows confidence in significant exchanges. Unlike speculative meme tokens like Shiba Inu, Rexas Finance values community involvement through governance systems that let token holders participate in important decisions, promoting greater engagement and long-term commitment. Beyond governance, Rexas Finance provides staking options so investors may earn

passive income only by owning their tokens. This feature runs counter to SHIB's reliance on token burning to create scarcity, providing a more sustainable approach for investors to make returns and supporting the stability of the ecosystem. Conclusion Major SHIB holders moving onto Rexas Finance (RXS) indicate where smart money is headed. Shiba Inu is a high-risk investment, particularly in uncertain market situations, even if it maintains a dedicated following and changing ecosystem depending on speculative trading. By combining blockchain with actual asset ownership, RXS presents investors with real-world value and long-term growth potential, offering a more consistent and profitable prospect. Projects like Rexas Finance, which offer actual value and viable economic models, will become more popular as the crypto market develops. Recent whale movements imply that people who earned fortunes in SHIB's early years saw RXS as the next major prospect. Significant investors are undoubtedly paying close attention, and the shift from meme coins to utility tokens is accelerating. Whether or not Rexas Finance lives up to its bold forecasts is another matter. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Meme coins have revolutionized the crypto world through fast profit opportunities that struggle to retain lasting value. The speculative nature of Dogecoin along with other meme-based tokens, brings short-term price spikes but produces significant market fluctuations that push away investors. Ozak AI has recently gained widespread notice because of its practical application and extensive potential for expansion. Analysts predict Ozak AI will experience a 100x growth within the next few months. So this has led investors to direct their attention to this AI project. Memecoins: Hype or Smart Investment? The rise of meme coins such as Dogecoin and Shiba Inu attracted strong communities. In addition, it provided returns to those who invested earlier. Their achievements in the crypto market are mostly driven by predictions and publicity campaigns. Late investors normally lose money when meme coins stop receiving public excitement. Most meme coins struggle to survive in the long term because of lack of utility. The search for profitable investments with practical utility has driven many investors toward Ozak AI. Ozak AI: The Next Big Opportunity? Ozak AI stands apart from meme coins due to its established foundation, which integrates artificial intelligence with blockchain technology. The project utilizes artificial intelligence to boost financial market analysis capabilities while optimizing data processing algorithms. Ozak AI utilizes state-of-the-art technologies to deliver a distinct market solution that extends beyond speculation practices. The presale campaign of Ozak AI allows investors to purchase tokens at \$0.003 each in the current phase 3. The next stage will see a price rise about 400% from the initial price of \$0.001 to \$0.005. According to expert estimates, Ozak AI's valuation will reach \$1 by Q4. The project has accrued major investment from its presale phase and raised over \$900K while investor trust continues to expand. Even though experts are bullish on the \$OZ token due to its planned listing price of \$0.005. Why Investors Are Choosing Ozak AI Over Meme Coins The primary distinction between Ozak AI and meme coins rests in their practical business capabilities. Dogecoin operates through social media popularity but Ozak AI brings AI-driven solutions that help industries make better decisions. As a result, Ozak AI maintains market advantage and enduring value while offering substantial financial returns to future investors. The decentralized architecture of Ozak AI creates both transparent systems and secure operations which enhances investor confidence. Ozak AI generates stable growth potential through its AI-based predictions and practical use cases rather than the volatile nature of meme coins. Conclusion Meme coins provide temporary marketplace value although they typically do not carry future investment potential. Ozak AI uses blockchain paired with AI technology to develop a transformative investment solution. The presale price set at \$0.003 allows new investors to purchase Ozak AI that could potentially reach \$1. The evolving crypto industry positions Ozak AI as a utility-focused token, which makes it a superior option above traditional meme coin speculators. 24 " Hour Price Change	1.91% Up
24 " Hour Trading Volume	\$18.13M
Market Cap	\$1.55B
Circulating Supply	83.73M DEXE
All " Time High	\$33.54 (Mar 08, 2021)
All " Time Low	\$0.6535 (On Nov 11, 2020)
What is DeXe (DEXE)	TICKER DEXE
BLOCKCHAIN	Ethereum
CATEGORY	DeFi Asset Management
LAUNCHED ON	September 2020
UTILITIES	Governance, Staking, Fee Burning & Insurance
DeXe (DEXE)	is the governance and utility token of the DeXe Network, a decentralized asset management platform designed to enable non-custodial, transparent, and automated portfolio management. The platform empowers traders and investors by offering social trading features, decentralized asset management tools, and advanced automation for trading strategies. DeXe supports both professional fund managers and retail users, providing seamless integration with various DeFi protocols. The DEXE token serves multiple purposes, including governance, staking, and insurance coverage. Token holders

participate in decision-making, propose changes, and vote on network updates. Staking DEXE rewards users and enhances platform security. Additionally, a portion of the platform's fees is used to buy back and burn DEXE, creating deflationary tokenomics. Built on blockchain technology, DeXe emphasizes transparency and efficiency, offering users a way to leverage the expertise of top traders while retaining full control of their funds. It's a vital tool for DeFi enthusiasts and investors.

DeXe (DEXE) Price Prediction 2025

DeXe (DEXE) ranks 53rd on CoinMarketCap in terms of its market capitalization. The overview of the DeXe price prediction for 2025 is explained below with a daily time frame.

DEXE/USDT Horizontal Channel Pattern (Source: TradingView)

In the above chart, DeXe (DEXE) laid out a Horizontal channel pattern also known as the sideways trend. In general, the horizontal channel is formed during the price consolidation. In this pattern, the upper trendline, the line which connects the highs, and the lower trendline, the line which connects the lows, run horizontally parallel and the price action is contained within it. A horizontal channel is often regarded as one of the suitable patterns for timing the market as the buying and selling points are in consolidation. At the time of analysis, the price of DeXe (DEXE) was recorded at \$18.55. If the pattern trend continues, then the price of DEXE might reach the resistance levels of \$19.414, and \$22.635. If the trend reverses, then the price of DEXE may fall to the support of \$17.957, and \$16.598.

DeXe (DEXE) Resistance and Support Levels

The chart given below elucidates the possible resistance and support levels of DeXe (DEXE) in 2025.

DEXE/USDT Resistance and Support Levels (Source: TradingView)

From the above chart, we can analyze and identify the following as the resistance and support levels of DeXe (DEXE) for 2025.

Indicator	Purpose	Reading	Inference
Resistance Level 1		\$21.074	
Resistance Level 2		\$55.637	
Support Level 1		\$6.932	
Support Level 2		\$2.731	

DEXE Resistance & Support Levels

DeXe (DEXE) Price Prediction 2025

RVOL, MA, and RSI

The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of DeXe (DEXE) are shown in the chart below.

DEXE/USDT RVOL, MA, RSI (Source: TradingView)

From the readings on the chart above, we can make the following inferences regarding the current DeXe (DEXE) market in 2025.

Indicator	Purpose	Reading	Inference
50-Day Moving Average (50MA)	Nature of the current trend by comparing the average price over 50 days	50 MA = \$18.322	Price = \$18.537 (50MA < Price)
Relative Strength Index (RSI)	Magnitude of price change; Analyzing oversold & overbought conditions	54.769	<30 = Oversold, 50-70 = Neutral, >70 = Overbought
Relative Volume (RVOL)	Asset's trading volume in relation to its recent average volumes	Below cutoff line	Weak Volume

DeXe (DEXE) Price Prediction 2025

ADX, RVI

In the below chart, we analyze the strength and volatility of DeXe (DEXE) using the following technical analysis indicators: Average Directional Index (ADX) and Relative Volatility Index (RVI).

DEXE/USDT ADX, RVI (Source: TradingView)

From the readings on the chart above, we can make the following inferences regarding the price momentum of DeXe (DEXE).

Indicator	Purpose	Reading	Inference
Average Directional Index (ADX)	Strength of the trend momentum	15.148	Weak Trend
Relative Volatility Index (RVI)	Volatility over a specific period	58.14	<50 = Low, >50 = High

High Volatility

Comparison of DEXE with BTC, ETH

Let us now compare the price movements of DeXe (DEXE) with that of Bitcoin (BTC), and Ethereum (ETH).

BTC Vs ETH Vs DEXE Price Comparison (Source: TradingView)

From the above chart, we can interpret that the price action of DEXE is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of DEXE also increases or decreases, respectively.

DeXe (DEXE) Price Prediction 2026, 2027, 2028, 2029, and 2030

With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of DeXe (DEXE) in 2026, 2027, 2028, 2029, and 2030.

Year	Bullish Price	Bearish Price
DeXe (DEXE) Price Prediction 2026	\$135	\$2
DeXe (DEXE) Price Prediction 2027	\$150	\$1
DeXe (DEXE) Price Prediction 2028	\$175	\$0.8
DeXe (DEXE) Price Prediction 2029	\$200	\$0.6
DeXe (DEXE) Price Prediction 2030	\$220	\$0.4

Conclusion

If DeXe (DEXE) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish DeXe (DEXE) price prediction for 2025 is \$55.637. Comparatively, the bearish DeXe (DEXE) price prediction for 2025 is \$2.731. If there is a positive elevation in the market momentum and investors' sentiment, then DeXe (DEXE) might hit \$100. Furthermore, with future upgrades and advancements in the DeXe ecosystem, DEXE might surpass its current all-time high (ATH) of \$33.54 and mark its new ATH.

FAQ

- What is DeXe (DEXE)? DeXe (DEXE) is the governance and utility token of the DeXe Network, a decentralized asset management platform designed to enable non-custodial, transparent, and automated portfolio management.
- Where can you buy DeXe (DEXE)? DeXe (DEXE) has been listed on many crypto exchanges which include Binance, MEXC Global, gate.io, KuCoin, WhiteBIT, WazirX, Nominex, LATOKEN, PancakeSwap (V2), and Bitrue.
- Will DeXe (DEXE) record a new ATH soon? With the ongoing developments and upgrades within the DeXe platform, DeXe (DEXE) has a high possibility of reaching its ATH soon.
- What is the current all-time high (ATH) of DeXe (DEXE)? DeXe (DEXE) hit its current all-time high (ATH) of \$33.54 on Mar 08, 2021.
- What is the lowest price of DeXe (DEXE)? According to CoinMarketCap, DEXE hit its all-time low (ATL) of \$0.6535 on Nov 11, 2020.
- Will DeXe (DEXE) hit \$100? If DeXe (DEXE) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$100 soon.
- What will be the DeXe (DEXE) price by 2026? DeXe (DEXE) price might reach \$135 by 2026.
- What will be the DeXe (DEXE) price by 2027? DeXe (DEXE) price might reach \$150 by 2027.
- What will be the DeXe (DEXE) price by 2028? DeXe (DEXE) price might reach \$175 by 2028.
- What will be the DeXe (DEXE) price by 2029? DeXe (DEXE) price might reach \$200 by 2029.

- A live TV broadcast mistakenly showed XRP surging to \$21,355, a 961,936% spike.
- Other assets, including Bitcoin and Ethereum, also displayed a surge in prices.
- This continues a long history of XRP price glitches, fueling speculation within the community.

The XRP community is once again buzzing after a price glitch on live American television showed the asset soaring to \$21,355, a 961,936% increase from its actual market value of \$2.22. The anomaly appeared during a cryptocurrency market

segment on American Sunrise Early Edition, a show on cable news channel Real America's Voice, hosted by Jake Novak. Is the XRP incident a widespread price glitch? The glitch persisted throughout the segment, causing confusion as XRP's price fluctuated between \$2.22 and \$21,355 on the display. While Bitcoin (BTC) also showed a dramatic price variation—falling to \$43,636 from its real value of \$86,246—Novak only acknowledged BTC's anomaly, ignoring the XRP issue. Other assets also experienced bizarre price distortions: - Ethereum (ETH) jumped from \$2,345 to \$6,000 (+156%). - Solana (SOL) surged from \$139 to \$2,896 (+1,983%). - Dogecoin (DOGE) skyrocketed from \$0.22 to \$32 (+15,900%). - Cardano (ADA) spiked from \$0.67 to \$69 (+10,198%). Despite the widespread impact of this latest glitch, XRP's price increase was by far the most extreme. Many in the XRP community believe these recurring glitches hint at deeper market manipulation or hidden valuation metrics. Skeptics, however, argue that similar glitches have affected multiple assets over the years, dismissing claims of the coin being uniquely undervalued. Whether this latest incident is another technical mishap or something more remains a topic of debate within the Ripple coin community.

- Bitcoin holders may now utilize Solana's DeFi ecosystem, enabling cross-chain Bitcoin liquidity. - Zeus Network's flagship dApp, APOLLO, enables the Solana-native asset, zBTC, to unleash Bitcoin finance (BTCFi) prospects on Solana. The first on-chain Bitcoin exchange developed on Solana, APOLLO, Zeus Network's flagship decentralized application, was formally launched. Zeus Network has unveiled zBTC, the first fully permissionless Bitcoin asset on Solana, in addition to APOLLO. Bitcoin holders may now utilize Solana's DeFi ecosystem, enabling cross-chain Bitcoin liquidity, without depending on centralized wrapped solutions. APOLLO adds Bitcoin liquidity in a completely decentralized, non-custodial setting by enabling users to lock native BTC and mint zBTC directly on Solana at a 1:1 ratio. While traditional wrapped Bitcoin models depend on opaque systems and centralized custodians, APOLLO and zBTC provide a transparent, trustless experience free from custodial concerns and KYC requirements. During the private mainnet phase, the platform has shown a great deal of interest, minting 50 zBTC before launch and registering over \$40 million in on-chain volume. With a range of decentralized financial services that take use of Bitcoin's unparalleled liquidity and security to interface with contemporary DeFi infrastructure, APOLLO's debut marks the arrival of Bitcoin Finance, also known as BTCFi, on Solana. Bitcoin holders may now engage in a variety of DeFi strategies across Solana by using zBTC, such as trading zBTC on Jupiter and offering liquidity on Meteora, HawkFi, and Raydium. In the near future, vault tactics for yield optimization will also be introduced, including depositing zBTC on Drift and Neutral Trade. Through ZeusScan, a specially designed Proof of Reserves system that guarantees every Bitcoin transaction is completely auditable, Zeus Network further offers on-chain insight into Bitcoin reserves. This utility preserves the integrity of APOLLO's trustless architecture while bolstering user confidence. Zeus Network intends to roll out additional services that further modularize Bitcoin liquidity in the next months. It will be simpler than ever to manage Bitcoin holdings across protocols and formats when APOLLO allows users to switch between zBTC, cbBTC, and wBTC and withdraw any version back to native Bitcoin. Users will have more freedom and control thanks to this modular structure, which will also improve market efficiency. Along with many other things, users will be able to borrow and lend funds on Drift and Save Finance. Onboarding institutional liquidity partners, including other UTXO-based assets like DOGE, LTC, and KAS, and evolving ZPL-assets to improve liquidity coverage are among Zeus Network's top goals for the future. As Zeus continues to build BTCFi on Solana, other Bitcoin-native apps will be released on Solana. The Solana Virtual Machine (SVM) serves as the foundation for the multi-chain layer Zeus Network, which enables permissionless communication between Bitcoin and other significant blockchain ecosystems. It creates safe, scalable cross-chain connections by smoothly integrating liquidity from UTXO-based blockchains like Litecoin, Dogecoin, and Kaspa as well as Bitcoin into the Solana ecosystem. Zeus Network's flagship dApp, APOLLO, enables the Solana-native asset, zBTC, to unleash Bitcoin finance (BTCFi) prospects on Solana by showcasing the decentralized, trustless integration of native Bitcoin using a lock-mint mechanism.

- FLOKI price jumped over 10%, reaching \$0.00007603 before settling at \$0.00007112. - FLOKI's CMF at 0.17 signals strong capital inflow, reinforcing bullish momentum. As the cryptocurrency market begins to signal recovery anticipation builds for the next bull run. Consequently, meme coins are once again gaining traction with Dogecoin (DOGE), FLOKI, Shiba Inu (SHIB), Official Trump (TRUMP), and PEPE turned slightly green. Among them, FLOKI has been making waves with a significant price surge, drawing increased attention in the crypto market. Over the past 24 hours, FLOKI saw a strong upward move, climbing over 10% from a low of \$0.00006872 to a high of \$0.00007603. However, it has since slightly retraced to around \$0.00007112, at the press time. This surge was accompanied by a 98% jump in daily trading volume reaching approximately \$169.66 million. Looking at the weekly performance, FLOKI has gained about 15%, though it still trades around 79% below its all-time high. The price action suggests a period of re-accumulation, with FLOKI recently breaking past a long-term resistance level, which has now turned into support. This is a bullish signal, indicating potential for further upside. FLOKI Technical Indicators Support a Bullish Outlook On the 4-hour chart, technical indicators support the positive outlook. The Relative Strength Index (RSI) sits at 58.92, showing bullish momentum without being overbought. The MACD indicator also signals upward movement as it trades above the signal line. Zooming in, the Chaikin Money Flow (CMF) at 0.17 reflects strong buying pressure. These factors point to a healthy trend. If the FLOKI price holds above \$0.000070 another upward push could be on the horizon. FLOKI is currently testing key resistance at \$0.000085 and \$0.000097. However, failure to maintain a range above \$0.000070 level might lead to a drop toward \$0.00006159 or even \$0.00005693 if selling pressure intensifies. FLOKI is currently in a strong position, with bullish indicators supporting further gains. However, a breakout above resistance or a dip in buying momentum could lead to short-term corrections. A sustained move above \$0.000085 could signal the next leg up, while a drop in volume or a bearish MACD crossover might indicate a pullback. Highlighted Crypto News Today:

- GameStop is issuing \$1.3B in convertible senior notes to fund Bitcoin purchases. - GameStop's bonds have a 0% interest rate, mature in 2030, and offer a 35-40% conversion premium for stock conversion. - GameStop's BTC purchase could boost buying pressure, potentially sparking a Bitcoin rally. Just a day after revealing plans to add Bitcoin (BTC) to its balance sheet, GameStop (GME) is taking things a step further. The company, led by CEO Ryan Cohen, is raising \$1.3 billion by issuing convertible senior notes, aiming to use the funds for Bitcoin purchases. The five-year bonds, set to mature in 2030, come with a 0% coupon, as per press release. Investors will have the option to convert their notes into GameStop shares if the stock price reaches a predetermined level, with a conversion premium set between 35% and 40%. An additional \$200 million may also be raised through an underwriter option. By adopting this Bitcoin strategy, GameStop joins companies like MicroStrategy (MSTR), MARA Holdings (MARA), and Riot Platforms (RIOT), all of which have issued convertible debt to buy Bitcoin. However, GameStop's board has unanimously approved Bitcoin as a treasury reserve asset, without setting a maximum limit on how much BTC it can hold. According to its SEC filing, the company also retains the right to sell Bitcoin when necessary. Market Reactions: GameStop Stock and Crypto Rally Following the Bitcoin announcement, GME stock surged 11.65%. The crypto market also responded positively, with Bitcoin holding strong at \$88K and meme coins like Dogecoin (DOGE), Shiba Inu (SHIB), PEPE, and FLOKI trading in the green for the second consecutive day. GameStop has a history of influencing meme coins, dating back to the 2021 "meme stock" frenzy. During the GameStop short squeeze, DOGE and SHIB saw explosive gains. More recently, the meme coin market got another boost when Keith Gill, known as Roaring Kitty—the key figure behind the GameStop short squeeze—returned online. However, historically, major corporate Bitcoin purchases have contributed to bullish momentum, as seen with MicroStrategy. If GameStop follows through on significant BTC acquisitions, it could add buying pressure to the market, potentially sparking a new rally. For now, GameStop's decision to integrate Bitcoin into its financial strategy marks another major step in corporate BTC adoption—one that could influence both stock and crypto markets in the coming months. Highlighted Crypto News Today ChatGPT Forecasts XRP Price Impact from Potential \$10 Billion ETF Adoption

- FARTCOIN surged 100% in a week, becoming the top performer among the top 100 cryptocurrencies. - FARTCOIN jumped from \$0.5291 to \$0.633, with a \$625.85M market cap and \$210M daily trading volume. The cryptocurrency market kicked off the day on a strong note, with the global market cap climbing to \$2.89 trillion. Bitcoin is inching closer to the \$88,500 mark, and most major assets are following the upward trend. Among them, meme coin Fartcoin (FARTCOIN) has caught everyone's attention, leading the gains with an impressive 20% surge. Fartcoin started the day at \$0.5291 and peaked at \$0.633 before settling at \$0.6313 at the time of writing. With a market cap of \$625.85 million and a daily trading volume hitting \$210 million, the token continues to rally. Over the past seven days, Fartcoin has skyrocketed 100%, making it the best-performing asset among the top 100 cryptocurrencies. What's Fueling the Fartcoin Rally? The recent price jump appears to be driven by a combination of factors. The biggest catalyst is Crypto.com's listing announcement, which boosted investor confidence. Additionally, increased social media hype, especially from influencers, helped Fartcoin break past its previous monthly low and approach early-February highs. So far in March, Fartcoin has surged 200% from its low of \$0.19. The growing hype around meme coins—especially after former U.S. President Donald Trump's Truth Social post about the TRUMP token—has also played a role in Fartcoin's momentum. Technical Analysis: Bullish Trend, But Caution Advised Fartcoin is currently trading within an ascending parallel channel, a bullish pattern that suggests strong buying pressure. If this uptrend continues, indicators suggest that the price could reach \$0.75 or even \$0.90 in the near future. Zooming in, the Chaikin Money Flow (CMF) indicator sits at 0.11, signaling that buying pressure still outweighs selling pressure. Other indicators, such as the Relative Strength Index (RSI) and Directional Movement Index (DMI), also suggest sustained momentum, reinforcing the current trend. If buyers remain strong, the memecoin could regain momentum and push towards \$0.95. On the flip side, some indicators suggest caution. The MACD (Moving Average Convergence Divergence) on the 4-hour chart shows a potential slowdown in momentum, hinting at a short-term pullback. If selling pressure increases, Fartcoin might test lower support levels around \$0.42. With meme coin mania heating up, Fartcoin remains a key token to watch. While the overall trend is bullish any signs of a reversal could happen soon. If market sentiment stays positive, Fartcoin could continue its explosive rally. However, if momentum slows down, short-term corrections may be on the horizon. Highlighted Crypto News Today: Bitcoin Tests \$88K After Prolonged Price Consolidation, Will \$90K Reappear?

