

launching a \$30M grant program to support developers and startups aiming to build real-world blockchain solutions. With a Beta Test Net arriving in March 2025 and BDAG's presale surging past \$200M, could this be the smartest move for anyone searching for the top crypto to buy and build on in 2025. Let's find out. BlockDAG's \$30M Grant Initiative: Building the Next Big Blockchain Solutions BlockDAG is setting new benchmarks with its \$30 million grant program, providing developers, startups, and blockchain innovators with the resources to build on a network designed for performance and scalability. Grants range from \$10,000 to \$100,000, distributed based on milestones to ensure sustained project growth. Unlike Ethereum's high gas fees and Solana's network inconsistencies, BlockDAG offers a Directed Acyclic Graph (DAG) architecture designed to deliver higher speeds and lower fees. This approach makes BDAG an attractive alternative for developers seeking a more scalable and cost-efficient blockchain. Beyond funding, BlockDAG's initiative includes access to the BlockDAG Academy, offering educational resources, mentorship, and real-world development opportunities. A strategic collaboration with HackerEarth also ensures hands-on hackathons, fostering innovation within its ecosystem. Developers who capitalize on this program early can gain a first-mover advantage ahead of BlockDAG's upcoming beta testnet launch. Meanwhile, BlockDAG's presale is in its 27th batch, with BDAG coins priced at \$0.0248. With over \$200 million raised and more than 18 billion BDAG coins sold, the project is seeing exponential interest. Another reason for this exponential growth is the ongoing BDAG800 code which offers a 400% purchase bonus, further enhancing its appeal as a strategic investment. As exchange listings approach, the window to enter BlockDAG at presale prices is closing fast. Ethereum's Potential Breakout: Is \$3,000 the Next Target? Ethereum is maintaining its position above \$2,300, reinforcing speculation that a push beyond \$3,000 is on the horizon. Increased whale accumulation and technical indicators suggest a potential price rally, with ETH currently trading above its 100-hour Simple Moving Average. Market analyst Ted Pillows compares Ethereum's current price movement to Bitcoin's 2015-2017 growth cycle, raising expectations for an extended uptrend. Ethereum has remained resilient thanks to its DeFi ecosystem and institutional backing, with strong support levels. For Ethereum to confirm a breakout, it must surpass \$2,920 and hold above \$3,000. With sustained investor demand and network stability, ETH remains a dominant force despite competition from newer blockchain projects like BlockDAG. Solana's Struggles Continue: Bearish Sentiment Grows Solana (SOL) continues its downward trend, having fallen from \$280 to \$160, marking six consecutive weeks of losses. The meme coin sector, once a significant driver of Solana's success, has seen its market cap collapse from \$25 billion to \$10 billion, leaving traders uncertain about SOL's future. Additionally, Solana's DeFi activity is weakening, with DEX volumes dropping 36% to \$16.6 billion and network fees plummeting to \$1.1 million. Key technical indicators, including a death cross pattern, bearish MACD, and a declining RSI, suggest further downside risk. Analysts pinpoint \$109 as the next major support level, warning that without a catalyst like ETF approval, SOL's recovery could be difficult. While Solana's declining momentum raises concerns, BlockDAG's rapid growth presents a strong alternative for those looking beyond traditional Layer 1 blockchains. Its combination of scalability, low fees, and developer incentives positions it as an attractive option for builders and investors alike. Which Crypto Holds the Strongest Potential? Ethereum is showing strong market resilience, with whale activity supporting a potential breakout beyond \$3,000. In contrast, Solana's ecosystem decline raises doubts about its short-term recovery. However, BlockDAG stands out as the most promising crypto of 2025, thanks to its \$30M grant program, upcoming Beta Test Net, and rapidly expanding presale. With over \$200M raised and BDAG's value surging, now is a critical time to secure BDAG before its exchange debut. For developers and investors seeking a high-growth blockchain with real-world potential, BlockDAG is proving to be an opportunity too significant to overlook. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. With confidence returning following Trump's executive order to move forward on a crypto strategic reserve, the coming days promise further upswings. This reserve includes the XRP coin, sparking a huge leap as it retests \$4. The leading altcoin, ETH, is also on this list, pushing the Ethereum price closer toward \$3,000. At the same time, the new ERC-20 coin IntelMarkets (INTL) is in the spotlight. Gearing up for its scheduled debut this quarter, it is a new DeFi project to watch out for. It is backed by a bullish AI narrative and has plenty of room to run, positioning it among this year's best crypto investment. IntelMarkets (INTL): A New AI Coin to Watch Out For in Q1 IntelMarkets (INTL), one of the fastest-rising AI coins, has been hailed as the best new crypto to invest in this quarter. Preparing for its debut, it is significantly undervalued than the current Ethereum price and has higher growth prospects than the XRP coin. Also fueling interest is its bullish narrative—a blend of DeFi and AI. As the first AI-powered trading platform, it is expected to transform the \$36 billion global crypto trading market. Further, its trading robots will be trained on over 100,000 data points, standing out from the basic ones used by conventional exchanges. With plenty of room to run as a new and low-cap coin, experts consider it a steal at \$0.091 in the tenth ICO stage. Over \$11.2 million has been raised in funding amid huge demand, highlighting its potential and investor trust. Tipped for a 15x upswing this quarter after its launch, it might be Q1's best presale. Ripple (XRP): Retesting \$3 The XRP coin is among the top gainers as it retested \$3, rising from the previous week's low of \$1.95. Up over 30% on the daily chart, its outlook is bullish—one of the altcoins to watch. Amid growing institutional demand, the XRP coin is among the best cryptos to buy this year. Meanwhile, top crypto analyst Barkmeta expects the XRP coin price to soar past \$10 this bull run. A more modest forecast was given by Xrpbart, an analyst and enthusiast, suggesting an upswing toward \$5 and \$8. That said, these bullish XRP coin price predictions are supported by the MACD Level (12, 26) and 9-HMA. However, as one of the top altcoins, its upside potential is limited, owing to its large market size.

Hence, savvy investors have been betting more on new altcoins with huge growth prospects instead. IntelMarkets, a new AI coin, might be the best crypto to invest in this year given its bullish AI narrative and low market size. Ethereum (ETH): Bulls Target a Breakout Above \$3,000 The Ethereum price crossed \$2,500, starting the week strongly. Next on its list is a rally above \$3,000, pushing it closer to \$3,300, its 30-day high. Given its inclusion in the US crypto strategic reserve, the Ethereum price is poised for a new all-time high. Moreover, key technical indicators like the Ethereum price hovering above the 10-SMA and 10-EMA hint at a bounce. At the same time, analysts have been making bold forecasts. Jasonappleton, a crypto trader, expects a rally past \$3,300 if the Ethereum price breaks the \$2,750 resistance. Although primed for significant gains, Ethereum (ETH) might not be a better bet than INTL, a new AI coin. Buzzing with potential and backed by a bullish AI narrative, it has plenty of room to run—a promising wave not to miss. IntelMarkets (INTL): The Next Big Thing After Ripple (XRP) and Ethereum (ETH) As a top ICO, the INTL token is more budget-friendly than the current Ethereum price. Gearing up for its much-anticipated debut, it has plenty of room to run, edging out the Solana coin. Moreover, it is poised to transform the crypto trading scene with AI, putting it in the spotlight. For more information about IntelMarkets (INTL) visit the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

- Ethereum (ETH) fell 10.51% to \$2,102.21, with market cap down 10.44% to \$253.5B. - Whale activity adds volatility, with \$81M in unrealized profit from ETH shorts. Ethereum (ETH) is under selling pressure, mirroring the broader crypto market downturn. The global market cap has dropped 8.04% to \$2.76 trillion, while total market volume has declined 10.59% to \$179.83 billion in the past 24 hours. ETH is currently trading at \$2,102.21, marking a 10.51% decline in the past day. The market cap has dropped 10.44% to \$253.5 billion, and trading volume fell 10.06% to \$34.87 billion. The fully diluted valuation (FDV) remains at \$253.62 billion, with a total circulating supply of 120.59 million ETH. A whale who shorted ETH with 50x leverage is now sitting on \$81 million in unrealized profit. The whale has begun closing some short positions, securing profits amid ETH's decline. Can Ethereum Break Above \$2,200 Resistance? ETH faces immediate resistance at \$2,200. If bulls break this level, the next target could be \$2,350, followed by \$2,500 in an extended rally. On the downside, support stands at \$2,000. A breakdown below this level could push ETH toward \$1,950, with further selling pressure potentially dragging it to \$1,850. The RSI (14, close) is at 37.47, reflecting oversold conditions. The RSI average is at 46.85, indicating that ETH has been weakening over time. A move above 50 could signal renewed buying momentum, while further decline may confirm continued bearishness. The CMF (20) stands at -0.02, suggesting weak capital inflows. A negative CMF implies declining buying pressure, making it harder for ETH to sustain an uptrend. The 50-period moving average (MA) is positioned above the price, reinforcing short-term bearish sentiment. The 200-period MA suggests that ETH remains in a broader downtrend. A potential crossover between short and long-term MAs could determine ETH's direction. If the 50-MA crosses below the 200-MA, it would confirm a bearish continuation. Conversely, a bullish crossover could indicate a trend reversal. ETH's future depends on whether it holds \$2,000 support or reclaims \$2,200 resistance.

Despite declining confidence and low sentiment, the AI narrative remains in the spotlight, driving demand for IntelMarkets (INTL). Up over 900% and still massively undervalued at \$0.091, it is more budget-friendly than the current Ethereum price. It also has higher growth prospects than the XRP coin. Given the above, it has been dubbed the best new crypto to invest in. While the Ethereum price tumbled below \$2,400 and the XRP coin hovered around \$2.2, INTL charts an upward course and is poised to explode even further. Scheduled to go live this quarter, it is a new DeFi project to watch out for. IntelMarkets (INTL): The Next Crypto Unicorn IntelMarkets (INTL), a new AI-DeFi coin, might be the next Ethereum (ETH) or Ripple (XRP). More budget-friendly than the current Ethereum price and boasting higher growth prospects than the XRP coin, it is arguably the best new crypto to invest in this cycle. It recently entered the tenth ICO stage, soaring over 900% from the initial price of \$0.009 to \$0.091. During this period, it outperformed the crypto market and with plenty of room to run as a low-cap, it is a promising wave not to miss. Meanwhile, over \$10.8 million has been raised in early funding, highlighting trust and its rapidly growing community—a bullish catalyst. Tipped by experts for a 75x rally post-launch, it is among the best ICOs to invest in. Beyond the gains, it is fundamentally solid as it will combine AI technology, blockchain and DeFi—the first true modern-gen exchange. At the same time, it will feature an AI-based blockchain and advanced trading bots trained on over 100,000 data points—a trailblazer. Ethereum (ETH): Significant Decline Below \$2,400 Ethereum (ETH), the leading altcoin, nosedived alongside the crypto market. The Ethereum price fell below \$2,400 from the weekly high of \$2,800, retesting lower price levels. However, analysts are optimistic about a bounce. But how high can the Ethereum price go? As the second-largest cryptocurrency, the Ethereum price is closer to its top than the bottom, making new and promising altcoins like IntelMarkets (INTL) better alternatives. Nevertheless, Dezsoicy, a top analyst, expects a retest of \$2,900 and \$3,160, next an upswing toward \$3,600 and \$4,200. Additionally, IKC_Trading believes the Ethereum price could soar as high as \$7,000 this bull run—a bold ETH price prediction. Meanwhile, technical indicators like the MACD Level (12, 26) and Williams Perfect Range (14) suggest looking beyond current market conditions. That said, INTL might be a better bet this year given its small market size and upside. Ripple (XRP): Bears Spark a 15% Weekly Decline The XRP coin, while more resilient than most top crypto coins, trades downward. It retails around \$2.2, down over 15% on the weekly chart. While it is in an attractive buy zone, further downswings cannot be ruled out. Nonetheless, technical indicators like the 200-SMA and 200-EMA hint at a bounce in the XRP coin price. Top analysts also maintain a bullish outlook. Sonysigm, bullish on the XRP coin, targets \$4 next. 0gasfees, another crypto analyst and trader, expects a run toward \$3 and \$4 by mid-year. Given the above, there is a path toward recovery,

positioning the XRP coin among the best altcoins to invest in. However, its large market cap leaves little room for growth, making INTL a better bet this cycle. Moreover, the current market condition has shifted sentiment toward emerging cryptocurrencies, making INTL a good crypto to buy. IntelMarkets (INTL): The Next Big Thing After Ethereum (ETH) and Ripple (XRP) The declining interest in top altcoins is in stark contrast to the bullish presale tokens. As popular tokens like the XRP coin tumbled, presale tokens are a safe haven against market turbulence are in high demand. IntelMarkets, a novel AI coin, is a new favorite, more budget-friendly than the current Ethereum price and with plenty of room to run. For more information about IntelMarkets (INTL) visit the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. - Hsiao-Wei Wang and Tomasz StaÅ„czak appointed as EF's new co-executive directors. - Aya Miyaguchi transitions from executive director to EF president. The Ethereum Foundation (EF) has announced a major leadership change. Hsiao-Wei Wang and Tomasz StaÅ„czak will take over as the new co-executive directors. This transition follows Aya Miyaguchi stepping down from the role to become EF's new president. The Ethereum community has been debating the foundation's role for months. Many have criticized its leadership for Ethereum's struggles. Ether (ETH) has lagged behind competing cryptocurrencies in price performance. Additionally, Ethereum has attracted fewer developers than Solana for the first time. Wang has been part of EF since 2017. She has worked on Ethereum's major upgrade, the Merge, and sharding research. Meanwhile, StaÅ„czak is the founder of Nethermind. His company operates one of the largest Ethereum execution clients. Danny Ryan Moves to Ethernize In addition to the leadership changes, ex-EF researcher Danny Ryan is joining Ethernize. The new firm aims to integrate Ethereum with Wall Street. Founded by former banker Vivek Raman, Ethernize focuses on educating institutions and marketing ETH as a key financial asset. At @etherealize_io, I intend to build a new Ethereum institution with Real World Ethereum as its north star. March 1, 2025 The world is ready to come on chain, and we're here to do the hard work necessary to make it happen Ryan shared his vision on X. He said he wants to build a strong Ethereum institution centered around real-world Ethereum use cases. He also emphasized the importance of bringing the world on-chain. Strategic Moves for Ethereum's Future EF's leadership changes come at a crucial time. The foundation has faced criticism for not effectively supporting Ethereum's ecosystem. Investors worry about ETH prices and competition from high-throughput blockchains. Vitalik Buterin outlined a plan for January to strengthen Ethereum. His strategy included increasing the blob count to boost transaction capacity. Additionally, layer-2 solutions would be encouraged to pay some fees to Ethereum's base layer. On February 13, EF deposited 45,000 ETH, worth \$120 million, into Aave, Compound, and Spark. This move aimed to generate yield instead of selling ETH, which could suppress its price. The community welcomed this step. Highlighted Crypto News Today CZ Proposes a New Token Issuance Model to Support Long Term Growth

