

role in the future of DePIN (Decentralized Physical Infrastructure Networks), Tony Gâ€™s investment underscores his belief in DePIN as a major growth sector in Web3. His support will help accelerate Hivelloâ€™s expansion, enabling more users to seamlessly contribute to decentralized infrastructure while earning rewards. With his backing, Hivello is positioned to become a key player in the next generation of blockchain-powered compute networks. In addition, the \$HVLO token is a core component of Hivelloâ€™s ecosystem, designed to incentivize users to contribute compute, storage, and networking resources to DePIN protocols. With listings on Gate.io and MEXC, two of the industryâ€™s top centralized exchanges (CEXs), and Raydium, the largest decentralized exchange (DEX) on Solana, Hivello is ensuring greater liquidity, accessibility, and trading flexibility for a global user base. By offering both CEX and DEX options, more users can conveniently trade \$HVLO and participate in the expanding DePIN economy. For more details on exchange listings, token utilities, and access to staking, visit our token page. â€œHivello is tackling one of the biggest challenges in DePINâ€”bridging complex infrastructure with everyday users,â€ said Tony G. â€œTheir platform makes it incredibly easy for anyone to participate in and benefit from the decentralized economy. I see huge potential in their approach and am excited to support their journey.â€ â€œTony Gâ€™s investment is a strong validation of Hivelloâ€™s vision to simplify and scale decentralized physical infrastructure networks,â€ said Domenic Carosa, Co-Founder of Hivello. â€œHis deep expertise in blockchain and infrastructure scaling, combined with his ability to back high-growth projects, will help accelerate our mission to make DePIN accessible to millions of users worldwide.â€ About Hivello Hivello is an aggregator of DePIN projects that allows any user to participate in a variety of DePIN networks with just a few clicks. This eliminates the technical hurdles that many users face when trying to join these networks, and allows users to earn passive income by mobilizing their idle computers. We aim to create a simple app that allows users to contribute their computer resources and earn passive income, with no technical knowledge required. Itâ€™s as easy as downloading, installing, and running nodes, making complex technologies accessible and beneficial to all. The \$HVLO token will be issued by the Swiss-based HVLO Association under license from Hivello Holdings. The world of cryptocurrency has exploded into the global spotlight over the last few years. From the towering success stories of Bitcoin and Ethereum to the meteoric rise of newer tokens, the space is full of excitementâ€”and risk. But, letâ€™s be real, youâ€™re here for one thing: the best cryptos to invest in today for exponential return potential. And weâ€™ve got just the right picks. In this article, weâ€™ll explore three rising starsâ€”Qubetics (\$TICS), Immutable X, and Artificial Super Intelligence Allianceâ€”each offering something unique to the crypto market. While Immutable X focuses on solving scalability issues for NFTs, Artificial Super Intelligence Alliance is tackling the future of decentralized AI, and Qubetics has set the stage to be a game-changer in multi-chain wallets. But hereâ€™s the twistâ€”Qubetics isnâ€™t just another token. Itâ€™s a next-gen platform that solves many problems previous crypto projects failed to address. So, if youâ€™re wondering where you should park your cash for the best cryptos to invest in today for exponential return potential, youâ€™ve come to the right place. Now, letâ€™s break down each of these cryptos separately, starting with Qubetics. Buckle up!â€”this is where the future of crypto gets interesting. Qubetics: Revolutionizing the Wallet Experience with a Non-Custodial Multi-Chain Solution Qubetics isnâ€™t just a cryptocurrency; itâ€™s a full-fledged ecosystem with one goal: creating the best cryptos to invest in today for exponential return potential by addressing real-world problems in blockchain and digital finance. One of the biggest issues faced by crypto enthusiasts is managing different assets across various platforms, especially when dealing with non-custodial wallets and multi-chain operations. Enter Qubetics. A Game-Changing Multi-Chain Wallet Qubetics has partnered with SWFT Blockchain to deliver a state-of-the-art non-custodial multi-chain wallet that allows users to store and manage their tokens with ease. You donâ€™t have to worry about trusting a third party with your keys, as it gives users full control over their funds. This is crucial for anyone serious about privacy and security. What makes this wallet even more exciting? It supports a wide variety of assets, including Ethereum-based tokens, Binance Smart Chain assets, and beyond. So whether youâ€™re holding Bitcoin, Ethereum, or altcoins like Solana or Avalanche, Qubeticsâ€™ wallet is equipped to handle it all. And, given its seamless cross-chain functionality, you can make transactions between different blockchains faster and more efficiently than ever before. A Strategic Partnership with 1inch To level up its offerings, Qubetics has also integrated 1inch, the world-renowned DeFi aggregator, into its ecosystem. This collaboration ensures that Qubetics users will have access to some of the best rates and liquidity on the market. Whether youâ€™re swapping tokens, providing liquidity, or engaging in yield farming, 1inchâ€™s powerful algorithms make sure you get the most out of every trade. As a result, Qubetics isnâ€™t just a walletâ€”itâ€™s a powerful trading platform that puts the entire DeFi space at your fingertips. Investors can expect lower slippage and better price execution across decentralized exchanges (DEXs), all thanks to this groundbreaking partnership. A Strong Start with a Thriving Presale Letâ€™s talk numbers for a second. The Qubetics presale is already in its 21st stage and has raised an impressive \$12.6 million so far. Over 19,600 holders have already secured their share of \$TICS tokens, and the presale price is currently \$0.0733 per token. Analysts are bullish on the token, predicting an ROI of up to 6712% when the mainnet launches. And while weâ€™re not throwing around wild price predictions here, itâ€™s clear that Qubetics is on track to disrupt the blockchain and crypto ecosystem in a big way. Immutable X: Leading the Charge in NFT Scalability When it comes to the best cryptos to invest in today for exponential return potential, Immutable X deserves a spot on any investorâ€™s radar. Immutable X offers a scalability solution for NFTs (non-fungible tokens) without compromising on security or decentralization. Letâ€™s dive into how Immutable X is changing the NFT space and why itâ€™s generating so much buzz. NFTs have seen an explosive rise in popularity, but one problem thatâ€™s plagued this market from the beginning is scalability. Ethereum, the dominant blockchain for NFTs, has suffered from high gas fees and network congestion. Immutable X solves this problem with a Layer-2 solution built on the Ethereum network. It uses zero-knowledge-rollups to bundle multiple transactions into a single proof, drastically reducing fees and increasing throughput. As a result, Immutable X offers gas-free transactions and near-instant finality, making it the ideal platform for NFT creators and traders. Plus, itâ€™s fully decentralized, meaning users donâ€™t have to worry about giving up control over their assets. While Immutable X is primarily known for its impact on NFTs, the technology behind it has the potential to revolutionize other sectors as well. By focusing on scalable solutions, Immutable X could support decentralized finance (DeFi) applications, gaming economies, and other use cases that require high throughput. This makes it one of the best cryptos to invest in today for exponential return potentialâ€”especially if youâ€™re looking for long-term growth in the crypto space. Artificial Super Intelligence Alliance: The Future of Decentralized AI Artificial Super Intelligence Alliance (ASIA) is another contender that is positioning itself as one of the best cryptos to invest in today for exponential return potential. ASIA is tackling a completely different frontierâ€”the fusion of AI and blockchain technology. By decentralizing AI, ASIA aims to give users control over their data while enabling smart systems to perform complex tasks efficiently and securely. AI has immense potential, but the vast majority of AI solutions are controlled by large corporations. With ASIAâ€™s decentralized model, anyone can access AI tools, contribute to their development, and own the outcomes. This democratization of AI can have a profound impact on industries ranging from healthcare to finance to entertainment. By creating an open and secure network for AI, ASIA is ensuring that no single entity holds all the power in this space. Itâ€™s a bold vision that could pave the way for a more equitable AI landscape and one that could provide enormous upside for investors as well. Conclusion: After exploring Qubetics, Immutable X, and ASIA, itâ€™s clear that each of these projects brings something innovative to the table. However, if youâ€™re looking for the best cryptos to invest in today for exponential return potential, Qubetics stands out as the top choice. Its multi-chain wallet, strategic partnerships with 1inch and SWFT Blockchain, and innovative approach to decentralized finance have set the stage for incredible growth. If youâ€™re serious about securing your place in the future of digital finance, Qubetics offers an opportunity that you wonâ€™t want to miss. The presale is still ongoing, and with each passing stage, more people are jumping on board. Donâ€™t wait too longâ€”get in on the action now. For More Information: - Qubetics: <https://qubetics.com> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> FAQs: Why is Qubetics considered one of the best cryptos to invest in today for exponential return potential? Qubetics offers a non-custodial multi-chain wallet and powerful partnerships with SWFT Blockchain and 1inch, positioning it for exponential growth. How does Immutable X solve scalability issues for NFTs? Immutable X uses Layer-2 technology and zero-knowledge-rollups to enable gas-free transactions and high throughput on Ethereum. What makes Artificial Super Intelligence Alliance unique in the crypto space? ASIA is decentralizing AI, giving users control over their data and enabling a more equitable AI ecosystem for industries like healthcare and finance. What is the current presale status of Qubetics? Qubetics is in its 21st presale stage, having raised over \$12.6 million with more than 19,600 holders and a token price of \$0.0733. Is Qubetics a good long-term investment? Given its unique wallet solution and strong partnerships, Qubetics is poised for long-term success and could deliver significant returns. - Hackers took over Zach Witkoffâ€™s X account to shill a fake Barron Trump-themed memecoin. - The \$BARRON token surged to \$73M before crashing 99%, sparking fresh concerns about crypto scams. Zach Witkoff, co-founder of Donald Trump-linked crypto project World Liberty Financial, fell victim to a cyberattack when hackers hijacked his X account to promote a fraudulent Barron Trump-themed memecoin, \$BARRON. The scam coin \$BARRON triggered a speculative frenzy, sending the tokenâ€™s market cap soaring to \$73 million before it crashed by 98% within minutes. In a deleted tweet, the hackers sparked public interest in the fake memecoin linked to Trumpâ€™s youngest son, Barron, claiming, â€œTrump should confirm it soon.â€ Investors quickly jumped in and invested heavily in the unverified coin. However, World Liberty Financial, a Decentralized Finance project launched in October 2024, quickly distanced itself from the scam. The company took to their X account to clarify the incident. â€œZach Witkoffâ€™s account was compromised, and a fake Barron meme was posted. Please do not engage. We are resolving the issue ASAP,â€ the post said. Despite the warning, the coinâ€™s meteoric rise and subsequent collapse left many retail investors devastated, highlighting ongoing vulnerabilities in the memecoin sector. Trump-Themed Memecoin Scams Gain Momentum The \$BARRON scam incident is not the first Trump-related crypto controversy. In January, Ivanka Trump, daughter of President Trump publicly disavowed a memecoin bearing her name, calling it a scam that defrauded investors of their â€œhard-earned money.â€ â€œTo be clear: I have no involvement with this coin. This fake coin risks deceiving consumers and defrauding them of their hard-earned money, and the unauthorized use of my name and likeness is a violation of my rights,â€ Ivanka emphasized. Similarly, the launch of Donald Trumpâ€™s Official Trump (\$TRUMP) token and Melania Trumpâ€™s Melania Meme (\$MELANIA) sparked a wave of imitation projects seeking to exploit the Trump brand for profit. These incidents have raised questions about celebrity-linked cryptocurrencies. â€œHow does this work? I share my dogâ€™s name and picture, and then people create memecoins? How do you know which one is â€œofficialâ€ or does that even matter?â€ Binance founder Changpeng Zhao (CZ) commented, questioning memecoinsâ€™ legitimacy. Regulatory Gaps Leave Investors Exposed The rise of celebrity-themed memecoins has fueled debates about crypto regulations. Many tokens are created overnight, promoted through hype, and then abandoned, leaving investors with significant losses. SEC Commissioner Hester Peirce recently acknowledged these challenges stating, â€œMany of the memecoins that are out there probably do not have a home in the SEC under our current set of regulations.â€ This regulatory loophole allows bad actors to exploit the market with little to no consequences. As memecoin scams become more frequent, investors are urged to exercise caution. The \$BARRON collapse serves as yet another warning that not all hype-driven projects are what they seem. Highlighted Crypto News for Today New York Senator Proposes Bill to Establish Cryptocurrency Task Force

Meme coins have taken the crypto world by storm over the past few years, turning what started as internet jokes into full-fledged financial movements. Remember when Dogecoin was just a goofy experiment? Then Elon Musk tweeted about it, and suddenly, DOGE was skyrocketing to the moon. Fast forward a few years, and now Shiba Inu, Pepe, and countless other meme coins have turned early investors into overnight millionaires. What is the beauty of meme coins? Theyâ€™re not just about making moneyâ€”theyâ€™re about community, culture, and crazy growth potential. Unlike traditional crypto projects, meme coins donâ€™t need complex tech or whitepapers filled with jargon. They thrive on hype, FOMO (oops, letâ€™s not say that), and viral momentum. And with every bull cycle, we see new contenders stepping into the arena, fighting for the next legendary run. Now, in 2025, the meme coin space is bigger, wilder, and more profitable than ever. But with hundreds of new tokens launching every day, finding the best meme coin presale to join in 2025 isnâ€™t easy. Enter Arctic Pablo Coin (\$APC)â€”a presale project so unique, itâ€™s got the crypto community buzzing. With a mythical Flat Earth journey, record-breaking 13,451.72% ROI potential, and an eye-popping 66% APY on staking, Arctic Pablo Coin isnâ€™t just another meme token. Itâ€™s a game-changer. What is Arctic Pablo Coin (\$APC)? A Meme Coin Like No Other Arctic Pablo Coin (\$APC) isnâ€™t just another meme coin looking to cash in on the hypeâ€”itâ€™s a crypto journey unlike anything the industry has seen before. While other