- Bitcoin has shown a modest price increase of 1.27% in the last 24 hours. - The cryptocurrency's daily trading volume has dipped by 11.94% as per CMC data. The overall crypto market has shown a glimmer of hope after days in the dark consolidation tunnel. While the altcoin sector has not shown much action over the past few weeks, other sectors have been booming. Several ETP issuers are taking measures to introduce altcoin ETFs and the regulatory sector is buzzing with new laws and reforms. Meanwhile, the largest cryptocurrency, Bitcoin, has shown a modest price increase of 1.27% in the last 24 hours. Propelled by this movement, BTC briefly tested the \$88,000 range after weeks of the \$85K consolidation. In the afternoon hours of March 25, the digital asset was trading at the \$87.1K level. However, as bullish candles sparked, Bitcoin surged to trade at the border between \$87K and \$88K, after briefly testing and failing the higher range. In the past hour, it has managed to climb to \$88.1K level. At the time of writing, BTC was trading at \$88,152.17 as per CMC data. Zooming out onto its weekly chart, the cryptocurrency's price consolidation is quite evident. While prices now show a 5.51% increase, a prolonged consolidation between \$83K and \$85K, can be observed mid-week. From a low of \$83,546, Bitcoin has climbed to current trading levels. Will the Bitcoin Bulls' Slow Progress Reach \$90K? On analyzing its recent price movements, Bitcoin shows a price breakout from a recent horizontal channel pattern. Often, when such a trend occurs, it is expected to witness further upward movements. Secondly, the lack of selling activity by BTC traders as reported by prominent analyst Ali (@ali_charts) is also promising. Moreover, Bitcoin's Moving Average Convergence Divergence (MACD)

MACD line stands below the signal line. Although this is an indicator of a bearish trend, the MACD line shows signs of moving towards a crossover. Additionally, the Chaikin Money Flow (CMF) indicator value stands at a positive 0.03 as per TradingView data. This indicates a capital influx into Bitcoin, thus suggesting positive investor sentiment thus reiterating a possibility of hitting \$90K in the coming days. Finally, prominent crypto-based firm GameStop has announced investing in a Bitcoin reserve, which also adds to the positive momentum. Meanwhile, other altcoins such as DOGE have also shown price surges.

- A whale allegedly influenced a Polymarket market resolution using 5 million tokens. - The decision cost traders thousands, sparking concerns over decentralized governance integrity. Polymarket, a leading decentralized prediction platform, is under fire after an alleged governance attack led to a controversial market resolution. A large UMA token holder (so-called whale) reportedly manipulated the voting process to secure profits. This left many traders questioning the integrity of the system. The dispute centered on a prediction market asking whether Ukraine would sign a mineral agreement with Donald Trump before April. Although no official deal was announced, Polymarket resolved the market as "YES," sparking outrage. A whale holding 25% of the voting power allegedly swayed the outcome in their favor using UMA's Optimistic Oracle, leading to accusations of market manipulation. Whale Influence and the \$7 Million Fallout Reports indicate that the whale strategically used 5 million UMA tokens spread across three accounts to influence the final vote. As a result, Polymarket's system validated the disputed resolution, causing traders who had bet on "NO" to suffer losses in the thousands. Over \$7 million flowed into the betting pool. Many traders argued that Trump's statement about expecting to sign a deal was not sufficient proof, especially since no official agreement was reached. A trader on X believes most events are not determined by real world events but by influencers' decisions as opposed to Polymarket's claim, he thinks Polymarket isn't transparent with its deals. "The rules clearly state, 'The resolution source for this market will be official information from the governments of the U.S. and Ukraine.' Yet, there is no confirmation of the deal or the outcome of the decision," wrote Web3Marmot. Critics argue that the event exposes a major flaw in Polymarket's reliance on UMA's Optimistic Oracle, where token holders, rather than real-world facts, determine market outcomes. Polymarket and UMA Respond Following the backlash, a Polymarket representative addressed concerns on Discord, stating: "We are aware of the situation regarding the Ukrainian Rare Earth Market. This market resolved against user expectations and our clarification. However, because this wasn't a market failure, we cannot issue refunds." Polymarket emphasized its commitment to improving clarity and preventing similar issues in the future. The UMA team has also been involved in discussions to refine governance processes and avoid last-minute vote swings that disrupt market confidence. Meanwhile, some traders argue that this was not a governance attack but a case of negligence. A user on X noted that Polymarket's last-minute clarification on the dispute came too late. The UMA whale voters, having already committed their votes, opted to confirm "YES" rather than face penalties or restart the voting process. Despite the controversy, Polymarket has maintained a 94% accuracy rate in predicting events, according to research by data scientist Alex McCullough. However, this case has raised questions about the reliability of decentralized governance in high-stakes betting markets. With over \$4.5 billion wagered on Polymarket across political and sports markets, trust in its governance mechanisms is crucial. As the industry evolves, ensuring fairness and transparency will be key to sustaining user confidence in decentralized prediction platforms. Highlighted Crypto News for Today: Dogecoin (DOGE) Jumps 10.58% as Foundation Launches 10M DOGE Reserve

- Cboe BZX filed a 19b-4 form on March 25 to list Fidelity's spot Solana ETF. - The SEC's stance on altcoin ETFs may shift under Trump's administration. Cboe BZX Exchange has officially submitted a 19b-4 filing to the U.S. Securities and Exchange Commission (SEC) to list a spot Solana (SOL) exchange-traded fund (ETF) from Fidelity. The filing, made on March 25, follows Fidelity's registration of a Solana trust in Delaware. Fidelity joins asset managers such as VanEck, Grayscale, 21Shares, Bitwise, and Canary Capital in seeking approval for a spot SOL ETF. Analysts estimate potential inflows of \$3 billion to \$6 billion based on market cap comparisons with Bitcoin (BTC) and Ethereum (ETH) ETFs. Solana futures contracts debuted on the Chicago Mercantile Exchange (CME) on March 17. Trading volumes reached \$12.3 million on launch day, lower than BTC's \$102.7 million and ETH's \$31 million. However, market cap-adjusted volumes show that demand aligns with Bitcoin and Ethereum. On March 20, Volatility Shares launched the first Solana futures ETFs in the U.S. These include the Volatility Shares Solana ETF (SOLZ) and the leveraged Volatility Shares 2X Solana ETF (SOLT). Analysts view their performance as a gauge for future spot ETF demand. Competitive ETF Landscape Fidelity's latest filing follows Cboe's March 12 application to list Franklin Templeton's spot Solana ETF. Multiple firms have submitted applications for altcoin-related ETFs. These include funds for Litecoin (LTC), XRP, Cardano (ADA), Polkadot (DOT), and even memecoins like Dogecoin (DOGE). Canary Capital recently applied for an ETF tracking a non-fungible token (NFT) collection, exposing investors to the PENGU token and Pudgy Penguins NFTs. The ETF market is expanding as asset managers test regulatory boundaries. Highlighted Crypto News Today Fidelity Enters Stablecoin Race Amid Growing Tokenization Trend

Meme coins have taken the crypto world by storm, blending humor and financial opportunity in ways that no one could have predicted. What started as internet jokes has transformed into a serious market, with tokens like Cheems, Sudeng, Comedian, SLERF, Dogecoin, Bonk, and Dogwifhat capturing global attention. But one coin, in particular, has been making waves like no other: Arctic Pablo Coin. With its exciting meme coin presale and unique incentives, Arctic Pablo Coin is quickly gaining traction as the best meme coin to buy this month. Arctic Pablo Coin stands out for more than just its adventurous narrative. It's packed with innovative features that redefine what a meme coin can be. As other coins ride the hype, Arctic Pablo offers high APY staking, referral incentives, and community

competitions that make it a project to watch closely. Let's dive into what makes Arctic Pablo Coin a frontrunner and explore why these other meme coins are also worth a closer look.

- Arctic Pablo Coin: The Best Meme Coin to Buy for Passive Rewards** Arctic Pablo Coin isn't just another meme token; it's an ecosystem designed to reward its community in multiple ways. Investors can stake their APC tokens during the meme coin presale to earn a remarkable 66% APY, turning passive holdings into steady growth. Plus, Arctic Pablo goes beyond traditional staking by offering referral incentives – spread the word, bring in new investors, and get rewarded with additional tokens. To top it off, the project frequently holds community competitions, where participants can win extra APC tokens or even USD, keeping the engagement high and the rewards flowing. Currently in its 16th presale stage, called Crystal Cove, Arctic Pablo Coin is on fire. The price sits at a tempting \$0.000083, with over \$2 million raised so far. What's more? The ROI is already an astonishing 9552.41%, with the listing price projected at \$0.008. As the presale countdown continues, this could be the best meme coin to buy this month for those seeking explosive gains and a vibrant community.
- Cheems: The Meme King with Staying Power** Cheems has become synonymous with meme culture, with its iconic Shiba Inu mascot representing humor and lightheartedness. Beyond its meme status, Cheems has built a loyal community that continues to support its growth. The coin aims to fund community-driven projects and collaborations that keep the meme alive while offering real-world utility. Cheems made it to this list because of its ability to evolve beyond a meme, fostering a strong, engaged community that believes in its long-term potential.
- Sudeng: Blending Humor with Blockchain** Sudeng might sound playful, but it's built on a solid foundation. The project integrates NFT utilities and decentralized governance, ensuring its community has a say in development decisions. Its meme-centric branding appeals to a wide audience while offering more than just laughs. Sudeng earned its spot for blending meme culture with serious blockchain infrastructure, making it a unique contender among the best meme coins to buy this month.
- Comedian: Laughter Meets Crypto** Comedian is all about embracing humor in the crypto space. It's the first meme coin to sponsor live comedy events, bridging the gap between digital finance and real-world entertainment. Investors not only support the coin but also the comedic arts. Comedian made it to this list because of its innovative approach to combining entertainment and investment, offering holders more than just financial returns.
- SLERF: The Wild Card of Meme Coins** SLERF thrives on unpredictability. Its tokenomics are built around sudden burns and surprise airdrops, creating a rollercoaster ride for holders. Every transaction could trigger unexpected events, adding an element of fun and risk. SLERF earned its place by embracing the chaotic energy of meme coins, attracting thrill-seekers looking for high-risk, high-reward opportunities.
- Dogecoin: The OG Meme Coin** No meme coin list is complete without Dogecoin, the pioneer that started it all. Originally created as a joke, Dogecoin has grown into a symbol of community-driven success. It's been endorsed by major celebrities and used in countless charitable campaigns. Dogecoin made it to this list for its legendary status and unwavering community support, proving that meme coins can have staying power.
- Bonk: The Solana Superstar** Bonk exploded onto the scene as Solana's first major meme coin, quickly becoming a symbol of the blockchain's resilience. It's not just about hype – Bonk integrates with Solana's DeFi ecosystem, offering practical use cases alongside its meme appeal. Bonk earned its place for bringing fresh energy to the Solana network and proving that meme coins can also offer serious utility.
- Dogwifhat: The Whimsical Underdog** Dogwifhat rides the wave of absurd humor that meme coin enthusiasts love. It thrives on community engagement and playful branding while steadily building its ecosystem. The coin has gained traction for its quirky charm and loyal supporters. Dogwifhat made it to this list for embracing meme culture at its finest, turning internet humor into a growing digital asset.

Verdict: Arctic Pablo Coin Leads the Meme Coin Charge Meme coins have moved far beyond internet jokes, evolving into legitimate investment opportunities. Based on the latest research, the best meme coins to buy this month are Arctic Pablo Coin, Cheems, Sudeng, Comedian, SLERF, Dogecoin, Bonk, and Dogwifhat. Each brings its own flavor to the crypto space, but Arctic Pablo Coin stands out as the most exciting investment. Its high APY staking, engaging referral program, and community competitions create a dynamic ecosystem that rewards holders in more ways than one. If you're searching for the best meme coin to buy this month, Arctic Pablo Coin's explosive presale could be the opportunity you've been waiting for.

For More Information:

- Arctic Pablo Coin: <https://www.arcticpablo.com/>
- Telegram: <https://t.me/ArcticPabloOfficial>
- Twitter: <https://x.com/arcticpabloHQ>

Frequently Asked Questions

- What makes Arctic Pablo Coin unique among meme coins? Arctic Pablo Coin offers a 66% APY during its meme coin presale, referral rewards, and community competitions, creating multiple income streams for investors.
- Why is Arctic Pablo Coin considered the best meme coin to buy this month? With over \$2 million raised and a staggering 9552.41% ROI in its current presale stage, Arctic Pablo Coin offers unmatched growth potential.
- How can I participate in the Arctic Pablo Coin presale? Visit the official Arctic Pablo Coin website, connect your wallet, and follow the simple steps to secure your tokens.
- Are meme coins like Dogecoin still worth investing in? Absolutely! Dogecoin remains a pioneer in the space, with strong community backing and ongoing development.
- What factors should I consider when investing in meme coins? Look for community engagement, project utility, and long-term vision. Arctic Pablo Coin excels in all three areas.

- Celo transitions to Ethereum L2 with 1 seconds block time and \$0.0005 fees - Migration enables native bridging, boosts speed, and lowers security risks
- Vitalik and Coinbase support Celo's shift to enhance Ethereum integration

After two years of process, the Layer 1 blockchain Celo has officially transitioned to an Ethereum Layer 2 platform as part of an update on March 26. The migration utilizes Optimism's OP Stack for scaling and EigenDA for data availability. With the activation of the Celo L2 Mainnet at block height 31,056,500, the network is now fully operational, supported by Forno nodes. This major technological shift marks a new phase of growth and deeper integration with the Ethereum

ecosystem. ðŸˆ“Todayâ€™s the day. â€” cLabs | â€¢â€¢â€¢f (@cLabs) March 25, 2025 Celo hits block 31056500 and enters the L2 era. Celo L2 Mainnet is coming â€” and itâ€™s just the beginning. In SF? Celebrate with @VitalikButerin, @Marek_, @RegenRene, @Optimism, @EspressoSys, @ElectricCapital & more:<https://t.co/VatengDbhe> Celo Boosts Speed, Security, and Features With L2 Upgrade The Celo team celebrated the successful migration, highlighting how it strengthened Celoâ€™s technical framework. The transition enhances interoperability with Ethereum, allowing Celo to better leverage Ethereumâ€™s infrastructure. Despite the shift, Celo maintains its reputation for ultra-low transaction fees of \$0.0005 and quick processing times. The technical advancement introduced block time reduction from 5 seconds down to 1 second. As part of its technological enhancements Celo incorporated native Ethereum bridging to eliminate security risks that stem from using external bridging services. By bringing its 1,000 projects onto Ethereum through this upgrade, Celo will enhance both network activity and innovation. Celo upholds its foundational components, such as SocialConnect for phone number payments and fee abstraction, which lets users pay fees through ERC-20 tokens. CEL0 tokens now reside natively on Ethereum, but layer 2 CEL0 represents the bridged tokens, so Celo continues to establish deep connections with Ethereumâ€™s blockchain network. Vitalik and Coinbase Back Celoâ€™s Smooth Ethereum L2 Shift Ethereum co-founder Vitalik Buterin expressed praise for Celo because he saw how the platform brought Ethereum together with improved globalization for cryptocurrency acceptance. The move would boost both the overall ecosystem and decentralized finance growth according to him. Further, Coinbase provided support to Celoâ€™s migration process by stopping deposits and withdrawals of its native token CGLD temporarily. User CGLD tokens would transform automatically during the migration without any user intervention under the assurance of the exchange. Coinbase requested its users to stop CGLD token deposits since they could delay transaction processing times. Highlighted Crypto News Today:

- FORM (formerly BinaryX) reached an all-time high of \$2.62, showing strong bullish momentum. - BinaryX rebranded to Four, then changed its ticker to FORM, completing a 1:1 BNX to FORM swap on March 21. The global crypto market is experiencing a mix of positive and negative sentiment, with major cryptocurrencies like Bitcoin (BTC), Ethereum (ETH), and XRP showing fluctuations. Amid this volatility, Four (FORM), formerly known as BinaryX (BNX), has surged to a new all-time high of \$2.62. At the time of writing, FORM is priced at \$2.49, with a market cap of \$953.26 million. Over the past week, it has recorded a remarkable 39.75% increase, while its daily trading volume has soared by more than 48% to \$136.07 million in the past 24 hours. The bullish journey of FORM began with the launch of the Four.Meme fairlaunch platform on July 3, 2024. Later, BinaryX rebranded to Four, aligning itself better with its token launch platform. However, since â€œFOURâ€ was already widely used in the meme coin community, the team decided to change its ticker to FORM, initiating a 1:1 swap from BNX to FORM on March 21. Since early February, the altcoin has seen an extraordinary price rally, climbing over 1460% and breaking into the top 100 cryptocurrencies, currently ranking 72nd by market capitalization. After briefly dipping in March, the token continued its bullish momentum, breaking through an ascending resistance trend line. FORMâ€™s Bullish Momentum: Technical Indicators and Price Outlook On the 4-hour FORM/USDT chart, technical indicators suggest further upward movement. The Relative Strength Index (RSI) has broken out from a descending trend line, while the Moving Average Convergence/Divergence (MACD) has formed a bullish divergence, reinforcing a positive outlook. Looking ahead, the price prediction shows that FORM could soon set another new all-time high. Its wave count indicates that the token is in the middle of a five-wave rally, with the next target projected at \$2.86. However, if the bullish momentum slows down, key support levels lie at \$2.30, extending down to \$2.00 and \$1.95. With strong technical indicators and continued market interest, the cryptocurrency remains at a bullish trend which could continue to the coming weeks. Highlighted Crypto News Today: Dogecoin Foundation Launches Dogecoin Reserve Through Latest Financial Arm

Alright, listen up, fellow degens. The meme coin season is in full swing, and if youâ€™re not paying attention, you might just miss the next 100x rocket. Crypto Twitter is buzzing, Telegram groups are on fire, and influencers are screaming about the best 100x cryptos to load up on before they take off. But hereâ€™s the kickerâ€”you need to act fast. One of the biggest stories in the meme coin world right now is BTFD Coin, which just entered Stage 15 of its presale, meaning thereâ€™s only one final stage left before this beast launches. With over \$6.41 million raised, more than 71 billion coins sold, and 11,500+ holders already in the game, this meme coin presale is closing in on the finish line. And hereâ€™s the real juicy part: BTFD Coinâ€™s price has already jumped from \$0.00016 to \$0.0002 in Stage 15, and some analysts predict a whopping \$0.0006 at launch or even an insane \$0.006 moonshot once it gets listed. But hold on, thereâ€™s more. Six meme coins could send portfolios into the stratosphere. From the bullish energy of Floki to the new-gen tech of Osaka Protocol, plus the legendary Cheems, BabyDoge Coin, and Snek, these are the top meme coins you should be looking at right now. 1. BTFD Coin â€” The Meme Coin Thatâ€™s Rewarding Its Community Big-Time BTFD Coin embodies the golden rule of crypto: Buy The Dip. But unlike your friend who panic sells at the bottom, this coin is designed to reward diamond hands and early adopters massively. BTFD Coinâ€™s Referral Rewards Program BTFD Coin is taking community engagement to the next level with one of the most rewarding referral programs in crypto. Hereâ€™s how you can stack up more BTFD tokens effortlessly: - Get 10% of the raise amount in BTFD tokens if you make it into the top 20 referrers. - The competition resets monthly and runs until the last day of the month at 6 PM UTC. - Anyone who uses your unique referral code for a \$50+ purchase gets an extra 10% in \$BTFD! Thatâ€™s a massive opportunity for both buyers and sharers. Just connect your wallet, grab your referral code, and start earning while spreading the word. Investment Example: Massive Potential Gains Suppose you drop \$1,000 into BTFD Coin right now at \$0.0002 per token. That bags you 5 million tokens. If the token hits \$0.0006 at launch, your stack is suddenly worth \$3,000 â€” a 200% ROI. And if it moons to \$0.006, youâ€™re sitting on \$30,000 â€” a 2,900% gain! Why this meme coin made it to this list: BTFD Coin is rewarding its investors, has an insane referral program, and is on the verge of launch with only one meme coin presale stage left. FOMO levels are maxed out. Donâ€™t sleep on this. 2. Floki â€” The Peopleâ€™s Crypto with Utility &

Hype Floki isn't just another dog-themed meme coin—it's a full-fledged ecosystem. Built as the ultimate Viking-inspired token, Floki has its own metaverse, an NFT marketplace, and even a DeFi lending platform. Beyond the hype, Floki continues to secure major exchange listings, build strategic partnerships, and enhance its utility in the Web3 space. With strong backing from a dedicated community, this token has gone from meme status to a legitimate crypto contender. Why this meme coin made it to this list: Floki is a long-term meme coin powerhouse with actual use cases, a strong fan base, and constant exchange listings.