Timing might make the difference between small and life-changing profits in the fast-paced world of cryptocurrency. Renowned for precisely forecasting the huge 2021 crypto bubble, a seasoned crypto trader is warning investors: now is the perfect time to acquire an Ethereum rival, Rexas Finance (RXS). Priced at just \$0.20, this interesting coin will likely rise over \$12 by 2025, offering early adopters exponential gains. A Proven Track Record of Accurate Predictions The trader in issue gained recognition for predicting the explosive increase of numerous big cryptocurrencies during the bull run of 2021. His observations enabled many investors to seize early-stage gains that transformed modest interests into substantial fortunes. According to him, the crypto market is about to enter another explosive period today, and Rexas Finance (RXS) is among the most interesting prospects. His positive view of Rexas Finance comes from carefully studying its solid foundations, technological developments, and market trends. He said that even if established giants like Ethereum are always changing, there is room for creative ideas that solve practical problems and have clear uses. One such enterprise is Rexas Finance; its low price offers a perfect opportunity for investors who missed the early gains in 2021. Rexas Finance (RXS): The Ethereum Rival with Unmatched Utility Rexas Finance (RXS) is an Ethereum-based coin meant to challenge the limits of blockchain technology. Unlike many altcoins that depend on speculative hype, RXS is based on an ecosystem that aims to tokenize real-world assets (RWAs) and democratize access to blockchain innovation. Rexas Finance stands out mostly for its collection of easy-to-use tools. The platform offers a Token Builder so companies and developers can quickly design unique tokens. Complementing this is the Launchpad, which aids new ventures in raising money and acquiring market exposure, and the QuickMint Bot, which simplifies the token-generating process. These instruments, taken together, create an environment where creativity can flourish and offer a solid basis for steady long-term expansion. Another important feature that distinguishes Rexas Finance is RWA tokenizing. By digitizing physical assets, including real estate, commodities, and financial instruments, RXS closes the distance between conventional finance and the distributed society and opens a multi-trillion-dollar market. This capacity appeals greatly to forward-looking traders and institutional investors, establishing Rexas Finance (RXS) as a project with great real-world value. Strong Presale Performance: A Signal of Market Confidence Rexas Finance (RXS) has already shown remarkable market appeal during its presale. Originally costing \$0.20 in its last presale round, which is already 89.90% filled, RXS has sold over 449.5 million tokens and raised an amazing \$45.9 million. This early performance highlights great investor trust in the technological and long-term perspective of the enterprise. The forthcoming official release on June 19, 2025, will further accelerate the token's momentum. Early buyers of tokens at the presale price will be positioned to profit from notable upward price movement once RXS goes public on main exchanges, given a planned listing price of \$0.25. Security and Market Visibility: Building the Foundation for Exponential Growth Rexas Finance (RXS) has given developing a strong security architecture priority in an industry where

security breaches are rampant. Following a thorough Certik audit, the project has shown that its smart contracts and general platform architecture satisfy the highest security criteria. For investors, this independent validation offers much-needed confidence and greatly lowers the risk connected with early-stage initiatives. Moreover, Rexas Finance is listed on critical crypto-tracking systems such as CoinGecko and CoinMarketCap. These listings improve the token's visibility and legitimacy, facilitating retail and institutional investors' monitoring of its performance. The Road to 2025: Exponential Growth Potential According to the trader's study, Rexas Finance is ideally positioned to see a notable rally—perhaps soaring from its present \$0.20 price to over \$12 by 2025. Should these forecasts come true, an early investment might provide the kind of exponential gains that typified the 2021 crypto explosion multiplied several times over. Rexas Finance (RXS) gives a strong chance for investors wishing to diversify their portfolios and catch the next significant bull run. Unlike more established, more seasoned assets like Ethereum, its creative environment, strong security measures, and emphasis on practical uses set it distinct. Now is the time for any forward-looking investor to consider Rexas Finance (RXS) as a strategic addition to their portfolio in a market where early-stage projects keep delivering life-changing profits. Final Thoughts The cryptocurrency market is ready for another significant bull run, and initiatives that provide creative technology and practical use probably have the most interesting prospects. Renowned for his successful forecasts during the 2021 bubble, the trader is betting on Rexas Finance—a token valued at just \$0.20 that might break through to reach over \$12 by 2025. Investors waiting for the next major discovery can get RXS tokens from their official website. Rexas Finance (RXS) is a lighthouse of hope in the ever-changing realm of cryptocurrencies, with great presale performance, solid security, and a whole ecosystem aimed at long-term development. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market is experiencing major shifts, with Qubetics, Ethereum, and Bitcoin Cash taking center stage for vastly different reasons. Qubetics is leading the charge with its tokenized assets marketplace, offering investors access to fractional ownership of real-world assets. Meanwhile, Ethereum is on shaky ground, losing key price support, while Bitcoin Cash is surging, fueled by ETF speculation and renewed interest in Proof-of-Work cryptocurrencies. With Qubetics smashing through Stage 23 of its presale, investors are rushing to secure \$TICS tokens before the anticipated post-mainnet explosion. These developments make Qubetics one of the top cryptos to join for 2025, as market sentiment continues to evolve. Qubetics: Revolutionizing Asset Tokenization with Blockchain Innovation At the heart of the Qubetics Network lies a groundbreaking tokenized assets marketplace, designed to democratize ownership and investment access. Traditionally, investing in real estate, commodities, equities, and intellectual property required significant capital and complex legal structures. Qubetics is eliminating these barriers through blockchain-powered fractional ownership, allowing investors of all sizes to buy and trade tokenized assets. By converting physical and digital assets into blockchain-based tokens, Qubetics is creating a global investment hub where liquidity, transparency, and accessibility are the defining factors. As more institutions and retail investors embrace tokenized asset trading, Qubetics is emerging as a pioneering force in blockchain finance—and one of the top cryptos to join for 2025. Qubetics Presale Surges as \$TICS Hits \$0.0888—Momentum Builds for 2025! The Qubetics crypto presale is reaching new heights, advancing into Stage 23 with \$TICS priced at \$0.0888. With \$14.2 million raised and 491 million tokens secured across 21,600+ investors, demand for Qubetics is skyrocketing. Market projections indicate a 181.52% ROI before listings, but the real growth potential lies ahead. Analysts predict \$TICS could surge to \$10–\$15 post-mainnet, making it a prime target for investors seeking high-growth opportunities. For those looking to get in before the next big crypto boom, Qubetics is proving to be one of the most compelling investments of 2025. Ethereum (ETH) Struggles as Support Levels Break—Bear Market Ahead? Ethereum's price has collapsed, losing critical support at \$2,400 after a 21% drop in just seven days. This downturn has erased weeks of gains, and if ETH falls below \$2,000, the market could enter a full-blown bearish phase. Analysts are watching \$1,800, a key level last seen in 2023 during the bear market. If Ethereum fails to reclaim bullish momentum, its uptrend could be invalidated, leading to lower price levels. With Ethereum's dominance under pressure, some investors are shifting focus toward emerging blockchain solutions like Qubetics, which offer new value propositions beyond traditional smart contract platforms. Bitcoin Cash (BCH) Rallies on ETF Speculation—Can It Maintain Momentum? While Ethereum struggles, Bitcoin Cash (BCH) surges, driven by ETF optimism and renewed investor interest in Proof-of-Work (PoW) altcoins. The U.S. Securities and Exchange Commission (SEC) has played a pivotal role in reviving the altcoin market, especially after acknowledging filings for Litecoin and Ripple ETFs from Grayscale. As investors price in a 90% chance of Litecoin ETF approval, demand for Bitcoin Cash has skyrocketed, with traders speculating that BCH could be next in line for ETF consideration. With institutional money flowing into PoW-based assets, Bitcoin Cash is emerging as one of the most watched altcoins in 2025. If ETF approvals continue, BCH could see even bigger price gains, cementing its place among the top cryptos to join for 2025. Conclusion: Where Are the Biggest Opportunities? As the crypto market heads toward 2025, Qubetics, Ethereum, and Bitcoin Cash present distinct opportunities and challenges. Qubetics is on the rise, leading the tokenized assets revolution, offering fractional ownership of real-world investments through blockchain. Its booming crypto presale and expected post-mainnet explosion position \$TICS as a high-growth contender. Ethereum is at a critical juncture, with its bullish momentum fading. If ETH fails to hold \$2,000, it could enter a prolonged bear market, raising concerns about its short-term outlook. Bitcoin Cash is gaining traction, fueled by ETF speculation and rising demand for PoW-based altcoins. With institutional

investors eyeing BCH as a potential ETF candidate, its price could see sustained gains throughout 2025. Qubetics stands out as a game-changer in blockchain finance for investors looking for the best crypto opportunities, while Bitcoin Cash offers ETF-driven upside potential. The market is evolving fast, and those who position themselves early could reap massive rewards in the coming months! For More Information: - Qubetics: <https://qubetics.com> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> Disclaimer: TheNewsCrypto does not endorse any content on this page. If you're considering which altcoins to buy and hold for short-term profits, you're in the right place. Cryptocurrency, a world once dominated by Bitcoin, has exploded into a vast array of coins and tokens. While Bitcoin still remains the king, other contenders like Ethereum and the rapidly rising Qubetics are catching attention for their potential. Each of these coins offers distinct features and advantages, but how do they compare when it comes to short-term potential? Let's dive into the specifics of each. Bitcoin has long been the face of the crypto industry. Its stability, brand recognition, and history of growth have made it the go-to choice for those seeking long-term gains. However, for those looking to make quicker moves and benefit from some of the new technologies emerging in the crypto world, Bitcoin may not offer the same rapid rewards. That's where Ethereum and Qubetics come in, offering exciting prospects that could deliver big gains in the short term. Now, let's take a closer look at why Qubetics might just be one of the best altcoins to buy and hold for short-term growth and why it could soon be the talk of the town. It's not just another Layer-1 EVM-compatible blockchain; it's a game-changer that promises to address challenges faced by earlier projects, offering scalability, security, and a fresh perspective on what blockchain can do for businesses, professionals, and individuals alike. Qubetics: The New Contender to Watch Qubetics is an emerging blockchain that has everyone buzzing. Unlike Bitcoin or Ethereum, which were built with specific goals in mind (Bitcoin as digital gold, Ethereum as a decentralized platform for smart contracts), Qubetics offers something unique: interoperability and a strong focus on scalability. These are the areas where other blockchains have faltered, and Qubetics is here to change that. One of the standout features of Qubetics is its focus on enhancing blockchain usability, allowing businesses, developers, and individuals to create solutions that can easily communicate across multiple blockchain platforms. For example, its Qubetics Wallet is designed to be intuitive, secure, and versatile. This wallet makes it easier for users to hold and transfer tokens securely, providing a seamless experience across various blockchain ecosystems. And, with Qubetics undergoing a detailed blockchain audit by CertiK, one of the most trusted names in blockchain security, confidence in the project's transparency and reliability is skyrocketing. As of the 23rd crypto presale stage, Qubetics has already raised over \$14.2 million by selling more than 491 million tokens to over 21,600 holders. At a price of \$0.0888 per token, analysts predict that Qubetics could see impressive returns up to 16,791% after its mainnet launch. This gives it a strong advantage for anyone looking to capitalize on short-term opportunities in the crypto market. Bitcoin: The Unshakable Giant Let's face it: when people think of cryptocurrency, Bitcoin is often the first thing that comes to mind. Known as the first and most established cryptocurrency, Bitcoin's price history is full of highs and lows, but its overall trajectory has been one of growth and acceptance. As a store of value, Bitcoin has proven itself time and again, with the Bitcoin price often reflecting broader market trends. It remains the most widely adopted digital asset and continues to enjoy institutional support, making it a solid choice for many crypto enthusiasts. But what about short-term gains? While Bitcoin is a reliable bet for long-term growth, it isn't necessarily the best altcoin to buy and hold for short-term profits. With its massive market cap and established position, Bitcoin's growth tends to be slower compared to altcoins with less market penetration. That said, the Bitcoin price is often seen as a bellwether for the broader cryptocurrency market. When Bitcoin's price goes up, so does the price of many altcoins including Ethereum and Qubetics. For those seeking quick profits, Bitcoin can still provide opportunities, but it's generally considered a slower mover. However, as a safe bet in the volatile world of cryptocurrency, Bitcoin remains a staple for anyone looking for stability and growth over a longer horizon. Ethereum: The Smart Contract Pioneer Ethereum, often referred to as the world's programmable blockchain, has been around for a while now and has become one of the most widely used platforms for decentralized applications (dApps) and smart contracts. Its smart contract capabilities set it apart from Bitcoin, which was primarily designed as a store of value. Ethereum allows developers to build decentralized applications, opening the door for innovation across various industries, from finance to gaming. The Ethereum price has seen impressive growth, but similar to Bitcoin, it has had its share of volatility. In terms of short-term buying potential, Ethereum still presents a solid case, especially as it transitions into Ethereum 2.0. This update promises to improve scalability, lower transaction costs, and reduce energy consumption all of which will make Ethereum even more attractive to developers and users alike. Ethereum's ability to power decentralized finance (DeFi) platforms and facilitate tokenized assets is where its true value lies. This makes it a top contender for those looking to participate in the broader crypto ecosystem and tap into the growing popularity of DeFi, NFTs, and more. Understanding Qubetics' Interoperability, Wallet, and Blockchain Audit What sets Qubetics apart from both Bitcoin and Ethereum is its focus on interoperability. In simple terms, interoperability means that Qubetics can interact and exchange information with multiple blockchains, including Bitcoin and Ethereum. This opens up a range of possibilities for businesses and individuals to leverage the strengths of different blockchain platforms in one cohesive ecosystem. This is a huge advantage as it addresses the fragmentation that has historically limited blockchain's effectiveness. Qubetics' commitment to security also shines through with its ongoing blockchain audit by CertiK. This audit is designed to ensure that Qubetics' wallet and overall blockchain ecosystem are secure, transparent, and resilient. For those interested in the future of blockchain technology, Qubetics' focus on security and seamless integration between

blockchains presents an exciting proposition. CertiK's involvement in the Qubetics audit helps to build trust in the project, as it has already secured some of the biggest names in the crypto space. This audit provides an additional layer of confidence for anyone looking to participate in Qubetics's presale or use its network once it's up and running. Conclusion: Why Qubetics is the Best Altcoin to Buy and Hold for Short Term While Bitcoin and Ethereum have their own merits, it's clear that Qubetics brings something fresh to the table. Whether it's the emphasis on interoperability, the innovative wallet solution, or the blockchain audit from CertiK, Qubetics has positioned itself as a future-forward blockchain that will cater to the needs of both individuals and businesses. For anyone looking to make short-term profits, Qubetics is hard to ignore. The presale has already raised millions, and the potential for massive returns post-mainnet launch is enormous. If you're looking for the best altcoins to buy and hold for short-term potential, consider Qubetics as a solid addition to your crypto portfolio. With its unique features and promising growth, Qubetics may be the next big thing in the world of blockchain. For More Information: Qubetics: <https://qubetics.com> Telegram: <https://t.me/qubetics> Twitter: <https://x.com/qubetics> FAQs: - What is Qubetics? Qubetics is a Layer-1 EVM-compatible blockchain focused on scalability, interoperability, and security. - Why is Qubetics's interoperability important? Interoperability enables Qubetics to seamlessly interact across multiple blockchain platforms, enhancing efficiency and flexibility. - How is CertiK involved in Qubetics? CertiK is conducting a thorough audit of Qubetics's wallet and blockchain ecosystem to ensure security and transparency. - Is Qubetics a good altcoin to buy for short-term gains? With a strong presale and impressive potential for growth, Qubetics is a promising choice for short-term gains. - How does Qubetics compare to Bitcoin and Ethereum? Qubetics stands out with its focus on interoperability and scalability, offering unique advantages over Bitcoin and Ethereum for businesses and individuals.