meme coins follow the standard playbook of flashy marketing and influencer endorsements, \$APC has flipped the script, turning its presale into an immersive adventure that takes investors across a mythical Flat Earth in search of untold riches. Arctic Pablo: A Revolutionary Presale Concept Unlike traditional crypto presales that simply number each phase, Arctic Pablo Coin's team crafted an interactive, story-driven experience that transforms every stage into a legendary location on a Flat Earth map. Investors aren't just buying tokens; they're unlocking new lands, venturing deeper into the Arctic world, and following the footsteps of Pablo, the legendary Arctic explorer. The journey began in Atlantis, a sunken city of hidden treasures, symbolizing the first wave of investors discovering the project's untapped potential. As the presale progresses, new locations unlock, each offering a new stage price and limited-time allocations. Investors who move early secure their place in history, while those who hesitate risk being left behind as the expedition moves forward, never looking back. At Stage 5 (Snowy Shores), the coin had already gained massive momentum, with the community buzzing about its unique Flat Earth concept. Then came El-Dorado (Stage 6), a name synonymous with wealth, marking a turning point where early believers saw their holdings multiply. Now, Arctic Pablo Coin has stormed into Stage 10 (Aqua Frost), where the adventure reaches an icy climax, with prices rising as the map gets closer to completion. But there's still time—just a few more stages before the grand finale at Horizon Haven (Stage 36), where the last remaining presale tokens will be sold before \$APC launches at its final listing price of \$0.008. Why This Matters for Investors So why does this mythical Flat Earth journey matter for investors? It's simple. The presale's structure isn't just about storytelling—it's a psychological and financial game-changer. Each new stage represents a time-sensitive opportunity, creating a built-in sense of urgency without relying on typical fear-of-missing-out (FOMO) marketing tactics. By tying each stage to a visually compelling and interactive experience, Arctic Pablo Coin makes investing fun, engaging, and easy to follow, even for crypto newcomers. With each 7-day cycle, the price increases, and any unsold tokens are burned, ensuring a deflationary model that rewards early adopters. This means the supply is constantly shrinking while demand grows, pushing the price higher as the project progresses. At its core, Arctic Pablo Coin is a crypto movement, redefining what a presale can be and setting a new standard for innovation in the space. Whether you believe in Flat Earth theories or not, one thing is clear: this journey leads straight to profit. The Presale That's Making History The Arctic Pablo Coin presale kicked off on January 9, 2025, at an initial price of \$0.000015 per token. In just over a month, it has blazed through 10 stages, with the price now sitting at \$0.000059 in Stage 10 (Aqua Frost). With over \$1.1 million raised, this project has already surpassed expectations—and we're not even at the final stage yet. The most insane part? At the listing price of \$0.008, early investors are staring down a massive 13,451.72% ROI. That's not just good—it's legendary. Why Arctic Pablo Coin is the Best Meme Coin Presale to Join in 2025 1. Unmatched ROI Potential How Big Could This Get? When it comes to meme coins, everyone's chasing that golden ticket—the one that turns a modest investment into life-changing money. We've seen it before with Dogecoin, Shiba Inu, and even newer contenders like PEPE. But what if there was a meme coin presale right now with the potential to outperform them all? Enter Arctic Pablo Coin (\$APC). Let's talk raw numbers. If you had thrown \$10,000 into Arctic Pablo Coin at Stage 10 (\$0.000059), you'd be holding: - 169,491,525 \$APC tokens - At the listing price of \$0.008, your portfolio would be worth \$1,355,932. Yeah, you read that right. That's over 1.35 million dollars from an initial \$10K investment. It's insane, but it's real, and those who move fast are the ones who stand to gain the most. Now, let's take it a step further. What if you got in at Stage 1 when Arctic Pablo Coin launched at just \$0.000015? The difference is astronomical. At that price, a \$10,000 investment would have secured 666,666,667 APC tokens. At the listing price of \$0.008, that bag would now be worth a mind-blowing \$5.33 million. And here's the kicker—the supply is shrinking with every passing stage. Arctic Pablo Coin isn't just letting unsold tokens sit around. At the end of each 7-day phase, any remaining tokens are burned. That means fewer coins in circulation, increasing scarcity and driving up value for those who already bought in. Think about it. The closer we get to the final stages of the presale, the fewer tokens will be available. Basic supply and demand economics kick in, and by the time \$APC hits the market at \$0.008, those who got in early will be laughing all the way to the bank. 2. High-Yield Staking: 66% APY While You Wait for the Moon Most meme coins are purely speculative. You buy them, hold them, and pray for that one viral moment that sends them to the stratosphere. But Arctic Pablo Coin isn't just relying on hype—it's bringing serious utility to the table. One of its biggest draws? A staggering 66% APY staking reward. Now, let's break that down. Say you buy 1,000,000 \$APC at the Stage 10 price of \$0.000059. That's a \$5,900 investment. If you just hold those tokens, you'll already be in for big gains when \$APC lists at \$0.008, but if you decide to stake them? That's where the real magic happens. - Staking your 1,000,000 \$APC for a full year at 66% APY means you'll end up with 1,660,000 APC when the staking period ends. - If we assume \$APC maintains its listing price of \$0.008, that 1,660,000 APC would be worth \$13,280—more than double your original investment. That's passive income on steroids. You're literally making money while doing nothing. And here's the best part—staking unlocks just one month into the presale. That means early investors will have a massive head start in accumulating rewards before the rest of the market even realizes what's happening. Arctic Pablo Coin's staking model is a game-changer for those looking to build wealth in crypto without constant trading. Why This Matters for Investors Think about it this way: - You invest in Arctic Pablo Coin early at a dirt-cheap price. - You stake your tokens, growing your bag effortlessly thanks to the 66% APY. - You hold until \$APC lists at \$0.008, cashing in on a potentially life-changing ROI. This isn't just another meme coin gamble—it's a strategic investment play that combines insane upside potential with risk-reducing staking rewards. For investors looking for the best meme coin presale to join in 2025, the choice is clear. Arctic Pablo Coin is setting the stage for something massive, and those who act now are in for the ride of their lives. A Flat Earth-Themed Presale Like You've Never Seen Before Most crypto presales follow the same old boring, predictable structure—a series of numbered stages, a countdown timer, and some flashy graphics. Nothing new, nothing exciting. But Arctic Pablo Coin (\$APC) is breaking the mold and doing something completely different. Instead of your standard stage-based presale model, \$APC is taking investors on an interactive adventure across a mythical Flat Earth map. Each phase isn't just a price increase—it's the unlocking of a legendary location where early adopters are rewarded for their courage. It's an investment journey like no other, and it's got the crypto community buzzing. The Interactive Flat Earth Map: A Journey Through Mythical Wealth Think of Arctic Pablo Coin's presale as a crypto expedition, where every step forward is a move toward unlocking greater fortunes. It all started in Atlantis (Stage 1), where the first wave of investors dove into the depths, searching for hidden treasure. Then came ChillHaven, Glacier Grove, and El-Dorado—each representing a new milestone where investors had the chance to accumulate wealth before the next stage price hike. Now, as the presale soars into Stage 10 (Aqua Frost), the map is filling in, and investors are seeing firsthand how each location marks a new chapter in the coin's meteoric rise. Unlike traditional presales where stages are just numbers, Arctic Pablo Coin's Flat Earth design adds a layer of excitement, storytelling, and urgency. The presale isn't just a countdown to the next price jump—it's an interactive experience where each new stage feels like unlocking a secret level in a game. And here's the kicker—once a location is unlocked, there's no going back. If you miss out on a stage, you've lost that opportunity forever. No second chances. No discounts. The Next-Level Design: A Presale That Feels Like an Experience If you thought Arctic Pablo Coin's concept was unique, wait until you see the presale page itself. This isn't just a standard buy-now landing page—it's a visually stunning, immersive masterpiece that brings the project's icy, Arctic theme to life. A 3D Interactive Map That Tracks Your Progress The Flat Earth-inspired map isn't just for show—it's a fully interactive, dynamic representation of the presale. As investors buy in and stages unlock, the map changes in real time, revealing new locations and keeping the community engaged. Imagine logging in to see the next destination glowing on the horizon—it's like watching an expedition unfold before your eyes. This level of engagement sets \$APC apart from any other meme coin presale in 2025. Icy Animations and Themed Visuals That Scream Quality The Arctic theme isn't just a gimmick—it's woven into every part of the experience. Expect snow-covered graphics, ice-themed animations, and smooth UI transitions that make the presale as fun to explore as it is to invest in. And let's not forget the coolest detail of them all—the igloo-shaped payment widget. Instead of just clicking a dull Buy button, investors interact with a custom-designed payment portal that blends seamlessly with the Arctic Pablo Coin aesthetic. It's these small but meaningful touches that turn \$APC from just another presale into an unforgettable experience. A Presale That Feels Like a Mission, Not Just an Investment Arctic Pablo Coin is proving that a presale doesn't have to be just a transaction—it can be an adventure. Every element, from the Flat Earth-inspired map to the next-gen visuals and real-time location unlocking, is designed to immerse investors in the experience. Crypto investing has always been about more than just numbers—it's about being part of something bigger. And with Arctic Pablo Coin, that's something bigger—a crypto journey unlike any other. Arctic Pablo's Scarcity Mechanics That Drive Prices Up Here's the thing—Arctic Pablo Coin (\$APC) isn't just another meme coin presale where tokens are endlessly minted. Instead, it uses a built-in scarcity mechanism that rewards early investors and ensures that every presale phase becomes more valuable than the last. Each presale stage lasts exactly 7 days, and when the timer runs out, any unsold tokens from that stage are permanently burned. This means that with every passing phase, the total supply is decreasing—which naturally increases the scarcity of \$APC. Unlike projects that allow leftover tokens to roll over into the next round, Arctic Pablo Coin is actively reducing supply, making each remaining token even more desirable. Now, why does this matter for investors? Simple. When supply shrinks and demand grows, prices inevitably rise. And that's exactly what's happening with Arctic Pablo Coin. Every stage sees a price increase, and with fewer tokens available at each new location on the Flat Earth map, new investors are forced to buy at a higher rate—rewarding those who got in early. This isn't just a random gimmick—it's a self-sustaining hype machine. With every unsold token getting burned, the supply squeeze creates a psychological rush for investors to buy before the next phase kicks in. Think about it: if you know that waiting even a few days means paying more for the same asset, you're more likely to secure your position now rather than later. And here's where things get even more interesting—once \$APC hits the open market, expect fireworks. By the time the presale ends, the supply will have been significantly reduced, making Arctic Pablo Coin's launch at \$0.008 an explosive moment for investors. A token with built-in scarcity, increasing demand, and an interactive presale journey? That's a recipe for massive price action. For those who are paying attention, the opportunity is obvious: get in before the next burn event or risk paying way more down the road. How to Join Arctic Pablo Coin (\$APC) Secure Your Spot in the Presale If you've been following along and are ready to get in on the Arctic Pablo Coin (\$APC) presale, you're making a smart move. This isn't just another meme coin launch—it's a carefully structured journey designed to reward early adopters with insane ROI potential. Here's a step-by-step guide to securing your APC tokens before the presale closes. Step 1: Visit the Official Arctic Pablo Coin Presale Page First things first, head over to the official Arctic Pablo Coin presale website. The presale page features a stunning interactive Flat Earth map, where each location represents a new stage in the presale journey. As new milestones unlock, the price increases—so timing is everything. Step 2: Choose Your Preferred Cryptocurrency for Payment Arctic Pablo Coin accepts a variety of popular cryptocurrencies, making it easy for investors to participate. Supported payment options include: - BNB (Binance Coin) - ETH (Ethereum) - USDT (Tether) - ERC20 & BEP20 - BTC (Bitcoin) - SOLANA (SOL) - XRP (Ripple) If you don't currently hold any of these assets, you can easily purchase them on popular exchanges like Binance, Coinbase, or KuCoin before proceeding with your investment. Step 3: Connect Your Crypto Wallet To buy \$APC, you'll need a compatible crypto wallet that supports Binance Smart Chain (BSC) transactions. The following wallets are recommended for a smooth purchase process: - MetaMask (Available as a browser extension and mobile app) - Trust Wallet (Great for mobile users) - WalletConnect (Connects multiple wallets seamlessly) Once you're on the presale page, click the Connect Wallet button and authorize the connection. Step 4: Enter the Amount & Confirm Your Purchase After connecting your wallet, enter the amount of \$APC tokens you want to purchase. The presale interface will display: - The amount of tokens you'll receive based on the current stage price - The total cost in your selected cryptocurrency - The countdown timer until the next stage unlocks Review the details, and once you're satisfied, confirm your transaction. Your wallet will prompt you to approve the payment, and within seconds, your APC tokens will be secured! Step 5: Hold, Stake, and Watch Your Investment Grow Once you've purchased your \$APC, you have two powerful options: Hold your tokens until the listing price of \$0.008 - Investors who buy at lower stages stand to gain massive returns when \$APC launches on major exchanges. Stake your tokens for 66% APY rewards - Staking unlocks one month into the presale, allowing investors to passively grow their holdings while waiting for price appreciation. Either way, Arctic Pablo Coin offers multiple ways to profit, making it one of the best meme coin presales to join in 2025. With limited tokens per stage and a 7-day countdown for each phase, the window to secure low-priced \$APC is closing fast. As unsold tokens get burned, supply shrinks, and prices climb—rewarding those who acted early. So, if you're serious about catching the next big meme coin before it takes off, join the Arctic Pablo Coin presale today and become part of the legendary Flat Earth crypto expedition. Final Thoughts: Arctic Pablo Coin is a Game-Changer in 2025 Based on our research and current market trends, Arctic Pablo Coin (\$APC) is shaping up to be one of the most profitable meme coin investments of 2025. It's not every day that a meme coin presale delivers a staggering 13,451.72% ROI potential, an industry-leading 66% staking APY, and an innovative, visually stunning Flat Earth-themed presale. Yet, Arctic Pablo Coin is doing exactly that—and it's catching fire. With each presale stage lasting just 7 days, and unsold tokens being burned at the end of each phase, supply is shrinking fast while demand continues to grow. Investors who have already secured their \$APC bags are sitting on what could be one of the biggest meme coin success stories of the year. But for those still on the sidelines? Time is running out. We're now deep into the presale journey, with only a few stages left before Arctic Pablo Coin reaches its final destination and launches on the open market at \$0.008. Those who