3. Osaka Protocol – AI-Driven Meme Coin Innovation Osaka Protocol brings AI-powered decentralization into the meme coin world. It's part-meme, part-high-tech, and fully community-owned. Osaka Protocol stands out by integrating artificial intelligence into crypto trading strategies, enabling users to make smarter, data-driven decisions. Its growing adoption and unique tech-driven approach give it an edge over traditional meme coins. Why this meme coin made it to this list: Osaka Protocol fuses AI, decentralization, and meme culture, making it one of the most innovative meme coins out there.

4. Cheems – The OG Meme Coin That Keeps Rising Cheems is a legend in the meme game. This Shiba Inu-inspired token is still one of the most recognizable names in crypto, and the community keeps it thriving. With an ever-expanding ecosystem, NFT drops, and social media dominance, Cheems has stood the test of time in the volatile meme coin world. It may not be the newest kid on the block, but it remains a strong player. Why this meme coin made it to this list: Cheems is a cult classic, and its community isn't letting it fade anytime soon as one of the best 100x cryptos.

5. BabyDoge Coin – The Next-Gen Doge BabyDoge Coin is a fan-favorite spin on Dogecoin, but with a twist—it rewards holders with auto-reflections. This means that simply holding BabyDoge in your wallet earns you more tokens over time. With major exchange listings and a growing DeFi presence, BabyDoge continues to build momentum. Why this meme coin made it to this list: BabyDoge is still growing, and its strong tokenomics keep rewarding holders.

6. Snek – The Meme Coin of Cardano Snek is the leading meme coin on Cardano, proving meme culture isn't just for Ethereum or BSC. As Cardano's biggest meme coin, Snek is carving out a niche in a rapidly evolving blockchain ecosystem. With growing adoption and Cardano's continued development, Snek has plenty of room to run. Why this meme coin made it to this list: Snek is Cardano's top meme coin, making it a must-watch in the ecosystem.

Conclusion: BTFD Coin's Presale is Almost Over – Don't Miss Out on the Best 100x Cryptos If you're looking for the best 100x cryptos, this list has the hottest meme coins to check out. But BTFD Coin is the one with an ending presale, insane referral rewards, and a massive potential moonshot. The time to act is now. Don't forget to use the LAUNCH100 code for a 100% bonus while it's still active! Find Out More: Website: <https://www.btfd.io/> X/Twitter: https://x.com/BTFD_COIN Telegram: https://t.me/btfd_coin FAQs What makes BTFD Coin one of the best 100x cryptos? BTFD Coin has a booming presale, a rewarding referral program, and massive FOMO-building potential. Is it too late to buy BTFD Coin's meme coin presale? No! It's in Stage 15, with only one stage left before launch. Act fast! How does the BTFD referral program work? Earn 10% of all purchases made with your referral code + your referrals get an extra 10% in BTFD. Which meme coin has the highest growth potential? BTFD Coin has massive FOMO potential, but Floki, Osaka Protocol, and Snek are also strong contenders. How high can BTFD Coin go? Experts predict \$0.0006 at launch and \$0.006 if it moons, meaning 2,900% gains are possible!

Dogecoin's price has taken a hit, dropping 45.30% from its December 2024 peak, sparking debate on whether it can reclaim \$1 in the coming years. While some analysts see a path forward, others argue that real utility is needed for lasting momentum. Meanwhile, the PI coin price has faced its own struggles, sliding 15% and testing key support levels. While these coins battle market volatility, BlockDAG is flipping the script. Its Achievement Page rewards users for active participation, turning engagement into earnings. Instead of passively holding, users earn XP through purchases, challenges, and platform activities. BDAG has already surged 2,380%, and demand keeps climbing, making it a strong contender for the best crypto to buy in 2025. Dogecoin (DOGE) Price Outlook: Can DOGE reach \$1? Dogecoin has faced a challenging start to the year, dropping 45.30% from its December 2024 peak of \$0.4843. Despite this decline, discussions around the Dogecoin (DOGE) price outlook remain active, with some analysts forecasting a recovery to \$1 between 2025 and 2027, depending on market sentiment. However, others remain cautious, emphasising that sustained growth will require broader adoption and improved utility. While some predictions extend to \$5 by 2034 or even \$10 by 2040, these remain speculative. The Dogecoin (DOGE) price outlook continues to divide opinions, with uncertainty surrounding whether the meme coin can regain momentum.

PI Coin Price Drops 15%—Will Support Hold or Break? The PI coin price has been on a downward trend since reaching its all-time high of \$2.98 in late February. Currently hovering around \$1.16, the token is testing a critical support level. A drop below \$1.08 could push the price further down to \$1.05, while a rebound may indicate a potential recovery. The launch of Pi Domains, which enables decentralized website purchases using Pi tokens, has sparked interest, but it remains uncertain whether this development will reverse the ongoing decline. With a 15% drop in the past 24 hours, the PI coin price continues to fluctuate amid shifting market sentiment.

BlockDAG Introduces XP System, Letting Users Earn More with Every Action Holding crypto has always been about patience, but BlockDAG is switching things up with its new Achievements Page. Instead of holding the coins passively, users can rack up experience points (XP) just by staying active on the platform. Buying BDAG, joining bonus programs, and completing tasks all add up to something bigger—tier-based rewards, leaderboard rankings, and even more BDAG. It's like leveling up in a game, except the rewards are real, and the more involved someone gets, the more they earn. Earning XP isn't just about buying BDAG and calling it a day. There's a whole system in place that keeps things fresh. Weekly challenges pop up, bonus programs offer extra XP, and platform interactions open new ways to climb the ranks. A simple purchase might earn some XP, but hitting milestones—like completing three transactions or joining special bonus events—can push users into higher reward brackets. There's always something new to work toward, making engagement just as valuable as holding the coin. BlockDAG's momentum speaks for itself. The coin has skyrocketed 2,380% since its first presale batch, with over 18.8 billion BDAG sold and \$205 million raised. BDAG is currently priced at

\$0.0248 in batch 27, but the price increases with every new presale batch. As adoption grows, BlockDAG shaping up to be one of the best cryptos to buy in 2025, thanks to its mix of strong demand, future potential, and interactive rewards system. Those stacking XP now are already locking in bigger payouts, setting themselves up for even more gains as BlockDAG's ecosystem expands. The Bottom Line The Dogecoin price prediction still hangs in the balance. Some believe a return to \$1 is possible, but without stronger adoption, uncertainty lingers. PI coin price has also had a rough stretch, dipping 15% and testing key levels. A bounce could change the outlook, but for now, it remains in a tricky spot. While DOGE and PI holders wait for the market to decide their next move, BDAG holders are cashing in every day. The Achievement Page turns engagement into real rewards, letting users grow their holdings through XP instead of just price swings. As BDAG surges 2,380%, competition for XP is ramping up, and early adopters are stacking rewards before the next wave. As momentum keeps building, BDAG proves to be the best crypto to buy in 2025 and those already earning might just have the biggest advantage. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. Shiba Inu (SHIB) delivered massive returns for early investors, but those who missed out are now searching for the next big opportunity. As 2025 approaches, several high-potential cryptos are emerging, offering strong growth prospects. One standout is Lightchain AI, which has already raised over \$18.1 million at a presale price of \$0.007, positioning itself as a leader in AI-driven blockchain solutions. Other must-buy cryptos include Dogecoin (DOGE) for its strong community, XRP for its payment network dominance, Cardano (ADA) for its smart contract innovation, and Avalanche (AVAX) for its speed and scalability. Could one of these be the next SHIB-like success story? Top 5 Cryptos to Buy in 2025 for Those Who Missed Shiba Inu's Boom For investors seeking promising cryptocurrencies in 2025, here are five noteworthy options: Lightchain AI (LCAI)- Integrating artificial intelligence with blockchain technology, Lightchain AI offers efficient AI computations and decentralized applications (dApps). Its innovative features, such as the Artificial Intelligence Virtual Machine (AIVM) and Proof of Intelligence (PoI) consensus mechanism, position it as a potential high-growth asset. Dogecoin (DOGE)- As a meme coin in its inception, Dogecoin has evolved to become a well-known cryptocurrency, with a large and dedicated clientele and celebrity support. Its increasing popularity for use in transactions and potential technological upgrades make it a great investment. Cardano (ADA)- Cardano focuses on scalability, sustainability, and interoperability through its research-driven approach. Its ongoing advancement of smart contract functionality and cross-industry partnerships enhance its potential for growth. Avalanche (AVAX)- Avalanche provides a high-speed, high-performance blockchain network with minimal fees. Its new consensus mechanism and growing DeFi platform are factors that help its ability to grow substantially. XRP (XRP)- With the aim of making cross-border payments fast and efficient, XRP has made headlines because of its inclusion in the U.S. Crypto Strategic Reserve proposal. This only speaks volumes of its potential for mass adoption and value appreciation. Although these cryptocurrencies show promising traits, research and analysis of market variation must be done prior to investing. Because the ever-changing world of crypto is constantly bringing new opportunities, there could be other new opportunities in 2025 that will overshadow even these best bets. Lightchain AI's Expert Pick- Next Big Opportunity in Crypto Lightchain AI is an expert pick for the next big opportunity in crypto, offering AI-driven blockchain innovation with unmatched efficiency. Its dynamic pricing model adjusts AI task costs based on network demand, ensuring fair and optimized transaction fees. The platform also excels in low-latency AI execution, using parallel processing and resource allocation to minimize delays in AI computations, making real-time decentralized applications more efficient. Zero-Knowledge Proofs (ZKPs) strengthen security and privacy, allowing transactions and AI computations to be verified without exposing sensitive data. This scalable, privacy-focused, and cost-efficient approach sets Lightchain AI apart. As the demand for decentralized AI solutions grows, its ability to balance speed, security, and affordability positions it as a high-potential investment in the evolving crypto landscape. Lightchain AI- Future of AI-Driven Blockchain Investments Get ready to invest in the future. Lightchain AI isn't just a top contender for 2025 it's set to redefine AI-driven blockchain investments. With cutting-edge technology built for scalability and efficiency, Lightchain AI has the power to transform industries like finance, healthcare, and supply chain management. And it's not just talk recent partnerships with major players in these sectors prove its potential for explosive growth. As more businesses embrace the game-changing combination of AI and blockchain, Lightchain AI is gearing up to lead the charge. Don't wait to join the revolution. Invest in LCAI today and be part of the future shaping industries around the globe! - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. The meme coin market is hotter than ever in 2025, with investors hunting for the next big winner before the next rally takes off. With massive hype, growing communities, and real utility making their way into the space, the right picks today like the top new meme coins to invest in for short term could transform modest investments into huge returns. BTFD Coin (BTFD) is riding the wave of meme coin mania, but it's not just another viral trend it's offering real staking rewards, a fully launched P2E game, and a presale nearing its final stage. With a 2900% ROI potential and only one step left before its explosive launch, the countdown is officially on. Alongside established heavyweights

like Dogecoin (DOGE), Dogwifhat (WIF), and Pepe Coin (PEPE), BTFD is positioning itself as the ultimate short-term play with long-term potential. 1. BTFD Coin (BTFD) – The Final Stretch Before a Potential 2900% Surge Is this the last chance to grab BTFD before it blows up? BTFD Coin isn't just another meme token—it's an ecosystem designed for serious gains. Right now, it's in Stage 15 of its presale, priced at \$0.0002, with only one stage left before the official launch at \$0.0006. Investors getting in now are staring at a 3x ROI before the presale even ends. But that's just the beginning. Analysts predict that BTFD could reach its moon price of \$0.006, meaning those who buy at the current price could be looking at a 2900% ROI. That's the kind of return that turns a \$2,500 investment today into \$75,000 if the price hits its peak. BTFD isn't just hype—it has real utility. The P2E game's full version launched on January 1, 2025, giving players the chance to earn rewards while gaming. The staking program, which went live on December 2, offers a 90% APY, allowing holders to grow their holdings exponentially. These aren't just promises—they're already live, proving BTFD's commitment to its community. BTFD Presale Details (Stage 15) BTFD Coin's presale is now in Stage 15, with a current price of \$0.0002 and over \$6.38 million already raised. The project has attracted more than 11,500 holders, with 71+ billion BTFD coins sold as the excitement builds. With just one stage left before its listing at \$0.0006, this is one of the top new meme coins to invest in for short term, offering massive growth potential. How to Buy BTFD Coin Before It's Too Late Getting into the BTFD Coin presale is quick and easy. Simply visit the BTFD Presale and connect your wallet using MetaMask or Trust Wallet. Enter the amount of BTFD you want to purchase, then confirm the transaction to secure your tokens before the final stage ends. With only one stage left, this could be the last chance to lock in the lowest price before the token hits exchanges. Why BTFD Is the Meme Coin to Watch BTFD made it onto this list because it isn't just about memes—it's about real rewards, high-yield staking, and a thriving P2E ecosystem. It's rare to find a meme coin presale with this much utility, community backing, and short-term profit potential. 2. Dogecoin (DOGE) – The Meme Coin That Started It All Dogecoin needs no introduction. It's been the king of meme coins for over a decade, proving that viral internet culture can evolve into serious market value. DOGE remains a top choice for short-term investors, especially when market sentiment turns bullish. Dogecoin has maintained its dominance as the go-to meme coin and is integrated into multiple payment systems, making it more than just a speculative asset. Its connection to social media hype and influential endorsements keeps it relevant, ensuring that it continues to serve as a staple for traders looking to capitalize on meme coin surges. What Makes DOGE a Short-Term Play? Dogecoin made it to this list of the top new meme coins to invest in for short term because it still leads the meme coin market, attracting new waves of traders every cycle. 3. Dogwifhat (WIF) – Solana's Meme Coin Sensation Dogwifhat (WIF) has exploded in popularity as one of the top meme coins on Solana, capitalizing on fast transactions and low fees. The coin's rapid rise proves that Solana's meme coin ecosystem is thriving, with WIF leading the charge. WIF has built a dedicated following, with a strong presence across crypto communities. As more investors explore meme coins beyond Ethereum, WIF continues to capture attention as a high-potential short-term investment for traders betting on Solana's growing adoption. Why Is WIF Worth Watching? WIF made it to this list of the top new meme coins to invest in for short term because it represents Solana's answer to the meme coin frenzy, giving investors an alternative to Ethereum-based projects. 4. Pepe Coin (PEPE) – The Viral Meme Coin With Unshakable Hype Pepe Coin (PEPE) has proven that meme culture never dies—it just reinvents itself. Since its launch, PEPE has remained one of the most actively traded and talked-about meme coins, with community-driven initiatives fueling its growth. Its massive liquidity and widespread trading volume make it one of the most stable meme coin investments in the space. As traders look for highly volatile, high-reward assets, PEPE continues to be a top pick for quick turnarounds. What Keeps PEPE in the Spotlight? Pepe Coin made it to this list because it remains one of the most traded meme coins, offering strong liquidity and continued hype. The Final Word on These Top New Meme Coins to Invest in for Short Term! Meme coins are unpredictable, but the right ones can generate massive profits in a short time. Dogecoin, Dogwifhat, and Pepe Coin have already made their mark, proving their staying power in the market. But BTFD Coin? It's in a league of its own among the top new meme coins to invest in for short term. With only one presale stage left, its 2900% ROI potential, live staking rewards, and play-to-earn ecosystem make it a rare opportunity in the meme coin space. The final stage is about to begin, and once the presale ends, there's no turning back. Don't wait until it's too late—join the BTFD presale now and lock in the last available low price before the launch. Find Out More: - Website: <https://www.btfd.io/> - X/Twitter: https://x.com/BTFD_COIN - Telegram: https://t.me/btfd_coin FAQs 1. What are the best meme coins to invest in right now? BTFD Coin, Dogecoin, Dogwifhat, and Pepe Coin are among the most exciting meme coins, each offering different short-term opportunities. 2. Why is BTFD Coin considered a high-potential investment? BTFD Coin offers 90% APY staking, a fully launched P2E game, and is in its final presale stage with a 2900% ROI potential before its official launch. 3. Is Dogecoin still a good investment? Yes, Dogecoin remains one of the most popular meme coins with strong market liquidity and widespread acceptance. 4. What makes meme coin presales attractive? Presales offer low entry prices, helping investors bypass market volatility and maximize returns before official listings. Disclaimer: TheNewsCrypto does not endorse any content on this page. Crypto investors are continually on the lookout for the following big possibility, and the choice among Dogecoin (DOGE) and Ozak AI (OZ) offers a thrilling dilemma. Both tokens have particular strengths—DOGE is a nicely-hooked meme coin with a robust network, whilst Ozak AI is an emerging AI-powered blockchain task with great boom potential. With \$250, an investor may want to both purchase about 2,000 DOGE or gather 83,333 Ozak AI tokens at the present presale price of \$0.003. Which one has the potential to show a small investment into large gains by 2025? Dogecoin's Strengths and