- Ethereum has fallen over 9%, slipping into the \$2.1K zone. - The market experienced a surge in liquidations, with \$195.40 million worth of ETH wiped out. The crypto market cap has shed 5.31% to \$2.67 trillion, weighed down by increased selling pressure. Bitcoin inches closer to \$79.8K, while the largest altcoin, Ethereum (ETH), extends its decline, consolidating losses near the crucial \$2K support level. ETH is forming a sturdy bearish trend line, and it could start a recovery wave only if it moves above \$2,200. The altcoin has attempted to maintain the upside correction but experienced a steep decline due to a broader market downturn. Following a 9.81% decline, ETH has been trending downwards. The price of the altcoin was unable to cross the \$2,424 resistance level. Ethereum fell to \$2,128 within the past 24 hours, with an initial high of \$2,378 before the pressure from bears dominated. At press time, Ethereum traded at \$2,117 with the daily trading volume staying at \$28.46 billion. Notably, the market observed a liquidation of \$195.40 million worth of Ethereum during this interval. Notably, the on-chain data reports that the Bybit hacker has already laundered over 50% of the stolen 499K ETH within a week, using THORChain to swap for BTC. In the past 5.5 days, they've moved 266,309 ETH worth \$614 million. With 233,086 ETH still left, if this pace continues, the hacker could fully launder the remaining funds in about five more days. Will Ethereum See Continued Selling Pressure? The ETH/USDT trading pair has recently formed a death cross, signalling the dominance of the bearish momentum. If the current downside correction continues, ETH could test the support at \$2K. Failing to hold here could open the door for a drop to \$1,824 or even lower. The altcoin could witness a rebound if it flips the \$2,274 level into a support zone. Breaking above this level with momentum could send Ethereum past \$2,396, bringing the \$2.5K target within reach. A prolonged uptrend may catalyze a quicker and more sustained recovery. The Moving Average Convergence Divergence (MACD) line and the signal line of ETH are settled below the zero line. It indicates a strong bearish crossover with the selling pressure dominating the market. A continued weakness may follow unless a bullish crossover occurs. Moreover, the Chaikin Money Flow (CMF) indicator settled at -0.18, suggesting that money is flowing out of the asset and the sellers are in control of the market. Meanwhile, the daily trading volume of Ethereum has surged by over 9.35%. ETH's Bull Bear Power (BBP) value found at -371.48 infers strong bearish dominance, and prices are trading well below recent highs. Moreover, the daily relative strength index (RSI) resting at 22.35 signals the asset in the oversold territory.

Due to the volatility in the crypto market, the Cardano coin has failed to reclaim the \$1 level. It has been trading between \$0.7 and \$0.8 in the past week. While the case is similar for the Ethereum coin, Mister Crypto predicts a price rally to \$10k soon. Meanwhile, IntelMarkets (INTL) is the latest crypto coin that is turning heads in the market. It is an artificial intelligence-based trading platform that is revolutionizing the DeFi market. It has AI bots that can make trading more profitable for users. With over 900% gains in the crypto ICO phase, IntelMarkets could be the next big thing in the market. Cardano (ADA) Consolidates Around \$0.7-\$0.8 The ADA price is still consolidating between \$0.7 and \$0.8 on the weekly timeframe. The altcoin has been trading sideways in the past few weeks due to the downturn in the general market. Data from CoinMarketCap indicates the ADA price has plunged by 20.3% on the 30-day chart. Despite the downtrend, the ADA price has remained above a major support level. Ali Martinez notes that the most critical support for the Cardano coin is around the \$0.67-\$0.80 region. The analyst argued that the ADA price could skyrocket in the future as long as this level holds. Dan Gambardello, one of the top analysts in the crypto space recently predicted the ADA price might pump to \$10. According to him, the ADA price reaching \$10 is clear. He also called the cryptocurrency a trillion-dollar coin. Looking ahead, Dan Gambardello says there is a potential head and shoulders pattern formation on the ADA price chart. This pattern could take the ADA price to a new level. Ethereum (ETH) Predicted To Hit \$10k Amid Downtrend The ETH price has breached the \$2.8k level more than three times in the past week. Bulls are attempting to flip this level into a major support. Such a move could cause a major ETH price rally to \$3k. According to CoinMarketCap, the ETH price has risen by 4.9% on the 7-day chart. Looking ahead, Mister Crypto posted a chart that showed the ETH price trading in a triangular pattern. The analyst says a breakout to the upside could happen soon given Ethereum's status as the King of DeFi. They forecast the ETH price might pump to \$10k in the

coming months. Another expert, Bitbull expects the ETH price to rally to \$5k. According to them, the ETH price is outperforming Bitcoin. Bitbull says this is a shift for the Ethereum crypto and utility-based projects like DTX Exchange. How IntelMarkets (INTL) Offers the Best Crypto Trading Experience IntelMarkets (INTL) is a trading platform that uses AI and blockchain technology to offer the best trading experience. It is suitable for both new and professional traders because it provides them with the best chance to make money with little risk. One advantage of IntelMarkets is that it provides up to 1000x leverage, which means that the trader can increase his position in the market. This feature enables the users to exploit the opportunities in the market that are rarely available while at the same time managing risks. Moreover, IntelMarkets has a team of specialists from MIT, OpenAI, and Goldman Sachs which puts it on the list of the most innovative platforms. Its native token, INTL, is currently priced at \$0.091, following a price pump of more than 900%. It has raised over \$10.8 million in funding with the potential to reach \$20 million soon. With the features above and the Intelli-M AI bots, this DeFi project is among the best to keep an eye on. It is starting a new era of modern crypto trading, providing speed, security, and advanced tools for traders from all over the world. Which is the Best Altcoin To Buy? While Cardano is on the path to consolidation and Ethereum targets \$10K, IntelMarkets is the best crypto to watch. By integrating the powers of AI and decentralized trading, INTL is disrupting the market of crypto trading. Its current presale values show that it has the potential to become a giant in the coming months. Such potential positions IntelMarkets as the best cryptocurrency to buy. For more information about IntelMarkets (INTL) visit the links below: - Presale: <https://intelmarkets.io/> - Telegram: <https://t.me/IntelMarketsOfficial> - Twitter: https://x.com/intel_markets Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

Buyers closely monitoring Ethereum (ETH), Onyxcoin (XCN), and BlockDAG (BDAG) face contrasting prospects. Ethereum's price dip below \$2,900, despite Bybit's reserve recovery efforts, highlights ongoing market uncertainty with key support levels at \$2,551 and \$2,159 at risk. Onyxcoin's 35% monthly plunge signals strong bearish momentum, making any short-term rebound speculative. BlockDAG, on the other hand, continues to defy market headwinds. With its \$199 million presale, 18.5 billion BDAG coins sold, and a 2,380% ROI for early participants, BDAG is attracting both retail and institutional buyers. BlockDAG's growth stems from real developments including comprehensive audits by Halborn and Certik, a Bug Bounty Program, and a rapidly expanding ecosystem. Ethereum Struggles Below \$2,900: Is a Rebound Coming or More Pain Ahead? Ethereum (ETH) has dropped over 22% in the past month, with its price now hovering below the \$2,900 resistance. Despite Bybit recovering 84% of its ETH reserves after a recent hack, selling pressure continues to weigh on the market. Technical indicators reflect bearish momentum. Ethereum's Relative Strength Index (RSI) plunged from 63.2 to 43, signaling weakened buying interest. The Directional Movement Index (DMI) also shows sellers gaining control, suggesting ETH could test lower supports at \$2,551 or even \$2,159 if the downtrend persists. However, there's a glimmer of hope. If Bybit fully restores its reserves, renewed market confidence could push ETH back toward \$2,850. A successful break above \$2,900 might trigger a rally to \$3,020 or higher. Onyxcoin Plunges 35%: Is a Rebound on the Horizon? Onyxcoin (XCN) has dropped 35% over the past month, with a 19% loss in just the past week. Despite briefly bouncing back, the token is struggling under heavy selling pressure, now trading near a crucial support level of \$0.014. Technical indicators point to continued weakness. The Relative Strength Index (RSI) has fallen to 41.8, reflecting declining buying interest, while the Average Directional Index (ADX) at 25.2 signals a strong downtrend. If selling momentum intensifies, XCN could slip below \$0.010. However, if buyers step in, XCN could retest resistance at \$0.0229, with a breakout potentially driving prices toward \$0.0339. Buyers looking for high-risk, high-reward opportunities may find XCN appealing, especially if it regains momentum from its late-January rally. Still, caution is warranted as bearish trends remain dominant. BlockDAG AMA Reveals Massive Growth and Incentives: Why Now Is the Time to Buy BDAG BlockDAG's latest AMA showcased significant progress, fueling investor excitement as its presale nears \$199 million with over 18.5 billion BDAG coins sold at \$0.0248. With the presale target set at \$600 million and token prices climbing with each batch, market sentiment is shifting toward FOMO as buyers rush to secure BDAG at a lower price. Security is a top priority for BlockDAG. Chief Security Officer Youssef Khaoulaj highlighted partnerships with leading blockchain security firms Halborn and Certik, ensuring the network undergoes comprehensive audits. These cover everything from blockchain protocols to smart contract safety, ensuring BlockDAG remains both functional and secure. To further strengthen security, BlockDAG is launching a Bug Bounty Program starting privately and later open to the public to encourage community involvement in spotting and fixing vulnerabilities. These measures are designed to build trust and ensure BlockDAG remains a safe, transparent, and resilient platform as it grows. With the mainnet approaching and incentives stacking up, BDAG's rapidly growing ecosystem presents a rare opportunity. Buying now means positioning yourself ahead of potential price surges and future utility expansions. Takeaway While Ethereum's potential rebound and Onyxcoin's speculative recovery capture market buzz, BlockDAG's momentum is driven by substance, not just sentiment. ETH faces technical hurdles and market volatility, while XCN's steep losses raise caution flags. In contrast, BlockDAG's presale success, bolstered by rigorous security partnerships and a proactive community engagement strategy, offers tangible upside. Its \$600 million presale target is within reach, and with exchange listings imminent and the mainnet launch on the horizon, BDAG's upward trajectory is supported by both investor enthusiasm and technological advancement. Buyers acting now can secure coins before potential post-listing surges. In a market where many projects rely on hope, BlockDAG delivers execution, making it the standout investment choice for 2025. - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. The \$OZ token represents an investment tool from Ozak AI which delivers predictive AI and blockchain technology-based advanced analytics solutions to users. The system provides real-time financial analytics tools to traders and institutions who need to understand market volatility in cryptocurrency markets. Ozak AI capitalizes on the fluctuating market values of Ethereum and Chainlink by offering data-centric solutions using its decentralized network infrastructure. The \$OZ token presale has gained traction, raising over \$900,000 by selling more than 152 million tokens across multiple phases. The token began its supply at \$0.001 but rose 200% to \$0.003 during stage three of its presale and analysts expect it to reach \$1 during 2025 due to its planned listing price of \$0.05. Even the price will go higher to \$0.005 in the upcoming stage. The crypto market displays increasing investor interest in AI-driven projects because of current market factors. Advanced Analytics Set Ozak AI Apart in a Volatile Market The system combines Prediction Agents (PAs) with Ozak Stream Network (OSN) to process market data for delivering forecasts to users. Portfolio optimization and risk management belong to the capabilities made possible by data processing tools that utilize historical data as well as real-time information. Ozak AI differentiates from Ethereum by providing forecasting tools that predict market shifts to users because the platform recently experienced a death cross indicating bearish signals. At the same time, Chainlink maintains its position as a decentralized oracle network for smart contracts but insufficiently provides the advanced analytics capabilities that Ozak AI delivers to users. Ethereum experienced a \$1.3 billion security breach because of the Lazarus Group attacks, yet Ozak AI builds DePIN as a decentralized physical infrastructure to protect smart contracts from such threats. Ozak AI stands out because of its forward-thinking approach making it an attractive investment opportunity. Market Potential and Investor Opportunities with \$OZ Token According to Precedence Research, the predictive AI market will expand to \$108 billion by 2033 because demand grows in finance and other sectors. Ozak AI adopts this market trend through its 10 billion \$OZ token maximum supply, which helps maintain a deflationary system. Analysts predict the token could climb to \$1 by 2025, fueled by its utility in financial modeling and algorithmic trading. Ethereum struggles to break the \$3,000 resistance level post-hack, and Chainlink faces competition in the oracle space. In contrast, Ozak AI's presale structure rewards early adopters, with the current phase at \$0.003 and the next set at \$0.005. The platform's roadmap includes boosting its machine learning engine and launching a mainnet, paving the way for long-term growth. With its blend of AI and blockchain, the \$OZ token is a great pick for investors looking for stability and fresh opportunities in today's changing market. For more information about Ozak AI, visit the links below: - Website: <https://ozak.ai/> - Twitter/X: <https://x.com/OzakAGI> - Telegram: <https://t.me/OzakAGI> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