get in now are locking in the lowest possible price before the presale closes forever. Donâ€™t be the person who hears about it after the explosion, wishing you had jumped in earlier. This is your shotâ€”join the Arctic Pablo Coin presale now and secure your place in one of the most exciting crypto journeys of 2025. Ever wonder whatâ€™s next for meme coins? The market is constantly shifting, and two of the biggest namesâ€”Dogwifhat (WIF) and Popcat (POPCAT)â€”have seen some recent movement. WIF, the viral Solana-based token featuring a Shiba Inu in a pink knitted hat, dropped 8.42% in the last 24 hours and 28.71% in the past week, despite a 55.35% spike in trading volume. Meanwhile, POPCAT is also experiencing turbulence, falling 5.59% in a day with a 35.56% decrease in trading volume, though it remains up 1.98% over the past week. While traders react to these shifts, one meme coin is breaking all the rules and delivering massive potentialâ€”BTFD Coin (BTFD). With its 90% APY staking rewards, over \$6 million raised, and a major 100% bonus offer, BTFD is making waves in the meme coin space. Its presale is surging ahead, and with a projected moonshot to \$0.006, itâ€™s shaping up to be one of the best meme coin presales to buy this week. BTFD Coinâ€™s 90% APY Staking Frenzy Sparks FOMO What if your meme coin could make you money just for holding it? Thatâ€™s exactly what BTFD Coin is offering with its insane 90% APY staking rewards, turning passive income into a reality for its holders. This staking setup lets investors grow their BTFD stacks at an unmatched rate, making it an attractive long-term option in a meme coin market thatâ€™s typically all about quick flips. BTFD is currently in Stage 14 of its presale, selling at just \$0.00016 per token, with over 69 billion tokens already scooped up by more than 10,600 holders. The presale started at \$0.000004, and after 16 stages, BTFD will list at \$0.0006â€”but analysts predict a post-listing surge to \$0.006, making this an opportunity thatâ€™s too good to ignore. To add fuel to the fire, BTFD burned all unsold tokens from Stage 13, reducing supply and tightening market availability. On top of that, investors can double their holdings instantly with the LAUNCH100 bonus code, meaning every BTFD token bought in this stage comes with a 100% match. If an investor drops \$7,000 at \$0.00016 per BTFD token, they secure 43.75 million BTFD tokens. Once the price hits \$0.0006 at the end of the presale, those tokens will be worth \$26,250â€”a 275% gain before the exchange listing even happens. But if BTFD hits its projected \$0.006 post-listing, that same investment would balloon to \$262,500. How to buy? Itâ€™s simple. Set up a MetaMask or Trust Wallet, load it with BNB or ETH, visit the presale page, enter the LAUNCH100 code, buy your tokens, and claim them when the presale ends. Dogwifhat Sees Price Drop as Trading Volume Surges Dogwifhat (WIF) has become one of Solanaâ€™s most viral meme coins, gaining traction for its adorable Shiba Inu mascot rocking a pink knitted hat. Despite its meme status, WIF has seen a steep 8.42% decline in the past 24 hours, with a 28.71% drop over the last week. However, its trading volume is up by 55.35%, signaling that traders are actively engaging with the token. The WIF community remains one of the strongest on Solana, and while price swings are common in meme coins, the high trading activity could mean that holders are repositioning themselves for potential future movements. Dogwifhat has cemented itself as one of the biggest meme coins on Solana, with a dedicated community and strong market engagement. Its presence in the space keeps it relevant, making it a token worth watching. Popcat Sees Volume Drop Despite Weekly Gains POPCAT, a meme coin inspired by the legendary Popcat meme, continues to be a digital collectible on the Solana blockchain. While it managed to rise 1.98% in the past week, itâ€™s down 5.59% over the past 24 hours, with trading volume declining by 35.56%. POPCAT thrives on community-driven hype and viral trends, much like Dogecoin and Shiba Inu. Its primary use case remains entertainment and payments within the Solana ecosystem, giving it flexibility in how itâ€™s used. POPCAT is part of a growing category of Solana-based meme coins that benefit from community engagement and the blockchainâ€™s fast transactions. Its ability to stay relevant makes it an interesting contender in the meme coin space. Final Words Based on our research and market trends, BTFD Coin is leading the charge among meme coin presales, thanks to its 90% APY staking rewards, 100% bonus code, and a presale thatâ€™s already raised over \$6 million. With a tightening supply, aggressive growth potential, and a projected price of \$0.006, itâ€™s shaping up to be one of the best meme coin presales to buy this week. As Dogwifhat and Popcat continue their market moves, BTFD Coin is making waves with its staking model and strong community backing. The window to buy at \$0.00016 is closing fast, and with tokens selling rapidly, now is the time to secure your stake in the next big meme coin. FAQs What makes BTFD Coin one of the best meme coin presales to buy this week? BTFD offers 90% APY staking rewards, a 100% bonus on purchases, and a projected post-listing price of \$0.006, making it a high-potential investment. How do I buy BTFD Coin? Simply connect your wallet, enter the LAUNCH100 code, buy BTFD with BNB, ETH, or USDT, and claim your tokens after the presale ends. What is the current price of Dogwifhat and Popcat? Dogwifhat is trading at \$0.6011, while Popcat is priced at \$0.2625, both experiencing market fluctuations. With 2025 shaping up to be a pivotal year for crypto, investors are scanning the market for the best crypto to invest in 2025 before the next bull run. One project thatâ€™s stealing the spotlight is Qubetics, with its presale surpassing \$12.5 million raised and 469 million TICS tokens soldâ€”solidifying its position as a Web3 powerhouse. Meanwhile, Monero (XMR) is making headlines as it eyes the \$245 resistance level, fueled by rising demand for privacy-focused cryptocurrencies. Over in the Web3 space, Stacks (STX) is flashing bullish signals, with analysts predicting a strong upward movement as the project gains traction in Bitcoin Layer 2 development. With these three cryptos capturing investor interest, letâ€™s break down why Qubetics stands out as the best crypto to invest in 2025â€”and whether Monero and Stacks can keep up. Qubetics: The Future of Blockchain Interoperability and Financial Freedom The crypto industry is growing faster than ever, but one massive problem continues to limit adoptionâ€”blockchain fragmentation. Today, most networks operate in silos, making it difficult for users to transfer assets, execute cross-chain smart contracts, or interact with multiple ecosystems without relying on centralized exchanges or complex bridging solutions. Qubetics is solving this problem head-on. As the worldâ€™s first Web3 aggregator blockchain, Qubetics connects multiple blockchain networks into a unified system, making it possible for users to seamlessly move assets, interact with decentralized applications (dApps), and participate in tokenized marketplaces across different blockchains. For example, a DeFi user could stake assets across Ethereum, Solana, and Binance Smart Chainâ€”without needing separate wallets or bridges. Meanwhile, businesses looking to tokenize real-world assets (RWAs) can do so on Qubeticsâ€™ asset marketplace, ensuring liquidity across multiple chains. This interoperability breakthrough is why Qubetics is being called the best crypto to invest in 2025â€”as it addresses one of the biggest pain points in the industry while unlocking massive potential for mainstream adoption. Qubetics Presale: The Next Crypto to Explode? Investors have been piling into Qubeticsâ€™ presale, recognizing its massive growth potential before its full launch in Q2 2025. So far, Qubetics has: - Raised over \$12.5 million in presale funding. - Sold 469 million TICS tokens, with demand growing weekly. - Attracted 19,500+ token holders, proving strong early adoption. Qubetics operates on a dynamic pricing model, where each presale stage lasts 7 days, with a 10% price increase every Sunday at midnight. This means early investors secure the best price before the next surge. ROI Potential for Qubetics Investors: Current TICS Price: \$0.0733 - Projected Presale-End Price: \$0.25 (240.64% ROI) - Projected Price After Launch: \$1 (1,262.56% ROI) - Projected Price After Full Adoption: \$10 (13,525.66% ROI) A \$1,000 investment today at \$0.0733 per token would get 13,640 TICS tokens. If TICS hits \$10, that initial investment could skyrocket to \$136,400. With Qubeticsâ€™ mainnet launch set for Q2 2025, investors are rushing to secure TICS before the next price jumpâ€”making it the best crypto to invest in 2025 for those looking for early-stage exponential gains. Monero (XMR) Eyes \$245 Resistanceâ€”Can It Maintain Its Momentum? Monero (XMR), one of the most well-known privacy coins, is gaining bullish momentum, with analysts pointing toward a potential breakout above \$245. Privacy coins remain a hot topic, especially with governments increasing scrutiny on crypto transactionsâ€”making Monero an attractive hedge for users seeking anonymous transactions. Recent technical analysis shows XMR flashing positive signals, as it tested key support levels and is now pushing toward resistance. If Monero successfully breaks past \$245, it could trigger a fresh rallyâ€”but whether it sustains its upward momentum remains to be seen. Despite regulatory pressure, Monero remains a critical player in the privacy-focused crypto space, and if institutional adoption of privacy tech increases, XMR could see stronger demand in 2025. Stacks (STX) Shows Signs of a Potential Breakout Stacks (STX) is positioning itself as a major player in the Bitcoin Layer 2 ecosystem, allowing developers to build smart contracts and dApps directly on Bitcoinâ€™s network. With Stacks gaining momentum, analysts are now eyeing a potential bullish breakout. Currently, Stacksâ€™ price action is showing a strong reversal pattern, indicating that investors are accumulating ahead of a major move. As Bitcoin adoption increases, Stacks benefits as a key infrastructure layer, driving demand for STX tokens. If Stacks maintains its momentum, it could play a key role in Bitcoinâ€™s smart contract expansionâ€”making it a solid pick for long-term Web3 investors. Conclusion: Is Qubetics the Best Crypto to Invest in 2025? As 2025 approaches, these three cryptos are attracting investor interest for different reasons. Monero is riding the privacy wave, with technical indicators pointing toward a breakout above \$245â€”but regulatory uncertainty remains a factor. Stacks is showing signs of a bullish reversal, fueled by growing interest in Bitcoin Layer 2 solutionsâ€”which could make it a long-term winner in Web3 development. Among these, Qubetics presents the biggest opportunity for investors looking for a high-ROI crypto with real-world utility, making it the best crypto to invest in 2025. With its best crypto presale ending soon and the next price surge coming, now is the time to join before the next stage begins. For More Information: - Qubetics: <https://qubetics.com> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> FAQs 1. Why is Qubetics the best crypto to invest in 2025? Qubetics solves blockchain interoperability, allows seamless asset transfers between chains, and is experiencing massive presale demand. 2. How high can Monero (XMR) go in 2025? Monero is testing key resistance levels at \$245, and if it breaks through, it could enter a strong bullish trend. 3. What makes Stacks (STX) a promising investment? Stacks is building smart contracts on Bitcoin, making it a key player in the Bitcoin Layer 2 ecosystemâ€”which could see huge growth in the coming years. - Hackers compromised CoinSwitchâ€™s official X (Twitter) account to promote a fake scam token, SWITCH, as its native token - The CoinSwitch team regained control of the account and deleted the fraudulent post after an hour. In a concerning cybersecurity breach, the official X (formerly Twitter) account of CoinSwitch, one of Indiaâ€™s leading crypto exchanges, was hacked on Wednesday during Asiaâ€™s noon hours. The attackers used the compromised account to promote a fraudulent Solana-based token, SWITCH, falsely claiming it as CoinSwitchâ€™s native token set for trading launch at 8 AM UTC. Our X (formerly Twitter) account (@CoinSwitch) has been compromised and we are working with X to regain access. â€” Ashish Singhal (@ashish343) February 12, 2025 The rumor of a native token from CoinSwitch is false and we urge followers and users to disregard any messages from the compromised account until further updates.â€” CoinSwitch CEO Ashish Singhal confirmed the breach over an hour after the hack, reassuring users that their funds remained secure. Then the exchangeâ€™s team swiftly regained access to their X account and deleted the misleading post. Singhal urged the community to disregard any claims about SWITCH, emphasizing that CoinSwitch has no affiliation with such a token. Further investigation revealed that the scam token was created on Pump.fun, a platform notorious for launching memecoins with questionable legitimacy. At the time of writing, SWITCH had a market capitalization of just \$4,075 and was priced at a mere \$0.000004168. The creators misleadingly described the token as a reward system for top traders, adding to the deception. Highlighted Crypto News for Today

The Open Network has integrated with LayerZero to make blockchain asset transfers more efficient between networks. The integration will enable users to execute transactions without interruption between blockchain networks. TON will now enable connectivity with 12 leading blockchain networks like Ethereum, Tron, and Solana. The move will streamline the transfer of assets between different networks, which results in higher blockchain activity. Amidst this setting, the attention shifts to new and innovative projects with promising rewards. DexBoss (DEBO) is leading the pack thanks to its revolution in DeFi. Other projects include Aural One, yPredict.ai, XDC Network, and Kaspa. These five projects combine innovation, security, and growth potential, making them the best crypto to buy now. 5 Best Crypto To Buy Now Projects - DexBoss (DEBO) - Aural One (DLUME) - yPredict.ai (YPRED) - XDC Network (XDC) - Kaspa (KAS) The coins listed represent a new wave of blockchain innovation, tackling real-world challenges across different sectors. They provide users with financial autonomy, faster transactions, and lower fees, making them a valuable alternative to traditional monetary systems. Continue reading to learn more about these promising projects with huge potential. DexBoss (DEBO) DexBoss integrates traditional and decentralized financial tools, creating a platform with various trading features. Users can access options, futures, and standard DeFi functionalities, allowing different trading strategies. Automated risk management tools also help monitor investments and manage market fluctuations. Additionally, DexBoss provides multiple financial instruments in one platform, trying to offer flexible options. DexBoss aims to support users looking for diverse trading opportunities, making it the best crypto to buy now. Click here to know more about

DexBoss DEBO Tokenomics - USD Raised: 565,743.94/ \$750,000 as of 12 February 2025 - Presale Progress: 75% - Current Price: \$0.011 - Listing Price: \$0.0595 Trading Features and Security DexBoss provides a user-friendly trading experience with tools designed for new and experienced traders. It supports over 2000 cryptocurrencies, including widely used and lesser-known assets. High liquidity and quick order execution also help traders respond to market shifts effectively. The platform's decentralized nature allows users to maintain control of their holdings. Additionally, DexBoss uses security protocols to protect assets and transactions, reducing unauthorized access while preserving transparency in trading activities. Aural One (DLUME) Aural One introduces a blockchain framework designed for gaming, emphasizing adaptability and long-term usability. It reduces gas fees and finalizes transactions instantly, enhancing efficiency. These features improve accessibility in gaming and metaverse applications by lowering costs. Its scalable infrastructure processes thousands of transactions per second, addressing limitations in traditional blockchains. Faster processing eliminates delays, creating a smoother gaming experience and gaining a spot among the best cryptos to invest in 2025. Aural One seeks to remove technical barriers by focusing on speed and efficiency, making blockchain gaming more practical and cost-effective. DLUME Tokenomics - Funds Raised: 3,200,285 / \$4,500,000 - Current Price: \$0.0013 - Listing Price: \$0.005 - Next Price Increase: 15.4% - Profit Potential: 323.08% Community Governance and Utility in DLUME Aural One incorporates community-driven decision-making through DLUME token governance. Holders participate in decentralized voting, influencing ecosystem development. This structure allows active engagement in shaping platform updates and project direction. Beyond governance, DLUME tokens offer multiple uses, including in-game purchases, staking rewards, and access to exclusive features. These functionalities encourage a decentralized environment where community actions shape the platform's growth. With such features, Aural One is one of the next cryptos to hit \$1 in the coming crypto wave. yPredict.ai (YPRED) yPredict.ai simplifies financial data science by eliminating trading complexities and providing an effective platform. Data scientists sell model results via subscriptions through its prediction marketplace, creating a steady income stream. Traders and investors benefit from accessible, high-quality market predictions without requiring advanced expertise. This platform connects analytical professionals with market participants, enhancing prediction accuracy. By bridging data-driven insights with real-world applications, yPredict.ai ensures financial predictions reach a broader audience. YPRED Tokenomics - Token Sold: 80,000,000 - USD Raised: \$6,507,551 - Listing Price: \$0.12 - Total Supply: 100m YPRED YPRED: A Versatile Token for Developers and Traders YPRED tokens fuel yPredict's ecosystem by supporting developers and traders in a mutually beneficial environment. Developers earn passive income by contributing AI-driven predictive models, expanding the platform's analytical capabilities. Traders use these tokens for premium market insights, real-time predictions, and essential analytical tools. Holding YPRED utility tokens also grants access to yPredict Analytics and lucrative staking rewards. This dual-utility system enriches trading strategies while incentivizing ongoing AI model development. XDC Network (XDC) The XDC Network is an enterprise-grade blockchain for business applications, enabling decentralized applications with EVM-compatible developer tools. It supports real-world asset tokenization and trade finance, solidifying its position in the evolving blockchain landscape. Its scalable architecture ensures efficiency, security, and reliability, making it a practical choice for enterprises seeking blockchain solutions. By addressing modern business needs, XDC enhances transparency, transaction speed, and financial accessibility, attracting developers and companies looking for innovative blockchain applications. XDC Tokenomics - Current Price: \$0.0903 - Market Cap: \$1.33B - Total Supply: 37.95B XDC - Circulating Supply: 14.93B XDC XDC's Strategic Developments and Market Position XDC Network integrated with DEXTools, increasing visibility and accessibility within the crypto ecosystem. This step strengthens its infrastructure, reinforcing its role as a high-performance blockchain across industries, mainly digital finance. Prime Numbers Labs introduced PrimeStaking, a liquid staking solution that enables all XDC holders to stake assets and earn rewards. These advancements demonstrate XDC's commitment to innovation, decentralization, and accessibility, further solidifying its influence in blockchain-based financial solutions. Kaspero (KAS) Kaspero, a Layer 1 blockchain, is getting noticed for its blockDAG architecture. This design supports high transaction throughput and scalability. It places Kaspero as a major player in the blockchain arena. Developers and users who want efficient and secure transactions find it appealing. Kaspero uses the GHOSDAG protocol, which drives its growth potential. For investors looking for the best cryptos to invest in 2025, Kaspero attracts attention for its unique blockchain solutions. KAS Tokenomics - Current price: 0.0949 - Market Cap: 2.44B - Total Supply: 25.7B KAS - Circulating Supply: 25.7B KAS KAS Potential Growth Additionally, the Kaspero ecosystem is likely to grow with new smart contracts. These moves could draw a broader user base and boost adoption. This would enhance its market presence and value. With upcoming strategic collaborations and tech advances, Kaspero is set for significant growth. Keep an eye on this cryptocurrency in the coming days, as it is poised among the next cryptos to hit \$1. Concluding Thoughts As cryptocurrency adoption rises, careful investment choices are essential. Finding the best crypto to buy now requires evaluating strong ecosystems and trustworthy platforms. As such, investors prioritize transparent projects with solid fundamentals and long-term potential. These reliable cryptocurrencies provide active development teams and deliver safer opportunities in the volatile market. In this context, DexBoss simplifies DeFi and offers a secure, user-friendly experience. Aural One (DLUME) leads in the blockchain gaming metaverse space, while yPredict (YPRED) leverages AI in crypto trading. XDC Network (XDC) enhances enterprise-grade blockchain efficiency, and Kaspero (KAS) supports high transaction throughput and scalability. By focusing on innovation and security, investors reduce risks and improve profitability. Choosing these well-structured projects ensures a balanced approach to the crypto market. As always, conduct thorough research before investing. Disclaimer: TheNewsCrypto does not endorse any content on this page. London, UK, February 12th, 2025, Chainwire Hivello, a DePIN aggregator that enables users to earn by monetizing idle computer resources across multiple decentralized networks, has announced the launch of its \$HVLO token on Raydium, live today at 11:00 AM UTC following yesterday's listings on MEXC and Gate.io. This significant milestone underscores Hivello's commitment to decentralization, making the HVLO token accessible to all in a decentralized manner. The HVLO token empowers Hivello's ecosystem, enabling rewards, staking, and participation in DePIN networks. By launching on Raydium, a decentralized exchange built on the Solana blockchain, Hivello ensures that the HVLO token is available to a broader audience, reinforcing its mission to make decentralized technology accessible to everyone. "We are thrilled to launch the HVLO token on Raydium, providing our global community with a decentralized option to trade our ecosystem token," said Dom Carosa, Co-Founder of Hivello. "This decentralized option is a critical component for us as huge believers in the decentralized movement we are trying to support with Hivello. Now that \$HVLO is live on multiple exchanges, including GATE.io & MEXC, many benefits exist: - Staking \$HVLO via hivello.com provides access to an APY of 88%. - Expanding accessibility and benefits of \$HVLO, enabling more users to participate in decentralized compute mining, opportunities to earn rewards, and leveraging the token's utility across the growing DePIN ecosystem. - Enhancing staking and governance functionalities for \$HVLO holders, ensuring long-term engagement and sustainability. - Expanding partnerships with DePIN protocols and AI compute networks, driving broader adoption of decentralized infrastructure. - Scaling its network of decentralized node operators, making it easier for users worldwide to contribute to DePIN. For more information about Hivello and its innovative solutions, users can visit hivello.com or join the Hivello community on Discord at discord.com/invite/hivello. About Hivello: Hivello is an all-in-one DePIN manager that allows users to manage decentralized physical infrastructure networks and generate passive income. With a focus on accessibility and educational resources, Hivello simplifies decentralized technology for users worldwide. - Hester Peirce suggests many memecoins don't fit the current regulatory framework. - The SEC is easing its crypto crackdown as Peirce pushes for clearer rules. SEC Commissioner Hester Peirce claims most meme coins may not fall under the SEC jurisdiction. In an exclusive interview with Bloomberg, Hester stated "Many of the meme coins that are out there probably do not have a home in the SEC under our current set of regulations." She further reinforced the previous administration's roles in the crypto industry and its stance towards major cryptocurrencies and memecoins. Hester believes the SEC has discouraged some crypto projects by hardening its regulations, especially under its former chairman Gary Gensler, although memecoin lacks real-life use cases and only thrives on trends and hype. "We've just put roadblock after roadblock up against people who are trying to come in and talk to us," she said. SEC Softens Its Approach to Crypto As the new head of the SEC's crypto task force, Peirce wants clearer rules on which tokens count as securities. Her approach signals a shift from aggressive enforcement. The SEC has also scaled back its crypto enforcement team. Reports suggest lawyers from the division are being reassigned, indicating an internal policy shift. Still, concerns remain: Meme coins often face fraud allegations, pump-and-dump schemes, and extreme volatility. The recent lawsuit against the Solana-based platform pump.fun, accused of running a Ponzi scheme, highlights these risks. Trump's Meme Coin Move Adds Political Pressure Peirce's comments come as Donald Trump and Melania Trump launch their own meme coins on Solana. Trump's \$TRUMP token soared to \$73 just after launch and before crashing to its current \$16, showing the wild swings in this market. Also, the MELANIA meme coin faced the same destiny dropping over 85% from its ATH to the current trading level of \$1.43. The political landscape is shifting. Trump supports a pro-crypto stance, while the SEC's leadership is changing. This raises speculation about a more lenient approach to digital assets. "Facts and circumstances matter. We always have to look at the facts and circumstances," said Peirce, in a thoughtful response when asked if the President and First Lady launching their own memecoin is a challenge. Peirce has long pushed for clearer rules instead of aggressive crackdowns. "Regulation should set basic parameters and then let people innovate," she said. Highlighted Crypto News for Today