Limitations Dogecoin has been in the crypto space since 2013 and has constructed a devoted network. It won sizable attention during the 2021 bull run whilst Elon Musk's tweets drove its charge to an all-time high of \$0.73. DOGE has considered the fact that end up a widely identified digital foreign money, even used for bills by using major companies like Tesla. However, Dogecoin faces challenges: Lack of utility: DOGE is broadly speaking a meme coin with confined real-world applications in comparison to AI or DeFi initiatives. Inflationary supply: Unlike Bitcoin, Dogecoin has an infinite supply, with thousands and thousands of recent coins mined day by day. This steady delivery boom places downward pressure on its price. Dependence on hype: Dogecoin's price movements are regularly tied to social media tendencies and movie star endorsements, making it much less predictable than tasks with sturdy basics. While DOGE has the capability for profits, specifically in every other bull run, its boom may be slower as compared to newer, high-utility crypto projects like Ozak AI. Ozak AI's Potential for Explosive Growth Ozak AI stands as a next-era AI blockchain project designed to revolutionize data analytics, predictive modeling, and decentralized computing. Unlike DOGE, which is predicated on speculation, Ozak AI has a strong use case that might power sustained demand. Key advantages of Ozak AI: AI-Driven Insights: The platform makes use of machine learning to investigate financial markets and deliver real-time, actionable facts. Decentralized Infrastructure: Through its Ozak Stream Network (OSN) and Decentralized Physical Infrastructure Networks (DePIN), it ensures improved data security and scalability. Strong Tokenomics: Unlike DOGE, which has an endless supply, OZ has a fixed supply structure, growing scarcity and long-term value. Early Investment Opportunity: Ozak AI is presently in its presale phase at \$0.003 per token, making it a ground-floor funding with massive potential. Which Investment Could Deliver Bigger Gains? If DOGE were to go back to its preceding all-time high of \$0.73, a \$250 funding today might grow to around \$1,460—a strong benefit, however a way from life-changing. On the other hand, if Ozak AI follows the trajectory of AI-based crypto tasks which have surged beyond bull markets, it could revel in a 100x or maybe 500x increase. Here's how the numbers wreck down: A 10x increase (\$0.03 in step with OZ) might flip \$250 into \$2,500; A 100x boom (\$0.30 in keeping with OZ) might turn \$250 into \$25,000; A 500x increase (\$1.50 per OZ) would turn \$250 into \$125,000. Given the rising demand for AI-pushed blockchain solutions and the growing market interest in AI-related cryptocurrencies, Ozak AI should outperform DOGE substantially in terms of return on investment. While Dogecoin has a strong network and will see profits inside the subsequent bull cycle, its long-term growth is limited by means of its inflationary supply and speculative nature. Ozak AI, however, combines AI generation with blockchain innovation, supplying a tangible use case and sturdy tokenomics. With its low presale price, early buyers should see huge returns if the challenge gains sizable adoption. For those looking for the best ability gains in 2025, Ozak AI can be the better desire over DOGE. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. For more visit: - Website: <https://Ozak.ai/> - Telegram: <https://t.me/OzakAGI> - Twitter : <https://x.com/Ozakagi> Disclaimer: TheNewsCrypto does not endorse any content on this page. Having purchased Solana (SOL) tokens for \$64 each through an OTC transaction with Galaxy Digital, Arthur Cheong, founder of DeFiance Capital, is quite optimistic about Solana's future. Although the DeFi tokens have appreciated, Cheong expects SOL to be "considerably higher in three months." At the same time, the memecoin scene is gaining traction thanks to DuragDoge (\$DURAG), a token that merges style with aspiration and swagger. DuragDoge aspires to build a community anchored in ambition, driven by crypto, and fueled by cultural identity. The combination of emerging memecoins like DuragDoge and the anticipated growth of Solana present exciting opportunities for investors. Let's explore some more details that could potentially position DuragDoge as the next major player in the memecoin space and the forthcoming Solana surge. Arthur Cheong's Optimistic Stance on Solana (SOL) Arthur Cheong, founder of DeFiance Capital, revealed on the social media platform X that he has unlocked tokens from an OTC SOL transaction via Galaxy Digital. He is now expecting a massive increase in Solana prices. As a crypto investor, Cheong hopes to profit from his SOL DeFi tokens, which means he will have to hold on to them for the next three months. Even though that means waiting after his initial buy-in at \$64, Cheong is confident that the wait will be worth it. Also he has high hopes for the Solana ecosystem especially Jupiter (JUP) a DEX aggregator. The Solana based futures contract options released by CME Group on March 17th may cause a short squeeze and pump SOL. Although Cheong sees a market liquidity drought he thinks the stablecoin supply that has grown since 2024 can sustain a market rally when investor confidence improves. DuragDoge (\$DURAG) Emerges as the Streetwise Memecoin Poised to Take Over the Memecoin Ecosystem As Solana's price goes up the memecoin craze within the ecosystem is heating up. Among the new entrants DuragDoge is gaining traction fast and getting noticed by investors. A token that represents "style, hustle and swagger" DuragDoge aims to create a community of ambitious people united by the street's culture. The project's narrative is around DuragDoge, a resilient character that represents underdogs who turn challenges into opportunities. This resonates with people who identify with perseverance and ambition and makes \$DURAG more than just a cryptocurrency, it's a movement and a lifestyle. That's why some analysts are saying it could be the next big thing in the memecoin space even though it's still in presale. DuragDoge also prioritized transparency and security. The project went through an audit by Coinsult Audits and got verified. The official DuragDoge account announced this milestone saying "a \$DURAG is officially audited and VERIFIED by CoinsultAudits. No cap, just facts. The hood's meme coin is locked, loaded and certified". That's why it's the best crypto to buy considering the security it gives to its holders. DuragDoge (\$DURAG) Aims to Redefine the Crypto Culture The \$DURAG token can be

acquired at discounted rates throughout the ten stages of presale. Investors buy into the presale knowing that its success will predictably boost the token's initial performance when launched on mainstream exchanges. Using both social media and other platforms, the community is able to garner a sense of belonging and shared purpose, illustrating how the members actively engage within the social DuragDoge ecosystem. The branding and narrative is targeted towards individuals who embody the hustle and cultural pride associated with the durag symbol. Unlike its predecessors Dogecoin and Shiba Inu, DuragDoge blends streetwise resilience into their memecoin style, setting themselves apart within the continuously advancing memecoin market. Even in the absence of defined utility, community driven initiatives make the narrative captivating, emphasizing the appeal of the currency. Sentiment and community-oriented projects currently drive the crypto making it clear that DuragDoge is expected to perform exceptionally well. Conclusion The progression of the marketing is further complimented by Cheong's optimistic focus on Solana coupled with the rise of DuragDoge as a possible leader in the memecoin market. Cheong's investment strategy which focuses on purchasing SOL indicates increasing trust from institutions toward Solana's ability to scale and innovate. At the same time, DuragDoge is set up to be the best crypto to buy during the next bull run because of the unique combination of meme culture and hip branding, capturing the attention from various crypto audiences. Follow DuragDoge on X and Telegram for the latest news and updates. Disclaimer: TheNewsCrypto does not endorse any content on this page. What if a single investment today could multiply your portfolio by nearly 30 times in the coming months? With meme coins shaking off their "joke" status and delivering life-changing gains, smart investors are eyeing the hottest new projects before they explode. The market has seen meme coins grow from internet humor into a billion-dollar phenomena. But the next wave of the best meme coins to buy this month isn't just about speculation—they're packed with utility, staking rewards, and Play-to-Earn (P2E) ecosystems that drive real value. One such project shining bright is BTFD Coin (BTFD), a meme coin presale in its final stage, offering a staggering 2900% ROI potential. Its full-fledged P2E game is already live, allowing players to stack tokens while having fun. As FOMO intensifies, let's dive into the five best meme coins to buy this month before they rocket skyward.

- BTFD Coin (BTFD) – 2900% ROI Potential with a Thriving P2E Game** What if the next crypto moonshot was staring you in the face? BTFD Coin has already raised over \$6.38 million in its presale, selling more than 71 billion tokens and gaining 11,500+ bullish holders. Investors who jumped in early at \$0.000004 per token are now eyeing massive gains, with the current presale price at \$0.0002 and the listing price locked in at \$0.0006. But that's just the start—analysts predict a moonshot of \$0.006, an eye-watering 2900% surge from today's price. BTFD isn't just about price speculation; its fully functional P2E game is already live, delivering real earning potential. Players can battle through multiple levels, earn token rewards, and cash out or stake their earnings. This isn't some "coming soon" gimmick—the game is here, and early players are already stacking rewards. An investment of \$4,000 at today's price of \$0.0002 gets you 20 million BTFD tokens. If the price hits \$0.0006 by presale's end, that's a cool \$12,000. And if it skyrockets to \$0.006? That same \$4,000 becomes \$120,000. This is the final presale stage before launch—miss the rewarding meme coin presale, and you'll be chasing green candles instead of riding them. BTFD Coin Referral Program Earn even more with BTFD's referral program. If your code gets used and you're in the top 20 referrers by month's end, you'll pocket 10% of the raised amount in BTFD tokens. Every referral who spends \$50+ also gets a 10% bonus. With just one presale stage left, now's the time to stack and spread the word. Why is BTFD leading this list of the best meme coins to buy this month? Because it's delivering real utility, massive presale gains, and an active earning ecosystem before it even hits exchanges. This is your chance to ride the bull from the start.
- Cat in a Dog's World (MEW) – The Underdog Meme Coin Gaining Traction** With a name that instantly grabs attention, MEW is making waves as the "anti-Dogecoin." Built on the Solana blockchain, MEW's low fees and fast transactions are attracting investors frustrated with high Ethereum gas costs. The project has seen a surge in community engagement, with thousands of cat lovers rallying behind its mission. Why is MEW on this list of the best meme coins to buy this month? It's a fresh take on meme coins with a growing following and a unique brand identity that sets it apart from the competition.
- Popcat (POPCAT) – Viral Meme Turned Lucrative Investment** Born from an internet meme, Popcat has turned virality into a serious investment opportunity. The token has integrated interactive staking features and a gamified ecosystem, keeping investors engaged beyond mere hype. Social media buzz has driven its recent price spikes, proving that Popcat isn't just another flash in the pan. Why is Popcat worth watching among the best meme coins to buy this month? Its rapid adoption and community-driven mechanics show strong potential for sustained growth in the meme coin space.
- SPX6900 (SPX) – The Meme Coin Fueling AI Innovations** SPX6900 is an outlier in the meme coin sector, blending artificial intelligence with decentralized finance (DeFi). Its AI-powered trading bot feature is designed to automate trades based on market sentiment, making it more than just a speculative meme coin. Why does SPX6900 make this list? Because it's pushing the boundaries of meme coin innovation, combining humor with real-world AI-powered utility.
- Notcoin (NOT) – The Telegram-Powered Meme Coin Taking Over** Notcoin exploded in popularity thanks to its integration with Telegram's massive user base. By gamifying the token-earning experience, it has created an army of users who tap their way to crypto rewards. With millions of players and a steady stream of token burns, NOT has turned micro-engagement into a valuable asset. Why is Notcoin here? It's tapping into a platform with billions of users, creating viral traction that most meme coins can only dream of.

Final Thoughts: Don't Sleep on BTFD Coin's Presale! With meme coins evolving beyond jokes and into full-fledged ecosystems, the opportunity to profit is bigger than ever. While all five coins in this list offer strong potential, BTFD Coin stands out as the best meme coin to buy this month. With only one presale stage left, a P2E game already live, and analysts eyeing a 2900%

ROI, the clock is ticking. The question isn't whether meme coins will deliver massive returns, it's whether you'll be in before the big wave hits. Secure your BTFD tokens now before the presale ends, and you'll be riding the bull instead of chasing it. Find Out More: - Website: <https://www.btfd.io/> - X/Twitter: https://x.com/BTFD_COIN - Telegram: https://t.me/btfd_coin FAQs - What makes BTFD Coin the best meme coin to buy this month? BTFD Coin offers a fully functional P2E game, staking rewards, and a presale with 2900% ROI potential, making it a top pick for investors looking for real utility. - How can I invest in BTFD Coin? You can purchase BTFD tokens directly from the official presale page. Prices increase with each stage, and there's only one left before launch. - What is BTFD Coin's referral program? BTFD offers a 10% bonus for referrals. If your code is used and you rank in the top 20 by month's end, you'll earn 10% of the raised amount in BTFD tokens. - How does the BTFD P2E game work? The game lets players complete levels and earn BTFD tokens, which can be staked or cashed out. It's a play-to-earn system built for long-term engagement. - What is the potential price of BTFD Coin after launch? The listing price is set at \$0.0006, but analysts predict a moonshot to \$0.006, offering massive ROI for early investors. Disclaimer: TheNewsCrypto does not endorse any content on this page. The rise of coins like Brett, Dogwifhat, and Shiba Inu has shown that community-driven projects can skyrocket in value overnight. But amidst this meme coin madness, a new contender is making waves: Arctic Pablo Coin (APC). Alongside classics like Pepe Coin and emerging stars like Bonk, Arctic Pablo Coin stands out with its adventurous narrative and groundbreaking meme coin presale, capturing the attention of savvy investors seeking the best meme coins to buy now. Arctic Pablo Coin is more than just a meme coin – it's a story-driven expedition into the unknown. Each presale phase unveils a new, mysterious location linked to hidden secrets of the Earth, blending mythology with blockchain technology. This unique theme not only fuels excitement but creates a sense of community-driven exploration, setting APC apart from the pack.

1. Arctic Pablo Coin: The Best Meme Coin Presale for Adventure Seekers Arctic Pablo Coin isn't just about laughs and memes – it dives deep into the unexplored, weaving a thrilling tale of adventure. Each presale phase unveils new mysteries tied to exotic locations, making every step of the journey feel like a treasure hunt. The project aims to blur the line between myth and reality, captivating investors who crave both narrative and profit. This captivating theme has created a buzz, positioning APC as one of the best meme coins to buy now. What makes APC even more exciting is its presale momentum. Currently in Stage 15, known as the "Nippy Nook," Arctic Pablo Coin is priced at just \$0.000079, with over \$1.94 million raised so far. The current ROI is a jaw-dropping 10,027.85%, with a projected listing price of \$0.008. If you're hunting for the best meme coin presale with massive return potential, Arctic Pablo Coin could be your golden ticket.
2. Brett: The King of Meme Community Power Brett has become a beacon for community-driven crypto projects, riding the wave of social media hype and passionate supporters. Launched as a tribute to the internet meme culture, Brett quickly gained traction, showing that the power of community can push a coin to new heights. Its relentless rise is a testament to meme coin mania. Brett's strong community presence and viral nature are key reasons why Brett made it to this list.
3. Dogwifhat: Barking Up the Right Tree Dogwifhat exploded onto the scene with its quirky, lovable branding, featuring a dog sporting an iconic pink hat. Its lighthearted nature and meme-worthy content have drawn a loyal following, helping it climb the crypto ranks. The coin's whimsical charm continues to win hearts and wallets alike. Dogwifhat's rapid ascent and irresistible charm are why Dogwifhat made it to this list.
4. Bonk: The People's Coin Bonk made waves as the first dog-themed coin to launch on Solana, immediately capturing attention with its community-first ethos. Its mission to reward early adopters and create a decentralized ecosystem has helped it carve out a niche in the meme coin world. Bonk's commitment to decentralization and its Solana roots are why Bonk made it to this list.
5. Pepe Coin: Meme Royalty No meme coin list is complete without Pepe Coin. As one of the oldest and most iconic meme-inspired tokens, Pepe has stood the test of time. It has continually reinvented itself, riding waves of internet culture and remaining a symbol of meme coin resilience. Pepe Coin's legendary status and staying power are why Pepe Coin made it to this list.
6. Shiba Inu: The OG Challenger Shiba Inu rose to fame as the "Dogecoin killer," capturing the imagination of crypto enthusiasts worldwide. Its decentralized ecosystem and dedicated fanbase helped Shiba Inu climb the ranks, securing a permanent place in the meme coin hall of fame. Shiba Inu's devoted community and ecosystem expansion are why Shiba Inu made it to this list.

Verdict: The Best Meme Coins to Buy Now Based on the latest research, the best meme coins to buy now are Arctic Pablo Coin, Brett, Dogwifhat, Bonk, Pepe Coin, and Shiba Inu. While each coin has its merits, Arctic Pablo Coin stands out with its immersive storytelling and unique meme coin presale. With each presale stage unveiling fresh mysteries and its current ROI soaring past 10,027%, APC is shaping up to be the dark horse of the meme coin race. If you're hunting for a coin with both adventure and profit, Arctic Pablo Coin is where the treasure lies. For More Information: Arctic Pablo Coin: <https://www.arcticpablo.com/> Telegram: <https://t.me/ArcticPabloOfficial> Twitter: <https://x.com/arcticpabloHQ> FAQs - What makes Arctic Pablo Coin unique? Arctic Pablo Coin blends adventure storytelling with blockchain technology, unveiling new mysteries at each presale phase. - Why is Arctic Pablo Coin's presale generating so much hype? With an ROI of over 10,027% and a rapidly growing community, Arctic Pablo Coin's presale offers massive return potential. - How do token burns impact Arctic Pablo Coin's value? Weekly burns during the presale reduce supply, increasing scarcity and potentially driving up value. - Is Dogwifhat a good investment? Dogwifhat has a strong community and unique branding, making it a solid contender in the meme coin space. - What are the best meme coins to buy now? Top picks include Arctic Pablo Coin, Brett, Dogwifhat, Bonk, Pepe Coin, and Shiba Inu.

The crypto world never forgets the ones who got away. Remember when Dogecoin was just a joke? Or when

Shiba Inu traded for next to nothing before skyrocketing into the stratosphere? Now, another opportunity might be slipping through your fingers. Peanut the Squirrel was the last meme coin that sent early adopters laughing all the way to the bank. If you missed that ride, don't make the same mistake again. This week, the spotlight is on Arctic Pablo Coin (APC), the next big meme coin with insane potential. Picture this: A fearless explorer, Arctic Pablo, carving his way through frozen frontiers in search of mystical, wealth-laden treasures. Unlike other coins that live and die on hype alone, Pablo's journey is backed by a deflationary model, sky-high staking rewards, and a presale structured like an adventure—where each week unlocks a new location and a higher price. So, if you're still kicking yourself for missing out on previous meme coin goldmines, this might be your chance at redemption. Let's dive into why Arctic Pablo could be your golden ticket—and whether Peanut the Squirrel still has anything left in the tank.

Arctic Pablo Coin: The Next Big Meme Adventure

Deep in the frozen wastelands where legends are born, Arctic Pablo Coin blazes a trail through uncharted ice-capped realms, discovering a treasure trove of mystical \$APC coins. But this isn't just a story—it's an opportunity. Arctic Pablo Coin is redefining the meme coin space by blending an exhilarating narrative with real financial potential. Unlike other meme coins, Arctic Pablo's presale is an evolving expedition, where each week represents a new location, not just a stage. Pablo has arrived at Nippy Nook, where the price sits at \$0.000079. The longer you wait, the higher the price climbs. With a fixed price increase every week, early investors are already seeing an ROI that traditional crypto traders can only dream of. Arctic Pablo has reached Nippy Nook, the 15th stop on this expedition. With a price of just \$0.000079 and a total raise of over \$1.93 million, early adopters already see insane growth potential. Just imagine—if you invest \$1,000 today, you'd be sitting on a whopping \$101,254.88 by the time the coin launches at \$0.008. And with a 66% APY staking reward, the longer you hold, the more you earn. Pablo's journey isn't just about finding the coins—it's about putting them to work. With a 66% APY staking program, investors can stake their \$APC and watch their holdings grow passively. The best part? All staked coins are vested for two months post-launch, ensuring stability while rewarding those who genuinely believe in the mission. To fuel Arctic Pablo's legend, unsold tokens are permanently burned weekly during the presale, reducing the overall supply and increasing scarcity. This deflationary mechanism ensures that those who get in early benefit the most as supply tightens over time. It is one of the Top New Meme Coins to Invest in This Week.

Peanut the Squirrel: Did You Already Miss the Boat?

Peanut the Squirrel splashed in the meme coin scene, bringing a playful but unpredictable energy to the market. It had its moment of glory, and early adopters saw massive gains. But what about now? Peanut launched with an initial presale price of \$0.000015 before skyrocketing to over \$0.009 at its peak. That's the kind of return that dreams are made of. But in crypto, timing is everything. While Peanut still has a solid community and decent trading volume, the hype isn't what it used to be. Most of the most significant gains have already been made. The challenge with Peanut is that it has already hit its stride. The coin's price has seen massive fluctuations, and without a fresh catalyst, it may struggle to regain the same level of hype. Unlike Arctic Pablo, which is still in its presale with an upward trajectory locked in, Peanut is at the mercy of the market's unpredictability.

Bottom Line: Don't Miss Out Again

Based on our research and market trends, Arctic Pablo Coin stands out as the ultimate opportunity for those looking to capitalize on the next big meme coin explosion. With its deflationary model, lucrative staking rewards, and presale structured as an ever-expanding adventure, Pablo is on a path to shake up the meme coin landscape. If you missed Peanut the Squirrel, don't make the same mistake twice. The adventure is happening now, and those who join Arctic Pablo today are securing their spot in what could be the next major meme coin success story. Join the Pablo meme coin presale now before the following location sends prices soaring again!

Did you ever know that meme coins have taken the crypto world by storm, creating wealth overnight for early investors? But which project stands out? While AI Companions and Dog Bitcoin are making headlines, Arctic Pablo Coin (\$APC) is emerging as the hottest contender. With a revolutionary presale model, a strategic burn mechanism, and an innovative approach, this project is attracting massive interest. This article will cover the developments and updates of Arctic Pablo Coin, AI Companions, and Dog Bitcoin, exploring why these are the Top New Meme Coins to Invest in March 2025.

Arctic Pablo Coin's Deflationary Strategy: How Token Burns Boost Value

Arctic Pablo Coin (\$APC) is unlike any other meme coin. Built on Binance Smart Chain (BSC), it integrates a unique deflationary mechanism where unsold tokens are permanently eliminated weekly during the presale. Hence it is one of the top new meme coins to invest in March 2025. The remaining supply after presale completion will also be burned, ensuring scarcity and long-term sustainability. Token burns not only reduce supply but also increase demand. As the available APC tokens decrease, each coin becomes more valuable, rewarding early adopters. This scarcity-driven model positions Arctic Pablo Coin as a prime investment in the meme coin space.

Presale: Arctic Pablo Coin's Journey Hits Nippy Nook!