- Staking within ETFs could boost investor returns through passive income. - The SEC's decision will set a key precedent for staking in regulated products. The U.S. Securities and Exchange Commission (SEC) is reviewing a proposal from Grayscale Investments to include staking in its proposed Ethereum ETFs. If approved, this could change how investors engage with Ethereum. The proposal was officially acknowledged by the SEC after NYSE Arca submitted it on February 14, 2025. This started the review process, which included a public comment period. The SEC has 45 days to make an initial decision, but this can be extended to 90 days. If approved, investors could earn staking rewards while holding shares of the Ethereum ETF. Staking is a central component of decentralized finance (DeFi). It involves locking up crypto to support a blockchain network with participants earning rewards. Grayscale aims to integrate staking into the regulated ETF framework, potentially bridging traditional finance and DeFi. "Unlike Bitcoin, Ethereum is not a finite token. Therefore, staking is arguably the biggest value proposition of ETH to major investors," according to the filing. This suggests staking could attract more investors to Ethereum ETFs. ETFs offer a familiar structure for yield generation. This could draw in institutions previously wary of direct staking. Grayscale plans to stake Ethereum through trusted providers. The ETF sponsor will manage this. Coinbase Custody will continue to hold the fund's Ethereum. This approach balances innovation with regulatory needs. A Shifting Regulatory Landscape? The SEC's review comes amid evolving perspectives on cryptocurrency regulation. While the agency has previously exercised caution regarding staking, recent developments indicate an increasing openness toward this technology. Journalist Eleanor Terrett noted on X that the SEC is "very, very interested" in staking. The agency is seeking input from experts. This suggests the SEC wants to understand staking's nuances and its impact on investors and markets. However, the SEC will examine investor's security and market oversight, custody arrangements, and important disclosures before reaching a conclusion. This comprehensive review process is mandatory for the SEC to provide a strong regulatory framework for cryptocurrency products. Potential Increase in Ethereum's Overall Value Approval of Ethereum ETF staking could profoundly affect the Ethereum ecosystem and its native token, potentially attracting increased institutional investment and strengthening the network. The filing also suggests, "Should staking rewards finally be enabled on ETH ETF markets, a steady flow of inflow optimism could soon snowball into a long-awaited bull run on ETH." This highlights staking's potential to fuel Ethereum's growth, increase demand, and encourage participation. ETFs could also make staking more accessible. Direct staking can be complex. ETFs could simplify it, bringing staking benefits to a broader audience. The crypto world awaits the SEC's decision. A positive outcome would validate integrating staking into ETFs. Currently, Ethereum struggles below the \$2,500 zone, trading at \$2,487. Ethereum's recent decline has been fueled by a \$1.4 billion Bybit hack and investor doubt, causing a bearish pattern for ETH and the overall crypto

market. Highlighted Crypto for Today Mirana Ventures Stands as the Largest ETH Depositor for Bybit

Ethereum and Ripple are set to rally higher as the crypto market continues to recover, from the recent correction. While the Ethereum price could rise to \$4.5k, the XRP price could surge to \$3.4. Meanwhile, IntelMarkets (INTL) is stealing the attention of investors in the DeFi space. The AI-based trading platform offers users features like advanced AI trading bots, dual-chain capabilities, and a growing presale. Currently, in the tenth phase of its crypto ICO, the value of INTL has risen by 900%. It is expected to soar by 20x before the year runs out. Ripple (XRP) About To Produce Textbook Surge A crypto enthusiast called Froggy says the XRP price is about to perform a textbook rally. According to them, the XRP price has been showing bullish momentum. It has formed higher lows, signaling high interest from buyers. Technical indicators like the relative strength index reveal that buyers are gaining traction. The metric has crossed the midline and is heading for the oversold region. Looking ahead, Froggy predicts the XRP price could skyrocket to \$3.4 if it remains above an ascending line. Failure to do so could cause the XRP price to drop to \$2. At the moment, the XRP price has dropped by 3.2% on the weekly timeframe. The altcoin witnessed a pullback after failing to cross the resistance around the \$2.7k level. The XRP price must breach this level in the coming weeks to raise its chances of reclaiming the \$3 level. On the flip side, a continuous rejection could push the Ripple price to retest the \$2 region. Ethereum (ETH) New Addresses Soar In a recent post on X, Ali Martinez called the attention of the crypto community to a recent growth in the Ethereum network. According to him, the number of new addresses on the network has increased by 12% over the past week. This increase bodes well for the Ethereum price which is already showing gains on the chart. Data from CoinMarketCap reveals the Ethereum price has increased by 2.8% and 1.9% on the weekly and biweekly charts, respectively. With this upsurge, the Ethereum price could pump to \$3k in the next few weeks. Meanwhile, CryptoGoos says the Ethereum price is about to skyrocket. The analyst posted an Ethereum price chart which showed similarities between the trajectory of 2021 and 2025. CryptoGoos forecasts the Ethereum price could soar to \$4.5k and then higher in the coming months. Another analyst who is bullish about the Ethereum price trajectory is Crypto Rover. He believes the Ethereum price is undervalued and could see massive growth during the next bull run. IntelMarkets (INTL) is the Best Crypto Platform for Trading IntelMarkets (INTL) could become one of the leading trading platforms in the crypto trading market. It has shown good results during the presale period. The INTL token is currently at \$0.091 which is a good price for those who are smart investors. It has also managed to secure more than \$10.8 million in funding. IntelMarkets is revolutionizing the crypto trading market by bringing together retail and institutional traders. Thus, with the help of artificial intelligence, the platform offers the user improved tools that were previously available only to professionals. The core of the IntelMarkets's innovation is the Rodeum AI's self-learning bots. These bots can purchase and sell cryptos by using data analysis to look for the best opportunities to make profits for their users. Moreover, IntelMarkets has powerful features such as multi-channel analysis that assists traders in comprehending the market situation in various assets. This way of data analysis helps the users to make the right decision and find the best crypto investment at the right time. New ICO Steals The Spotlight from Ripple and Ethereum While Ethereum and Ripple look forward to new price levels, investors are doubling down on IntelMarkets. This new DeFi project could be the game changer that investors have been looking for. Due to its innovative AI trading platform and high growth prospects, it is not surprising that early investors are willing to bet on INTL. Its price could surge to \$1 in the coming months. For more information about IntelMarkets (INTL) visit the links below: - Presale: <https://intelmarkets.io/> - Telegram: <https://t.me/IntelMarketsOfficial> - Twitter: https://x.com/intel_markets Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

Chicago, Illinois, February 25th, 2025, Chainwire Powerful momentum continues after a record-breaking testnet phase, more than \$300 million in total value locked (TVL), and dozens of ecosystem launch partners. Hemi, a modular blockchain network powered by Bitcoin and Ethereum, today announced that it will launch its mainnet on March 12, 2025. Key Facts - Launching its mainnet on March 12, Hemi is a modular blockchain network designed for superior scaling, security, and interoperability, unifying Bitcoin and Ethereum as a single supernet. - Over fifty protocols will be deployed on Hemi, including decentralized exchanges (e.g., Sushi, DODO, Izumi), lending protocols (e.g., LayerBank, ZeroLend), vaults (e.g., Nucleus, Concrete, VaultCraft), top LSTs and LRTs (e.g., Kelp, pumpBTC, StakeStone), oracles (e.g., RedStone, Pyth, Stork), and key dApps (e.g., LayerZero, Pell, BitFi). - Hemi has already attracted more than \$300 million of Total Value Locked (TVL) and announced a \$15 million seed round in September 2024, led by Binance Labs, Breyer Capital, and Big Brain Holdings. - Hemi was founded by renowned early Bitcoin developer Jeff Garzik and blockchain security pioneer Max Sanchez. The transition from testnet to mainnet is a major milestone for Hemi, which has already attracted more than \$300 million in total value locked (TVL) and rapidly built an ecosystem of dozens of protocols. This positions Hemi as a vital infrastructure layer for decentralized finance across Bitcoin and Ethereum, enabling innovation and scalability across the blockchain space. Through the protocols offered by Hemi's early Day One ecosystem collaborators, users will be able to: - build applications that are both Bitcoin- and Ethereum-aware; - participate in lending and DEX liquidity provision, or allocate funds into specialized vault products; - trade perpetuals; - stake and restake popular BTC and ETH tokens; - borrow, and swap tokens; and - create synthetic assets. In particular, Hemi's DeFi ecosystem has a strong focus on providing liquidity and yield opportunities for many of the most popular liquid staking tokens (LSTs) and liquid restaking tokens (LRTs) from the Bitcoin and Ethereum ecosystems. - Just over six months after introducing our incentivized testnet, Hemi has demonstrated its resilience and capability as a powerful network for advancing blockchain applications across Bitcoin and Ethereum," said Jeff Garzik, co-founder of Hemi. "The Hemi team has a clear and

compelling vision for unlocking the programmability, portability, and potential of Web3,â€ said Ted Breyer, partner at Breyer Capital. â€With a distinguished track record, they are uniquely positioned to deliver.â€ A Layer-2 from a Different Point of View Attempts to integrate and scale Bitcoin and Ethereum have tended to address the problem within their respective communities, resulting in a fractured ecosystem. Hemi instead approaches Bitcoin and Ethereum as components of a larger supernetwork. This surfaces the key capabilities of both networks and, in turn, enables a new class of previously unattainable blockchain applications. Hemiâ€™s benefits include:

- Unifying Bitcoin and Ethereum â€ The Hemi Virtual Machine (hVM) integrates a full Bitcoin node within an Ethereum Virtual Machine (EVM), enabling developers to harness the power of both Bitcoin and Ethereum using familiar and proven development tools.
- Bitcoin Programmability â€ Building with the Hemi Bitcoin Kit (hBK) provides developers direct access to highly granular views of Bitcoinâ€™s state, unlocking new applications that were previously impractical or impossible to execute in a truly trustless, secure, and efficient way.
- Superfinality â€ Through its PoP consensus protocol, Hemi inherits Bitcoinâ€™s full security in a truly decentralized and permissionless manner, exceeding Bitcoin-level finality (â€superfinalityâ€) in just a few hours.
- Trustless Cross-Chain Portability â€ With Tunnels, Hemi offers a Bitcoin-secured method for moving assets between Bitcoin and Ethereum.
- Asset Programmability â€ Hemiâ€™s additional asset-programmability features include on-chain routing, time-lock, and password-protect. Gasless transfer enables asset movement without requiring a web3 wallet.

â€The Hemi team can be described in one word: ambitious. Everything we learned during our testnet has been embedded into the mainnet release and we are excited for our users and developers to build and use applications across Bitcoin and Ethereum,â€ said co-founder and CTO Max Sanchez. About Hemi Labs Hemi Labs is the creator of the Hemi Network (â€Hemiâ€), a modular Layer-2 network for superior scaling, security, and interoperability, powered by Bitcoin and Ethereum. Instead of approaching Bitcoin and Ethereum as siloed ecosystems, Hemi views them as components of a single supernetwork, unlocking new levels of programmability, portability, and potential. Hemi Labs envisions a new, converged Internet ecosystem that is secure, interoperable, and ready for the many challenges of a Web3 that is imminently colliding with the Internet at large. Users can learn more at <https://hemi.xyz/>. - Blog: <https://hemi.xyz/blog/> - GitHub: <https://github.com/HemiLabs> - Docs: <https://docs.hemi.xyz> - Discord: <https://discord.gg/hemixyz> - YouTube: <https://www.youtube.com/@HemiLabs/> - Twitter/X: https://x.com/hemi_xyz - Telegram (News): https://t.me/hemi_news - Telegram (Community): https://t.me/hemi_community Contact Media Relations HemiLabs.media@hemi.xyz

- It has happened before on an Etheruem test networkâ€an upgrade that did not finalize. - Pectra is a hard fork that unites 11 separate yet significant improvements, known as EIPs. On Monday, the Holesky testnet went live with Ethereumâ€™s Pectra upgrade, however it did not finalize in the allotted time. According to blockchain statistics, Pectra did not initially finalize after being launched on the Holesky testnet at 21:55 UTC (4:55 p.m. ET). When a transaction reaches finality, it cannot be undone after it has been verified and included in a block. If you want to make sure that any changes or upgrades to a main network, like Ethereumâ€™s, operate properly before releasing them to the public, you may set up a testnet to run the necessary tests. Why the Pectra upgrade did not finalize on Holesky is currently a mystery. On Monday, Ethereum developers were speculating on the problem in the Eth R&D Discord channel. It has happened before on an Etheruem test networkâ€an upgrade that did not finalize. The hard fork did not initially finalize on the Goerli testnet in January 2024. When the developers were testing the Dencun upgrade. Several Significant Improvements Pectra is a hard fork that unites eleven separate yet significant improvements, sometimes known as â€Ethereum improvement proposalsâ€ (EIPs). Central to this is EIP-7702, which aims to enhance the crypto wallet user experience. The EIP-7251 proposal is another important one; it would raise the maximum amount that validators may stake from 32 ETH to 2,048 ETH. Staking Ethereum validators now confront a number of issues, which the proposal aims to alleviate: Staking more than 32 ETH requires dividing it up among numerous validators, which may be a pain. The process of putting up additional nodes might be accelerated by merging those validators and boosting the maximum stake limit. One of the two testnets that will go through a Pectra simulation is Holesky. It is anticipated that the Sepolia testnet will conduct the next test on March 5th. Christine Kim, Galaxyâ€™s VP of research, said that developers may decide to postpone it based on the severity of the current problem. Highlighted Crypto News Today: Crypto Trader Loses \$24M on TRUMP Token as Market Downturn Continues