This month seems promising for crypto investors, as various altcoins show strong momentum, preparing for a breakout. This offers interesting investment prospects for individuals who want to make huge returns this month and beyond. Thus, now is the appropriate time to look at some of the best cryptos to buy right now. Below, we look closely at six altcoins that are currently gaining attention and could offer excellent growth potential this month. Rexas Finance (RXS): Revolutionizing Asset Management with Tokenization One of the most exciting new initiatives is Rexas Finance, making it a must-buy. The project intends to transform asset management through tokenization. What makes it stand out is its ability to make asset ownership more accessible. Traditionally, investing in real estate or fine art required large capital. However, Rexas Finance is changing that by making it easy to buy and trade fractional shares of these assets at a minimal cost. This creates an opportunity for small investors to join the RWA market, which they had previously been locked out of because of its high price. Rexas Finance is capitalizing on the trending tokenization market and its unique utility positions it for unparalleled growth. Investors have shown great interest in its vision, resulting in the presale's remarkable success. Over 443 million tokens have been sold, and \$44.5 million has been raised. With only about 60 million of the 500 million tokens left, now is the best time to buy before the presale ends. Experts expect a speedy climb for RXS, suggesting it might approach two digits within a few months of its launch. On June 19, RXS will list at \$0.25 and might explode to 100X or more. Rexas Finance's successful presale and unique proposition have already built a growth path for the coin, making this price target increasingly plausible. Thus, RXS is now one of the best coins to buy this month and is merely \$0.20 right now. Stellar (XLM): Surging Ahead of XRP XLM now trades around \$0.43 after seeing a significant 12% price rise, adding over \$1.5 billion to its market capitalization. Unlike its historical correlation with XRP, XLM has raced ahead, indicating rising speculative demand. This rally coincides with traders' bullish XLM bets. XLM broke past \$0.43, fueling investors' confidence. The next main resistance is at \$0.50. XLM might reach \$0.60 and beyond if it continues its upward trajectory. Thus, this month is a promising choice for investors. Litecoin (LTC): Breaking Out with Strong Bullish Potential LTC has broken out from a consolidation phase and is now gaining momentum. If bullish sentiment continues, this might cause a price surge to \$260. Technical indicators also show strong buying pressure, with LTC sitting above key resistance levels. Investor enthusiasm has also been piqued by the recent approval of a Spot Litecoin ETF for SEC comments. LTC might be a top performer this month if it maintains its breakout. If it falls below \$125, though, it may see a short-term pullback before another climb. Sui (SUI): Surging Past Key Resistance Levels SUI has surged past the key resistance level at \$3.9, showing a strong bullish trend. Should the momentum continue, analysts' next price targets are \$4.9 or even \$5.3. Technical indicators like moving averages and the Relative Strength Index also point to more increases. Its trading volume also supports the bullish picture. The growing confidence in Sui's long-term prospect makes it an exciting opportunity for investors looking for promising altcoins this month. Hyperliquid (HYPE): Rapid Growth with Room for More HYPE's recent 50% surge in just 16 days has sparked interest, especially after a 12% jump on January 30, 2025. Despite its rapid growth, HYPE is not in the overbought zone yet. This means there is still more room for growth. Investors should, however, watch its support level at \$24.30 in case of a retracement. Right now, HYPE trades at \$27.25. Ripple Labs' expanding partnerships and regulatory progress contribute to this rise. Furthermore, the shift toward a more crypto-friendly regulatory environment has driven optimism about the potential approval of an XRP ETF.

Analysts predict that XRP could soon break above \$4, supported by strong technical patterns. At press time, XRP trades at \$3.09. Conclusion These six cryptocurrencies are currently the best investments, as they could see notable increases this month. They might be heading for a major rally and have displayed amazing momentum. Rexas Finance is an exciting opportunity in its final presale stage. Experts believe RXS could witness a parabolic rally once it launches, leading to massive gains for investors. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Seychelles, VICTORIA, February 12th, 2025, Chainwire BYDFi, a well-known crypto exchange, officially announced the upcoming launch of its new Web3 on-chain trading platform, MoonX. Specifically designed for meme traders, MoonX aims to provide a fast, secure, and intuitive on-chain trading experience. The platform integrates core security technologies from Safeheron, a self-custody platform for digital assets, leveraging cutting-edge technologies such as Secure Multi-Party Computation (MPC) and Trusted Execution Environment (TEE) to build an industry-leading key management system that ensures the highest level of security for users' assets. Meme Coin Surge Fuels On-Chain Trading Growth Over the past year, the surge in Meme Coin trading has led to an unprecedented rise in on-chain transaction volume. In 2024, transaction fees from Meme Coin trading on the Solana blockchain ecosystem alone exceeded \$3.093 billion, contributing to the historic increase in on-chain trading activity. However, alongside this growth, security concerns have become more pronounced. On November 16, 2024, the decentralized exchange (DEX) DEXX was attacked by hackers, resulting in the theft of users' private keys and a loss of \$20 million in assets. This breach raised serious concerns about the security vulnerabilities of on-chain trading and the importance of private key protection. BYDFi Partners with Safeheron to Fully Upgrade On-Chain Trading Security Every day, thousands of new Meme tokens emerge, and traders face the challenge of selecting quality projects while navigating extreme market volatility. At the same time, the threat to private key security remains one of the most pressing issues in the Web3 space. As a global crypto exchange, BYDFi places a strong emphasis on security. Its collaboration with Safeheron is intended to bring advanced security features to MoonX, built on decentralized trust models. Safeheron's use of MPC and TEE technologies aims to enhance key management and transaction signature protection for MoonX, addressing key vulnerabilities in Web3 environments. The partnership includes: - MPC Multi-Party Computation Architecture: A decentralized model that eliminates the risks of single-point key exposure, ensuring secure key management and asset protection without reliance on centralized custody. - Cross-Device Security Experience: Embedded MPC nodes that seamlessly support trading across both mobile and web platforms, ensuring secure transactions across devices in a trustless environment. - Advanced Cryptographic Protocols: Supports elliptic curve algorithms such as ECDSA and EdDSA to reinforce the system's defense against potential attacks and mitigate risks associated with cryptographic key management. MoonX: The Ultimate On-Chain Trading Arena for Degen Traders The high volatility of the Meme Coin market has attracted a wave of Degen traders—speculators who thrive on high-risk, high-reward trades. These traders are constantly searching for the next 100x Gems. MoonX is purpose-built for this audience, enabling on-chain trading of assets across major blockchains including Solana, Ethereum, Base, and BNB Chain. The platform supports over 500,000 token pairs, coupled with powerful market analysis tools to assist traders in making informed decisions. MoonX offers an array of specialized, professional-grade trading features designed to optimize the user experience: - Take Profit & Stop Loss: Tools to effectively manage risk and lock in profits in volatile markets. - Smart Money & Signal Copy Trading: Real-time tracking of whale wallets and large market movers, allowing users to copy trades of high-net-worth individuals and institutional players. - Limit Orders & One-Click Buy/Sell: A CEX-level user trading experience, combining convenience with decentralized features for optimal transaction control. - Profit Optimization Strategies: Lock in profits with smart strategies, recoup the initial investment, and hold remaining assets with no cost. Michael, Co-Founder of BYDFi, stated: "MoonX is more than just a trading tool—it represents BYDFi's vision and commitment to the future of Web3. By integrating Safeheron's cutting-edge security technology, we aim to deliver the safest and most efficient Meme Coin trading environment, eliminating security risks in Web3 trading entirely." MoonX is currently in the final stages of development and will soon be launched. Updates will be available through BYDFi's official channels. About Safeheron Safeheron is a global leader in open-source, transparent digital asset self-custody solutions, founded in 2021 and headquartered in Singapore. Utilizing Secure Multi-Party Computation (MPC) and Trusted Execution Environment (TEE) technologies, Safeheron provides institutional clients with the highest level of security in digital asset self-custody services and MPC privatization solutions, enhancing both security and management efficiency. - The Altcoin market capitalization has seen a \$234 billion loss over the past two weeks. - Several major cryptocurrencies have lost their recent all-time highs to trade at support levels. Since the beginning of 2025, the crypto scene has been experiencing novelty in various forms. Firstly, with Bitcoin hitting new price milestones, the Altcoin market decided to stage a full-fledged rally. As this hype began to diminish, the Trump administration took the spotlight. Pro-crypto advancements in the US were reflected worldwide as the community saw widespread adoption. However, focusing on the recent market crash, investors have faced a difficult time. According to Glassnode reports, in the past two weeks, the altcoin market suffered a significant \$234 billion loss in market cap. This has caused major losses for investors who had just experienced huge amounts of profits. Furthermore, the Bitcoin loss accounted for the next majority, but Glassnode identified that the altcoin market experienced a relatively higher level of losses. While the Bitcoin price decrease resulted from Trump's tariff threats, the altcoin sector was dunked due to multiple challenges. Firstly, the side-selling pressure and the lack of mainstream adoption resulted in its decline. Recently, within the last two weeks, one analyst, Ali commented that there has been no sign of AltSeason. This consistent downward movement of the Altcoin market has led to the aforementioned losses. Will the Altcoin Market Recover? In the past 24 hours, according to CMC data, the overall crypto market cap shows a 2.68% drop. This shows that the Altcoin sector is still facing downward movements, after the recent recovery. With almost every member of the Altcoin market declining, the past day seems to have witnessed yet another modest price crash. However, particular altcoins have begun to show upward movements. For instance, the FTX token showed modest gains in the last 24 hours. Meanwhile, leading tokens such as Solana and XRP have shown downward movements similar to Bitcoin. When looking at whether the market will recover, it looks uncertain. Analysts have predicted support levels that could help in rebounds in the coming months. Highlighted Crypto News Today:

- President Trump plans to appoint Brian Quintenz as the CFTC Chair. - Brian Quintenz is crypto policy head at a16z and former commissioner of the CFTC. The crypto industry is facing multiple reformations at the global leadership level after Trump's re-election as the 47th US President. From appointing David Sacks as the White House AI & Crypto Czar to forming a Presidential Working Group to evaluate Bitcoin strategic reserve, the crypto industry is gaining unprecedented attention from Trump's presidency. As per the recent report by Bloomberg, Donald Trump plans to nominate Brian Quintenz as the chairman of the Commodity Futures Trading Commission. The news came to light as the Bloomberg News verified a document sent by the White House to Capitol Hill. Quintenz is a seasoned professional when it comes to crypto policies and regulations. He has extensive experience working with the CFTC in the past as a commissioner from 2017 to 2021. Moreover, he currently leads the global crypto policy arm at a16z. Is Brian Quintenz the Next CFTC Chair? Being a former commissioner of the CFTC, Quintenz has high chances for getting appointed as the CFTC chairman. Bloomberg mentioned him in one of its reports as the top contender for this position in 2024. Even though there is no official confirmation from the CFTC or the White House, Bloomberg and Fox Business reports confirmed it. Fox Business reporter Eleanor Terrett posted on X stating that three direct sources mentioned that Quintenz will be permanent chair of the CFTC. The present acting chair of the CFTC, Caroline Pham, stated, "I congratulate my friend Brian Quintenz on his selection for CFTC Chairman. I worked with Brian on important initiatives that he led to success when he was a CFTC Commissioner. He will do the same for crypto and innovation." On another note, the document from the White House also mentioned Jonathan Gould's nomination as Comptroller of the Currency. Furthermore, it nominated Jonathan McKernan as director of the Consumer Financial Protection Bureau. Highlighted Crypto News Today: Is Franklin Templeton Next in the Race of Solana ETF Filings?