The Arctic Pablo meme Coin presale follows an unconventional route inspired by the character's journey through various locations. Currently, the presale is at Nippy Nook, the 15th phase, where the token price sits at \$0.000079. With over \$1.93 million raised, the excitement is at an all-time high. Investors at this stage have a potential ROI of 10,027.85%, as the launch price is set at \$0.008. As Arctic Pablo Coin progresses through its journey, prices will rise, making this the perfect time to secure tokens at a low entry point. Don't wait—once Nippy Nook concludes, prices will increase again.

AI Companions Surges with Major Development

AI Companions, a cutting-edge meme coin that merges artificial intelligence with blockchain, recently announced a groundbreaking update: a decentralized AI-driven trading bot. This innovative feature aims to revolutionize automated trading, giving users access to

real-time AI predictions. With its increasing utility and an expanding user base, AI Companions is carving out a unique niche in the crypto space. Dog Bitcoin Gains Momentum Amid Market Volatility Dog Bitcoin, a meme coin inspired by the success of Dogecoin and Bitcoin, has been experiencing significant volatility. Recently, the project announced a new mining rewards system, which is expected to boost its adoption. With increasing attention from investors and growing community support, Dog Bitcoin remains a strong contender in the meme coin market. Final Thoughts: Arctic Pablo Coin Leads the Pack With Arctic Pablo Coin's deflationary mechanism, exciting presale structure, and staking rewards, it stands out as one of the Top New Meme Coins to Invest in March 2025. AI Companions and Dog Bitcoin also bring innovative features to the table, but Arctic Pablo Coin's unique approach is drawing the most attention. As the presale reaches its final stages, the opportunity to invest at this price point is slipping away. Get in before the next phase kicks in and the price jumps! - Santiment reports increased Dogecoin utility, active addresses, and smart money activity. - Analyst Marzell predicts a potential breakout with DOGE price targets between \$0.46 and \$0.65. Dogecoin price trading in a bearish momentum for a prolonged time. Currently, it is trading below the 50-day and 200-day exponential moving averages indicating a bearish trend. The Dogecoin bearish trend is a concern for investors. However, some analysts and on-chain analytical platform Santiment highlighted some promising indicators that could trigger a bounce in DOGE price. Santiment Indicates Potential for DOGE Rebound Market intelligence platform Santiment describes in the latest X post that Dogecoin utility and smart money are rising. The surge in activity is signaling a potential turning point once the broader crypto market rebounds. Santiment stated, "Dogecoin, like most meme coins, have been hammered during the 2-month crypto-wide retrace. However, we recommend keeping an eye on the rising level of wallets holding at least 1M \$DOGE, which has recovered during the price dump. Active addresses are also at 4-month highs." Recently, DOGE achieved over 150K active addresses per day which is the highest since mid-November. Moreover, since the beginning of February, the activity of wallets holding at least 1M \$DOGE has increased. The above data describes the growing interest in Dogecoin amongst investors. Moreover, recently a famous crypto influencer and analyst Marzell shared a bullish outlook for Dogecoin. He said that DOGE is signalling a potential breakout from a falling wedge pattern. If the current support holds, expect a strong rally towards \$0.46 - \$0.65. Marzell is bullish on Dogecoin and gave price targets of \$0.46386, \$0.55348 and \$0.65421. Despite experts being bullish on DOGE, it is still trading in a bearish momentum. According to CMC data, currently, it is trading at \$0.16825 with an intraday decline of 3.46%. Additionally, DOGE technical oscillators also support the bearish trend. The MACD, RSI, and EMA are emphasizing negative signs. - Canary Capital moves forward with SUI ETF filing, submitting an S-1 form to the SEC to advance its plans. - Following the ETF filing news, SUI surged 6%, reaching an intraday high of \$2.38 before slightly retracing. Canary Capital has officially submitted paperwork to the U.S. Securities and Exchange Commission (SEC) for a Sui (SUI) exchange-traded fund (ETF). This follows a series of crypto ETF applications from the firm, including ones for Dogecoin (DOGE), Solana (SOL), and XRP. The hedge fund manager's latest move comes after it registered a trust entity in Delaware on March 7, as seen on the state's Division of Corporations website. With the initial S-1 filing now in place, Canary Capital is expected to submit a 19b-4 document next, solidifying its plans for a SUI-focused fund. This development comes just days after Trump-affiliated decentralized finance (DeFi) platform World Liberty Financial (WLFI) announced it would include Sui assets in its token reserve and explore related product opportunities. Following the ETF news, SUI saw a 6% price jump, climbing from \$2.25 to an intraday high of \$2.38 before slightly retreating. The token is currently trading at \$2.32, with a market capitalization of \$7.38 billion. Meanwhile, its daily trading volume surged by over 45%, reaching \$782.88 million. Despite a 349.06% gain over the one year low, the cryptocurrency has dropped about 31% in the last month, mirroring the broader crypto market downturn. Will SUI price climb over \$3 again? SUI Price Analysis: Key Levels and Market Signals From a technical perspective, SUI is showing short-term bullish momentum, trading above its 9-day and 21-day exponential moving averages (EMAs). However, it remains below its 50-day and 100-day EMAs, suggesting resistance ahead at \$2.42 and \$2.47. A breakout above these levels could confirm further upside, while failure to do so might lead to downward pressure. Zooming in, the RSI at 52.42 on the 4-hour SUI/USDT chart indicates neutral momentum, suggesting neither strong bullish nor bearish pressure. Analysts are also monitoring a potential bearish shift, as indicated by the SuperTrend turning red on the same time frame. Resistance zones often bring high volatility as buyers and sellers compete for control. If buyers lose momentum, the altcoin could face a pullback toward key support levels. The first major support to watch is \$1.5997, where buyers may try to stop further losses. If this level breaks, SUI could drop to \$1.4222, a crucial support zone that has previously acted as a price floor.

Top meme coins like Dogecoin (DOGE) and Shiba Inu (SHIB) enjoyed massive price pumps in 2021. Fast forward to 2025, and investors are looking for a new token that can deliver a 20x ROI. Thankfully, they discovered FXGuys (\$FXG). Analysts settled for this decentralized funding platform after they saw its presale success numbers. For context, FXGuys has sold over 150 million tokens and has raised \$4.6 million so far in its presale. Keep reading to see why investors are going all in on \$FXG! FXGuys Will Disrupt Retail Trading Through New Privacy Initiatives As a small-scale financial trader, relying on prop firms to help bridge your funding gap is a necessity. However, you no longer have to deal with

the inefficiencies of these firms thanks to a new trading platform called FXGuys. The FXGuys prop firm is a decentralized community-driven trading protocol designed to help you improve, simplify, and fund your retail trading journey. On FX Guys, skilled traders can secure up to \$500,000 in funding once they pass certain trading challenges. Furthermore, FXGuys also runs a staking rewards program that guarantees returns from an annual trading volume profit share for those who stake their \$FXG tokens on the platform. You can also earn extra \$FXG tokens for each trade you execute on the platform, thanks to the FX Guys Trade2Earn program. Additionally, you can maintain your anonymity thanks to FXGuys's strict no-KYC policy. With this policy in place, you can hop on the recently released FXGuys BETA trading platform and test out all these exciting new features without submitting personal documents.

Dogecoin Foundation Increases Manpower in Q1 2025 On March 4, 2025, Timothy Stebbing (Director of the Dogecoin Foundation) announced that the Foundation is growing after new recruitments. Stebbing also invited the public to Dogecoin's hackathon in Portugal this June so they can see the improvements made so far. Previously, Dogecoin only had 10 senior blockchain developers for its core projects. Right now, they have 15 engineers, representing a 50% increase in manpower. On the market front, DOGE bounced back ahead of other meme coins and started bullish in March. For context, DOGE traded at \$0.20 on February 27. Four days later, DOGE had gained 20% and sold for \$0.24. However, the price quickly corrected to \$0.20 by March 6. Even though DOGE still has the potential to deliver a 100x ROI, \$FXG is more likely to hit that milestone before the year runs out. Shiba Inu is Set to Outperform Other Meme Coins in 2025 Meme coins are only valuable because they are popular within certain crypto communities. However, Shiba Inu hopes to change this status quo in 2025 by building a revolutionary DeFi gaming ecosystem. This Shiba Inu gaming platform will be powered by ShibOS and feature super-fast transactions on Shibarium. Furthermore, it will come with integrated Shiba Inu NFTs and a beautiful metaverse designed on Unreal Engine 5.4. Despite Shiba Inu's attempt to transition to a utility coin, SHIB recorded a price dip in early March 2025. On February 27, 2025, SHIB traded for \$0.0000145. Seven days later, SHIB had lost over 8% of its value and sold for \$0.0000133. \$FXG Will Likely Hit \$1 After Launching on Major Crypto Exchanges Currently, \$FXG is in Stage 3 of its public presale, and the token is selling for \$0.05. After the presale stages conclude, \$FXG will be listed on popular crypto exchanges and will sell for \$0.10. As a result, Stage 3 investors will get a 100% return on their tokens. FXGuys's popularity is already growing among retail traders due to unique and improved prop firm utilities. When \$FXG hits the mainstream market, these traders will accumulate the token fast, and \$FXG will likely hit \$1 before December 2025 due to growing demand. If you are looking for a 20x coin, lock into \$FXG today! Can meme coins still make millionaires, or is the golden era of explosive gains behind us? If history has taught us anything, it's that meme coins thrive on timing, community strength, and investor excitement. The latest wave of the top new meme coins to invest in this month is not just about viral trends; they're backed by innovation, staking rewards, and Play-to-Earn ecosystems. One meme coin is turning heads with its game-changing approach: BTFD Coin (BTFD). It's more than just a token; it's a movement fueled by the Bulls Squad, a passionate community determined to make early adopters rich. With a 3650% ROI potential, a booming presale, and a moonshot price target of \$0.006, BTFD is setting the stage for one of the biggest surges in meme coin history. Let's dive into BTFD and three others are catching serious momentum as the top new meme coins to invest in this month.

1. BTFD Coin (BTFD) – The Bulls Squad is Taking Over, and Early Buyers Are Reaping the Rewards What happens when a meme coin is built around an unstoppable community and high-reward staking incentives? You get BTFD Coin, a crypto that's proving early buyers always win. With over 71 billion tokens sold and a presale tally of \$6.32 million, BTFD has captured the attention of both seasoned investors and newcomers among the top new meme coins to invest in this month. BTFD's core strength lies in its Bulls Squad, a group of community-driven investors who believe in the power of buying the dip. The Bulls Squad isn't just holding tokens—they're riding market cycles to their advantage, making sure every dip becomes an opportunity. Right now, BTFD is in Stage 14 of its presale, priced at just \$0.00016 per token. But here's the kicker: once the presale ends, BTFD will list at \$0.0006, locking in a guaranteed 275% increase for early adopters. And if BTFD reaches its projected moonshot price of \$0.006, an investor who buys now could see an explosive 3650% return. Let's consider. If you invest \$4000 at today's price of \$0.00016, you'll receive 25 million BTFD tokens. If BTFD lists at \$0.0006, your holdings would already be worth \$15,000. But if it rockets to \$0.006, that same investment could balloon to \$150,000. The hype around BTFD isn't just about its price potential. Its P2E game, which went live on January 1, 2025, is already paying out rewards to users, and its staking APY is making long-term holders serious profits. BTFD also has a referral program, rewarding users with 10% of the purchase amount in BTFD tokens if they rank in the top 20 referrers of the month. To Buy BTFD, Follow These Steps: - Go to the BTFD Presale - Click "Connect Wallet" and select your wallet (MetaMask, Trust Wallet, etc.) - Enter the amount of BTFD tokens you want - Click "Buy Now" and confirm the transaction With Stage 14 almost sold out, the presale price won't last much longer. The next stage could bring an even higher price, meaning the best time to get in on this top new meme coin to invest in this month is right now before BTFD's launch.

2. Gigachad (GIGA) – The Alpha Meme Coin for the Crypto Bros Gigachad (GIGA) is not just another meme coin; it's a cultural phenomenon. Built around the meme of the ultra-masculine "Gigachad," this coin has harnessed a dedicated community of traders and influencers who embrace its status as the "ultimate alpha investment." GIGA isn't just a joke. It offers NFT integrations, staking incentives, and a unique gamification model where holders can earn rewards by engaging with the ecosystem. This mix of meme culture and tangible rewards has positioned GIGA as a standout player in the meme coin world. Why is GIGA on this list of the top new meme coins to invest in this month? Because its strong community-driven model ensures that

investor engagement and long-term holding incentives remain high. 3. Memecoin (MEME) – The OG Meme Coin That’s Still Running Strong Memecoin (MEME) was one of the earliest tokens to capitalize on meme culture, and it has stood the test of time. While many meme coins fade after a brief pump, MEME continues to thrive, thanks to its large and dedicated investor base. Its success lies in its cross-chain compatibility, making it easily tradable on major networks while offering staking incentives that reward long-term holders. MEME has also expanded into NFTs and metaverse partnerships, adding real-world utility to what was once just a meme-based asset. Why is MEME here among the top new meme coins to invest in this month? Because it’s resilience and ongoing development prove that meme coins can be long-term investments. Conclusion: Why These Meme Coins Matter Right Now Meme coins have always thrived on hype, community engagement, and unique use cases. The current market cycle has shown that investors are looking for more than just a funny name—they want real value, staking rewards, and high-growth potential. Among these projects, BTFD Coin stands out as the best investment opportunity. Its Bulls Squad is driving mass adoption, its P2E game is live, and its staking rewards offer long-term profitability. More importantly, the current presale price of \$0.00016 won’t last—those who wait could miss out on a guaranteed 275% gain before the public listing. The window of opportunity is closing fast. If you want to secure your position in the top new meme coins to invest in this month, this is your moment. Don’t let this chance pass you by. Find Out More: - Website:

<https://www.btfd.io/> - X/Twitter: https://x.com/BTFD_COIN - Telegram: https://t.me/btfd_coin FAQs 1. How does the BTFD Bulls Squad make this presale unique? BTFD’s Bulls Squad is a community of strategic investors who buy dips and push momentum. This isn’t just hype—it’s a movement ensuring long-term growth and adoption. 2. What makes BTFD’s 3650% ROI potential realistic? BTFD’s presale-to-listing jump is already 275%. With staking, P2E rewards, and a growing community, hitting \$0.006 isn’t far-fetched based on market trends. 3. How is BTFD different from Dogecoin and Shiba Inu? BTFD offers staking, Play-to-Earn rewards, and a referral program, unlike DOGE and SHIB, which rely mostly on brand hype and whale trading. 4. Is BTFD safer than meme coins already on exchanges? Yes, presale investors avoid early listing volatility and secure lower prices. Plus, BTFD’s Ethereum-based contract and liquidity lock add extra security. 5. Can I earn rewards after the presale ends? Yes! BTFD’s staking APY, P2E game rewards, and token burns will continue, offering long-term earning potential even post-launch. - Pavel Durov returns to Dubai after French authorities eased travel restrictions in the ongoing criminal investigation. - Toncoin surges to \$3.65 before settling at \$3.42, with a 46.86% plunge in 24-hour trading volume. Telegram founder Pavel Durov has returned to Dubai as French authorities continue investigating criminal activity on the messaging platform. Durov announced his return on Monday, stating that while the legal process is ongoing, he is relieved to be home. Durov, a Russian-born entrepreneur with Emirati and French citizenship, was arrested in August 2024 at Le Bourget airport near Paris. French authorities placed him under formal investigation and restricted his travel. He was charged with complicity in crimes such as child abuse content and drug trafficking on Telegram. Until recently, Durov was required to report to the police twice weekly and had posted a \$5 million (\$5.4 million) in bail. However, a judge relaxed these conditions on March 15, allowing him to leave France temporarily until April 7. Durov has denied the charges, emphasizing Telegram’s compliance with legal obligations. France’s Case Against Telegram French investigators allege that Telegram facilitated criminal activities, including child exploitation, drug sales, and money laundering. They claim the platform failed to share critical data with law enforcement when required. Since Durov’s arrest, Telegram has intensified its content moderation. In 2025 alone, the company reported blocking over 6.1 million groups and channels, including 160,000 linked to child exploitation and 57,000 related to terrorism. Russia has labeled Durov’s arrest politically motivated, while French President Emmanuel Macron has defended granting Durov French citizenship in 2021. Following Durov’s return to Dubai, Toncoin (TON), the Ton network’s native token, has seen a sharp rise in open interest and price. It surged to \$3.65 before settling at \$3.42, marking a 2.18% daily increase. The token’s market capitalization stands at \$8.5 billion, with a 46.86% plunge in 24-hour trading volume to \$375.68 million. The total circulating supply of Toncoin is 2.48 billion, with a fully diluted valuation of \$17.55 billion. Highlighted Crypto News Today The Impact of Political Events on Cryptocurrency Markets

- SHIB’s burn rate jumped 62,000%, and reduced the token’s supply to 584 trillion tokens. - Analysts predict SHIB could hit \$0.01 between 2030 and 2040, although not immediately but patience is required. Shiba Inu (SHIB) is now making waves and regaining the spotlight as traders debate whether it can ever reach \$0.01. The dream is a possibility but reality paints a different picture at the moment. While market conditions show potential bullish hope, a massive supply still holds SHIB back. Analysts remain hopeful, but the road ahead is long and uncertain. SHIB’s Current Market Position and Burn Rate Surge SHIB currently trades at \$0.00001324, marking a 1.56% gain in the last 24 hours. That’s fair progress, but the token is still 81.77% far below its all-time high of \$0.0000725. Shiba Inu needs drastic changes to move higher and upscale its current value. Another major factor is the burn rate, which recently soared by over 62,000%, according to data from Shiburn. A single transaction wiped out over 459 million SHIB tokens which has resulted in the ongoing effort to reduce supply. Since its launch, SHIB has burned more than 410 trillion tokens, which makes only 589 trillion SHIB remain in circulation. While the massive token burn would help, the numbers still show that reaching \$0.01 would require even more aggressive burns, whales interests, and a surge in demand for SHIB. Analysts Weigh In: When Could SHIB Reach \$0.01? Opinions vary widely on when—if ever—SHIB can hit one cent. Lucie, SHIB’s marketing lead, believes it’s possible but avoids giving a timeframe.