Rexas Finance is quickly becoming the Ethereum substitute, riveting whales and retail investors. With an admirable ecosystem, a lucrative presale, and a \$1 million giveaway, Rexas Finance is positioning itself as the blockchain-based asset management revolution. Itâ€™s a known fact that the tokenâ€™s value can skyrocket due to its strong fundamentals, which might make it an Ethereum alternative capable of Transforming \$677 into \$677,000 in the long term. A Presale Success That Signals Market Confidence The final stage of the Rexas Finance presale has been a resounding success, with 89.54% of tokens already sold and over \$45.5 million raised. This overwhelming investor confidence underscores the marketâ€™s belief in RXS as a strong alternative to Ethereum. The remaining supply is limited, causing fear of missing out among investors who want to secure a share before the token lists for \$0.25 on June 19, 2025. The presaleâ€™s success is due to the increased attractiveness of Real World Asset (RWA) Tokenization, which is rapidly growing across the blockchain ecosystem. Investors understand that tokenizing deeply traditional assets such as real estate, commodities, and intellectual property through blockchain technology offers the highest liquidity and access. Rexas Finance is leading this transformation, opening these traditionally illiquid markets to a global audience. Unmatched Tokenomics and Investor Rewards RXS has a well-structured tokenomics model designed for long-term sustainability. With a total supply of 1 billion tokens, key allocations ensure a balanced ecosystem: 42.5% allocated to the presale, 22.5% for staking rewards, and 10% reserved for the treasury. The staking pool offers significant incentives, ensuring long-term investor engagement

while driving demand for RXS. Unlike many competitors, this distribution strategy prevents inflation and fosters sustainable price growth. The staking mechanism plays a crucial role in maintaining token stability. By allowing investors to stake RXS and earn passive income, Rexas Finance creates an additional utility layer that encourages holders to keep their assets rather than sell them immediately. This decreases selling pressure and develops a gradual price appreciation, further substantiating RXS as a strong long-term investment. A Thriving Ecosystem Powering Growth The ecosystem of Rexas Finance aims to transform the asset management arena by integrating blockchain technology. The Rexas Token Builder simplifies tokenization, allowing seamless asset digitization without coding expertise. The Rexas Launchpad provides a decentralized funding platform for new projects, ensuring fair and transparent investment opportunities. The Rexas DeFi platform enables multi-chain cryptocurrency trading, while Rexas Estate democratizes real estate investments through fractional ownership. Additionally, Rexas Treasury maximizes returns with automated yield optimization. Such a system promotes innovations, increases liquidity, and guarantees numerous investment prospects, making Rexas Finance a holistic ecosystem tailored for institutional and retail investors looking for financial appreciation. A Secure, Transparent, and Engaging Ecosystem Rexas Finance values security above all else, as demonstrated by its CertiK audit, which verifies the strength of its smart contracts and distinguishes it from other DeFi projects with security issues. The audit reassures investors and attracts institutional interest. Rexas also adopts a decentralized governance model, giving RXS holders voting rights and ensuring community-driven decisions. To boost adoption, a \$1 million giveaway rewards 20 participants with \$50,000 each, requiring a \$100 presale investment and aligning new users with the project's long-term vision. This strategy, partnerships, and influencer collaborations enhance Rexas Finance's market presence. The Long-Term Potential of RXS Rexas Finance is set to outperform many current cryptocurrencies owing to its strong foundation, a well-structured ecosystem, and an engaging investor community. It is capable of real-world asset tokenization and facilitates decentralized financial services, standing as a pioneer in accepting blockchain technologies. As the presale nears completion, RXS is expected to experience substantial growth, solidifying its place as a top Ethereum alternative. Whales have already taken notice of RXS, with significant wallet addresses accumulating the token before its listing. The potential for an explosive price rally post-launch is evident, with industry experts predicting substantial appreciation. RXS's value as a link between conventional and digital finance will likely increase as more investors appreciate this, increasing the demand level. Conclusion Rexas Finance isn't simply a novel cryptocurrency; it is a full-fledged Ecosystem aimed at long-term sustainability. With a successful presale, robust tokenomics, a CertiK-verified security framework, and a \$1 million giveaway, the token stands out in the crowded blockchain space. As whales and retail investors accumulate RXS, its potential to transform small investments into massive returns becomes increasingly evident. Now is the time to act before the final presale tokens are gone. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Ethereum (ETH) price dropped below \$2,500, recording an 11% drop over the past 24 hours. - ETH must hold \$2,600 to prevent further downside. - Long-term accumulation trends remain bullish. Ethereum (ETH) has slipped below the \$2,500 mark, resulting in an 11.54% decline in the past 24 hours. The dip in the ETH market occurs amidst global crypto market weakness and the recent Bybit hack, resulting in the theft of approximately \$1.4 billion worth of Ethereum. In an act to salvage the situation, Bybit CEO Ben Zhou confirmed that the exchange firm has closed the deficit and published a PoR to verify that the Ethereum assets remain fully backed, securing 447,000 Ether through emergency funding. Although short-term indicators suggest a bearish outlook, some analysts maintain a strong long-term bullish stance, strongly confident about Ethereum's historical price patterns and trends. Key Technical Levels: Can ETH Hold Above \$2,600? Ethereum price is currently struggling around the \$2,500 level, with analysts identifying \$2,450 as a crucial threshold for the asset's short-term trajectory. A break below this level will nullify hope for its breakthrough and rather push it toward the next key support zone at \$2,120. Also, the technical indicators point to that ETH may remain below the \$2,750 level and 100-hour moving average. However, a bearish pattern has formed with resistance at \$2,600, an important level for ETH. The MACD for ETH/USD still shows a bearish line as Ethereum's RSI sits far below the 50 level, which indicates a lack of buying pressure. If Ethereum manages to reclaim \$2,650, a relief rally toward \$2,850 could materialize, but strong resistance remains in place at these higher levels. Long-Term Fundamentals: Accumulation Trends and Market Dynamics Despite the current market downturn, Ethereum's long-term outlook remains positive. Analyst 'Doctor Profit' pointed out that ETH is only 18% above its 200-week EMA, a historically reliable indicator that has provided strong support in previous market cycles. Ethereum 200-week EMA Analysis. Source: (X) This suggests that Ethereum's risk-reward ratio is still healthy and attractive with a potential uptrend. On-chain data from Glassnode also reveals that investors have been actively accumulating ETH at key support levels. Approximately 786,000 ETH has been bought around the \$2,632 zone, another indication of strong buying interest. Also, a more substantial accumulation happened at \$3,150, where 1.22 million ETH has been acquired. These trends suggest that long-term holders remain confident in Ethereum's future, willing to average down instead of existing their entire position. Ethereum vs. Bitcoin: Can ETH Outperform? Recently, Ethereum has faced downward pressure and is undervalued. Still, its relative performance against Bitcoin remains a point of interest. According to data from CryptoQuant, while Ethereum's taker buy-sell ratio increases, Bitcoin's is showing signs of decline. Historically, such shifts have paved the way for Ethereum to gain bullish momentum against

BTC. However, Ethereum still faces structural challenges, including lower staking yields compared to Solana (SOL) and ongoing regulatory uncertainty surrounding spot Ether ETFs. Highlighted Crypto for Today Metaplanet and El Salvador Buy More Bitcoin Amid Market Crash

Are you looking for the best cryptocurrencies to invest in? The cryptocurrency market is ranging, with Bitcoin hovering around the critical \$95,000 mark and Ethereum struggling to break past \$2,800. A 1.65% drop in total market cap, bringing it down to \$3.15 trillion, has been linked to significant security breaches. The recent Bybit hack led to a staggering \$1.4 billion loss in ETH. Despite Bybit CEO Ben Zhou confirming the full recovery of the stolen funds, the market remains under pressure, struggling to regain momentum. While identifying how to recover from this market turmoil, investors struggle to find the top crypto coins with massive gains. In this article, we have identified four promising crypto coins with high growth potential. Let's read more to discover these hidden gems and make the right investment decision. Top 4 Crypto Coins To Invest - Aureal One (DLUME) - DexBoss (DEBO) - yPredict (YPRED) - Polkadot (DOT) Each of these coins has unique features and high potential to thrive in this dynamic environment. These high-growth cryptos are equipped with robust technology and advanced tools to ensure strict security measures. Delve deeper into their deep insight and find out why Aureal One leads the list! 1. Aureal One (DLUME): A High-Potential Crypto Investment With the market continuously witnessing ups and downs, coins like Aureal One are set to surge high, possessing high stability and the potential to offer high ROI. Currently, in its presale, the platform is offering its token DLUME at a discounted price, which is at a faster rate surging high. It is one of the top crypto coins for 2025 to invest in, providing the opportunity to purchase tokens at a low cryptocurrency rate and reap the benefits. Click here to know more about Aureal One DLUME Financial Insights - USD Raised: \$3,260,472.8 / \$4,500,000 as of Feb 24, 2025 - Current Price: \$0.0013 - Next price increase: 15.4% - Listing Price: \$0.005 Aureal One Ecosystem & Features Aureal One is built on advanced blockchain technology tailored for the gaming and metaverse sectors. There are 1000 more games set to launch, which is supported by Zero-Knowledge Rollups (ZK-Rollups). Furthermore, it supports thousands of transactions per second (TPS), efficiently handling the demands of complex gaming interactions. It is designed specifically for gaming applications, enabling rich, dynamic, and immersive environments within the metaverse. 2. DexBoss (DEBO)- Revolutionizing The DeFi Space DexBoss is a stable long-term growth project in the crypto market that aims to be the next big crypto coin. The adoption of the DEBO presale coin is growing rapidly as more investors learn about the potential of this project, with 78% of the presale raised completed. The platform offers a simplified transition between fiat and crypto, offering seamless on- and off-ramp solutions. With support from over 10 trusted partners, DexBoss allows users to earn passive income through liquidity farming and staking. DEBO Key Statistics - USD Raised: \$591,604.44 out of \$750,000 - Presale Progress: 79% - Current Price: \$0.011 - Listing Price: \$0.0505 DexBoss Ecosystem DexBoss offers automated risk management tools that operate 24/7, ensuring users stay protected while trading. With access to over 2,000 cryptocurrencies, DexBoss is a low risk crypto with high ROI, designed to increase users' profit while making sure the transaction and assets stay safe. It expands strategies with options, futures, and leveraged trading for maximum profit potential. 3. yPredict (YPRED): AI System For Traders To Navigate yPredict improves crypto trading by using artificial intelligence for better decision-making. Traders get predictive insights to identify trends and profitable opportunities. The technology processes vast market data, helping traders navigate crypto volatility with greater accuracy. This system supports users by providing real-time market assessments, ensuring more informed strategies to get the best crypto to invest in the ever-changing crypto environment. YPRED Key Finance Insights - Token Sold: 80,000,000 - Raised: \$6,507,551 - Price: \$0.004546 yPredict Ecosystem It works as an AI-powered forecasting model for informed decision-making, emerging as the next big crypto coin. It provides predictive chart analysis to forecast future price trends with customizable technical analysis tools for precise market insights. It helps to detect candlestick formations and key market structures. 4. Polkadot (DOT): A Secure and Decentralized Blockchain Network Polkadot is more than just another best crypto to invest in. It helps to identify the decentralized protocol that fosters secure communication like Ethereum and Bitcoin. At the heart of this ambitious project lies the DOT token, which fuels the network's operations and governance. DOT Key Financial Insights - Current Price: \$4.73 - Market Cap: \$7,356,062,899.85 - Circulating Supply: 1,551,866,581.46 DOT Polkadot Ecosystem Polkadot Chain has access to \$6 billion in economic security, and its landscape allows its users to enjoy unmatched security, scalability, and interoperability. It allows rapid tier 1 blockchains by executing transactions on the network and achieving shared finality with 6-second block timings. Easily transfer tokens within the Polkadot ecosystem and to external chains like Ethereum. Final Words: Aureal One- The Best Crypto to Invest in Before The Next Price Increase With Bitcoin and Ethereum facing short-term challenges in maintaining their market momentum, investors are now exploring opportunities in the crypto space. These fluctuations have opened the door for emerging projects that offer innovative solutions and high-growth potential. Among them, Aureal One (DLUME) stands out with its focus on metaverse gaming, delivering high-speed transactions and low fees. Alongside Aureal One, other promising projects like DexBoss (DEBO), yPredict (YPRED), and Polkadot (DOT) are also capturing investor attention. These coins offer not only stability in an unpredictable market but also the potential for substantial gains. To stay ahead of the curve, investors are suggested to conduct thorough research for better prices among these top crypto coins. Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bullish ETH price prediction for 2025 is \$3,113.88 to \$4089.81. - Ethereum (ETH) price might reach \$6000 soon. - Bearish ETH price prediction for 2025 is \$1,911.70. In this Ethereum (ETH) price prediction 2025, 2026-2030, we will analyze the price patterns of ETH by using accurate trader-

friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | ETHEREUM (ETH) PRICE PREDICTION 2025 | | | ETHEREUM (ETH) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Ethereum (ETH) Current Market Status | Current Price | \$2,503.21 | 24  Hour Price Change | 7.66% Down/td> | | 24  Hour Trading Volume | \$31.06B | | Market Cap | \$301.65B | | Circulating Supply | 120.57M ETH | All  Time High | \$4891.70 (On Nov 16, 2021) | | All  Time Low | \$0.4209(On Oct 22, 2015) | What is Ethereum (ETH) | TICKER | ETH | | BLOCKCHAIN | Ethereum | | CATEGORY | ERC-20 token | | LAUNCHED ON | July 2015 | | UTILITIES | Governance, Fast Transactions, gas fees & rewards | Ethereum (ETH), known as Ether, is the native cryptocurrency of Ethereum. Ethereum is an open-source blockchain platform that revolutionized the blockchain and DeFi sector by the introduction of smart contracts. This second-generation blockchain was launched in 2015. Its native crypto coin, ether (ETH) was launched through an initial coin offering (ICO) in August 2014. The entire Ethereum network is fueled by Ether (ETH). The blueprint of the Ethereum network was first released in its whitepaper in 2013 by Ethereum Co-founder Vitalik Buterin. Since its launch, the blockchain-based software platform functions as a potential launchpad for several other crypto tokens, DeFi protocols, and numerous decentralized applications (dApps). Thus, Ethereum is regarded as the world computer. The smart contracts are coded programs that execute autonomously with pre-defined conditions on Ethereum. These smart contracts are deployed and executed via the Ethereum Vending Machine (EVM). Ethereum has successfully transitioned to Proof-of-Stake (PoS) with The Merge completed on September 15, 2022. Originally built on the energy-intensive Proof-of-Work (PoW) system, Ethereum developers began preparing for this shift in 2020. However, the PoS upgrade reduces Ethereums energy consumption, as validators now stake ETH instead of mining. Additionally, this transition has turned Ether from an inflationary asset into a deflationary one, with reduced new ETH supply and transaction fee burns. Ethereum 24H Technicals (Source: TradingView) Ethereum (ETH) Price Prediction 2025 Ethereum (ETH) ranks 2nd on CoinMarketCap in terms of its market capitalization. The overview of the Ethereum price prediction for 2025 is explained below with a daily time frame. ETH/USDT Horizontal Channel Pattern (Source: TradingView) In the above chart, Ethereum (ETH) laid out a Descending Broadening Wedge, The descending broadening wedge occurs when price moves within two diverging trendlines, creating a broadening shape. This indicates increased market volatility and suggests a potential trend reversal. As price fluctuates, it forms lower highs and higher lows, signaling a shift in market sentiment. Investors should watch for a breakout, as moving past the resistance level could signal a bullish reversal, despite the patterns bearish appearance. Proper timing and caution are key for capturing potential upside. At the time of analysis, the price of Ethereum (ETH) was recorded at \$2,503.21. If the pattern trend continues, then the price of ETH might reach the resistance levels of \$2644.65, \$2853.56, and \$3347.07. If the trend reverses, then the price of ETH may fall to the support of \$2463.85. Ethereum (ETH) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Ethereum (ETH) in 2025. ETH/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Ethereum (ETH) for 2025. | Resistance Level 1 | \$3,113.88 | | Resistance Level 2 | \$4,089.81 | | Support Level 1 | \$2,489.05 | | Support Level 2 | \$1,911.70 | ETH Resistance & Support Levels Ethereum (ETH) Price Prediction 2025  RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Bitcoin (ETH) are shown in the chart below. ETH/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Ethereum (ETH) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$2993.89Price = \$2503.11 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change;Analyzing oversold & overbought conditions | 36.60 <30 = Oversold 50-70 = Neutral>70 = Overbought | Nearly Oversold | | Relative Volume (RVOL) | Assets trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Ethereum (ETH) Price Prediction 2025  ADX, RVI In the below chart, we analyze the strength and volatility of Ethereum (ETH) using the following technical analysis indicators  Average Directional Index (ADX) and Relative Volatility Index (RVI). ETH/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Ethereum (ETH). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 37.86 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 38.13 <50 = Low >50 = High | Low volatility | Comparison of ETH with BTC Let us now compare the price movements of Ethereum (ETH) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of ETH is similar to that of BTC. That is, when the price of BTC increases or decreases, the price of ETH also increases or decreases respectively. Ethereum (ETH) Price Prediction 2026, 2027  2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Ethereum (ETH) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Ethereum (ETH) Price Prediction 2026 | \$7,877 | \$1,400 | | Ethereum (ETH) Price Prediction 2027 | \$8,123 | \$1,350 | | Ethereum (ETH) Price Prediction 2028 | \$8,500 | \$1,300 | | Ethereum (ETH) Price Prediction 2029 | \$8,768 | \$1,250 | | Ethereum (ETH) Price Prediction 2030 | \$9,156 | \$1,200 | Conclusion If Ethereum (ETH) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Ethereum (ETH) price prediction for 2025 is \$4,089.81. Comparatively, if unfavorable sentiment is triggered, the bearish Ethereum (ETH) price prediction for 2025 is \$1,911.70. If the market momentum and investors sentiment positively elevate, then Ethereum (ETH) might hit \$6000. Furthermore, with future upgrades and advancements in the Ethereum ecosystem, ETH might surpass its current all-time high (ATH) of \$4891.70. and mark its new ATH. FAQ 1. What is Ethereum (ETH)? Ethereum or Ether (ETH) is the native cryptocurrency of Ethereum. Ethereum is a second-generation blockchain platform that launched in 2015. Ether (ETH) was launched in 2014. 2. Where can you buy Ethereum (ETH)? Traders can trade Ethereum (ETH) on the following cryptocurrency exchanges such as Binance, WEEX, OKX, LBank, and Bybit. 3. Will Ethereum