Jakarta, Indonesia, February 11th, 2025, Chainwire Key Takeaways: - Significant Trading Growth: PINTU's trading volume surged over 150% YoY from January 2024 to January 2025, with Monthly Trading Users (MTU) increasing by more than 100%. - AI & Meme Tokens Lead Market Growth: AI tokens saw a 1,200% increase in trading volume, while meme tokens grew 230%, reflecting Pintu's user interest in emerging crypto trends. - Indonesia's Expanding Crypto Market: Crypto transactions in Indonesia surged 335.91% YoY, reaching IDR 650.61 trillion, highlighting strong local market growth. PINTU, the leading all-in-one crypto app in Indonesia, announced a remarkable 150% year-on-year (YoY) surge in trading volume, fueled by the explosive growth of AI and meme tokens in 2024. This milestone reflects a broader global trend, as the overall crypto market experienced substantial expansion. 2024 marked a historic milestone for the global and Indonesian crypto markets, said Timotheus Martin, Chief Marketing Officer of PINTU. Our internal data from January 2024 to January 2025 reveals a massive increase in trading activity, with total trading volume up over 150% YoY and Monthly Trading Users (MTU) increasing by more than 100%. The most traded tokens on PINTU were AI tokens, which saw a trading volume surge of over 1,200%, followed by meme tokens, which recorded a 230% increase. Globally, the crypto market capitalization rose by 97.7% in 2024, reaching \$3.40 trillion by the end of the fourth quarter, according to CoinGecko's Annual Crypto Industry Report. This growth was mirrored by a 128.2% jump in average crypto trading volume, from \$88.0 billion in Q3 2024 to \$200.7 billion in Q4 2024. Factors driving this global surge included economic and political developments, particularly in the United States. The election of Donald Trump as the 47th President of the U.S. brought optimism to the industry, as he is expected to be more crypto-friendly than the former government. Trump's administration appointed pro-crypto figures such as Elon Musk to key positions, and there were proposals to establish a U.S. strategic national Bitcoin reserve, further fueling the rise of crypto asset prices. The rise of AI tokens, with a 2,940% average Return on Investment (ROI) for the top 10, and meme tokens, boasting a 2,185% average ROI, dominated the 2024 crypto narrative. The AI sector growth was driven by innovations like ChatGPT and DeepSeek, as well as AI Agents' autonomous artificial intelligence systems capable of performing complex tasks efficiently. Meme token growth, driven by communities around projects like Dogecoin (DOGE), which surged 255%, and Popcat (POPCAT), which skyrocketed 9,954%, was closely linked to the Solana (SOL) ecosystem's expansion. Solana's network transactions increased by 152% in Q4 2024, exceeding Ethereum's transaction volume. In Indonesia, crypto transactions surged 335.91% from 2023 to 2024, reaching a total value of IDR 650.61 trillion, according to Bappebti (Commodity Futures Trading Regulatory Agency). Despite the optimistic outlook, Timo advised investors to remain cautious. While AI and meme tokens have experienced explosive growth, it's critical to assess their underlying utility, innovation, and community strength. Crypto investments carry inherent risks, and investors must manage their portfolios wisely. PINTU emphasizes the importance of responsible investing, urging users to conduct thorough research, invest only what they can afford to lose, and avoid impulsive decisions driven by FOMO. As the crypto market continues to grow, PINTU remains committed to providing a secure, licensed platform that supports new and experienced investors in navigating digital assets. About PINTU Indonesian cryptocurrency trading and investment platform PT Pintu Kemana Saja is an all-in-one crypto app officially registered as a Digital Financial Asset Trader (PAKD) with the Financial Services Authority (OJK) and a member of the CFX Crypto Bourse. Launched on April 1, 2020, the PINTU app aims to facilitate access to cryptocurrencies and promote the inclusion of Indonesians in the crypto world. PINTU focuses on an intuitive app interface, ease of use, in-app educational content, and features such as Pintu Earn, Pintu Staking, Auto DCA, Web3 wallet, Pintu Pro, and Pro Futures. - Pi Network's Mainnet is set to launch on February 20, 2025, after multiple delays. - The announcement triggered the price of Pi [IOU] (PI) to surge by 85.47%, jumping from \$48.24 to \$99.96. Pi Network, a decentralized ecosystem, has announced its official transition to the Open Network

phase of its Mainnet on February 20, 2025, at 8:00 AM UTC. The transition to Open Network is a testament to Piâ€™s 19 million identity-verified Pioneers and the broader community. For six years, Pi Network has been growing into a thriving peer-to-peer ecosystem powered by its native cryptocurrency, Pi. With the transition to an Open Network, the platform will finally lift its restrictions. It allows seamless external connections and opens the door to wider adoption. Pi Network has not only met but exceeded the key milestones needed for this transition. Also, one major achievement is Mainnet migration, with over 10.14 million Pioneers successfully moving to the Mainnetâ€”surpassing the initial goal of 10 million. Know Your Customer verification with 19 million pioneers has completed the KYC process, surpassing the 15 million originally required. Followed by the utility-driven ecosystem, the network has reached over 100 Mainnet or Mainnet-ready applications. It likely ensures an active ecosystem at launch. Significantly, these confirm that the network is prepared for Open Mainnet, enabling seamless participation in Pi-based applications and transactions. Pi Networkâ€™s transition is contingent upon other conditions like technical, product, business, and legal requirements that have been completed to support the Open Network phase. Enclosed to Open Network Journey Since December 2021, Pi Network has operated within an Enclosed Network, giving Pioneers the time to complete KYC. Moreover, to transfer their balances, and develop decentralized applications (dApps) in a secure, controlled environmentâ€”without external blockchain access. This phase provided a controlled environment to strengthen security, scalability, and utility before full-scale deployment. With Open Mainnet, Pi holders can engage in transactions beyond the enclosed ecosystem and unlock greater adoption potential for the cryptocurrency. Although there have been delays in the past, including an extension of the KYC and migration deadline to February 28, 2025. The Pi Core Team has made it clearâ€”there wonâ€™t be any more pushback. The February 20 launch is set to proceed as planned. Besides, the announcement brought in the price surge of Pi [IOU] (PI) by over 85.47%, reaching \$99.96 from a low of \$48.24. At press time, the asset trades at around \$90.31 with the daily trading volume having increased 108% hitting \$639K. Highlighted Crypto News Is Franklin Templeton Next in the Race of Solana ETF Filings?