Lucie expressed her opinion via a post X (formerly Twitter) , cementing her long term vision for SHIB. Luis Delgado (Del Crxpto) sees similarities with Dogecoin (DOGE), which made a similar climb in just four years. This could be the same for the Shiba Inu too. AI models offer mixed predictions. Changelly suggests SHIB could hit \$0.01 by 2040, while Grok AI places the target around 2030 or later. ChatGPT gives a best-case scenario of 5â€"10 years but says 10â€"20 years is more realistic. Bottom line? Itâ€™s possible, but without drastic changes, patience will be key. Technical Analysis: A Breakout in the Making? Technical Indicators suggest SHIB might be gearing up for a breakout. The current price is moving in a falling wedge pattern, which could mean a bullish reversal. The Relative Strength Index (RSI) now at 82, recently broke a key trendline, hinting at growing momentum. Meanwhile, the Percentage Price Oscillator (PPO) just formed a bullish crossover. Source: SosoValue If SHIB holds above \$0.0000145, it could push toward \$0.0000165-\$0.0000170, its next major resistance. Breaking past that level could send SHIB soaring toward \$0.000020, a 60% jump from current prices. Macro factors, like potential Federal Reserve rate cuts, could also boost speculative assets, including SHIB. Highlighted Crypto News for Today

What if the next meme coin you invest in isnâ€™t just about viral hype but actually pays you to play? The meme coin landscape has changed, and now projects are blending gaming, AI, NFTs, and real-world brands to create something way more engaging than just a speculative asset. Right now, BTFD Coin (BTFD) is making headlines with its Play-to-Earn (P2E) game, which just launched in January 2025, giving holders a whole new way to earn rewards. But thatâ€™s not the only exciting project in the mixâ€"tokens like Act I: The AI Prophecy (ACT), Moo Deng (MOODENG), Non-Playable Coin (NPC), and Simonâ€™s Cat (CAT) are all gaining traction in different corners of the meme coin universe. Hereâ€™s why these five tokens stand out as the best meme coins to join right now. 1.BTFD Coin: The Meme Coin That Pays You to Play Meme coins are evolving, and BTFD Coin (BTFD) is proving that they can be more than just speculative assets. The Play-to-Earn (P2E) game, which launched in January 2025, allows holders to earn \$BTFD tokens by playing, creating a real-use case that fuels both engagement and token demand. And itâ€™s not just gaming thatâ€™s driving the hypeâ€"BTFDâ€™s presale is on fire. The project has already raised over \$6.32 million, sold 71 billion tokens, and onboarded over 11,400 Bulls. At \$0.00016 per token, investors still have time to lock in before the presale price jumps, with an expected listing price of \$0.0006. But analysts are whispering about something biggerâ€"a possible post-launch surge to \$0.006, which means an insane 3,650% ROI potential. What does that look like in numbers? Letâ€™s say you drop \$10,000 into BTFD at \$0.00016â€"youâ€™d bag 62.5 million tokens. If BTFD hits \$0.0006, thatâ€™s \$37,500. But if it rockets to \$0.006, thatâ€™s a life-changing \$375,000. And what could you do with that kind of money? Fund a business, clear out student loans, grab a brand-new Tesla, or take a year-long vacation hopping between luxury destinations? Thatâ€™s the kind of potential BTFDâ€™s ecosystem is bringing to the table. Beyond P2E gaming, staking offers a crazy 90% APY, meaning long-term holders can passively stack rewards. Plus, the Bulls Squad community keeps growing, bringing real hype and utility to the project. How to Buy BTFD Coin? Simple: Set up a MetaMask or Trust Wallet, fund it with BNB or ETH, visit the BTFD presale page, connect your wallet, and buy before the next price jump. Why did this coin make it to this list? Because BTFD Coinâ€™s Play-to-Earn game, massive presale success, and 3,650% ROI potential make it one of the best meme coins to join right now. 2.Act I: The AI Prophecy (ACT): The Meme Coin Blending AI & Crypto What happens when AI and meme coins collide? You get Act I: The AI Prophecy (ACT)â€"an open-source, community-driven platform where multiple AI models interact and collaborate. Instead of being just another meme token, ACT is positioning itself at the intersection of artificial intelligence and Web3. With AI adoption skyrocketing, ACT has captured investor interest by building a decentralized AI ecosystem, where users can contribute, trade, and profit from AI-driven tools. Why did this coin make it to this list? Because ACT is combining AI, blockchain, and meme culture, making it a high-potential project with a unique niche. 3.Moo Deng (MOODENG): The Meme Coin Inspired by a Viral Hippo Youâ€™ve heard of Dogecoin and Shiba Inu, but what about a meme coin based on a baby pygmy hippo? Thatâ€™s exactly what Moo Deng (MOODENG) isâ€"a viral Solana-based token inspired by a real-life internet sensation. With animal-based meme coins still dominating, Moo Dengâ€™s cuteness factor and social media-driven hype have given it a strong community. If DOGE and SHIB have taught us anything, itâ€™s that meme coins with loveable mascots tend to have staying power. Why did this coin make it to this list? Because MOODENG capitalizes on meme culture and real-world viral appeal, making it a standout pick. 4.Non-Playable Coin (NPC): The Meme Coin + NFT Hybrid Ever seen the â€"I support the current thingâ€" meme? Thatâ€™s where Non-Playable Coin (NPC) comes in, blending crypto, NFTs, and meme culture into a single Meme Fungible Token (MFT). By combining ERC20 and ERC1155 standards, NPC lets users own tokens that also function as NFTs, adding a collectible layer to meme coin investing. The unique hybrid structure has helped NPC stand out in a crowded meme coin market. Why did this coin make it to this list? Because NPC merges meme culture with NFT functionality, offering something different from the usual meme coin formula. 5.Simonâ€™s Cat (CAT): The Official Token of a Beloved Web2 Franchise Some meme coins start from internet jokes, but Simonâ€™s Cat (CAT) is backed by an actual global brand. Originating from the famous animated series and books created by Simon Tofield, Simonâ€™s Cat already has a built-in fanbase with over 1.6 billion YouTube views. Unlike random meme coins that fade out, CAT benefits from full IP rights and an established community. If meme coins like PEPE and BONK can thrive on cultural relevance, Simonâ€™s Cat could carve out a similar path using nostalgia and brand trust. Why did this coin make it to this list? Because Simonâ€™s Cat leverages an iconic Web2 brand, giving it instant recognition and long-term potential. Conclusion Based on market momentum and upcoming developments, these five projects are some of the best meme coins to join, offering high engagement, strong communities, and unique themes. While each project has its strengths, BTFD Coin is the only one still in presale, meaning early investors have a limited-time opportunity to lock in before prices rise. With a P2E game that just launched, 90% APY staking, and a projected 3,650% ROI, BTFDâ€™s setup is built for major potential gains. If you want to catch a meme coin on the rise, donâ€™t waitâ€"join the BTFD Coin presale before this price is gone. FAQs 1. What are the best meme

coins to join right now? Some of the best meme coins to join include BTfD Coin, Act I: The AI Prophecy, Moo Deng, Non-Playable Coin, and Simon's Cat, each offering unique value in the meme coin space. 2. How do I buy BTfD Coin? BTfD Coin is still in presale. Investors can set up a MetaMask or Trust Wallet, load it with BNB or ETH, and secure their tokens before the next price increase. 3. What makes BTfD Coin unique? BTfD Coin has a fully live Play-to-Earn game, 90% APY staking, and an explosive presale performance, setting it up as one of the most exciting meme coins of 2025. The crypto market is a battleground of speculation and real-world use cases. Bitcoin is cementing its status as a store of value, Cardano continues to chase scalability, and Trump Coin thrives on political allegiance. But what if there was a token that wasn't just about hype—but real, revenue-generating power? That's where BitLemons (\$BLEM) comes in. With a fully functional crypto casino already generating income, \$BLEM proves that real utility beats speculation every time. A Crypto That Generates Revenue BitLemons isn't just another token—it's a fully operational, revenue-generating casino disrupting the \$450 billion gambling industry. Unlike speculative coins that rely on price swings, BitLemons is already making money, with 30% of its Gross Gaming Revenue (GGR) feeding back into its ecosystem. The platform boasts over 8,000 games, including exclusive in-house titles like \$BLEM Keno, Crash, and Wheel of BitLemons. By eliminating third-party fees on these exclusives, the platform maximizes profits and increases the value of the token. Stage 1 of the presale sold out in just 16 days, and Stage 2 is already 98% sold with nearly \$2M raised. Stage 3 will soon push prices to \$0.03, signaling strong investor demand and the potential for massive returns. The project's roadmap is packed with expansion plans, new games, and upcoming strategic partnerships. Major influencers and sports celebrities are already being courted, setting the stage for mainstream adoption. The combination of limited supply, aggressive revenue reinvestment, and an engaged community makes BitLemons more than just another crypto project—it's a business model built to win. BTC the Store of Value, But Nothing More? Bitcoin's inclusion in the U.S. strategic crypto reserve is a historic moment, solidifying its role as digital gold. Institutional investors are treating BTC as a hedge against inflation, strengthening its position as a long-term asset. However, while Bitcoin remains dominant, it lacks one critical feature—utility. BTC holders rely solely on price appreciation, as the network does not generate yield or direct returns for investors. Bitcoin's network continues to face scalability challenges, making transactions slow and costly. Unlike newer platforms, it struggles to evolve beyond its original purpose. As more projects integrate yield-generating mechanisms and real-world applications, Bitcoin's lack of revenue-sharing makes it a passive investment rather than a wealth-building asset. ADA's Great Idea That's Still Waiting to Happen Cardano briefly surged when it was mistakenly linked to the U.S. strategic crypto reserve, but the excitement faded once the correction was made. Despite its research-driven approach and strong community, ADA has faced criticism for slow development and a lack of mainstream adoption. While Cardano's proof-of-stake mechanism is more energy-efficient than Bitcoin's proof-of-work, its ecosystem remains underdeveloped compared to competitors like Ethereum and Solana. ADA's price has historically been prone to extreme volatility, and its delayed rollouts have tested investor patience. While its long-term vision remains ambitious, its slow-moving development has allowed faster, more innovative projects to steal market share. Unlike BitLemons, which is already revenue-generating, Cardano remains largely speculative, relying on the potential of future utility rather than present-day results. TRUMP That Made Millions (For Now) Launched in the wake of political frenzy, Trump Coin (\$TRUMP) has become a speculative powerhouse. Its meteoric rise has been fueled by strong media attention and an ultra-loyal base, drawing comparisons to meme coins like Dogecoin and Shiba Inu. While the initial hype has attracted short-term traders, its long-term value remains questionable, as its utility is limited beyond its branding and community enthusiasm. The volatility surrounding \$TRUMP makes it highly unpredictable. Its price swings wildly based on political events and media cycles, making it difficult to assess its true worth. Without a strong use case, \$TRUMP may struggle to maintain momentum once its novelty wears off, while projects like BitLemons continue building sustainable revenue streams. Why Smart Investors Are Watching BitLemons Closely Unlike Bitcoin, Cardano, and Trump Coin, BitLemons is not just another speculative asset—it is a revenue-generating powerhouse with real-world application. With new partnerships, expanded casino offerings, and a roadmap packed with growth opportunities, BitLemons is positioned to be one of the most exciting crypto projects of the year. Plus, BitLemons is giving away \$1,000,000 USDT to 20 lucky winners. With just a \$50 investment in \$BLEM, you could win 50,000 USDT and be part of the hottest crypto casino project! Discover the Exciting Opportunities of BitLemons (\$BLEM) Presale Today - Website: <https://presale.bitlemons.io/> - Socials: <https://linktr.ee/bitlemons> Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market might be experiencing a slight uptick but is it just a dead cat bounce? Among the tokens hit the hardest, the Solana coin is at the forefront and might plummet further if key support is breached. Also, the Dogecoin price is in the red, with technical indicators signaling another dump. Meanwhile, DTX Exchange (DTX), offering a safe haven against market shocks and promising significant ROIs, is the latest favorite among investors. Amid huge demand, early funding has surpassed \$15.9 million and the number of holders has passed 700,000—a new DeFi project to watch. Scheduled to launch this quarter, it has been hailed as the best new crypto to invest in. DTX Exchange (DTX): How High Can It Go? DTX Exchange (DTX), dubbed the next big thing, might be this year's best crypto investment. It stands out for several reasons, from outperforming the declining Dogecoin price to boasting higher growth prospects than the Solana coin. As a low-cap, it has plenty of room to run, not to mention its bullish narrative—a blend of DeFi and TradFi. Expected to go live on Tier-1 exchanges this quarter, experts are optimistic about DTX being one of the best ICOs to invest in. A token costs only \$0.18 in the bonus ICO round, presenting a 2x gain at the listing price of \$0.36. That isn't all. New investors can make up to 4x ROI by applying `â€¢LIST2X` at the checkout for a 100% bonus on purchases. Meanwhile, experts predict a 75x rally this year—one of the best altcoins to buy. Beyond the gains, it is fundamentally solid, standing at the intersection between DeFi and TradFi. It will become the first crypto-native platform to offer stocks, ETFs, bonds and over 120,000 currency pairs, setting it up for adoption. Its blend of key elements of CEX and DEX sets it apart even more. Solana (SOL): Down or Up? The Solana coin is down over 10% in the past seven days, changing hands at above \$120. Down over 55% from its January all-time high of \$294, the past few months have been a wild ride, to say the least. A weekly close under \$120 might lead to a cascading sell-off below \$100. Considering technical indicators like the 20-VWMA, the Solana coin might experience further downswings. However, the Commodity Channel Index (20) and 9-HMA signal a shift in market trends. Despite current market conditions, top analysts are maintaining a bullish stance. Captain Rice, a crypto analyst, targets \$1,500 in Q2. HeyitsWolf17, another leading expert on X, expects the Solana coin to run past \$1,400.

However, at the current price, the Solana coin is not as promising as DTX—a new altcoin primed for a 75x rally. Dogecoin (DOGE): Experts Consider One More Zero to the Current Price The Dogecoin price crashed alongside the broader crypto market, down over 15% on the weekly charts. It retails around \$0.16 but the worst might not be over despite the 10% daily increase. Key technical indicators like the MACD Level (12, 26) hint at a dip in the Dogecoin price. A fall below critical support might add another zero to the current price. However, the Commodity Channel Index (20) and Stochastic RSI Fast suggest now might be a good time to buy in anticipation of a bounce. BraVoCycles, holding a bearish outlook, believes the Dogecoin price may drop as low as \$0.05. Meanwhile, Vnzabbar, a leading expert on X, targets \$0.18 next and a potential rally toward \$0.30 in the Dogecoin price. However, investors seeking to make the most of this cycle are betting more on DTX. This is courtesy of its solid narrative—a blend of DeFi and TradFi—and massive upside. DTX Exchange (DTX): A New Favorite Over Solana (SOL) and Dogecoin (DOGE) As a new and low-cap gem, DTX Exchange (DTX) might be a better bet than the Solana coin. Moreover, it has become a safe haven as the Dogecoin price nosedived, laying the foundation for an explosive debut. Set to shake up the crypto market, it is a promising wave worth taking advantage of. Find out more information about DTX Exchange (DTX) by visiting the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. - VanEck filed an S-1 registration with the SEC for the first AVAX ETF. - The filing follows VanEck’s Delaware registration for the Avalanche ETF. VanEck has submitted an S-1 filing to the U.S. Securities and Exchange Commission (SEC) for the VanEck Avalanche ETF. Bloomberg analyst James Seyffart noted that while the registration had been widely discussed earlier, this filing represents the first official submission to the SEC. The firm has not yet disclosed the ETF’s ticker symbol. The proposed fund aims to track AVAX’s price performance while holding the asset directly. NEW: @vaneck_us officially files for an Avalanche ETF. pic.twitter.com/LL1FN770LZ — James Seyffart (@JSeyff) March 14, 2025 According to the filing, the ETF will value its shares based on the MarketVector Avalanche Benchmark Rate. This rate aggregates data from the five largest exchanges as determined by CData’s exchange benchmark report. The move aligns with the growing demand for investment products tied to digital assets beyond Bitcoin and Ethereum. Altcoin ETFs Gain Momentum The push for altcoin ETFs follows the SEC’s approval of spot Bitcoin ETFs in January and Ethereum ETFs more recently. Several asset managers are now seeking approval for ETFs linked to Solana (SOL), XRP, Dogecoin (DOGE), and Litecoin (LTC). Bloomberg analysts estimate a 90% approval chance for a Litecoin ETF, while SOL and XRP face lower odds. Avalanche’s blockchain has gained traction in financial markets. It supports tokenized assets, including Franklin Templeton’s blockchain-based fund. This track record may strengthen its case for ETF approval. However, the SEC has historically been cautious with crypto ETFs due to market manipulation and investor protection concerns. The SEC has not yet provided a timeline for its decision. Analysts expect the agency to extend its review period as it has done with previous applications. Bloomberg’s Seyffart and Eric Balchunas suggest approval could come later this year. JPMorgan’s January report projected billions in inflows if altcoin ETFs gain approval. The report estimated that SOL and XRP ETFs could attract between \$3 billion and \$8 billion in new assets. If approved, the VanEck Avalanche ETF could pave the way for further integrating blockchain assets into traditional finance. Highlighted Crypto News Today The Evolution of Token Launches: Lessons from the \$LIBRA Launch

Is this the moment that turns small investments into generational wealth? The meme coin frenzy is back, and it’s bigger, bolder, and wilder than ever with the Best 100x Cryptos. With each cycle, meme coins shake up the market, turning everyday traders into overnight millionaires. But this time, it’s different. The game has changed, and new players like BTFD Coin (BTFD) are rewriting the rules with real utility, massive staking rewards, and an explosive presale that’s already raised over \$6.32 million. If you missed Dogecoin and Shiba Inu’s early days, this is your second chance. BTFD Coin is set to take the meme coin revolution to the next level, offering investors a high-reward ecosystem that combines play-to-earn gaming, staking, and an electrifying 3650% ROI potential at presale. Alongside BTFD, projects like Popcat (POPCAT), Cat in a Dog’s World (MEW), Ponke (PONKE), Goatseus Maximus (GOAT), Cheems (CHEEMS), and ANDY (ANDY) are dominating investor interest. Let’s dive into the Best 100x Cryptos that could deliver massive gains in 2025. 1. BTFD Coin (BTFD) — The Presale That Could Turn \$8500 into \$31,875! What if your next crypto move had the power to 36x your money? That’s the opportunity staring investors in the face with BTFD Coin, the most hyped presale in the meme world. Right now, Stage 14 is nearly complete, with BTFD priced at just \$0.00016—but it won’t stay this low for long. Once the presale ends, BTFD will list at \$0.0006, delivering early investors a massive 3650% ROI. BTFD isn’t just another meme coin—it’s an entire movement backed by a full-fledged P2E gaming ecosystem (live since January 1), lucrative staking rewards, and an exclusive referral program. Here’s what makes it a Best 100x Crypto pick: - Explosive Presale Growth: Over \$6.32 million raised, 71 billion coins sold, and 11,300+ holders onboarded. - High-Stakes Referral Program: Earn 10% of the raise amount in BTFD tokens if you land in the top 20 referrers. - P2E Game Rewards: The full version of the BTFD game launched on January 1, letting players earn while having fun. - Massive Staking APY: Staking launched on December 2, offering APYs that attract serious long-term holders. - Future Exchange Listings: Once the presale ends, BTFD will be listed at \$0.0006, with top analysts predicting an eventual moonshot to \$0.006. Here’s a real-world scenario: If you invest \$8500 at the current price (\$0.00016), you’d hold 53,125,000 BTFD. When BTFD hits \$0.0006 at the listing, that’s \$31,875—an easy 36x. And if BTFD reaches its projected moon price of \$0.006? That’s a mind-blowing \$318,750. Buy BTFD Coins Before Stage 14 Ends! - Connect Your Wallet — Choose MetaMask or Trust Wallet. - Enter Purchase Details — Select how much BTFD you want. - Confirm Your Purchase — Secure your investment before the presale ends. 2. Popcat (POPCAT) — The Viral

Meme Coin Taking Over Social Media Popcat isn't just another meme—it's an internet legend with one of the most engaged crypto communities. Unlike typical pump-and-dump meme coins, POPCAT has solidified itself as a top-tier meme coin by embracing viral culture and massive social interactions. Its NFT collaborations, integration into gaming ecosystems, and high meme value make it a compelling alternative investment. Why is POPCAT on this list? Because its cult-like fanbase and meme credibility make it a prime candidate for the next breakout rally.

3. Cat in a Dog's World (MEW) — The Underdog with a Feline Advantage Meme coins dominated by dogs? MEW flips the script. This cat-themed meme coin has gained a loyal following by branding itself as the ultimate rival to dog-based meme coins. Its metaverse integration, DeFi partnerships, and unique staking mechanics have turned it into a serious contender for crypto enthusiasts looking for the next best play. What makes MEW a Best 100x Crypto? Its ability to challenge the dominance of dog coins while offering lucrative DeFi opportunities.

4. Ponke (PONKE) — The Meme Coin Loved by Traders Ponke has become a go-to meme coin for traders who value liquidity, scalability, and community backing. With listing on major exchanges like HTX, Gate.io, and Bybit, Ponke continues to prove itself as a resilient player in the meme coin ecosystem. Ponke earns its spot as a Best 100x Crypto thanks to its high trading volume, strong exchange support, and long-term growth trajectory.

5. Goatseus Maximus (GOAT) — The Cult Meme Coin for Hardcore Investors GOAT thrives on community engagement, staking mechanisms, and exclusive NFT releases. With one of the most dedicated crypto communities, GOAT has positioned itself as a unique alternative for meme coin investors seeking sustainable growth. The reason GOAT is on this list? It keeps proving that meme coin investing isn't just hype—it's a strategy.

6. Cheems (CHEEMS) — The Classic Meme Coin That Keeps Delivering Cheems has remained a stronghold in meme coin culture due to its charismatic branding, social media virality, and integrations with blockchain-based applications. Its community-driven initiatives keep investors coming back. Why did Cheems make it here? Because it's a proven survivor in the meme coin world.

7. ANDY (ANDY) — The Meme Coin That's More Than Just a Meme ANDY is breaking into the mainstream with brand collaborations and real-world use cases. From NFT integrations to DeFi staking pools, ANDY is transforming meme coin investing into a utility-driven opportunity. Why is ANDY on this list? Because it's showing that meme coins don't have to be short-term plays—they can be long-term winners.

The Clock is Ticking — Join the Best 100x Cryptos Before It's Too Late! Crypto investors always say, "I wish I bought earlier." This is your moment to act on the best 100x cryptos before the next wave hits. BTFD Coin's presale is closing in, and once the price jumps from \$0.00016 to \$0.0006, the window for massive early gains will be gone. Whether you're betting on Popcat, MEW, Ponke, GOAT, Cheems, or ANDY, one thing's certain—meme coins are leading the next crypto charge. But only BTFD offers a 3650% ROI at presale and the chance to turn a small investment into life-changing money. Act now—join the BTFD presale before it's too late. Find Out More: - Website: <https://www.btfid.io/> - X/Twitter: https://x.com/BTFD_COIN - Telegram: https://t.me/btfid_coin

FAQs

1. What is the Best 100x Crypto to invest in right now? BTFD Coin (BTFD) is the hottest presale meme coin, offering a 3650% ROI potential before exchange listings.
2. How does the BTFD Coin referral program work? Earn 10% of the raise amount in BTFD tokens if your referral code is used and you rank in the top 20 referrers.
3. When will BTFD Coin be listed on exchanges? After the presale ends, BTFD will list at \$0.0006, giving early investors a chance to profit from the price jump.
4. Why are meme coins like Popcat (POPCAT) and Ponke (PONKE) popular investments? These coins thrive on community engagement, viral trends, and integration with DeFi and NFTs, making them attractive speculative assets.
5. How can I buy BTFD Coin before the presale ends? Go to the BTFD Presale, connect your wallet, enter purchase details, and confirm the transaction.