(ETH) record a new ATH soon? With the ongoing developments and upgrades within the Ethereum platform, Ethereum (ETH) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Ethereum (ETH)? Ethereum (ETH) hit its current all-time high (ATH) of \$4,891.70 on November 16, 2021. 5. What is the lowest price of Ethereum (ETH)? According to CoinMarketCap, ETH hit its all-time low (ATL) of \$0.4209 on October 22, 2015. 6. Will Ethereum (ETH) hit \$6000? If Ethereum (ETH) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$6000 soon. 7. What will be the Ethereum (ETH) price by 2026? Ethereum (ETH) price might reach \$7,877 by 2026. 8. What will be the Ethereum (ETH) price by 2027? Ethereum (ETH) price might reach \$8,123 by 2027. 9. What will be the Ethereum (ETH) price by 2028? Ethereum (ETH) price might reach \$8,500 by 2028. 10. What will be the Ethereum (ETH) price by 2029? Ethereum (ETH) price might reach \$8,768 by 2029. Top Crypto Predictions PancakeSwap (CAKE) Price Prediction Disclaimer: The opinion expressed in this article is solely the author's. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing.

Cryptocurrency is a rapidly evolving space, and if you're looking to ride the wave of future innovation and huge gains, you're likely already eyeing the next big project. In this article, it'll be diving into three standout cryptocurrencies that have the potential to deliver massive returns—Qubetics, Near Protocol, and Polygon. Let's take a closer look at how each of these coins is structured, what they aim to solve, and why they could be the best crypto for huge gains. Whether you're a seasoned investor or a newcomer to the crypto scene, understanding what makes these coins tick is crucial. In particular, be focusing on Qubetics (\$TICS) and its ongoing presale, which has already made waves in the crypto community. With over 489 million tokens sold and more than \$14 million raised, Qubetics is a hot topic. But how does it compare to other projects like Near Protocol and Polygon? Let's find out. In this article, let's explore Qubetics' potential to solve real-world problems that its predecessors—Near and Polygon—haven't fully addressed. The future of blockchain and digital finance is looking brighter with Qubetics, and explain why it's uniquely positioned to lead the charge. Qubetics: The Future of Interoperability and Blockchain Innovation Let's kick things off with the rising star in the crypto space—Qubetics. If you're hunting for the best crypto for huge gains, then Qubetics (\$TICS) is one project that's grabbing attention like no other. As of now, Qubetics is in its 23rd presale stage, and it has already sold over 489 million tokens to more than 21,200 holders, raising a whopping \$14 million. Qubetics is designed to be a powerful, scalable, and interoperable platform that facilitates easy transactions across different blockchain ecosystems. One of the major pain points of blockchain technology has always been the lack of smooth interoperability between chains, which leads to higher costs, inefficiency, and complexity. But Qubetics aims to change that. The platform is built to offer seamless cross-chain interactions, meaning businesses, professionals, and individual users will have an easier time exchanging value between different networks. What does this mean for you? Well, it means that businesses can transact faster and with fewer fees, professionals can handle multi-chain investments effortlessly, and individuals will have more access to various decentralized applications (dApps) across the blockchain space. For anyone looking for the best crypto for huge gains, the promise of Qubetics' interoperability cannot be overstated—it's solving real issues with practical solutions. Qubetics' ongoing presale is also a huge draw for investors, with the token priced at \$0.0888 per token. Analysts predict that by the end of the crypto presale, the token could rise to \$0.25, giving early investors an ROI of 181.52%. But the potential for massive gains doesn't stop there. After the presale ends, \$TICS could soar to \$1, offering a jaw-dropping 1026% ROI. The predictions don't end here either; once Qubetics' mainnet launches, experts are forecasting \$TICS could hit anywhere between \$5 and \$15—leading to returns of 5530% or even 16,791%. The real question is—are you going to miss out on the chance to get in while the presale is still live? Qubetics offers a unique opportunity to get in early on a project that could reshape the future of blockchain. Near Protocol: Speed and Scalability Next, let's talk about Near Protocol—a high-performance blockchain designed for scalability and speed. Near Protocol's architecture is built to support decentralized applications and smart contracts, and it promises to tackle some of the main pain points that other platforms like Ethereum struggle with. Near's focus on scalability and speed makes it a go-to choice for developers who want to build dApps without facing network congestion or high gas fees. One of the major selling points of Near Protocol is its ability to scale efficiently without compromising on performance. Unlike Ethereum, which suffers from slow transaction speeds and high gas fees during peak times, Near Protocol uses a sharding mechanism to break the network into smaller, more manageable pieces. This allows the blockchain to process many transactions at once, improving the overall throughput. In terms of user experience, Near Protocol offers one of the most user-friendly platforms out there. It's easy to use, especially for newcomers, and features a simple, intuitive wallet that makes interacting with the blockchain a breeze. With its fast transaction speeds and low fees, Near Protocol is a strong contender for anyone looking for the best crypto for huge gains. It's especially appealing for developers who want to build decentralized applications (dApps) with scalability in mind. However, while Near Protocol has made strides in scalability and user-friendliness, it still faces competition from other players like Qubetics and Polygon, which are also focused on similar solutions, albeit with different approaches. But Near's focus on decentralization and its unique sharding technique make it a compelling option for those looking to get into a promising blockchain project. Polygon: Ethereum's Layer 2 Scaling Solution Last but not least, let's discuss Polygon—another heavyweight in the crypto space, especially when it comes to Ethereum scaling. Polygon is a Layer 2 scaling solution built on top of Ethereum, and it aims to solve some of Ethereum's most significant issues, like high transaction fees and slow processing times. By offering a sidechain solution to Ethereum, Polygon allows for faster, cheaper transactions while still leveraging Ethereum's robust security model. Polygon's ecosystem is broad, with over 2,000 dApps running on the platform. Its utility in the DeFi space is significant, and its integration with Ethereum makes it an attractive option for developers who want to harness Ethereum's power without

facing the crippling fees associated with Ethereum's mainnet. What makes Polygon stand out as one of the best cryptos for huge gains is its broad adoption and deep integration within the Ethereum ecosystem. Polygon makes it easier for users and developers to enjoy the benefits of Ethereum without the drawbacks of congestion and high fees. If you're looking for a crypto that solves a specific problem, Polygon could be the way to go—especially if you're already invested in the Ethereum ecosystem. While Polygon has made a name for itself, it still competes with newer projects like Qubetics, which may offer more advanced solutions in terms of interoperability. But Polygon's proven track record and huge developer community give it a strong position in the crypto market.

The Power of Interoperability: Why It's the Future of Crypto So, why is interoperability such a game-changer in the crypto world? Interoperability is the ability for different blockchain networks to communicate and work together seamlessly. In the past, this has been a significant challenge in the blockchain space, as different chains were built using different protocols, making cross-chain transactions slow, expensive, and complicated. Qubetics, however, is leading the charge by offering a platform that can easily interact with different blockchain networks. This means that users can transact, trade, and build on multiple chains without facing the barriers typically found in multi-chain ecosystems. For businesses, this opens up a whole new world of opportunities, as they can now reach customers across multiple chains with ease. Qubetics' focus on interoperability not only makes it easier for businesses to thrive but also for individual users and developers. Imagine being able to move assets from one chain to another in a matter of seconds, all while avoiding high fees and network congestion. This is the kind of future Qubetics is building—a truly interoperable ecosystem where the best crypto for huge gains can be found.

Conclusion: Why Qubetics Could Be Your Best Bet for Huge Gains In conclusion, if you're hunting for the best crypto for huge gains, Qubetics is a project you don't want to miss. While Near Protocol and Polygon offer their own unique benefits—speed, scalability, and Ethereum integration—Qubetics is positioning itself as a leader in blockchain interoperability. With its ongoing presale and the massive potential for growth, \$TICS could offer some seriously impressive returns. Whether you're looking for scalability, user-friendly platforms, or seamless interoperability, Qubetics is shaping the future of blockchain. As its presale continues to draw in investors and developers alike, it's clear that Qubetics is one project to watch in 2025 and beyond. So, what are you waiting for? The presale is still active, and there's never been a better time to get involved. Grab your \$TICS tokens while you can! For More Information: Qubetics: <https://qubetics.com> Telegram: <https://t.me/qubetics> Twitter: <https://x.com/qubetics>

FAQs What makes Qubetics different from other blockchain projects? Qubetics focuses on interoperability, allowing seamless transactions across different blockchain ecosystems, making it easier for businesses, professionals, and individuals. Is Qubetics a good investment for huge gains? With its strong presale performance and analysts predicting huge ROI, Qubetics could be one of the best cryptos for huge gains in 2025. How does Near Protocol compare to Qubetics? Near Protocol offers scalability and speed, but Qubetics excels in cross-chain interoperability, a key factor for future blockchain growth. What is Polygon's role in Ethereum's ecosystem? Polygon acts as a Layer 2 solution for Ethereum, offering faster and cheaper transactions while leveraging Ethereum's security features. Why is interoperability important in crypto? Interoperability allows different blockchain networks to work together, which reduces transaction costs and makes it easier for users to interact across various platforms.

Are you a market participant looking to invest in Ethereum? Is Ethereum a good investment at the moment? Last week, Ethereum's price movement experienced an upward trajectory. However, at the start of this week on Monday, Ethereum's price declined and is currently trading at \$2701. What will be its next move? Could it trigger a bearish momentum? Let's briefly analyze the price movement of Ethereum on the daily chart for better understanding.

Ethereum Price Analysis – 24 Hours Outlook As illustrated in Chart 1, on the trading day of February 23, Ethereum's price movement exhibited a notable price action. In the early trading session, ETH began with a sharp price decline. At 04:25 UTC, a Golden Cross on MACD signaled a possible uptrend. As expected, at 04:35 UTC, ETH found support at \$2748, began to move on the upside, breached a breakout at 05:00 UTC, and reached \$2831.17. Conversely, ETH encountered an RSI overbought situation, indicating a possible trend reversal. Likely, at 07:55 UTC, ETH price began to experience a downtrend and dropped to \$2773.45. A Death Cross on MACD at 08:10 UTC reaffirmed this downtime. At 15:50, ETH found support at \$2773.45, experienced an uptrend, and reached the day's top price of \$2857.73. A Golden Cross on MACD at 16:10 UTC asserted this uptrend. At 23:20, ETH encountered a short-term downfall and closed at \$2830. In the early trading session on February 24, the ETH price began with a short rise in price. But at 00:10 UTC, a Death Cross on MACD signaled a price decline. As expected, at 00:20 UTC, ETH began to fall, broke the support at \$2773.43, breached a breakout, and experienced a sharp fall. At 03:55, ETH broke another support at \$2723 and breached a breakout, signaling a further price decline.

Ethereum's Downtime & Best Crypto Coin to Invest in 2025 Based on the Ethereum price analysis, the ETH price movement is projecting a sharp price decline. Hence, investors are looking for high potential crypto projects that have long-term utility, substantial growth potential, and exclusive rewards. Crypto presales are a good start when seeking such prospects. Countless crypto presale projects are being encountered in the crypto world. Among them, DexBoss, Aural One, The Last Dwarfs, and Qubetics are the top performers in the market. What makes them stand out projects? Let's dive in to explore them in depth.