In an astounding financial turn, Japanese investment firm Metaplanet Inc. recorded a skyrocketing 4,000% rise in its stock price, which by the by coevally happened with the recent cryptocurrency rally. The ground-breaking surge seen is to be ascribed to Metaplanetâ€™s strategic maneuver of building a large Bitcoin store that is what has made it a considerable participant in the crypto investment backdrop. The recklessness of the companyâ€™s initiative goes hand in hand with one of the factors driving the wider shift to using cryptocurrencies as assets to shore up value and generate investor interest. In this dynamic environment, investors are keen to jump at the first opportunity that promises high returns. One of these opportunities is the best crypto presale investment opportunity, which allows participants to get early access to tokens that have tremendous growth potential. We have 5 exceptional initiatives highlighted that are making an impact on the industry. Read more and explore each projectâ€™s unique features. Top 5 Crypto Presale Projects - DexBoss (DEBO) - Aureal One (DLUME) - Solaxy (SOLAX) - Rexas Finance (RXS) - Best Wallet Token (BEST) From innovations in decentralized finance to metaverse integrations and sophisticated trading platforms, it is these initiatives that are at the forefront of technological advance. As the market ready itself for a crypto bull run, early participation in these presales may see investors poised for huge gains. Letâ€™s find out why DexBoss leads the list! DexBoss (DEBO): Revolutionizing Decentralized Trading DexBoss is a decentralized exchange (DEX) conceived in support of liquidity issues, excessive gas prices, and negligible incentives. By applying a hybrid of liquidity pool mechanisms, users are rewarded for their contribution toward liquidity which provides efficiency and seamless trading. The platformâ€™s user interface works great for novice and experienced traders alike: Accessibility for all DeFi scopes. Click here to know more about DexBoss DEBO token DEBO token convenes the backbone of the DexBoss Environment. It is available currently at \$0.011 and is projected to be listed at \$0.0505. The presale is catching the eyes of the investors and has already raised 563,476.3 (75% of its target of \$750,000). Governance rights will benefit token holders by engaging in important decisions, including fee structures, liquidity incentives, and feature developments. Staking DEBO tokens makes impregnations possible and long-term attractive to such investors. DexBossâ€™s unique methodology toward decentralized trading makes it one of the best crypto presale opportunities in 2025. Aureal One (DLUME): Connecting Metaverse and Blockchain Gaming Aureal One sets out to change the lines of the game and revive the metaverse by integrating its team of programmers, artists, game developers, musicians, and even authors based on amazing 3D game experiences through blockchain technology. The introduction of this new interaction model allows the players to own the gameâ€™s assets, trade them between persons seamlessly, and earn some tangible rewards from the game. Aureal One has grabbed a new opportunity by entering a gigantic market as far as digital experiences are concerned. DLUME Token The DLUME token is the native token of the Aureal One ecosystem and is currently priced at \$0.0011. It is projected to be listed at \$0.005 promising a 400% return to early investors. As of February 11, 2025, the presale has already raised \$3,195,601.5 out of \$3,200,000. It is used for in-game transactions within the metaverse and governance. Players are offered the chance to take part in decisions through a voting process on game developments. Besides, staking the DLUME token generates rewards, which serve as an added motivation to invest. With the rapidly exploding Altura Metaverse coin, Aureal One becomes one of the high potential crypto that should take considerable attention from investors. Solaxy (SOLX): Improving Blockchain Scalability Solaxy is a Layer 2 solution aimed at improving the scalability of Solana. Solaxy intends to solve congestion issues that enable faster finality and lower transaction fees, thus rendering the network more efficient. Its primary focus on increased scalability stays well within the usual boundaries of interest to the blockchain ecosystem. SOLX Token The SOLX token is one of the main components in the Solaxy platform, where it performs the task of validating and staking transactions. The holders will have a say in governance decisions, thereby helping influence the operational parameters and future development to be considered before something goes live. Nonetheless, with the additional scalable solutions needed in blockchain, Solaxy proved to be yet another great investment opportunity with the sale coming up shortly. The SOLX token is priced at \$0.001624 and has raised \$17,570,952.77/ \$18,226,663 so far. It has positioned itself as the best crypto to invest in 2025 and investors looking for growth should get their hands on it before the price increases. Rexas Finance (REXA): Tokenization of Real-World Assets Rexas Finance deals with the tokenization of real-world assets (RWA), allowing users to own fractionalized carrying values of highly priced assets such as real estate, commodities, art, and intellectual properties. The project intends to break down barriers impeding the tokenization of RWAs and opening new investment opportunities for all. Rexas Finance wants to utilize blockchain technology for transparent, liquid, and accessible asset ownership. REXA Token Currently, in presale, the token is available for \$0.200 and will be listed at \$0.250. With \$45,059,125 raised out of \$56,000,000, the token indicates strong investor interest. REXA token facilitates transactions within the Rexas Finance ecosystem, allowing holders to invest in fractionalized assets, participate in governance decisions, and earn rewards through staking. As demand for asset tokenization rises, Rexas Finance puts itself at the forefront of integrating old-style assets into the digital world, which in itself is good material for a high potential crypto. Best Wallet Token (BEST): A Fully-Fledged Web 3 Wallet Solution Best Wallet is a Web3 wallet that provides storage, trading, portfolio management, and many other services. Users can do leveraged crypto trading through perpetual futures or invest in exclusive presales, with the option of using their Wallet balance as payment. It contains the whole lifestyle package, making it an all-in-one utility for crypto enthusiasts. BEST Token BEST is a native currency in the Best Wallet ecosystem, allowing holders to gain discounts on transaction fees, participate in governance, and increase staking returns through the staking aggregator. With their presale raising \$9,027,566.19, Best Wallet Token is coming into the limelight as one of the most favorable investments that you could take priced at \$0.02385. Concluding Words With the cryptocurrency market preparing for the next crypto bull run, then investors are on the lookout for early-stage projects that show immense growth potential. DexBoss offers a new way of decentralized trading, Aureal One is leading in metaverse gaming, Solaxy solves serious scalability concerns, Rexas Finance adds a novel spin on asset tokenization, and Best Wallet Token completes your whole Web3 wallet solution. Participating early in these presale opportunities gives them the edge to rank themselves strategically at the top curve of the run. Among these five projects, DexBoss is well-equipped to provide DeFi experience with ease as it allows you to trade in over 2000 cryptocurrencies, making it a worthy option for those looking for the best crypto presale. As always, maximize research and awareness around developments of influence as an investor before making decisions. The upcoming presales of 2025 could be game changers for many, get prepared, and never miss out. We recommend you research the market trends before investing to avoid some risks. Rippleâ€™s XRP is making headlines as its bull run mode remains active despite a recent price dip. It is pushing past key resistance levels, aiming for \$6.50. Meanwhile, a rising altcoin, Rexas Finance (RXS), is turning heads with its ambitious goal of reaching double-digit prices from under \$0.30. This massive rally potential has drawn investors to its presale. As these two cryptocurrencies gain traction, investors are eager to see if they can sustain their upward momentum and deliver substantial returns. Ripple (XRP): Aiming for \$6.50 Amid Growing Institutional Interest XRPâ€™s strong positive momentum has driven it beyond key resistance levels, placing it among the best-performing cryptocurrencies in recent weeks. Despite the recent retreat below \$3, XRP is still in its bull run mode. It has continued surging and has surpassed the important \$3 mark. It currently trades at \$3.08, with the key resistance level around \$3.40. Still, trade volume is robust, and whale activity indicates strong confidence in large investors about XRPâ€™s potential for upward momentum. Technical indicators, however, show mixed signals. The Relative Strength Index (RSI) has fluttered around overbought levels, signaling a possible pullback. Yet, the overall outlook is positive. Its tightening Bollinger Bands suggest declining volatility and an approaching rally. Should XRP break past the \$3.50 resistance zone, it will swiftly challenge \$4, which could drive it towards \$6.50. Recently, Ripple reached yet another milestone. Key U.S. states have approved Money Transmitter Licenses for Ripple, providing credibility and boosting adoption among financial institutions. A possible XRP Spot ETF, attracting more institutional investors, has also created excitement. Meanwhile, Rippleâ€™s recent partnership with Ondo Finance is driving new tokenization efforts. These factors have helped XRP solidify its position in the crypto market. Analysts highlight crucial support levels around \$2.70. If the price stays above \$3.50, XRP could be on track for a significant rally. Breaking past \$5 would likely trigger more buying pressure, setting the stage for a run toward \$6.50. Rexas Finance (RXS): The Rising Star Poised for Double-Digit Gains While Rippleâ€™s XRPâ€™s bullish path leads it to \$6.50, RXS, a fast-rising altcoin, is shooting for the stars as it targets a double-digit price. This will represent a behemoth increase from its current price below \$0.30. RXS has seen significant growth since its presale launched at \$0.03. The token is now selling for \$0.20 at stage twelve, the final stage. The presaleâ€™s success has been remarkable, and its momentum has showcased investorsâ€™ strong conviction in the projectâ€™s vision. So far, the project has sold 443 million tokens, raising \$44.5 million. Unlike many projects that rely on venture capital, Rexas Finance has chosen a decentralized approach. The public presale has allowed retail investors to get in early for better returns, helping build a loyal community that believes in the projectâ€™s long-term potential. Rexas Finance (RXS) is gaining attention with its innovative approach to real-world asset (RWA) tokenization. The project stands out for its unique utility, which has boosted its potential for long-term growth. With a commitment to making real-world assets (RWAs) accessible to everyone, Rexas Finance turns these assets into digital tokens. This not only makes high-value assets more accessible but also improves liquidity and reduces costs. Investors worldwide can now participate in markets that once faced geographical restrictions, and small investors can now buy fractions without needing huge capital. The demand for tokenized assets is growing rapidly, and Rexas Finance is positioned at the forefront of this movement. Tokenization offers clear benefits, including lower entry barriers and increased security. Institutional investors are increasingly exploring this space, and RXS is poised to capitalize on this trend. Rexas Finance provides a seamless and secure platform to facilitate RWA investments as more people discover the power of asset tokenization. Its ecosystem also boosts its appeal, providing powerful tools like the Rexas Token Builder that make tokenization and investment seamless, even for beginners. Rexas Finance has built a strong foundation for growth, which has sparked ambitious price predictions. Analysts predict it can easily hit two digits once it launches on June 19. Its upcoming launch on major exchanges will act as a catalyst for RXSâ€™s growth. Gaining access to top-tier exchanges will significantly boost its liquidity and market exposure. More visibility means more buyers, which drives demand and price appreciation. With institutional investors likely to take notice, RXS could see an influx of capital once it starts trading on major platforms. Given its strong fundamentals, rising demand, and upcoming listing, Rexas Finance has all the ingredients for massive growth in 2025. With targets from \$15 to \$25, RXS is a promising investment for savvy investors. Conclusion XRP is maintaining its strong bullish trajectory, while RXS is gaining momentum ahead of its exchange debut. Rippleâ€™s institutional adoption and regulatory strides could fuel its push toward \$6.50, while Rexas Financeâ€™s innovative approach to asset tokenization sets the stage for massive gains post-launch. Although both offer exciting opportunities in 2025, RXSâ€™s double-digit gains far outperform its predicted rise to \$6.50. Thus, for investors looking for the most lucrative opportunities, RXS is the better choice. The crypto market recently experienced declines by over 12.7% of its market cap in a single day, shrinking to about \$2.99 trillion. The current downward trend in the market is temporary and creates a great chance to buy altcoins at lower prices. The market is likely to stabilize and stay in a certain range for a few days before going back up. In a time such as this, investing in FXGuys (\$FXG), Solana (SOL), and Ethereum (ETH) has proven to be a very smart investment decision as these altcoins have the potential for massive returns in a short time from now. Join us as we discuss more about these altcoins and why we believe they are the best crypto coins to buy now. Solana (SOL) Achieves Important Blockchain Milestone Solana has not had any outages for a whole year. This is groundbreaking, especially for a blockchain that was once the subject of every crypto industry joke about downtime. Solana was known for having a bad image. Block production halts, hours-long outages, critics calling it a centralized mess – it all weighed down not just the technology but also the SOL token’s price performance. The last big disruption lasted 4 hours and 46 minutes, which is a very long time for a blockchain. And guess what? That wasn’t the worst. In an industry where being dependable is crucial, it’s tough to change a history like that. However in the spirit of growth, Solana did not remain inactive during its year without any outages; instead, it grew. The total value locked (TVL) in the network increased by 548%, reaching a high of \$14.25 billion. Ethereum’s (ETH) Trend Reveals It is Poised For Its Most Explosive Breakout An expert compared market cycles and found that Bitcoin, in its third cycle, moved sideways in a symmetrical triangle shape before its sudden sharp rise. Ethereum is in its fourth cycle now and looks like it might follow the same pattern as earlier cycles, suggesting that a big price rise could happen soon. Ethereum is today priced at around \$2,693. The \$3,000 level is an important point to keep an eye on because it could affect future price changes. If Ethereum can hold \$3,000 as a support level, it might rise to \$4,000. If the price goes above this point, it would indicate strong demand, which could drive Ethereum’s price up further. If the spiral pattern is right, Ethereum could be set for a significant price increase, similar to what Bitcoin experienced in the past under similar conditions. The FXGuys (\$FXG): The Altcoin That Could Explode Your \$1K Portfolio into \$100K in 2025 FXGuys is a crypto trading platform that offers a new way to approach trading by providing endless access to the forex market. This new crypto ICO provides advanced analytics, AI tools, and interactive charts to help traders make better trading choices. The Trader Funding program is one of the features that sets this crypto trading platform ahead of Solana and Ethereum. With this feature, skilled traders can access capital up to \$500,000 when they complete challenges on the platform. Additionally, there is an 80/20 profit split for active traders, with 80% in their favor. FXGuys’ Trade2Earn program is another feature that draws attention to this new crypto ICO. This feature is a great opportunity for those learning how to trade cryptocurrency to boost their portfolios, as FXGuys rewards you with \$FXG tokens. Regardless of the outcome of your trade, you can boost your portfolio with \$FXG in anticipation of the new year, as the Trade2Earn system incentivizes active participation. The \$FXG public presale is currently in Stage 3, valued at \$0.05. Due to increased demand, over \$3.9 million has been raised. As the presale draws closer to Stage 4, experts believe that once \$FXG lists at \$0.10, early investors will receive a 150% ROI. Summary If you intend to make massive gains in 2025 from crypto trading and your portfolio does not include \$FXG, SOL, and ETH, then it is safe to say that you are a joker. Having \$FXG in your portfolio is already a major game-changer, as this altcoin has proven to be one of the best crypto coins to buy now. Join the \$FXG public presale and secure your wealth! To find out more about FXGuys follow the links below: Presale | Website | Whitepaper | Socials | Audit Disclaimer: TheNewsCrypto does not endorse any content on this page. Ever feel like you missed out on the biggest meme coin explosions? The crypto market has seen its fair share of underdog tokens turning into viral sensations overnight. And guess what? Another wave of meme coins is brewing, and if you’re paying attention, you might just catch the next big one before it takes off. One of the most exciting meme coin opportunities right now is BTDF Coin (BTDF), which isn’t just about the memes—it’s got serious earning potential. With an insane 90% APY on staking, this coin is turning heads. But it’s not alone in the spotlight. Two more meme coins—Popcat (POPCAT) and Peanut the Squirrel (PNUT)—are also generating serious buzz. Let’s dive into why these projects are catching fire as the top new meme coins to buy this week and why every savvy investor should be watching closely. 1. BTDF Coin: 90% APY Staking, Presale Surge and a Thriving Bulls Community BTDF Coin is a meme coin that isn’t just riding the hype—it’s delivering serious rewards to its holders. The most exciting part? A whopping 90% APY on staking, making it one of the highest-yield meme coins on the market. That means if you stake your BTDF tokens, you’re not just hodling—you’re multiplying your holdings at a jaw-dropping rate. It’s no surprise that BTDF is being talked about as one of the top new meme coins to buy this week by crypto enthusiasts looking for high-yield opportunities. For example, let’s say you invest \$5,000 in Stage 14 of the presale at \$0.00016 per BTDF token. That gives you 31.25 million BTDF coins. Now, if BTDF hits its listing price of \$0.0006, your investment would be worth \$18,750—a 3.75X ROI before staking rewards even kick in. And if the post-listing predictions are correct, and BTDF hits \$0.006, that same investment could skyrocket to \$187,500! The BTDF presale has already raised over \$6 million, sold more than 69 billion tokens, and attracted over 10,500 holders. With its Play-to-Earn game live since January 1, 2025, and a growing Bulls Squad community, BTDF is creating an ecosystem that’s not just about holding—it’s about earning and engaging. This combination of staking rewards, gaming, and community-driven momentum is exactly why BTDF is one of the top new meme coins to buy this week, offering more than just hype—real, tangible earning potential. How to Buy BTDF Coins? Setting up is easy. Connect your MetaMask or Trust Wallet, load it with BNB or ETH, head to the BTDF presale page, buy your tokens, and start earning. Once the presale ends, claim your BTDF tokens and watch your rewards stack up! Why did this coin make it to this list? BTDF isn’t just another meme token—it’s a staking powerhouse. With its 90% APY, an explosive presale, and a strong gaming component, it’s giving investors multiple ways to earn. If you’re looking for a meme coin that’s more than just hype, BTDF should be on your radar. 2. Popcat: From Meme to Crypto Star If you’ve been on the internet at all in the last few years, you’ve probably seen Popcat—the famous meme of a cat with a ridiculously exaggerated mouth. But did you know it’s now a crypto phenomenon? POPCAT is an internet culture-fueled meme coin that launched in October 2020, and it’s gaining major traction in 2025. This project is all about community-driven hype, leveraging the power of internet virality to create a decentralized meme economy. With Popcat’s history as one of the internet’s favorite memes, POPCAT tokens are riding the nostalgia wave and attracting both crypto traders and meme lovers alike. Why did this coin make it to this list? POPCAT taps into one of the most powerful forces in crypto—memes. With a strong community, growing adoption, and a foundation built on internet culture, this token could see explosive gains. 3. Peanut the Squirrel: A Meme Coin with a Purpose Most meme coins thrive on humor, but Peanut the Squirrel (PNUT) is taking a different approach—blending meme culture with animal advocacy. Inspired by Peanut, the beloved rescue squirrel, this Solana-based meme coin is building a community dedicated to wildlife awareness. PNUT has become a symbol of compassion, charity, and crypto-driven social impact, making it stand out from the usual meme coin crowd. And since Solana’s low fees and fast transactions make it ideal for microtransactions, PNUT is making it easier for the community to support animal welfare initiatives. Why did this coin make it to this list? PNUT isn’t just a meme—it’s a movement. With a growing following, a real-world cause, and strong community backing, this meme coin is proving that crypto can do more than just entertain—it can inspire and give back. Conclusion The meme coin scene is evolving, and these top new meme coins to buy this week are proving that it’s more than just a fad. With BTDF Coin’s 90% APY staking, Popcat’s internet-driven meme energy, and Peanut the Squirrel’s mission-driven appeal, there’s something for every investor. The clock is ticking—BTDF Coin’s presale won’t last forever. The current stage is almost over, and the price of \$0.00016 won’t stick around for long. If you’re looking for high APY staking and meme coin potential, now’s the time to act. Join the BTDF Coin presale now. FAQs What makes BTDF Coin unique among meme coins? BTDF Coin stands out due to its insane 90% APY staking, growing Bulls Squad community, and live Play-to-Earn game. Is Popcat (POPCAT) still a relevant meme coin in 2025? Absolutely! Popcat remains one of the most recognizable memes, and its community-driven token is gaining traction. What is the purpose behind Peanut the Squirrel (PNUT)? PNUT is more than just a meme—it’s a movement for animal welfare, combining meme culture with social good. What if you could find the next 1000X crypto before it takes off? As the market heats up, investors are closely watching projects with massive upside potential. Two names making waves are ZIGnaly (ZIG), which has a market cap of \$131.97 million and a circulating supply of 1.43 billion tokens, and Avalanche (AVAX), which has seen a staggering 62.94% surge in 24-hour trading volume, hitting \$340.5 million. These numbers highlight growing investor interest, making both projects prime contenders for explosive growth. However, one crypto stands out with a groundbreaking DeFi solution—Qubetics (QTICS). With its Non-Custodial Multi-Chain Wallet, strategic partnership with 1inch, and recognition in Trust Wallet’s Web3 Digest, Qubetics is redefining how users store, trade, and interact with crypto assets. Its fast-selling presale and high analyst predictions make it one of the best cryptos with 1000X potential, offering investors a chance to get in early before its next price jump. Qubetics’ Non-Custodial Multi-Chain Wallet Is Redefining Crypto Storage Crypto wallets are evolving, and Qubetics is at the forefront of this transformation. Unlike traditional wallets, Qubetics allows users to seamlessly manage, trade, and interact with multiple blockchain ecosystems—all from one platform. Whether someone is trading on Ethereum, staking on Solana, or swapping assets across different chains, Qubetics eliminates the need for multiple wallets, making cross-chain interactions simple and efficient. As the crypto market grows, demand for decentralized, non-custodial solutions is skyrocketing. The global crypto wallet market was valued at \$8.42 billion in 2022 and is projected to reach \$16.87 billion by 2030. With its intuitive user interface, cross-chain functionality, and security-first approach, Qubetics is positioning itself as a must-have DeFi tool. For investors looking for the best cryptos with 1000X potential, this project is an undeniable contender. Partnership with 1inch, Trust Wallet Web3 Digest Elevates Qubetics to the Next Level Qubetics isn’t just another wallet—it’s a full-fledged DeFi powerhouse, thanks to its strategic partnerships with 1inch and Trust Wallet. Through its 1inch integration, Qubetics gives users access to hundreds of decentralized exchanges (DEXs), ensuring the best trade execution with deep liquidity. This means traders always get the most competitive rates, streamlining the DeFi trading experience and making Qubetics an essential tool for serious investors. Beyond 1inch, Qubetics has been featured in Trust Wallet’s Web3 Digest, a major endorsement that highlights its cutting-edge technology. Trust Wallet’s Web3 Digest is known for showcasing top-tier blockchain innovations, exposing Qubetics to a vast audience of Web3 users and investors. This recognition cements Qubetics as a trailblazer in DeFi and a top contender in the race for the best cryptos with 1000X potential. Qubetics Presale: The Investment Opportunity of a Lifetime The Qubetics presale is on fire, with over \$12.4 million raised, 469 million tokens sold, and 19,300+ holders already securing their positions. Each presale stage lasts only 7 days, with a 10% price increase every Sunday at 12 AM, creating urgency for investors looking to maximize their gains before the next jump. Currently, QTICS is priced at \$0.0733, but projections are bullish. If QTICS reaches \$0.25 by the end of the presale, investors can see a 240.64% ROI. Post-launch expectations are even higher—\$1 equals a 1262.56% ROI, \$5 means 6712.83%, and \$10 translates to 13,525.66%. For example, an investor putting \$750 into Qubetics at \$0.0733 would receive 10,212.93 tokens. If QTICS hits \$1, that’s a return of \$10,212.93. At \$10, it skyrockets to \$102,129.34, making Qubetics one of the best cryptos with 1000X potential. ZIGnaly’s Market Cap Drops, But Potential Remains Strong ZIGnaly (ZIG) has seen a 4.99% drop in market cap, bringing it to \$131.97 million, while 24-hour trading volume declined by 5.58% to \$11.87 million. Despite the dip, ZIGnaly remains a promising project with a total supply of 2 billion ZIG tokens and a circulating supply of 1.43 billion. While the market may be reacting to short-term volatility, long-term interest in ZIGnaly remains strong. With its focus on crypto trading solutions and AI-driven investment strategies, ZIGnaly is positioning itself as a key player in automated trading. As market conditions stabilize, ZIGnaly could see renewed interest from both institutional and retail investors, making it one of the best cryptos with 1000X potential for those looking at long-term plays. Avalanche Sees a 62.94% Surge in Trading Volume, Signaling Bullish Momentum Avalanche (AVAX) has experienced a massive 62.94% increase in 24-hour trading volume, hitting \$340.5 million. This spike indicates renewed investor interest in AVAX, driven by its robust ecosystem and fast transaction speeds. The market cap currently stands at \$10.64 billion, with a circulating supply of 411.83 million AVAX tokens. Avalanche’s scalability and low fees have made it a go-to platform for DeFi applications, NFT projects, and enterprise blockchain solutions. With AVAX adoption growing and trading activity increasing, the token remains a strong player in the market. As it continues to expand its ecosystem,

AVAX has the potential to deliver massive returns, making it one of the best cryptos with 1000X potential. Conclusion: Which Crypto Has the Best 1000X Potential? For investors looking for the best cryptos with 1000X potential, Qubetics, ZIGnaly, and Avalanche each offer unique opportunities. ZIGnaly has strong fundamentals despite recent market fluctuations, while Avalanche is seeing renewed interest with a major surge in trading volume. However, Qubetics stands out as the highest-growth opportunity. With its Non-Custodial Multi-Chain Wallet, linch integration, Trust Wallet feature, and fast-selling presale, Qubetics is leading the charge in Web3 innovation. Investors looking for massive upside potential should join the Qubetics presale before the next price increase. For More Information: - Qubetics: <https://qubetics.com/> - Telegram: <https://t.me/qubetics> - Twitter: <https://twitter.com/qubetics> FAQs How does Qubetics ensure security and transparency for its users? Qubetics prioritizes security and transparency by offering a non-custodial wallet, meaning users have full control over their assets. It also integrates advanced encryption, smart contract verification, and real-time analytics through its ecosystem, ensuring secure transactions and complete transparency in all interactions. Is Avalanche a good investment? Avalanche has seen a 62.94% surge in trading volume, signaling strong market interest. With its scalability, low fees, and growing adoption, AVAX remains a solid investment choice. Whatâ€™s next for ZIGnaly? Despite a 4.99% drop in market cap, ZIGnaly continues to attract investors looking for AI-driven trading solutions. As the market stabilizes, ZIG could see renewed growth. - Four.Meme platform witnessed a major security breach. - PeckShieldAlert reported that the platform lost about \$183K in the attack. Another day, another vulnerability was exploited in cryptocurrency. BNB Chainâ€™s Four.Meme launch platform has faced a major security breach. The attackers targeted the growing liquidity in meme tokens and swiped \$183k worth of assets. Four.Meme is a memecoin launch platform based on the BNB chain. It was launched in July 2024 and enhanced the BNB chain ecosystem by empowering traders, creators, and opportunists. PeckShieldAlert Reported the \$183K Crypto Hack In todayâ€™s X post Four.Meme platform announced that they are experiencing a malicious attack. However, the platform assured the users that their funds were safe and unaffected from the hack. #PeckShieldAlert @four_meme_has reported suffering an exploit, resulting in a loss of -\$183K.<https://t.co/d84BRJ3s3nJ> pic.twitter.com/4nWmURCmjB â€” PeckShieldAlert (@PeckShieldAlert) February 11, 2025 The On-chain Security firm PeckShield reported losses of \$183K. Later on Four.Meme platform suspended the token launched on PancakeSwap. Trading will be accessible to users as soon as the platform team fixes the ongoing problem. The hack comes just a few days after the platform reported a record high in user activity and token launches. According to Dune data, the platform achieved 11,473 unique addresses. However, this metric decreased to 5,301 addresses as a result of the attack. The unique addresses metric served to illustrate the number of unique addresses on the platform. Additionally, the increase in unique addresses is also a contributing factor as to why attackers targeted the Four.Meme platform. This is not the first time the crypto industry witnessed these types of cyber attacks. Many such cases have been seen in recent days. In Mid 2024 Solana memecoin launchpad Pump.fun faced a similar type of flash loan attack. Nowadays the meme coins launchpad are a favorite target of these attackers. The popular platform becomes prey to these attackers. As a result, these vulnerabilities are exploited, causing significant financial losses and shaking the trust of the crypto community. Highlighted Crypto News Today:

- Cardano has risen over 13%, trading around the \$0.80 mark. - The daily trading volume of ADA surged by over 70% to \$1.33 billion. Cardano (ADA) has registered a 13.66% daily surge. The latest price resurgence follows the crypto asset manager, Grayscaleâ€™s spot Cardano exchange-traded fund (ETF) application on the New York Stock Exchange (NYSE). This could have sent a buzz across the ADA community. Notably, Bloomberg ETF Analysts James Seyffart and Eric Balchunas predict that the Securities and Exchange Commission (SEC) will approve ETFs for Litecoin, Dogecoin, Solana, and XRP. Although Cardano left unmentioned. In the early hours, ADA visited its lowest trading level at \$0.6947 and eventually mounted to the daily high of \$0.8159. It has broken the crucial resistances at \$0.7491 and \$0.7934. As of the press time, Cardano trades at \$0.8012, with its daily trading volume reaching \$1.33 billion. Meanwhile, the market has witnessed a \$3.70 million ADA liquidation during the period. Despite this recovery, ADAâ€™s momentum appears to be uncertain, with technical indicators exhibiting mixed signals. Is ADA on the Rise or Fall? Cardanoâ€™s four-hour candlestick analysis exhibits the active downside correction. Assuming the selling pressure intensifies, the immediate support could be tested at \$0.7483. Losing ground at this level might trigger more downside, plummeting toward \$0.68 or even lower. Contrarily, a reversal could form a golden cross to push the price upside. In such a case, Cardano might likely test the \$0.8673 resistance. An extended gain of ADA can drive the price to reclaim the \$1 mark in the upcoming days. The Moving Average Convergence Divergence (MACD) line and signal line of ADA are found below the zero line. It indicates a bearish crossover and traders often consider this as a sell signal within the market. Moreover, the Chaikin Money Flow (CMF) indicator at 0.26 suggests a positive flow with buyers in control of the market. Significantly, the daily trading volume of Cardano has increased by over 70.52%. ADAâ€™s Bull Bear Power (BBP) value at -0.032 signals brief bearish pressure with sellers having a marginal edge over buyers. Besides, the daily relative strength index (RSI) of 44.08 points out the asset is in a neutral to slightly bearish zone.

Meme coins have taken the crypto world by storm, transforming small investments into life-changing gains. From the legendary Dogecoin craze to the rise of Shiba Inu, these digital assets have proven theyâ€™re more than just internet jokes. Now, a new wave of meme coins is making waves, offering massive ROI potential. Among them, Arctic Pablo Coin, Degen, Apu Apustaja, and Snek are turning heads in the Top Cryptos to Join for Short Term space. With unique utilities, massive hype, and a chance for early investors to capitalize on their growth, these projects are poised for an explosive breakout. While all these meme coins have impressive qualities, Arctic Pablo Coin stands out with a revolutionary presale structure. Unlike traditional staged presales, Arctic Pablo Coin â€™travelsâ€™ through different locations, making its journey unpredictable and thrilling. With over \$1 million raised and a mind-blowing ROI potential, Arctic Pablo Coin might just be the next big meme coin success story. Arctic Pablo Coinâ€™s Unique Presale Model is a Game-Changer Arctic Pablo Coin takes a fresh approach to presales, ditching the standard tiered system. Instead, the coin â€™travelsâ€™ through different locations, with each new stop bringing a price change. Currently stationed in Aqua Forest at a price of \$0.000959, early investors are locking in a jaw-dropping ROI of 13,451.72% when it hits its launch price of \$0.008. This unique structure makes it a must-watch among the Top Cryptos to Join for Short Term coins. With the Arctic Pablo Coin meme coin presale already surpassing \$1.1 million in funding, demand is skyrocketing. Each new location in its presale roadmap sees a token price increase, ensuring a constant upward trend. On top of that, the token burn mechanism keeps supply in check, potentially increasing scarcity and driving value even higher. Investors looking for a meme coin with real upside should be paying close attention to Arctic Pablo Coin before it launches. Degen â€” The Ultimate Degenerateâ€™s Paradise Degen is the perfect meme coin for risk-takers who thrive on unpredictability. Designed to embrace the high-risk, high-reward ethos of crypto trading, Degen has built a vibrant community of traders looking for the next moonshot. With a lighthearted yet aggressive branding, itâ€™s rapidly gaining traction in crypto circles. A strong, dedicated fanbase and a growing ecosystem are why Degen made it to this list. Apu Apustaja â€” The Classic Meme Revival Apu Apustaja capitalizes on one of the internetâ€™s most beloved memes, bringing it to the blockchain in full force. This meme coin merges nostalgia with cutting-edge tokenomics, offering staking rewards and community-driven incentives. As meme coins continue to dominate speculative markets, Apu Apustajaâ€™s loyal following and nostalgic appeal make it a strong contender. Thatâ€™s why Apu Apustaja made it to this list. Snek â€” The Serpent of Solana Snek has slithered its way to the top of Solanaâ€™s meme coin rankings, proving that even a snake can charm investors. With Solanaâ€™s rapid ecosystem growth, Snek benefits from lightning-fast transactions and lower fees, making it a prime choice for traders. Its growing popularity within the Solana community ensures it remains a meme coin to watch. Thatâ€™s why Snek made it to this list. Conclusion â€” Arctic Pablo Coin and Other Top Meme Coins to Watch Based on the latest research, Top Cryptos to Join for Short Term coins are Arctic Pablo Coin, Degen, Apu Apustaja, and Snek. While all of these meme coins show significant promise, Arctic Pablo Coin stands out with its innovative presale journey and massive ROI potential. With a unique location-based pricing system and strong tokenomics, early investors have a golden opportunity to maximize their gains. As the crypto market gears up for another meme coin surge, securing a position in Arctic Pablo Coinâ€™s presale could be the smartest move for those looking to capitalize on the next viral sensation. For More Information: - Arctic Pablo Coin: <https://www.arcticpablo.com/> - Telegram: <https://t.me/ArcticPabloOfficial> - Twitter: <https://x.com/arcticpabloHQ> Frequently Asked Questions (FAQs) 1. What makes Arctic Pablo Coin different from other meme coins? Arctic Pablo Coin stands out with its unique location-based presale system, where token prices increase as it â€™travelsâ€™ to new destinations, creating an exciting and dynamic investment opportunity. 2. What is the potential ROI for Arctic Pablo Coin? Early investors could see an ROI exceeding 14,725.93% from the current presale price to its planned launch price of \$0.008, making it one of the most lucrative top crypto presale opportunities. 3. Why are meme coins gaining popularity in 2024? Meme coins continue to attract attention due to their viral marketing potential, strong community engagement, and ability to generate massive returns in a short time. 4. How does Arctic Pablo Coinâ€™s token burn mechanism work? The Arctic Pablo Coin presale includes a burn mechanism that helps reduce supply, increasing scarcity and potentially driving up value for holders. 5. When will Arctic Pablo Coin officially launch? While no exact date has been announced, the presaleâ€™s current pace suggests a highly anticipated launch in the coming months, giving investors a limited-time opportunity to buy in at a lower price. In the dynamic world of cryptocurrencies, meme coins often experience rapid shifts in value and investor sentiment. Dogwifhat has recently encountered significant resistance at the \$2 price level, struggling to break through this critical point. Despite previous rallies, the coin has stalled at this key mark, leading to concerns among investors about its short-term recovery potential. Without renewed buying pressure, Dogwifhat risks further price declines. Investors are now closely watching to see whether the meme coin can gain enough momentum to break through resistance and reclaim a bullish trajectory. While Dogwifhat fights to regain ground, BTFD Coin is seeing explosive growth in its presale, attracting thousands of investors. Unlike other meme coins that rely solely on market speculation, BTFD Coin offers an engaging ecosystem and a lucrative presale structure that rewards early buyers. With analysts forecasting strong future performance, BTFD Coin is quickly establishing itself as one of the best crypto under \$1. BTFD Coin: Presale Performance and Analystsâ€™ Predictions BTFD Coin has set itself apart from other meme coins with its impressive presale momentum and strategic investor incentives. The project is currently in Stage 14 of its presale, allowing investors to buy in at \$0.00016 per token before the next price increase. With strong community engagement and structured growth incentives, analysts believe that BTFD Coin has the potential to outperform many traditional meme coins once it officially launches. One of the biggest advantages of joining the presale now is the LAUNCH100 bonus, which gives investors 100% more BTFD tokens at no additional cost. This means that for every token purchased, investors receive an equal amount for free, doubling their holdings instantly. With meme coins often delivering their highest returns in their early phases, this bonus is a game-changing opportunity for those looking for the best crypto under \$1. Unlike projects that depend solely on hype, BTFD Coin has built a solid foundation through its referral program, play-to-earn features, and staking incentives. This combination of rewards and real utility ensures that the coin retains investor interest long after the presale ends. While many meme coins fade out after their initial pump, BTFD Coinâ€™s structured approach is designed to maintain growth, making it a long-term contender in the market. As of today, BTFD Coin has raised over \$6 million, with more than 69 billion tokens sold to over 10,500 investors. With momentum continuing to build, analysts predict that once BTFD Coin lists on major exchanges, its price could rise significantly. For those looking for an entry point into the next big meme coin, this could be the best time to buy before the presale ends. Dogwifhat: Struggling at the \$2 Resistance Level Dogwifhat, one of the most talked-about Solana-based meme coins, has found itself in a critical battle at the \$2 resistance level. Despite periods of strong bullish momentum, the coin has struggled to sustain gains, leading to price stagnation. Investors who were previously bullish on Dogwifhat are now becoming cautious, as its failure to break through \$2 raises concerns about further downside potential. Market analysts suggest that Dogwifhatâ€™s next move depends heavily on broader market conditions. If trading volume and buying interest increase, Dogwifhat could successfully break resistance and move higher. However, if the coin continues to struggle at this level, a sharp retracement could follow, leading to potential losses for short-term holders. For now, investors remain divided on Dogwifhatâ€™s future. Some believe it still has room for another rally, while others are shifting their focus to emerging projects like BTFD Coin, which offer stronger growth potential and structured investment rewards. Bonk: Navigating Market Volatility Bonk has long been a dominant player in Solanaâ€™s meme coin ecosystem, but its high volatility has made it a challenging asset for investors. Over the past month, Bonk has seen a 49.34% decline, raising questions about its ability to hold long-term value. However, some analysts remain optimistic,