The crypto world is buzzing with excitement as Top Meme Coins to Join Now continue to shake up the market, turning internet humor into serious investment opportunities. What once started as internet jokes has now turned into serious investment opportunities, with meme coins proving they're more than just a passing trend. Among the latest breakout stars are Arctic Pablo Coin, Dog (Bitcoin), and TURBO—each bringing its own unique appeal, community-driven momentum, and potential for massive returns. Whether it's the thrilling adventure narrative of Arctic Pablo Coin, the rising bullish sentiment around Dog (Bitcoin), or TURBO's innovative AI-driven approach, these coins are making waves in the market.

Arctic Pablo Coin: The Most Thrilling Pick Among Top New Meme Coins to Join Now In the frosty realms of the crypto world, Arctic Pablo Coin (\$APC) stands out as one of the Top New Meme Coins to Join Now, capturing the imagination of adventurers and investors alike. This meme coin presale isn't just about hype—it weaves an enthralling narrative, inviting participants to join Arctic Pablo on his legendary quest through enchanted terrains, uncovering ancient mysteries and hidden treasures. But beyond its captivating storyline, what makes Arctic Pablo Coin a compelling investment? Currently, Arctic Pablo Coin is in its 14th presale location, "Frosty Falls," with tokens priced at a mere \$0.000074. As one of the Top New Meme Coins to Join Now, this phase has already attracted over \$1.87 million, reflecting strong community backing. Investors who seize this opportunity now could see a massive 10,694.59% ROI when the token lists at \$0.008. But here's the catch—this entry point won't last forever. The presale follows Arctic Pablo's journey, with each new location triggering a price increase. Unsold tokens are burned weekly, creating a deflationary effect that enhances scarcity and future value. This means that once this phase ends, the opportunity to invest at this rock-bottom price will be gone. Acting now is the smart move if you're looking for serious returns. Beyond the presale excitement, Arctic Pablo Coin offers an enticing 66% APY staking program, making it one of the Top New Meme Coins to Join Now with built-in earning potential. Investors can stake their \$APC tokens and watch their holdings multiply, with all staked tokens vested for two months post-launch. This initiative strengthens the ecosystem while rewarding long-term holders with generous passive income. One of the most defining features of Arctic Pablo Coin is its

deflationary tokenomics. Unsold tokens from each presale location are permanently burned, reducing supply and driving up scarcity. This strategy ensures long-term value growth, reinforcing Arctic Pablo Coin's status as one of the Top New Meme Coins to Join Now.

Dog (Bitcoin): The Canine-Inspired Crypto with Renewed Momentum Dog (Bitcoin) (\$DOG) is a decentralized meme coin operating on the Bitcoin blockchain. Inspired by the original Dogecoin, \$DOG has carved its niche in the crypto space, attracting a community of enthusiasts and investors. As of the latest data, \$DOG is trading at \$0.001823, boasting a market capitalization of \$182.29 million. The coin has experienced a 21.33% surge from its recent low of \$0.001503, indicating renewed investor interest and bullish momentum. Despite being 81.67% below its all-time high of \$0.009947 in December 2024, the recent uptick suggests potential for recovery. The 24-hour trading volume stands at \$10.18 million, up 34.11%, reflecting heightened trading activity and community engagement. The \$DOG community remains optimistic, with discussions focusing on potential rallies and strategic developments. While past performance has seen fluctuations, the current trend indicates a possible resurgence. Investors are advised to stay informed and consider market dynamics when evaluating \$DOG's potential.

TURBO: The AI-Generated Meme Coin Accelerating in the Crypto Lane TURBO (\$TURBO) distinguishes itself as the first AI-generated meme coin, merging the realms of artificial intelligence and cryptocurrency. This innovative approach has garnered attention, positioning TURBO as a unique player in the meme coin arena. Currently, \$TURBO is trading at \$0.002188, with a market capitalization of \$150.98 million. The coin has seen a 14,047.4% increase from its all-time low of \$0.00001547 in May 2023, showcasing its explosive growth potential. Despite being 84.76% below its all-time high of \$0.01436 in December 2024, the recent 3.37% surge and a 24-hour trading volume of \$45.65 million (up 31.51%) indicate robust market activity and investor interest. With over 53,000 holders, TURBO's community is rapidly expanding. The integration of AI in its development has piqued the interest of tech-savvy investors and crypto enthusiasts alike. As the project evolves, its unique positioning could lead to further adoption and value appreciation.

Final Thoughts: The Best New Meme Coins to Join Now Based on our research and market trends, Arctic Pablo Coin, Dog (Bitcoin), and TURBO stand out as some of the top new meme coins to join now. Arctic Pablo Coin presents an unparalleled opportunity with its adventurous narrative, presale structure, and deflationary tokenomics. However, time is running out to get in at the lowest possible price before the next stage takes effect. Investors looking to maximize gains should act quickly before Arctic Pablo Coin's prices rise. Meanwhile, Dog (Bitcoin) is showing renewed bullish momentum, making it a compelling option for traders looking to capitalize on potential price recoveries. On the other hand, TURBO's AI-driven innovation and strong community support position it as a forward-thinking meme coin with long-term promise. For those looking to seize the moment and get ahead of the market, the Arctic Pablo Coin presale is the most exciting opportunity right now. Join the adventure today, stake your claim in the Arctic Pablo ecosystem, and watch your investment grow!

For More Information:

- Telegram: <https://t.me/ArcticPabloOfficial>
- Twitter: <https://x.com/arcticpablo>

Frequently Asked Questions (FAQs)

- What is Arctic Pablo Coin's current presale stage and price? Arctic Pablo Coin is currently in its 14th presale location, Arctic Frosty Falls, with tokens priced at \$0.000074.
- How does Arctic Pablo Coin's token burn mechanism work? Unsold tokens from each presale location are permanently burned, reducing the total supply and potentially increasing the value of remaining tokens.
- What staking rewards does Arctic Pablo Coin offer? Arctic Pablo Coin offers a staking program with a 66% Annual Percentage Yield (APY), allowing investors to grow their holdings while participating in the ecosystem.
- Is Dog (Bitcoin) (\$DOG) a good investment right now? \$DOG has recently gained bullish momentum, with a 21.33% increase from its recent low. However, like all cryptocurrencies, it carries inherent risks, and investors should conduct their own research.
- What makes TURBO (\$TURBO) different from other meme coins? TURBO is the first-ever AI-generated meme coin, blending artificial intelligence with cryptocurrency, making it a unique and innovative project in the meme coin space.

If there's one thing the crypto market does best, it's creating wild success stories overnight. From Bitcoin millionaires to Dogecoin moonshots, crypto is packed with opportunities for those who know where to look. But in 2025, where's the next big 100x play? After digging through the market's hottest contenders, three names keep surfacing: BTFD Coin, Notcoin, and DOGS. Each one brings something different to the table, but only one looks set to take off in a way that could change lives. Right now, BTFD Coin is making headlines with its explosive presale, a rapidly growing community, and a projected ROI of 3650%. With Stage 14 nearly closing and over \$6.32 million raised, BTFD Coin is running out of cheap entry points fast. But can it outpace Notcoin and DOGS in the race to 100x? Take a look at what makes these three cryptos the hottest bets for massive returns in 2025.

1. BTFD Coin – The Meme Coin With the Biggest Profit Potential BTFD Coin is no ordinary meme coin—it's a full-blown movement with one of the fastest-growing presales in the market. While other projects rely solely on hype, BTFD Coin backs it up with a reward-packed referral program, high-APY staking, and an engaged community that's driving its price skyward. The buzz is real, and with over 71 billion BTFD coins already sold, early investors are already seeing massive gains. The referral program is one of the most lucrative in crypto. Those who refer others not only help spread the word but also receive 10% in BTFD Coins if they rank in the top 20 referrers. On top of that, their referrals get an extra 10% in tokens, making this a win-win system that fuels FOMO at every stage. Beyond the presale, BTFD Coin is packed with features designed to keep the price climbing. The high-APY staking model will allow holders to multiply their BTFD Coins long after the presale ends, providing a passive income stream that could make early investors very wealthy. If the coin reaches \$0.006 as analysts predict, anyone who invests \$9,000 at the current presale price of \$0.00016 could be looking at a \$337,500 return. With only two presale stages left, those who hesitate might find

themselves paying much higher prices when it hits exchanges. 2. Notcoin – A Meme Coin That’s Not Just a Joke Notcoin may have started as a joke, but it has quickly turned into a serious contender in the meme coin space. Notcoin has built a strong foundation with deflationary tokenomics, an active community, and real governance features that allow holders to influence its future. One of Notcoin’s biggest strengths is its community-driven nature. Token holders play a crucial role in decision-making, giving it an edge over traditional meme coins where developers hold all the power. On top of that, its deflationary supply ensures that as more transactions occur, a portion of tokens is burned, creating scarcity and increasing the potential for long-term price appreciation. Social media has also played a major role in Notcoin’s rapid rise. Its online presence has exploded across Twitter and Telegram, with viral marketing campaigns pushing the project into mainstream awareness. If the hype continues, Notcoin could be one of the most unexpected 100x cryptos of 2025. DOGS – The Meme Coin Built for Telegram’s Massive Audience DOGS is a meme coin with a unique advantage—it’s directly integrated into Telegram’s ecosystem. With Telegram boasting millions of users worldwide, DOGS has a built-in user base that could drive mass adoption faster than almost any other meme coin. What sets DOGS apart is its focus on community engagement. Telegram users can use DOGS for tipping, giveaways, and rewards within the platform, making it far more than just another speculative token. This real-world use case gives it a solid foundation for growth, and with Telegram expanding its crypto-friendly features, DOGS could ride that wave to significant price gains. The network effect is one of DOGS’s biggest weapons. As Telegram’s user base continues to grow, DOGS will be at the center of a massive ecosystem of crypto users, influencers, and traders, creating organic demand that could push its value higher. While it’s still in its early stages, DOGS has all the ingredients to be a surprise 100x contender. To Wrap It Up: Which Crypto Has the Best 100x Potential? Notcoin, DOGS, and BTFD Coin all have serious moonshot potential, but one stands out from the pack. BTFD Coin isn’t just another meme coin—it’s a presale powerhouse that’s already proving its ability to generate wealth for early investors. With an insanely popular referral system, high-yield staking rewards, and a price that’s still in its early growth phase, BTFD Coin has a clear path to explosive returns. If its presale momentum continues, it could easily be one of the best 100x cryptos of 2025. Right now, with Stage 14 closing soon, this is one of the last chances to buy before prices climb higher. Find Out More: - Website: <https://www.btfd.io/> - X/Twitter: https://x.com/BTFD_COIN - Telegram: https://t.me/btfd_coin FAQs 1. What makes BTFD Coin one of the best 100x cryptos to buy in 2025? BTFD Coin is exploding in popularity due to its high-yield staking, viral referral program, and massive presale success. With only two stages left, early investors are already seeing major returns. 2. Can BTFD Coin hit a 100x ROI? With the presale price still low and projections estimating a 3650% gain, BTFD Coin has a clear shot at hitting 100x—especially with its growing community and staking rewards system. 3. How does BTFD Coin compare to Notcoin and DOGS? Notcoin has a strong community-driven governance model, and DOGS benefits from Telegram integration, but BTFD Coin stands out with its explosive presale, sustainable staking model, and high referral rewards. The crypto market made a strong comeback in a recovery following lower than expected U.S. inflation readings that eased investors’ worries. Bitcoin crossed the \$84,000 barrier, and XRP topped \$2.25, with a 2.6% increase in global market capitalization to \$2.76 trillion. Why Is the Crypto Market Pumping? The U.S. Consumer Price Index (CPI) rose 2.8% year-over-year, just short of the predicted 2.9%, suggesting that inflation is maybe slowing down. Monthly inflation also increased just 0.2%, less than expected. The news eased fears of aggressive Federal Reserve policies, triggering a wave of risk asset euphoria in such assets as stocks and cryptocurrencies. Bitcoin’s recent price hike follows after the correction of its March peak price of \$95,000 after Trump’s government’s proposed establishment of a strategic Bitcoin reserve. The token dipped to \$77,000 but has made a comeback and has tested resistance at \$90,000. Penetrating through this support level would push BTC to the price range of \$95,000–\$100,000, with \$80,000 still being very firm support. XRP’s Rally and the SEC Lawsuit Settlement XRP increased by 6% in 24 hours, crossing \$2.25 as legal clarity improved. The SEC will close the case against Ripple, and a finalization of negotiations is underway. Ripple’s lawyers are negotiating fewer penalties with conditions like a \$125M fine and the removal of bans on institutional sales. They believe that if other crypto firms are being cleared, Ripple should not be punished. The non-precedential nature of the case is keeping the ruling on hold, but a decision is imminent. The most critical resistance levels of XRP are \$2.8, \$3.5, and \$5, and the support lies at \$2. With cooling inflation, the sentiment remains bullish in the markets but there’s plenty of volatility. If BTC is able to break \$90K, then the target might be \$100K. Macro uncertainty created by Fed policy and Trump’s tariffs, though, could have some influence on direction. Traders will have to watch Fed announcements and major points of resistance as the next behemoth moves set in. Highlighted Crypto News Today Altcoins Under Pressure: Solana, Dogecoin, and Ethereum Face Critical Levels

- The SEC has delayed its decision on VanEck’s spot Solana (SOL) ETF, citing market assessment. - Similar delays were issued for other altcoin ETFs, including Dogecoin, XRP, Litecoin, and Cardano. The U.S. Securities and Exchange Commission (SEC) has postponed its decision on VanEck’s proposed spot Solana (SOL) exchange-traded fund (ETF). This delay aligns with the regulator’s cautious approach to cryptocurrency ETFs, emphasizing investor protection and market stability. The SEC’s decision to delay the Solana ETF was widely anticipated, as the agency continues to assess various crypto-related investment products. Historically, the SEC has cited concerns about market volatility, regulatory scrutiny, and custody security when evaluating crypto ETFs. The postponement does not mean rejection. Instead, it extends the review period, allowing the SEC more time to evaluate VanEck’s proposal and

its potential impact. The approval of a spot Solana ETF could set a precedent for other altcoins, prompting the SEC to proceed cautiously. SEC's Broader Crypto ETF Delays The SEC's decision on VanEck's Solana ETF comes amid broader delays in other altcoin ETF applications. On March 11, the agency postponed decisions on various altcoin-based ETFs, including those for Dogecoin (DOGE), XRP, Litecoin (LTC), and Cardano (ADA). Additionally, it delayed filings from Grayscale, Bitwise, and 21Shares, as well as staking proposals for Ethereum ETFs. Despite the delays, the SEC acknowledged new filings, such as Grayscale's Hedera (HBAR) ETF and Bitwise's DOGE-related proposal. Franklin Templeton also entered the altcoin ETF race by filing an S-1 Form for an XRP ETF. Bloomberg ETF analyst James Seyffart stated that these delays were expected, describing them as a "standard procedure." He noted that the final deadlines for SEC decisions on all pending ETF applications fall in October 2024, and the likelihood of approval remains high. Seyffart and Bloomberg's senior ETF analyst Eric Balchunas estimated approval odds for various altcoin ETFs earlier this year. Litecoin leads with a 90% probability of approval in 2024, followed by Dogecoin at 75%, Solana at 70%, and XRP at 65%. These odds have risen significantly compared to the pre-election period in November 2023.

Highlighted Crypto News Today U.S. House Votes to Overturn IRS Rule on DeFi Platforms

- Lido DAO (LDO) price fell over 20%, now at \$0.8681. - Trading volume surged 41.70%, reaching \$153.89M. Lido DAO (LDO) has plunged over 20% in the last 24 hours, making it the top loser in the crypto market. The token is currently trading at \$0.8681, down 17.32% in a single day. Its market cap stands at \$779.21 million, reflecting a 17.32% decline. Meanwhile, trading volume has surged 41.70%, reaching \$153.89 million in the past day. Lido DAO's fully diluted valuation (FDV) is at \$868.14 million, with a 19.65% market cap ratio. The platform holds \$16.82 billion in total value locked (TVL), with a market cap ratio of 0.04648. Will LDO Recover? LDO is in a downtrend, testing key support levels. The immediate support is at \$0.85, with a stronger support zone at \$0.80. If these levels fail, the price may decline further toward \$0.75. On the upside, resistance is at \$0.95, and a breakout could push LDO toward \$1.05. The Relative Strength Index (RSI) is at 27.72, indicating oversold conditions. The RSI moving average is at 33.55, showing continued bearish momentum. The Chaikin Money Flow (CMF) stands at -0.09, suggesting weak buying pressure. Moving averages confirm the bearish trend. The 50-day moving average is trending below the 200-day moving average, signaling a death cross. This pattern typically indicates extended downside pressure. Lido DAO's sharp decline aligns with broader market weakness. Increased trading volume suggests heightened volatility. If buyers step in at support levels, a short-term rebound is possible. However, continued selling pressure could push LDO to new lows. LDO investors should monitor RSI recovery and potential crossover movements. A break above \$0.95 could signal a trend reversal, while failure to hold \$0.85 may lead to further losses.