DexBoss (DEBO) Looking for the best crypto coin to invest in today to yield remarkable gains in the future? Don't miss DexBoss. DexBoss is one of the decentralized finance platforms built to rule the DeFi world. This new crypto presale provides a distinct platform that links traditional finance with decentralized finance. From novice to professional traders, every user can experience intuitive trading with diverse trading strategies. Click here to know more about DexBoss

DEBO's Economic Expansion - Current Presale Price: \$0.011 - Expected Listing Price: \$0.0505 - Total Fund Raised: \$591,602.7 / \$750,000 (79% of its target)

Aural One (DLUME) Aural One is one of the high potential crypto presale projects that every investor should add to their crypto portfolio. This emerging crypto

platform focused on incorporating gaming and metaverse in its blockchain. Its Zero-Knowledge Rollups technology offers seamless thousands of transactions per second instantly with near-zero gas fees. This future-proof network aims to build two key projects, Darklume (own, build, and trade digital assets) and Clash of Tiles (conquer, deploy, or stock cryptocurrencies on the virtual tiles to earn DLUME). DLUME's Economic Expansion - Current Presale Price: \$0.0013 - Expected Listing Price: \$0.005 (323.08% rise from current price) - Total Fund Raised: \$3,259,900.8 / \$4,500,000 The Last Dwarfs (TLD) The Last Dwarfs is a blockchain-based gaming ecosystem designed to shape the future of the gaming world. This new emerging platform offers a Play-to-Invest model that turns the gameplay into an investment hub. Through its gamified launchpad, users can acquire TLD tokens, stake them, and earn huge rewards. TLD's Economic Expansion - Current Presale Price: \$0.0085 - Total Fund Raised: \$94,548.55 Qubetics (TICS) Qubetics is the first layer 1 web3 aggregated ecosystem that connects the leading blockchains, including Ethereum, Bitcoin, and more. This redefining platform aims to build a highly efficient, self-sustaining ecosystem to manage a large number of transactions effortlessly. TIC's Economic Expansion - Current Presale Price: \$0.088803 - Total Fund Raised: \$14,079,477.51 Final Thoughts Today's Ethereum price analysis shows that the ETH price movement is experiencing a deep fall. Hence, investors are hesitant to invest in ETH. Therefore, they are looking for the best crypto coin to invest in to earn high rewards in the future. Are you one of those investors? Then, DexBoss should be your perfect match. DexBoss is one of the best crypto presale projects that offers early access to its expensive blockchain at a low entry price. As crypto investment involves risks, we encourage readers to research and make informed decisions on this golden opportunity before the presale ends. The past few days have been exciting, not just for most top crypto coins. AI cryptos are the latest on investors' radars and at the forefront is IntelMarkets (INTL). This new altcoin combines AI and DeFi and is tipped for a 50x upswing this year. Given the above, it is a better bet than Ethereum (ETH) and Shiba Inu (SHIB). At \$0.091, it is more budget-friendly than the current Ethereum price. Meanwhile, it has plenty of room to run compared to the SHIB coin due to its small market size. IntelMarkets (INTL): Projected 50X Upswing After Tier-1 Exchange Listings IntelMarkets (INTL) is the latest on investors' radars for its huge growth prospects and bullish narrative. As a low-cap coin, its upside potential is staggering, edging out top altcoins characterized by large market caps and limited growth prospects. Further, its bullish narrative "a blend of DeFi and AI" makes it arguably the best altcoin to buy this year. It will combine AI technology with blockchain and DeFi "a trailblazer. Aiming to transform the \$36 billion global trading crypto market, it will be the first to integrate artificial intelligence across all levels. Its compatibility with the Solana and Ethereum blockchains is among its most distinguishing features. Set for adoption, it has been dubbed the best presale to invest in. Currently priced at \$0.091 in the tenth ICO stage, it offers a lower entry and is more budget-friendly than the Ethereum price. The over \$10.8 million raised in early funding highlights growing interest, tipped for a 50x upswing by experts and potentially outperforming the SHIB coin. Ethereum (ETH): Low Growth Prospects The Ethereum price hovers above \$2,700, gathering steam for a breakout above \$3,000. It nosedived over 15% on the monthly chart, reflecting current market conditions. However, technical indicators like the 20-VWMA and 9-HMA suggest the Ethereum price might be poised for a bounce. At the same time, experts are bullish, looking beyond short-term volatility. MisterX6934, a leading expert, targets a rally between \$10,000 and \$15,000 in the Ethereum price this year. Dezcoicy, also maintaining a bullish outlook, targets a short-term bounce between \$2,900 and \$3,160, followed by a breakout above \$3,600 and \$4,200. Despite this, savvy investors have been opting for new AI altcoins like IntelMarkets (INTL). For starters, it is more budget-friendly than the current Ethereum price. Further, it has higher growth prospects, making it more attractive "one of the best new cryptos to invest in. Shiba Inu (SHIB): 20% Downturn in the Past Month The SHIB coin changes hands at \$0.000015 "a good entry courtesy of recent downturns. Like the rest of the crypto market, it is down 5% on the weekly chart. Its performance in the past 30 days isn't any better: a 20% decline. On the bright side, the SHIB coin price is cheaper. Further, technical indicators like the MACD Level and 9-HMA suggest the SHIB coin might be primed for a rally. Moreover, bullish Shiba Inu (SHIB) price predictions have been flying. Buzzing with optimism, CW8900, a top analyst, has \$0.00004 as a short-term SHIB coin price target. This sentiment was echoed by SHIBMortal, predicting a breakout toward \$0.000048 and \$0.000070. Despite this, IntelMarkets might be a better bet considering its 50x upside potential. IntelMarkets (INTL): A More Compelling Bet Than Ethereum (ETH) and Shiba Inu (SHIB) The new AI coin IntelMarkets (INTL) is shaping up to be the next big thing. It is fundamentally solid, standing at the crossroads between AI and DeFi. Further, it is budget-friendly "more appealing than the current Ethereum price. Boasting higher growth prospects than the SHIB coin, it is a promising wave not to miss this year. For more information about IntelMarkets (INTL) visit the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. Ever wonder if the next big crypto breakthrough is just around the corner? Picture vibrant digital communities, high-energy trading floors, and investment opportunities that defy expectations. The meme coin revolution is evolving, and the market buzz is louder than ever. Today, the spotlight shines on the top cryptos to buy now: Arctic Pablo Coin (APC), Ethereum (ETH), and Polkadot (DOT). While ETH and DOT continue to innovate with their robust ecosystems and groundbreaking blockchain technology, APC is capturing attention with a presale that's setting new benchmarks. Stay tuned as these projects redefine what it means to invest in the digital age. Arctic Pablo Coin (APC) " The Trailblazer

Arctic Pablo Coin (APC) has quickly emerged as one of the top cryptos to buy now. APC is captivating the market with its innovative presale model, unique tokenomics, and community-first approach. At the current 11th phase at Blizzard Bay, APC is available at an ultra-low entry price of \$0.000063 per token. The project has raised over \$1.5 million, proving its strong market appeal and high investor confidence. Market analysts predict that as APC expands into new territories, its value could skyrocket. Imagine an investor who buys APC at \$0.000063 and eventually sells at \$0.08, potentially achieving a staggering 12,600% ROI. The secret behind APC's explosive potential lies in its robust staking rewards and innovative referral incentives. APC offers a phenomenal 66% staking return, ensuring that every token holder not only supports the network but also earns significant passive income. This high staking yield creates a self-reinforcing cycle: the more participants stake, the stronger and more secure the network becomes, driving demand and increasing the token's value. In addition, APC's referral program rewards community members who introduce new investors, multiplying the growth potential exponentially. Presale Highlights The presale details shine as a beacon for early adopters. With APC available at Blizzard Bay for \$0.000063, the stage is set for unprecedented growth. The presale is structured with a smart token burn mechanism that gradually reduces supply, ensuring scarcity as the project scales. Hypothetically, if an investor puts in \$500 now, they could receive millions of tokens, and when APC lists at \$0.08, that initial investment might transform into a sizeable sum—highlighting the potential for enormous gains. Every new phase and market expansion further fuels this momentum, making it essential for investors to secure their position now. The strategic mix of low entry pricing, robust staking rewards, and community-driven referral incentives positions APC as one of the top cryptos to buy now for those who want to ride the wave of innovative digital assets. APC's mission goes beyond mere financial gains. The project is dedicated to building a thriving, decentralized ecosystem that empowers its community through continuous innovation and transparent governance. The combination of cutting-edge tokenomics and an electrifying presale model has set APC apart from traditional investments, offering both excitement and solid long-term growth potential. With each passing day, APC's momentum increases as new investors join the movement and the project expands into new markets. Because of APC's revolutionary staking, referral incentives, and dynamic presale structure, it is a standout opportunity among the top cryptos to buy now. Ethereum (ETH) – The Backbone of Innovation Ethereum (ETH) continues to be one of the top cryptos to buy now, maintaining its position as a pioneering force in the blockchain space. ETH's robust ecosystem and smart contract capabilities have set it apart as the foundation for countless decentralized applications and innovations. Its development team is continually working to enhance scalability, security, and interoperability, ensuring that Ethereum remains at the forefront of the digital revolution. Recent upgrades have significantly improved Ethereum's network efficiency, paving the way for faster transactions and reduced fees. These advancements not only benefit developers and businesses but also enhance user experience, driving broader adoption. The Ethereum community, known for its creativity and technical expertise, is actively involved in shaping the platform's future, contributing to its long-term resilience and growth. With a vibrant community and strong institutional backing, Ethereum remains a critical asset for investors seeking stability combined with groundbreaking innovation. Investors regard Ethereum as a key pillar in any diversified crypto portfolio. Its strategic roadmap, which includes exciting projects in DeFi, NFTs, and beyond, reinforces its importance as one of the top cryptos to buy now. The continuous evolution of the Ethereum ecosystem is a testament to its enduring relevance in the ever-changing world of digital assets. Because of Ethereum's groundbreaking technology, robust development framework, and unwavering community support, it is a cornerstone of blockchain innovation and one of the top cryptos to buy now. Polkadot (DOT) – The Future of Interoperability Polkadot (DOT) is quickly emerging as one of the top cryptos to buy now, thanks to its unique focus on interoperability and multi-chain integration. DOT's architecture enables various blockchains to communicate and share information seamlessly, addressing one of the most critical challenges in the crypto industry. This capability not only enhances network efficiency but also opens up a myriad of opportunities for decentralized innovation across different ecosystems. The Polkadot ecosystem has been expanding rapidly, with new projects and collaborations continuously enriching its value proposition. DOT's governance model empowers token holders to influence key decisions, ensuring that the platform evolves in line with community interests and market demands. This democratic approach fosters a strong sense of ownership and engagement among investors, positioning DOT as a truly community-driven asset. Polkadot's vision of creating a connected blockchain universe sets it apart from many other projects. By facilitating seamless cross-chain communication, DOT not only enhances its utility but also strengthens the overall security and scalability of the network. Its innovative approach is attracting both seasoned investors and newcomers alike, solidifying its status as one of the top cryptos to buy now in a competitive market. Because of Polkadot's commitment to interoperability, its strong governance model, and the strategic partnerships it continues to forge make it an essential player among the top cryptos to buy now, offering immense potential for future growth. Conclusion Based on our research and market trends, the future looks incredibly promising for these top cryptos to buy now. APC's groundbreaking presale model, coupled with its robust staking rewards and referral incentives, sets it apart as a must-invest opportunity while ETH and DOT continue to drive innovation and network interoperability. The convergence of cutting-edge technology, vibrant communities, and strategic roadmaps marks a new era in digital asset investing. Seize this moment and secure your position in the crypto revolution. Join the APC Coin presale now and participate in the meme coin presale alongside ETH and DOT for an exciting journey ahead! For More Information: Arctic Pablo Coin: <https://www.arcticpablo.com/> Telegram: <https://t.me/ArcticPabloOfficial> Twitter: <https://x.com/arcticpabloHQ> FAQs 1. What makes APC stand out among the top cryptos to buy now? APC's innovative presale, high staking rewards, and effective referral incentives create an ecosystem designed for explosive growth and high ROI. 2. How does Ethereum maintain its position as a leading crypto? Ethereum's robust smart contract platform and continuous network upgrades ensure its ongoing innovation and widespread adoption in decentralized applications. 3. What is Polkadot's unique contribution to the crypto space? Polkadot enables

seamless interoperability between different blockchains, enhancing scalability and security across multiple networks. 4. Why is joining a presale important for early investors? Participating in a presale allows investors to secure tokens at an exceptionally low price, potentially leading to significant returns as the project grows. 5. How do community-driven features impact the success of these top cryptos to buy now? Strong community engagement fosters innovation, increases adoption, and drives the overall value of the project, ensuring sustainable long-term growth.

- Arthur Heyes suggests rolling back the Ethereum network to reverse the Bybit hack. - Community opposes the idea as it could impact the entire Ethereum ecosystem and its interlinked systems. The Bybit hack worth \$1.4 billion sent waves across the crypto industry. Hackers are coming up with the most advanced types of scams no matter how secure crypto exchanges are. To reverse the damage, Arthur Heyes suggested rolling back the Ethereum network to Vitalik Buterin on X. @VitalikButerin will you advocate to roll back the chain to help @Bybit_Official ? â€” Arthur Hayes (@CryptoHayes) February 21, 2025 Heyes even reminded the community of the 2016 DAO hack hardfork where Ethereum split into two chains â€” Ethereum Classic and Ethereum. He further stated, â€œMy own view as a mega ETH bag holder is ETH stopped being money in 2016 after the DAO hack hardfork. If the community wanted to do it again, I would support it because we already voted no on immutability in 2016, why not do it again?â€ Rolling back the Ethereum network involves bringing back the chain to its state before the hack happened. This also includes reversing all the activities and transitions that took place during or after the hack. While this is one way to reverse the damage, it could impact the entire ecosystem and disturbed its interlinked applications and networks. When the Ethereum DAO hack happened in 2016, the Ethereum community agreed to roll back the network and reversed \$60 million theft of ETH. As a result, the Ethereum chain hardforked into two chains â€” Ethereum Classic and Ethereum. Bybit Hack is Too Complicated to Roll Back Arthur Heyesâ€™ suggestion on rolling back Ethereum received mixed reactions from the community with most of them opposing the idea. One of the replies from the CEO of Satoshi Money highlighted that the DAO hack involves 4.5% of total supply back then but the Bybit hack includes only 0.4% of the total ETH market cap. He even asked why someone would roll back the entire chain for 0.4% of the market cap. Another reply explained what would happen if we consider the rollback philosophically. It would disturb bridged or swapped assets, stablecoins and tokenized RWAs will be unbacked, and L2s will be left in an unfixable state. The Ethereum ecosystem became much more intertwined and complex compared to the times of the DAO hack. So, it may not be possible to consider the idea of rolling back Ethereum. Vitalik Buterin is yet to reply to Arthur Heyesâ€™ suggestion. Highlighted Crypto News Today: Will the Bybit Hack Trigger Uncertainty in Ethereum Price Movement?