Highlighted Crypto News Today Germany's Deutsche Boerse Plans Bitcoin and Ether Institutional Custody Launch

The crypto market is dynamic, with new and established projects constantly vying for investor attention. Among the usual suspects, BitLemons (\$BLEM) has been making waves with its unique crypto casino platform, while Dogecoin (DOGE) continues to be driven by its community and Elon Musk's influence. Meanwhile, Pi Network (PI) is gaining momentum with increased social media engagement and trading volume. But how do these coins compare? Let's explore the growth potential and key developments behind each project. Can BitLemons Outpace the Competition? BitLemons (\$BLEM) is disrupting the \$450 billion casino market with its unique offering—a fully operational crypto casino. Unlike many of its competitors, BitLemons generates higher margins by keeping games in-house and avoiding third-party providers. This revenue-driven model maximizes profit and positions the platform as a leader in the emerging crypto casino space. With 8,000+ games already on offer and exclusive titles like \$BLEM Keno, the platform generates real revenue and attracts a loyal user base. BitLemons is also making significant strides with its presale, having raised over \$1.8 million, with 85.27% of Stage 2 already sold. The presale momentum, combined with its innovative tokenomics (30% of Gross Gaming Revenue allocated to token buybacks, burns, and staking rewards), gives BitLemons a strong foundation for long-term growth. With continuous game releases and a roadmap that includes new features and strategic partnerships, BitLemons is set to redefine the crypto gaming industry and deliver substantial value to its investors. Can Musk's Influence Keep Dogecoin Ahead of the Pack? Dogecoin (DOGE) remains one of the most popular cryptocurrencies, primarily due to its community-driven nature and Elon Musk's backing. Musk's involvement in digital payment initiatives and government efficiency policies further solidifies Dogecoin's relevance. As Musk continues to champion digital assets and push for fewer regulatory restrictions, Dogecoin could see continued adoption and use, benefiting from a more favorable regulatory environment. However, Dogecoin's reliance on Musk's influence and social media buzz means its value can fluctuate with every tweet or comment. While this makes Dogecoin a favorite for short-term traders, it also brings a degree of unpredictability to the market. Despite this, Dogecoin's strong community support and status as a "meme coin" with a serious backing make it a mainstay in the crypto space, with its potential tied to Musk's ongoing endorsements and developments in the digital finance sector. Is Pi Network's Growth Just Getting Started? Over the last 48 hours (as of March 10, 2025), PI Networks has experienced a noticeable uptick in market sentiment and community engagement. U.Today and CoinMarketCap have highlighted an increase in social media mentions and trading volume, suggesting renewed bullish interest. Bitcoin Magazine has featured discussions on PI Networks' potential for long-term growth, especially in light of upcoming protocol enhancements and community-driven initiatives. The reasons behind PI Networks' current popularity are multifaceted. Heightened social media chatter and community-driven updates are fueling trader optimism. CoinMarketCap data reflects a notable rise in trading volume, indicating increased market activity. Additionally, influencer and article mentions suggest that upcoming protocol and partnership announcements could further enhance the network's ecosystem and long-term value. While detailed technical updates remain forthcoming, general coverage on Decrypt and The Block also indicates positive sentiment driven by recent

partnership hints and strategic community events. This collective sentiment positions PI Networks as a project to watch closely, especially for traders eyeing innovative, community-centric crypto opportunities. Why BitLemons is the Coin to Watch While Dogecoin and Pi Network have their merits, BitLemons (\$BLEM) is today's most exciting opportunity in the crypto market. With a fully operational casino platform generating actual revenue and a presale already seeing impressive demand, BitLemons is well-positioned for massive growth. Its unique approach to the gaming industry, backed by strong tokenomics and a growing community, gives it a solid foundation for long-term success. For investors looking for a stable, revenue-backed crypto project with substantial growth potential, BitLemons is the standout choice. - Shiba Inu's technical indicators are constantly indicating a bearish trend. - SHIB price may face continued pressure unless it breaks above key EMA levels. The Shiba Inu (SHIB) price is at a critical level and has dropped below some important support levels and heading downward. The major indicators are constantly hinting at bearish signals, with potential for further downside. Shiba Inu hit a high of \$0.00003300 in early December 2024, but it halted as buyers failed to maintain positive momentum. In January 2025, it rangebound between the 50-day and 200-day EMA levels and dropped further. Presently, it is hovering below the 50-day and 200-day EMA levels, showcasing bearishness. A death cross is also visible on the technical chart, suggesting bears' dominance. According to CoinMarketCap data, at the time of writing SHIB crypto price is trading at \$0.00000881 with an intraday decrease of 6% indicating bearishness. The daily trading volume has surged by 52% and the volume-to-market ratio is 7.16%. Moreover, the market cap is \$6.84 billion and the 24-hour trading volume is \$489.24 million. However, despite the bearish chart, community sentiments are still on the positive side. 88% of community sentiments are on the positive side while 12% are on the negative side. Critical Moment For Shiba Inu Price Technical indicators such as MACD and RSI are indicating negative signs. The RSI curve is trading at 32.02 below the 14-day SMA curve, showcasing that SHIB is oversold. MACD formed a bearish cross and headed in a downward direction. However, if SHIB price manages to break back above the 50-day and 200-day EMA, it could indicate a potential reversal. However, with the current indicators, the chances of a rebound remain low. The trading view technical summary also supports bears. As per the technical summary of SHIB, out of 26 indicators, 14 are on the sell side, 9 are on the neutral side, and 3 are on the buying side, indicating a sell signal. Highlighted Crypto News Today:

- Bitcoin nears 2025 low amid crypto market selloff and volatility. - U.S.-China trade tensions and Trump's policies heighten economic uncertainty. - Upcoming CPI and PPI reports could impact Bitcoin's price direction. The Bitcoin-led crypto market was subject to a shock sell-off, with Bitcoin approaching its 2025 low of \$78,000. Bitcoin has shed more than 11% of its value in the last week, erasing most of its recent gains and trading at \$82,176, lower by more than 4% in the last 24 hours. The across-the-board decline saw altcoins such as Solana (SOL), Ethereum (ETH), Cardano (ADA), and Dogecoin (DOGE) losing heavily as well, with liquidations totaling more than \$600 million. The Role of Economic The sell-off in crypto comes as economic uncertainty grows. US-China trade tensions and President Trump's economic policy already caused instability in markets. The recent statements by Trump regarding the chances of dislocation in the near term because of tariffs and budget cuts fueled additional concerns. Trump admitted that the policies, which are painful short term, are part of a broader plan to get America richer. Trump's economic policies have drawn comparisons to policies of the earlier Federal Reserve Chair Paul Volcker in the 1980s, whose policy, while instituted hardship in the short run, eventually steadied the economy. The repeated trade war between China and America, where new tariffs on US agricultural goods from China, have also created uncertainty in the markets. Federal Reserve Chairman Jerome Powell's recent circumspection towards interest rates following weak US job numbers has kept traders on guard about the prospect of the economy. What's for Bitcoin? Bitcoin's fall has inspired mixed responses among investors. While others view the fall as a chance to purchase at a reduced price, others believe that more falls are forthcoming, particularly in the face of current economic uncertainty. Traders are keeping a close eye on major economic releases, including the U.S. Consumer Price Index (CPI) and the Producer Price Index (PPI), both scheduled this week. These reports can be meaningful in determining the future price action of Bitcoin, with inflation readings tending to influence market mood. As the market weather's this volatility, the future outlook for Bitcoin will be influenced by a range of factors, including inflation trends, Federal Reserve policy, and overall economic conditions.

- Bullish APT price prediction for 2025 is \$8.438 to \$15.101. - Aptos (APT) price might reach \$20 soon. - Bearish APT price prediction for 2025 is \$2.790. In this Aptos (APT) price prediction 2025, 2026-2030, we will analyze the price patterns of APT by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | APTOS (APT) PRICE PREDICTION 2025 | | | APTOS (APT) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Aptos (APT) Current Market Status | Current Price | \$5.14 | 24 " Hour Price Change | 4.70% Down | | 24 " Hour Trading Volume | \$105.83M | | Market Cap | \$3.18B | | Circulating Supply | 590.34M APT | All " Time High | \$19.90 (Jan 30, 2023) | | All " Time Low | \$3.09 (Dec 30, 2022) | What is Aptos (APT) | TICKER | APT | | BLOCKCHAIN | Aptos blockchain | | CATEGORY | Public blockchain platform | | LAUNCHED ON | October 2022 | | UTILITIES | Governance, Fast Transactions, gas

fees & rewards | APT is the native crypto token of the Aptos blockchain. Aptos is a layer-one blockchain that was developed by Aptos Labs. The Aptos mainnet was launched on October 17, 2022, by Aptos Labs. The Aptos network uses a proof-of-stake (PoS) consensus algorithm, which requires validators to have a minimum amount of staked Aptos tokens in order to participate in transaction validation. Aptos 24H Technicals Aptos (APT) Price Prediction 2025 Aptos (APT) ranks 30th on CoinMarketCap in terms of its market capitalization. The overview of the Aptos price prediction for 2025 is explained below with a daily time frame. In the above chart, Aptos (APT) laid out a Descending Channel pattern. A descending channel, also known as a falling channel, is a bearish technical analysis pattern formed by two parallel downward-sloping trendlines. The upper trendline connects a series of high points, indicating resistance where the price struggles to rise above, while the lower trendline connects the lower points, acting as support. This pattern suggests that sellers are in control, with the price consistently making lower highs and lower lows. Traders often look to sell near the upper trendline and buy near the lower trendline, as the price typically oscillates within this defined range. Overall, the descending channel helps traders identify potential shorting opportunities and assess market sentiment. At the time of analysis, the price of Aptos (APT) was recorded at \$5.143. If the pattern trend continues, then the price of APT might reach the resistance levels of \$5.321, \$7.154 and \$8.348. If the trend reverses, then the price of APT may fall to the support of \$4.035. Aptos (APT) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Aptos (APT) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of Aptos (APT) for 2025. | Resistance Level 1 | \$8.438 | | Resistance Level 2 | \$15.101 | | Support Level 1 | \$4.489 | | Support Level 2 | \$2.790 | Aptos (APT) Price Prediction 2025 â€” RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Bitcoin (APT) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current Aptos (APT) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$5.248 Price = \$5.125 (50MA >Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 53.512 <30 = Oversold 50-70 = Neutral >70 = Overbought | Neutral | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Aptos (APT) Price Prediction 2025 â€” ADX, RVI In the below chart, we analyze the strength and volatility of Aptos (APT) using the following technical analysis indicators â€” Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of Aptos (APT). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 30.375 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 51.85 <50 = Low >50 = High | High Volatility | Comparison of APT with BTC, ETH Let us now compare the price movements of Aptos (APT) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of APT is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of APT also increases or decreases respectively. Aptos (APT) Price Prediction 2026, 2027 â€” 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Aptos (APT) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Aptos (APT) Price Prediction 2026 | \$25 | \$2.5 | | Aptos (APT) Price Prediction 2027 | \$30 | \$2 | | Aptos (APT) Price Prediction 2028 | \$35 | \$1.5 | | Aptos (APT) Price Prediction 2029 | \$40 | \$1 | | Aptos (APT) Price Prediction 2030 | \$45 | \$0.5 | Conclusion If Aptos (APT) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Aptos (APT) price prediction for 2025 is \$15.101. Comparatively, if unfavorable sentiment is triggered, the bearish Aptos (APT) price prediction for 2025 is \$2.790. If the market momentum and investors' sentiment positively elevate, then Aptos (APT) might hit \$20. Furthermore, with future upgrades and advancements in the Aptos ecosystem, APT might surpass its current all-time high (ATH) of \$19.90 and mark its new ATH. FAQ 1. What is Aptos (APT)? APT is the native crypto token of the Aptos blockchain. Aptos is a layer-one blockchain that was developed by Aptos Labs. 2. Where can you buy Aptos (APT)? Traders can trade Aptos (APT) on the following cryptocurrency exchanges such as Binance, OKX, Bybit, CoinTR Pro, and DigiFinex. 3. Will Aptos (APT) record a new ATH soon? With the ongoing developments and upgrades within the Aptos platform, Aptos (APT) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Aptos (APT)? Aptos (APT) hit its current all-time high (ATH) of \$19.90 on January 30, 2023. 5. What is the lowest price of Aptos (APT)? According to CoinMarketCap, APT hit its all-time low (ATL) of \$3.09 on Dec 30, 2022. 6. Will Aptos (APT) hit \$20? If Aptos (APT) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$20 soon. 7. What will be the Aptos (APT) price by 2026? Aptos (APT) price might reach \$25 by 2026. 8. What will be the Aptos (APT) price by 2027? Aptos (APT) price might reach \$30 by 2027. 9. What will be the Aptos (APT) price by 2028? Aptos (APT) price might reach \$35 by 2028. 10. What will be the Aptos (APT) price by 2029? Aptos (APT) price might reach \$40 by 2029. - TRUMP token consolidates at \$11.26 after rejection from \$14.55. - A breakout above \$12.50 could push TRUMP toward the \$15.00 mark. - High trading volume signals continued investor interest despite the decline. The crypto market witnessed a severe downturn. Over the past few days Bitcoin together with Ethereum and Solana experienced major drops in value. Following the previous 24-hour period, the Official Trump (TRUMP) token value declined to \$11.14 with a 6.89% decline. The market shows substantial ongoing interest despite the recent decline due to its \$2.22 billion market cap and 63% surge in trading volume to \$674.85 million in the last 24 hours. High trading activity amid the price

decline indicates severe selling pressure. Source: Coinmarketcap TRUMP Token Holds Support After Rejection From \$14.55 The price level of Trump Token has remained within the \$11.26 range after investors rejected \$14.55 to start a downward trend movement. The price tested \$13.83 but maintained its position which indicates possible investor purchases at this support zone. Market analysts predict that TRUMP price breaking its consolidation zone may propel it toward \$13.83 and potentially exceed \$15.00. A powerful upward movement beyond resistance points would validate new buying activity that would attract additional investors who might change the current market trajectory. \$TRUMP has been consolidating around \$11.26 after a sharp rejection, signaling potential buyer interest at this support level. BitGuru (@bitgu_ru) March 9, 2025 A breakout from this zone could ignite bullish momentum, pushing the price toward \$13.83 and potentially beyond \$15.00. #Trump #tradingview pic.twitter.com/UclyLsibCJ Factors Behind the Crypto Market Decline The TRUMP token experienced decline due to economic policies along with budget cuts and tariffs which created wider effects on the entire crypto market. During a White House Crypto Summit President Trump spoke about market issues that caused temporary disturbances. His strategy is designed to establish sustainable economic peace while recognizing that it has temporary negative effects on the market. The market recovery relies on various elements which include the rate of inflation along with Federal Reserve decisions and worldwide economic situations. Better inflation control and favorable government policies could help restore confidence in the crypto market and support its recovery. Key Levels and Future Predictions for TRUMP Token Technicals show that TRUMP may recover. The Relative Strength Index (RSI) stands at 33.63 and indicates the token may reach oversold levels thus attracting potential buyers. A crossover between MACD histogram indicators indicates potential market trend changes regardless of its current negative status. TRUMP might gain strength when breaking past \$12.50 since it would then test the resistance area between \$13.00 and \$14.50. The tokens rising above these resistance points would establish an opportunity to progress toward \$15.00. The token will face difficulty sustaining \$11.00 support if selling pressure continues which could push prices toward \$9.50. Highlighted Crypto News Today:

From \$104 to \$1 million; These two coins might mirror PEPE, Shiba Inu, and Dogecoin's rise, with Lightchain AI leading the way. Having already raised over \$17.1 million at a presale price of \$0.006, Lightchain AI is rapidly gaining attention due to its groundbreaking integration of AI and blockchain technology. As PEPE, Shiba Inu, and Dogecoin achieved massive success, Lightchain AI's unique value proposition and strong momentum position it for explosive growth. With its potential to deliver substantial returns, Lightchain AI could be the next coin to replicate the meteoric rise of these meme coin legends. Turning Small Investments into Big Gains- Lessons from PEPE and Shiba Inu Investing modest amounts in cryptocurrencies like Shiba Inu (SHIB) and Pepe Coin (PEPE) has led to substantial returns for early adopters. Shiba Inu's remarkable ascent transformed regular investors into millionaires, proving the massive potential behind meme coins. Similarly, Pepe Coin's viral appeal resulted in significant price surges, rewarding early investors handsomely. However, the cryptocurrency market's volatility is evident, as meme coins like SHIB and PEPE have experienced significant fluctuations, highlighting the risks involved. Investors should approach such opportunities with caution, conduct thorough research, and be prepared for market volatility. Two Cryptocurrencies to Watch- Lightchain AI and Dogecoin Lightchain AI and Dogecoin are two prominent options for investors looking to capitalize on the next big trend in crypto. Dogecoin, a popular meme coin, has maintained its relevance thanks to its dedicated community and market resilience. In contrast, Lightchain AI brings a unique value proposition to the table, offering real-world applications backed by advanced technology. With features like sharding and Layer 2 scalability solutions, it ensures efficient transactions. Additionally, its privacy-focused AI framework and robust cryptographic security set it apart as a trusted and innovative option in the crypto space. Unlike purely speculative meme coins, Lightchain AI boasts strong tokenomics and a clear roadmap, aiming for global adoption by 2025. These factors make it an appealing long-term investment with significant growth potential. Together, Lightchain AI and Dogecoin combine community-driven appeal with cutting-edge advancements, echoing the success of coins like PEPE and Shiba Inu. Dogecoin remains a reliable choice, offering high liquidity and brand recognition for stability in the volatile crypto world. Meanwhile, Lightchain AI stands out as a growth-oriented option, blending innovation and utility to deliver promising long-term returns. Lightchain AI - A Rising Star Ready for Big Growth With its groundbreaking technology and strong momentum, Lightchain AI is quickly gaining popularity in the crypto world. The coin's recent presale success and partnerships with top AI and blockchain companies are a testament to its potential for exponential growth. As Lightchain AI continues to gather support from investors, early adopters could see impressive returns. Furthermore, as more real-world applications utilizing Lightchain AI's technology come into play, its value could rise significantly. Invest today and be part of the ride as Lightchain AI aims for \$1 million, following in the footsteps of meme coin legends like PEPE and Shiba Inu. So, keep an eye on Lightchain AI and Dogecoin as potential opportunities to turn small investments into big gains in the ever-evolving world of cryptocurrency. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. Trump Coin investors have faced major losses after the cryptocurrency's price collapsed from a high of \$75 to \$11. Many investors who bought at peak prices have seen their holdings drop in value, with reports estimating that over 813,000 wallets have lost a combined \$2 billion. The situation has led some traders to explore alternative opportunities in the market, with Ozak AI emerging as a favored choice. Trump Coin Decline Leads Investors to Seek Alternatives Trump Coin was initially launched with

high expectations, drawing strong investor interest. The token quickly gained value, reaching a peak of \$75. But the rally was not for long as the price plummeted and wiped out that many billions in the market capitalization. The situation has provoked discussions about the future of the coin and alongside it has been labeled as a scam in terms of pump and dump. However, it continues to trade for quite a long time, and investor confidence has waned, repelled by numerous insiders. Therefore, they are focusing on the search for stable business projects with the actual use of their results and further perspectives.

Ozak AI Gains Momentum with AI and Blockchain Integration

The concept that is making much buzz for Ozak AI is the attempt to apply AI coupled with blockchain technology. This is a project that is geared towards the provision of business analytics, particularly in making predictions and analyzing financial data; thus, it comes in handy for both traders and investors. The platform is capable of making quick calculations or analyses of data that is acquired from the market with the help of the Ozak Stream Network (OSN). It also includes Decentralized Physical Infrastructure Networks (DePINs) to enhance physical storage and access to information. These features are to ensure that users can receive relevant information as an output, which makes the project different from other AI-based cryptocurrencies.

Presale Success and Growing Investor Interest

Ozak AI has received a good response in presale and has been able to raise over \$900000. It has not been listed and is in the presale rounds where its token is sold at \$0.003 before the price of the token rises to \$0.005. It is also projected that the new listing price for the developers for each token is five cents, while there are other estimations indicating it may increase further before December 2025. A notice of growing investors' confidence in the incumbent project has been offered when, to highlight, the likes of Ethereum and Dogecoin holders start funneling their coins to Ozak AI. This way, those investors who are engaged in the presale purchase tokens at a cheaper rate than the market value; besides, they also get a bonus.

Future Outlook for AI-Based Tokens

Ozak AI has positioned itself as a strong alternative for investors looking beyond traditional meme coins. With its AI-driven financial analysis tools and blockchain-based data security, the project continues to gain attention. As AI-powered tokens gain traction, investors affected by Trump Coin's losses are exploring opportunities with projects that offer real-world applications. Ozak AI's ongoing presale and expanding adoption suggest continued interest in AI-based cryptocurrency solutions. The crypto market is buzzing with discussions about penny cryptos that could deliver massive gains. Shiba Inu (SHIB) remains a strong contender in the meme coin space, but Lightchain AI is emerging as a serious competitor with its AI-powered blockchain technology. With Lightchain AI's presale already raising over \$16.4 million at just \$0.006 per token, investors are now questioning "Which of these penny cryptos is actually worth buying this week?"

Shiba Inu (SHIB) - Meme Coin with a Loyal Following

Following Shiba Inu (SHIB) is a decentralized cryptocurrency launched in August 2020 by an anonymous creator known as "æRyoshi". Initially dubbed the "Dogecoin killer," SHIB has evolved beyond its meme coin origins into a comprehensive ecosystem. This includes ShibaSwap, a decentralized exchange, and Shibarium, a Layer-2 blockchain solution aimed at enhancing transaction speed and reducing costs. As of February 19, 2025, SHIB is trading at \$0.00001509, reflecting a slight decrease of 0.0364% from the previous close. The token's value is heavily influenced by its vibrant community and social media trends. Recent developments, such as the launch of Shibarium, have bolstered SHIB's utility and market presence, positioning it as a notable player in the cryptocurrency landscape.

Why Lightchain AI Stands Out as the Top Penny Crypto

Forget meme coins chasing social media trends! Lightchain AI is here to redefine blockchain with real-world innovation. If you're looking for a sustainable investment with long-term potential, this is a game-changer. As a global hub for decentralized AI, Lightchain AI puts powerful tools in the hands of developers worldwide. Its open-source platform fosters collaboration, enabling the creation and sharing of cutting-edge AI breakthroughs that are shaping the future of technology—one groundbreaking model at a time. But what truly sets Lightchain AI apart is its revolutionary AIVM. Offering real-time AI execution, secure processing, and seamless compatibility with top AI frameworks, it's bridging the gap between blockchain and AI like never before. These features don't just make it innovative—they give it a serious edge over speculative assets like SHIB.

Which Penny Crypto is the Better Buy This Week?

For investors seeking long-term growth and real-world utility, Lightchain AI clearly stands out as the better choice over SHIB. While Shiba Inu will always have meme coin appeal, Lightchain AI offers groundbreaking AI-powered blockchain solutions, making it a stronger investment for those looking beyond hype-driven assets. With its presale gaining momentum and AI innovations setting it apart from the competition, Lightchain AI could be the top penny crypto to watch this week. Which one will you choose? The answer seems clear. Lightchain AI is the way forward for those seeking long-term growth and real-world applications in the evolving world of cryptocurrency.

Some investors are focusing on Cardano (ADA) and believing it to be a great investment option. However, three other alternative crypto options are said to yield better returns. These are Dogecoin (DOGE), Sui (SUI), and Rexas Finance (RXS), the newest addition to the crypto space. Along with institutional support, these assets also have bullish price action, which gives them the potential to turn a \$500 investment into millions. Dogecoin is Poised to See a Breakout Despite a few setbacks in