Not much seems to be going well for the crypto space since a lot of the top tokens including Ethereum (ETH) and Dogecoin (DOGE) have shown red price charts recently. In a span of a month, the DOGE price has gone down double-digits. The price of Ethereum has followed the same path. Nonetheless, some market experts like Cas AbbÃ© and CryptoGoos continue to be bullish on these altcoins. With many of the bigger coins struggling, a new contender in the crypto marketâ€”IntelMarkets (INTL)â€”is gaining momentum. Powered by artificial intelligence technology and an incredible 911% presale surge, it is quickly becoming the most talked-about altcoin of 2025. Some experts even foresee this phase ten presale star as the next potential 6x token this year. Early Buyers in IntelMarkets (INTL) Are Now 911% Richer While Dogecoin (DOGE) and Ethereum (ETH) are experiencing turbulence right now, IntelMarkets (INTL) is making headlines for good reasons. IntelMarkets has raised over \$10M so far and looks set to surpass the \$12M milestone by the end of this month. This shows the level of interest people have in this game-changing project. Notably, IntelMarkets will launch the very first AI-powered smart trading platform. On it, users will access features powered by AI tech that do not exist anywhere else. For instance, powerful self-learning trading robots will continuously improve their trading capabilities. Moreover, AI-driven trade signals will search different markets for good trades to make. All these features have made FOMO rise for this platform. The FOMO shift resulted in big token sales, with over 40M INTL tokens sold in the ninth phase of the crypto ICO event. INTL is priced at \$0.091, an 911% increase from its original price of \$0.009. However, this altcoin price will rise to \$0.10 after the start of phase eleven. Also, everyone is grabbing INTL before a Tier-1 CEX lists it soon. This is expected to trigger a rally to \$0.11, making INTL the best crypto investment for fast returns. The Dogecoin (DOGE) Price May Skyrocket to \$1, Expert Predicts Dogecoin (DOGE) is one of the meme coin titans, but it has shown some volatility recently. CoinMarketCap shows that the DOGE price fell from around \$0.40 to nearly \$0.25 in the past month aloneâ€”over a 30% drop for Dogecoin in just a few short weeks. However, crypto analyst Cas AbbÃ© remains optimistic for Dogecoin (DOGE). According to his X post, this meme coin is now in a bullish falling channel similar to Q4 of 2023. This could result in a massive breakout to \$1 for the DOGE price. This Dogecoin price prediction has excited some traders, but many are still skeptical. Since the DOGE price has surged over 200% on the YTD chart, its highest upswings may have already passed. Therefore, many traders are sidestepping this meme coin for tokens like INTL. CryptoGoos: The Price of Ethereum (ETH) Could Soar to \$3,000 Like the DOGE price, Ethereum (ETH) also saw some red price charts. On the one-month chart, its value has fallen nearly 20%, as per CoinMarketCap. During that period, the price of Ethereum dropped from around \$3,300 to nearly \$2,700. But, the community is watching Ethereum (ETH) thanks to some bullish predictions from analysts like CryptoGoos. For instance, CryptoGoos made an X post saying that the price of Ethereum could reach \$3,000, as it is now seeing a bullish retest. Nevertheless, this tokenâ€™s high market cap could challenge this Ethereum price prediction. Notably, the Ethereum market cap now sits at around \$330B. This means the price of Ethereum will need a lot of new money to rise. But tokens like INTL will not face this issue. Can IntelMarkets (INTL) See Faster Price Gains Than Dogecoin (DOGE) and Ethereum (ETH)? IntelMarkets (INTL) will have a smaller market cap compared to Dogecoin (DOGE) and Ethereum (ETH), allowing for faster price growth. Moreover, it plans to take advantage of the growth of the AI market, which Statista has projected to be worth \$826B by 2030. Its novel approach to integrating AI technology and crypto trading could make its long-term growth potential great. For this

reason, experts predict that INTL could be the next 6x altcoin in 2025. For more information about IntelMarkets (INTL) visit the links below: - Presale: <https://intelmarkets.io/> - Telegram: <https://t.me/IntelMarketsOfficial> - Twitter: https://x.com/intel_markets Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

The crypto arena has seen some volatility, such as dips in Cardano (ADA) and Ethereum (ETH), as investors wait for the next big opportunity. For instance, the Cardano price fell by double-digits on the monthly chart. At the same time, the price of ETH also saw that same movement. However, market analysts like Sssebi and CryptoGoos have made bullish price predictions for these top altcoins. As these already-established projects try to regain their footing, one other altcoin is starting to make a name for itselfâ€”DTX Exchange (DTX). This project has given early buyers an 800% return. Given that the bonus stage of this presale star will end soon and a Tier-1 CEX listing will come, experts remain bullish. They foresee DTX potentially soaring by another 1,700% on the price charts before 2025 ends. DTX Exchange (DTX) Shocks Traders With an 800% Price Increase While Cardano (ADA) and Ethereum (ETH) are showing red price charts, DTX Exchange (DTX) is capturing the spotlight for a good reason. Early investors are already richer by 800%, and profits are expected to rise even further with the upcoming listing on a Tier-1 crypto exchange like Uniswap. Hype was already high for DTX Exchange, which recently launched its hybrid trading platform. On this platform, users access over 120K asset classes like gold, stocks, and crypto coins in one place. Additionally, transaction speeds as fast as 0.04 seconds and no sign-up KYC checks have attracted over 700K users to register so far. Those wanting to support this platform are now stocking up on its native token, DTX. Recently, CoinMarketCap listed this altcoin, opening the doors for millions of new traders to gravitate to it. Currently, DTX is worth only \$0.18 but this altcoin price will rise to \$0.20 after a major CEX listing soon. A lot of traders are in a rush to capitalize on the governance voting rights. Thus, DTX could be the one of the altcoins to watch this year. The Cardano (ADA) Price May Soar to \$0.90, Expert Claims Cardano (ADA) is one of the top 10 altcoins, but it has faced some volatility. CoinMarketCap shows that the Cardano price fell from around \$1 to nearly \$0.75 in the past 30 days, over a 25% price drop for this token. However, market expert Sssebi remains bullish for Cardano (ADA). According to his X post, this altcoin is poised for a pump if it holds the \$0.60 support level. He forecasts a potential Cardano price surge to \$0.90 soon. This Cardano price prediction has turned some heads, but many traders are looking at DTX more. The Cardano price has already surged over 20% on the YTD chart. Therefore, its highest upswings may have passed. CryptoGoos: The Price of Ethereum (ETH) Could Reach \$8,000 Ethereum (ETH) also saw some bleeding price charts like the Cardano price. For instance, the price of ETH saw nearly a 20% drop on the one-month chart. Its value moved from around \$3,400 to nearly \$2,700 during that time. The community is still watching Ethereum (ETH) thanks to some bullish statements from analysts like CryptoGoos. Recently, CryptoGoos made an X post saying that this altcoin has formed a double bottom pattern. He foresees the price of ETH soaring to \$8,000. Although this Ethereum price prediction is making some waves, traders are putting it on the back burner for tokens like DTX. This is because the price of ETH may face slower growth as its market cap sits at \$330B, which means it will need a lot of new money. What Gives DTX Exchange (DTX) the Edge Over Cardano (ADA) and Ethereum (ETH)? Cardano (ADA) and Ethereum (ETH) are experiencing ups and downs, but they could soon see some price rebounds. In this environment, DTX Exchange (DTX) is also setting itself up for massive growth. This project will have ties to many trillion-dollar markets, like the \$1.4T FX one, which could give it more stability in volatile waters as well as long-term growth potential. Its expansive ecosystem, which includes the Phoenix Wallet, may also attract countless traders. Many experts think that DTX could surge faster than both ADA and ETH as it will have a smaller market cap than them. Therefore, it will need less money for its value to rise. Because of this, experts foresee a potential 1,700% price increase for this altcoin in 2025. Find out more information about DTX Exchange (DTX) by visiting the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

The Ethereum price is once again a hot topic in the crypto sphere. As volatility decreases, analysts forecast a trendy move in the coming weeks. ETH is one of the most influential cryptocurrencies, and a trend shift could change the market sentiment. At the same time, a rising ERC-20 token, DTX Exchange (DTX), aims to revolutionize the global online sector, attracting attention from both retail and institutional investors. In the ongoing presale, DTX has raised over \$11.85 million. In this article, we break down and explain why Ethereumâ€™s trend shift could set DTX for a parabolic rally. Ethereum Price Prediction: Experts Project New Bull Leg Since the bull rally of 2021, the Ethereum price has been trading within a multi-year consolidation phase, but in between, it has created many strong trends. Because of its huge market cap, ETH has been a key measure for many investors. The Ethereum price is currently trading at \$2,729, with a 1.45% increase in the last 24 hours. The seven-day stats show flat momentum. It has successfully sustained above the \$2,500 level and is consolidating in an ascending triangle pattern. The pattern shows that Ethereum price volatility has decreased in the last few days, continuously reducing volume. Forecasts show that a range breakout above \$2,800 could propel it towards the first target of \$3,500, while if the momentum persists, ETH could reach the previous all-time high. The lower support at \$2,530 will guard the price from a downtrend. Important Ethereum Price Levels: Major Support Level â€” \$2,500 Major Resistance Level â€” \$3,100 Technical indicators are indicating a rising bullish momentum, as the MACD for ETH/USD is forming a bullish crossover, with the smaller moving average crossing above the larger one. Additionally, the Ethereum price Relative Strength Index (RSI) is currently at 43, suggesting a potential upward trend from the lower range of

the index. DTX Exchange: A Promising Opportunity For 2025 While the Ethereum price is experiencing ups and downs, the DTX Exchange is quickly making waves and is the next big opportunity in the cryptocurrency market. Based on the layer-1 VulcanX blockchain, the project introduces the first hybrid exchange to blend centralized and decentralized exchange models. This model offers innovative multi-asset solutions and high speed, with a capability of 200,000 transactions per second (TPS). The platform's major highlight is its unified combination of traditional assets and advanced blockchain technology. Through DTX, users can access various financial assets, including stocks, forex, crypto, ETFs, and NFTs. Using the VulcanX proprietary blockchain, DTX Exchange provides an ultra-light speed of 0.04 seconds, allowing traders to activate orders instantly. DTX Exchange has recently introduced many features dedicated to enhancing the overall trading experience. The DTX token holders can make a substantial passive income through the VIP Rebate Program, which allows them to earn as high as a 3% share of the exchange's fee revenue. Furthermore, the token holders can use the staking feature to get as high as 52% APY, the highest in the industry. DTX tokens were launched for \$0.02 each during the presale, and as a result of the high demand and quick scale, the price has risen to \$0.18 in the last remaining bonus round. According to experts, the price could grow 100 times in May after being listed on tier-1 exchanges like Binance, Coinbase, and Uniswap. The crypto market will see significant growth through the DTX Exchange, so potential investors should monitor this platform before its mainstream adoption. Find out more information about DTX Exchange (DTX) by visiting the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. - The Bybit hack has caused Ethereum price to drop and now trading around the \$2.7K range. - ETH's daily trading volume has surged by over 103%. - The market has witnessed \$120.44 million worth of Ethereum liquidations. The Bybit hack, now the largest crypto breach in history, has sent shockwaves through the market. As the stolen ETH's are moved and liquidated, Ethereum's price has tumbled by more than 3.30%, raising concerns about further volatility. The hacker drained roughly 401,000 ETH worth \$1.4 billion from Bybit's cold wallets. North Korea's Lazarus Group are speculated behind the hack, as per crypto investigator ZachXBt. It has emerged like a bitter pill to swallow for ETH while it has been battling to regain the uptrend. The altcoin has failed to gain traction, leaving ETH stuck in a consolidation phase for the last few weeks. In the early hours, the altcoin has broken the \$2,819 and \$2,832 resistance, hitting a high of \$2,842. Once the bearish shift unfolds, ETH has retested the \$2,616. As of this writing, the altcoin traded at \$2,708 with its daily trading volume reaching \$33.02 billion. Notably, the market has observed a liquidation of \$120.44 million worth of Ethereum. The on-chain data reveals that a whale has moved 20,000 ETH worth \$53.7 million to Bybit's cold wallet. Additionally, a 36,000 ETH valued at around \$96.5 million was transferred from Binance's hot wallet to Bybit's cold wallet. Will Ethereum Rally or Pull Back? The ETH/USDT trading pair appears to be weak after the liquidations following the Bybit hack. If it continues, Ethereum could test the immediate support at the \$2,580 range. Assuming the bulls failed to defend this level, the decline might continue to \$2,410 or even lower. Contrarily, after the recovery of Bybit hack, the emergence of the buying pressure could test the crucial resistance at \$2,763. If demand of Ethereum strengthens at this point, the bulls could push the price to rally above the \$3K threshold. The Moving Average Convergence Divergence line is stationed below the signal line infers the weakening momentum. If the MACD continues to move downward, it could signal further downside. A rebound may resume the uptrend. Besides, the Chaikin Money Flow (CMF) indicator, which assesses capital flow, is settled at -0.05 signaling mild selling pressure and money is flowing. Meanwhile, the daily trading volume of Ethereum has surged by over 103%. The Bull Bear Power (BBP) value at -21.73 indicates that bears have stronger control over the market. Moreover, the daily relative strength index (RSI) resting at 50.06 highlights Ethereum is neither bullish nor bearish, in a consolidation phase.

- Ethereum is currently trading around \$2,802, with immediate support at \$2,750 and resistance near \$2,850. - Ethereum ETFs saw mixed flows on February 20, 2025, with net outflows of \$13.1M. Ethereum is tightening in a narrow price band. The range of \$2,650 to \$2,750 has held firm for over two weeks. A decisive breakout is coming, but the direction remains uncertain. Technical analysis indicates a symmetrical triangle pattern on Ethereum's 4-hour chart, suggesting potential for an upward movement. A successful breakout could target the \$3,000 to \$3,100 range. Despite muted price action, smart money is accumulating. Ethereum gradually recovered as it traded around \$16 billion trading volume in 24 hours. Long-term hodler are utilizing this opportunity as a buy moment. The current Ethereum price set-up usually precedes a decisive move, as the \$2,820 level might be a catalyst for the next bull activity. Key Levels: Breakout or Breakdown? Ethereum faces strong resistance at \$2,800, a level that has repeatedly halted upward movement. If it breaks through, the next hurdle is the 200-day moving average at \$2,930. Clearing this level could propel ETH to \$3,055. Zooming in, the M30 supply zone has historically acted as a resistance area, leading to price rejections. This suggests that sellers are active in this region, potentially preventing upward movement. Conversely, the M15 demand zone around the \$2,600 level has shown strong buyer interest, providing support during price dips. This indicates that buyers are willing to enter the market at this price point, potentially preventing further declines. A bearish scenario forming as the BTC/Ethereum MVRV Momentum Oscillator is turning negative. By market history, this shift has always preceded sharp ETH corrections, as seen in May 2022 and September 2023. If ETH loses \$2,600, it may plummet to \$2,400 or lower. Technical signals are conflicting. The Relative Strength Index (RSI) is currently around 50, indicating neutral momentum. The Money Flow Index (MFI) is approximately 57, suggesting a slight leaning towards buying pressure. Also, institutional activity shows mixed signals with inflows and outflows throughout the week. US Ethereum ETFs recorded net outflows of \$13.1 million on February 20, 2025. This divergence