predicting that Bonk could rebound by 30.10% in the coming weeks, potentially reaching \$0.000024. While these forecasts provide some hope for investors, Bonkâ€™s recent price swings indicate that caution is still warranted. Meme coins often rely on community enthusiasm and external catalysts, and Bonkâ€™s performance will likely depend on whether it can regain investor confidence in the near term. Despite these uncertainties, Bonk remains a widely recognized meme coin, and if it can recover from recent losses, it may still provide profitable opportunities. However, with many investors seeking new and more structured meme coin investments, projects like BTDF Coin are becoming a more attractive alternative. Conclusion The meme coin market remains highly unpredictable, with Dogwifhat, Bonk, and BTDF Coin each presenting different opportunities and risks. Dogwifhat is facing a tough battle at the \$2 resistance level, with investors uncertain about its next move. If it fails to break through, a decline could follow, adding to recent struggles. Bonk has been dealing with significant price volatility, with some analysts predicting a 30.10% recovery, but others warning of continued uncertainty. Meanwhile, BTDF Coin is thriving in its presale, attracting over 10,500 investors and raising more than \$6 million. With the LAUNCH100 bonus doubling investor holdings and analysts forecasting significant price gains post-launch, BTDF Coin is emerging as one of the best crypto under \$1 for investors seeking both high potential returns and structured rewards. For those looking for a promising investment in the meme coin space, BTDF Coinâ€™s strong presale performance and long-term vision make it a standout choice. Find Out More: - Website: <https://www.btfd.io/> - X/Twitter: https://x.com/BTDF_COIN - Telegram: https://t.me/btfd_coin FAQs - What makes BTDF Coin one of the best crypto under \$1? BTDF Coinâ€™s strong presale performance, structured investment model, and LAUNCH100 bonus incentive make it a top pick for investors looking for high growth potential. - Why is Dogwifhat struggling at the \$2 resistance level? Dogwifhat has hit a critical price barrier, and without stronger buying pressure, it risks retracement and further losses. - Is Bonk expected to recover soon? Analysts predict a potential 30.10% recovery for Bonk, but its recent 49.34% decline raises concerns about long-term stability. Disclaimer: TheNewsCrypto does not endorse any content on this page. What if you could spot the next big crypto breakout before the masses? With the market shifting daily, investors are hunting for the best cryptos to invest in this week. Two major contenders have surfacedâ€”AAVE and Stacks, both making waves with bullish momentum. AAVEâ€™s latest price action suggests a potential surge toward \$450-\$600, while Stacksâ€™ founder just made a \$10 million investment into STX tokens, signaling strong confidence in the project. But while these projects are attracting attention, Qubetics (QTICS) is pioneering something bigger. Unlike traditional cryptos focused only on price action, Qubetics is building a Non-Custodial Multi-Chain Wallet that enhances financial freedom. With its feature in Trust Walletâ€™s Web3 Digest and a major partnership with l1nch, Qubetics is proving why itâ€™s more than just another altcoin. Combined with its red-hot Qubetics presale, this project is quickly becoming one of the best cryptos to invest in this week. Qubeticsâ€™ Non-Custodial Multi-Chain Wallet Is a Game-Changer In a world where financial control is slipping into the hands of centralized entities, Qubetics is flipping the script. Its Non-Custodial Multi-Chain Wallet empowers users to store, manage, and transact digital assets freely across multiple blockchains. Unlike traditional wallets that limit access to specific chains, Qubetics bridges multiple ecosystems, making asset management seamless and unrestricted. Consider a trader who holds Ethereum, Solana, and Bitcoinâ€”instead of juggling multiple wallets, they can manage everything under one roof with Qubetics. Similarly, a DeFi investor staking across different protocols can easily track and move assets without switching platforms. With mobile, desktop, and cross-chain compatibility, Qubetics ensures that users remain in full control of their financial future. As crypto adoption grows, demand for secure, user-friendly wallets is surging. The global wallet market was valued at \$8.42 billion in 2022 and is expected to hit \$16.87 billion by 2030. With Qubetics providing unmatched accessibility and security, itâ€™s solidifying its place among the best cryptos to invest in this week. Qubetics Expands Its Reach with l1nch Integration and Trust Wallet Feature Qubetics is not just another crypto walletâ€”itâ€™s a full-fledged DeFi powerhouse, making decentralized finance more accessible, efficient, and optimized for users worldwide. A key part of its growing ecosystem is its strategic partnership with l1nch, which elevates decentralized trading by providing unmatched liquidity, superior trade execution, and access to hundreds of decentralized exchanges (DEXs). With l1nchâ€™s advanced aggregation technology, Qubetics users can secure the best possible prices on trades without ever leaving their wallet, ensuring frictionless, cost-effective, and optimized transactions. This makes Qubetics an essential tool for traders looking to navigate the DeFi space with ease. Beyond its l1nch partnership, Qubetics has been featured in Trust Walletâ€™s Web3 Digest, a major milestone that further solidifies its position as an industry leader. Trust Walletâ€™s Web3 Digest highlights innovative and emerging blockchain projects, giving them exposure to a massive crypto audience and strengthening their credibility in the Web3 space. By being showcased alongside other high-profile blockchain innovations, Qubetics is receiving well-deserved recognition for its cutting-edge technology and commitment to decentralized finance. Trust Walletâ€™s Web3 Digest is widely regarded as a hub for discovering the next big thing in blockchain, and Qubetics being included is no small feat. This feature brings more visibility to Qubetics, introducing it to a broader Web3 audience while reinforcing its role as a trailblazer in the decentralized ecosystem. With this level of industry recognition and major integrations like l1nch, itâ€™s clear that Qubetics is one of the top crypto gems to buy right now, positioning itself at the forefront of the DeFi revolution. Qubetics Presale Is a Rare Opportunity with Explosive ROI The best crypto presale is heating up, with over \$12.4 million raised, 469 million tokens sold, and over 19,300 holders. With a 10% price increase every Sunday at 12 AM, early investors are locking in the best deals before the next surge. Right now, QTICS is priced at \$0.0733, but analysts predict major gains. If QTICS reaches \$0.25 by the end of the presale, thatâ€™s a 240.64% ROI. Long-term projections are even more bullishâ€”\$1 translates to a 1262.56% ROI, while \$5 offers 6712.83% returns. Some estimates even suggest QTICS could hit \$10 or \$15, meaning 13,525.66% to 20,338.49% ROI. For example, an investor putting \$750 into QTICS at \$0.0733 secures 10,212.93 tokens. If QTICS reaches \$1, thatâ€™s a \$10,212.93 return. At \$10, it jumps to \$102,129.34, and at \$15, it skyrockets to \$153,194.02. With such explosive potential, itâ€™s no surprise Qubetics is one of the best cryptos to invest in this week. AAVE Price Action Signals a Surge Toward \$450-\$600 AAVE is making waves in the crypto market after flashing a massive weekly candle that suggests a potential price surge to \$450-\$600. Analysts believe this pattern signals a bottoming phase, setting the stage for an explosive breakout. Beyond price action, AAVE continues to dominate the DeFi lending sector, giving it a strong fundamental foundation for growth. With investors closely watching AAVE price movements, this token remains one of the best cryptos to invest in this week for those seeking a high-potential breakout opportunity. Stacks Founderâ€™s \$10 Million Investment Fuels Market Confidence Stacks (STX) is making headlines after its founder personally accumulated \$10 million worth of STX tokens, signaling major confidence in the project. This bold move suggests that insiders see long-term value in STX, which could fuel further demand. Stacksâ€™ focus on Bitcoin smart contracts and scalability makes it a unique player in the blockchain space. With its founder leading by example with a multi-million-dollar buy, STX is gaining traction among investors looking for the best cryptos to invest in this week. Final Thoughts: Which Crypto Offers the Best Potential? For investors searching for the best cryptos to invest in this week, Qubetics, AAVE, and Stacks all bring exciting opportunities. AAVEâ€™s price action suggests a breakout, Stacksâ€™ founder is betting big on STX, and Qubetics is revolutionizing decentralized finance with its multi-chain wallet and strategic partnerships. However, Qubetics stands out as the most explosive opportunity. With its Non-Custodial Multi-Chain Wallet, l1nch integration, Trust Wallet feature, and record-breaking presale, Qubetics is leading the charge in Web3 innovation. Investors looking for massive upside potential should join the Qubetics presale before the next price increase. For More Information: - Qubetics: <https://qubetics.com/> - Telegram: <https://t.me/qubetics> - Twitter: <https://twitter.com/qubetics> FAQs What is the significance of Qubetics being featured in Trust Walletâ€™s Web3 Digest? Trust Walletâ€™s Web3 Digest highlights top-tier blockchain projects, giving Qubetics massive exposure in the Web3 space. This feature validates its innovative technology, security, and role in shaping the future of decentralized finance. How high can AAVE price go in the coming weeks? Analysts predict AAVE price could surge between \$450-\$600, driven by its bullish technical setup and strong DeFi presence. Why did the Stacks founder buy \$10 million in STX? The Stacks founderâ€™s \$10 million STX purchase signals strong confidence in the project, fueling investor interest and market demand. - Bloomberg analysts have revealed their approval odds for altcoin ETFs. - Litecoin ETFs have a 90% chance of approval, while XRP ETFs have the lowest approval odds. James Seyffart and Eric Balchunas, analysts at Bloomberg, have published their most recent predictions for the approval chances of spot cryptocurrency exchange-traded funds (ETFs). They have narrowed their focus to Litecoin (LTC), Dogecoin (DOGE), Solana (SOL), and XRP, which are expected to gain SEC acknowledgement and regulatory clarity by the end of 2025. 90% Green Light for Litecoin ETFs The Litecoin ETFs filed with Canary Capital and Grayscale likely have the best chance of clearing, at 90%. According to the Securities and Exchange Commission (SEC), Litecoin is a commodity. Remarkably, the initial 19b-4 filing for Litecoin was submitted on January 16, 2025, and acknowledged on January 29, 2025. The latest deadline from the SEC for the final answer is October 2, 2025. 75% Likelihood of Dogecoin ETF Approval Dogecoin ETFs, filed by Grayscale and Bitwise, have a 75% probability of getting approved because, like Litecoin, the SEC regards Dogecoin as a probable commodity. Thus raising its chances of the SEC accepting it. The first 19b-4 filing occurred on 31st January 2025. The acknowledgment date is expected on 14th February 2025 while the last SEC deadline is on 18th October 2025. Moderate Odds for Solana and XRP ETFs Approval The Solana ETFs with multiple issuers such as Grayscale, VanEck, 21Shares, Canary, and Bitwise, have a 70% chance of acceptance. However, the SEC is not currently including Solana under the commodity heading-would increase the chance of further scrutiny. The first 19b-4 submission for Solana was made on January 24, 2025, and the SEC took note on February 6, 2025. The final decision is due on October 10, 2025. Moreover, XRP ETFs have received a 65% probability of approval and emerged as the lowest-ranked asset. The SEC has not yet acknowledged its 19b-4 filings. XRP ETF applications have been submitted by Grayscale, Bitwise, Canary, 21Shares, and WisdomTree. The first filing was made on January 30, 2025, with an expected acknowledgement on February 13, 2025. A final SEC deadline of October 17, 2025, has been set. Meanwhile, Balchunas and Seyffart predict that the SECâ€™s Crypto Task Force, under the leadership of Commissioner Hester Peirce to elucidate the categorization of various digital assets by the end of 2025. This commodity vs. security categorization might impact the chance of the approval of such a commodity-based ETF directly. Highlighted Crypto News

- Grayscale has submitted a 19b-4 filing to the SEC for a spot Cardano ETF in the past day. - Analysts expect the US ETF to witness a huge boom in 2025. The US ETF market has once again sprung up with activity this week. While already launched spot ETFs continue to perform fairly well, they have recently triggered interest among institutional investors. On the other hand, the overall crypto market is still recovering from its most recent market crash. Notably, in the last 24 hours, prominent US-based ETF issuer Grayscale shared a document of a 19b-4 filing. This document was the firmâ€™s application to the SEC for listing and trading shares of the Grayscale Cardano Trust as the Spot Cardano ETF. The firm is one of the first to file for a Cardano ETF. Moreover, Grayscale has also filed the application in compliance with the NYSE guidelines, thus maneuvering ways for mainstream adoption. The past month has seen several issuers filing for altcoin spot ETFs after the success of the spot Bitcoin and ETH ETFs. Meanwhile, the SEC has been expanding allowances to existing ETFs. For instance, recent news of the US regulator amending Ark 21Shares Bitcoin ETF and 21Shares Core Ethereum ETF. The recent correction grants permits to the ETFs for â€œcreations and redemptions of any kind.â€ Will Grayscale Receive Approval from the SEC for its ETF? In the past few weeks, as prominent ETF analysts have discussed, there has been a boom in the ETF market. While several reasons might have played out, the SECâ€™s change in administration still seems to stand out. As a result, it could be highly likely that the new administration would approve Grayscaleâ€™s filing. Behold, my 2025 ETF predictionsâ€”â€ Nate Geraci (@NateGeraci) January 8, 2025 1) Either VOO, IVV, or Both Will Chop Fees 2) The World of Crypto ETFs 3) Private Credit ETFs Will Have to Wait 4) 351 Exchanges Go Mainstream 5) A Leveraged Single Stock ETF Implodes<https://t.co/uDj10CkavQ> pic.twitter.com/0yod79XQfs Thirdly, the market also saw the initiation of a Litecoin ETF filing. This indicates the altcoin ETFs sector is drawing much attention from investors. Community members are eagerly waiting for these ETFs to make their debut in the market. Previously, during the last administration, multiple issuers filed for a Solana ETF, which was rejected. However, analysts such as Nate Garcia have predicted that this year will be a crucial time for ETFs. Highlighted Crypto News Today: North Carolina Introduces Bill to Allocate 10% of State Funds to Bitcoin

The meme coin market continues to be a rollercoaster ride, with Bonk and Pepe experiencing major shifts. Bonk, which recently saw a 49.34% decline in the past month, is expected to rebound to \$0.000024, marking a potential 30.10% increase in the coming weeks. Meanwhile, Pepe, once a dominant force after surpassing a \$10 billion market cap in 2024, has been struggling to maintain investor interest. Analysts suggest that Pepeâ€™s downturn

is due to a lack of real-world utility, which has made it difficult to sustain long-term growth. While Bonk and Pepe navigate their respective challenges, BTDF Coin is quickly emerging as one of the best crypto to buy now. Unlike many meme coins that rely purely on speculation, BTDF Coin is growing through a strategic referral program that rewards early investors. With its presale already surpassing \$6 million and over 69 billion tokens sold, itâ€™s becoming a go-to choice for investors looking for solid community-driven projects. BTDF Coin: Referral Program Thatâ€™s Supercharging Growth Meme coins often depend on viral hype, but BTDF Coin has taken a different approach by incentivizing growth through a powerful referral program. Investors who invite others to join earn bonus tokens, creating a compounding effect that fuels organic expansion. This system has helped BTDF Coin rapidly build a strong and engaged community, making it one of the most attractive projects on the market today. Unlike traditional meme coins, BTDF Coinâ€™s model doesnâ€™t rely on short-term pumps. Instead, the referral program ensures long-term engagement, encouraging investors to actively contribute to the projectâ€™s growth. This gives BTDF Coin an edge over competitors that struggle to maintain consistent investor participation. BTDF Coinâ€™s presale is currently in its 14th stage, with a price of \$0.00016 per token. The project has already raised over \$6 million in funding, sold more than 69 billion tokens, and attracted over 10,500 holders. Additionally, investors can take advantage of the LAUNCH100 bonus code to double their holdings, making this presale an even more lucrative opportunity. With its community-driven model and strategic referral program, BTDF Coin is shaping up as one of the best crypto to buy now. Bonk: Can Solanaâ€™s Top Meme Coin Recover? Bonk, one of Solanaâ€™s most popular meme coins, has been struggling with price volatility over the past month. After a sharp 49.34% decline, analysts predict that Bonk could rise to \$0.000024, marking a potential 30.10% rebound. This forecast is fueling optimism among investors who believe that Bonk still has room to grow. Despite its recent price drops, Bonk continues to hold a strong position in the Solana ecosystem. It remains one of the most actively traded Solana-based tokens, and its presence on major exchanges ensures continued market exposure. However, the question remains: can Bonk sustain its recovery, or will it face further declines due to market uncertainty? While some investors remain bullish on Bonk, others are shifting their focus to BTDF Coinâ€™s structured growth model, which offers incentives beyond just speculation. For those looking for the best crypto to buy now, the choice between meme coin volatility and a referral-driven investment opportunity is becoming clearer. Pepe: Can It Regain Momentum After Losing Its \$10B Market Cap? Pepe was one of the biggest meme coin success stories of 2024, surpassing a \$10 billion market cap at its peak. However, the excitement surrounding Pepe has dwindled as its value continues to decline. Analysts attribute this drop to a lack of real-world use cases, making it difficult for the token to sustain long-term investor confidence. Once a dominant force in the meme coin sector, Pepeâ€™s struggle is now centered around its ability to retain buyers. While its initial surge was fueled by social media hype and aggressive trading activity, recent months have shown that investor enthusiasm is cooling off. Without new developments or increased adoption, Pepeâ€™s future remains uncertain. With meme coin investors looking for alternatives, BTDF Coin is capturing attention with its referral program and presale success. While Pepe searches for a way to regain traction, newer projects like BTDF Coin are proving to be some of the best crypto to buy now. Conclusion: Which Crypto Stands Out This Month? The meme coin sector remains one of the most unpredictable spaces in crypto, with Bonk, Pepe, and BTDF Coin each presenting different opportunities and risks. Bonk is trying to recover from a major decline, with analysts predicting a 30.10% rebound. Pepe is struggling to regain investor confidence after losing its \$10 billion market cap. BTDF Coin is seeing strong, sustained growth through its referral program and presale success. For those searching for the best crypto to buy now, BTDF Coin stands out due to its structured referral system, community incentives, and growing investor base. While Bonk and Pepe fight to stay relevant, BTDF Coin is building a strong ecosystem that offers more than just hype-driven trading. Ever wondered which meme coins are shaking up the crypto world this week? Peanut the Squirrel (PNUT) and Goatseus Maximus (GOAT) have been in the news lately due to their market shifts, but the real buzz surrounds BTDF Coin (BTDF). With its insane 90% APY staking rewards, explosive presale growth, and an engaged community of bulls, BTDF is drawing in investors left and right. Meme coins have evolved far beyond internet jokes. The rise of community-driven tokens has shown that hype and utility can go hand in hand. BTDF Coin is proof of that, taking things to the next level with a fully functional Play-to-Earn (P2E) game, a vibrant community, and a massive staking incentive that makes traditional finance look outdated. And now, with its presale skipping straight to Stage 14 and an exclusive 100% bonus offer, the opportunity has never been bigger for those looking at top new meme coins to buy this week. BTDF Coin (BTDF): The 90% APY Staking Powerhouse Thatâ€™s Breaking the Internet If thereâ€™s one name echoing through crypto circles right now, itâ€™s BTDF Coin. Built around the â€œBuy the Dipâ€ mantra, this token is causing a storm with its presale success. After burning all unsold tokens from Stage 13, BTDF has jumped directly to Stage 14, making the supply even tighter and demand stronger. With over \$6 million raised, 69 billion coins sold, and a growing army of over 10,500 bulls, BTDF is far from your average meme coin. But whatâ€™s really got investors hyped? The 90% APY staking rewards. Staking BTDF means earning passive income at a rate that traditional banks can only dream of offering. Think about thisâ€if you invest \$5,000 at the current price of \$0.00016, youâ€™d secure 31,250,000 BTDF tokens. But with the LAUNCH100 bonus, your holdings double to 62,500,000 tokens. When BTDF lists at \$0.0006, your investment could soar to \$37,500. If it hits its projected moon price of \$0.006, that same investment could turn into a staggering \$375,000â€making it one of the top new meme coins to buy this week for those eyeing massive ROI potential. Want in? Hereâ€™s how to buy BTDF Coin: - Set up your wallet â€ Use MetaMask or Trust Wallet. - Load up on BNB or ETH â€ Youâ€™ll need one of these to buy BTDF. - Go to the presale page â€ Connect your wallet and enter the amount. - Use the LAUNCH100 bonus code â€ Enter it in ALL CAPS to double your tokens. - Buy and confirm â€ Complete the transaction, and your BTDF is secured. With the P2E game fully launched on January 1, 2025, plus staking rewards and a strong community, BTDF is proving itself as a must-have token for investors who want to own the dip and ride the bull run. Peanut the Squirrel (PNUT): A Meme Coin with a Mission Peanut the Squirrel, or PNUT, has a heartwarming story. This Solana-based meme coin was created in honor of Peanut, a rescued squirrel that became a symbol of animal welfare and community support. While its mission is noble, PNUT has been navigating a rough patch in the market. Currently trading at \$0.165, PNUT is down 6.09% in the last 24 hours, with a 0.24% dip over the past week. The past month has been challenging, with a 69.41% decline in price and trading volume down by 29.75%. Despite these fluctuations, PNUTâ€™s community remains dedicated, supporting the coinâ€™s cause of promoting animal welfare. PNUTâ€™s backing by animal rights advocates and crypto enthusiasts keeps its ecosystem engaged, making it an interesting token to watch as it regains momentum. Goatseus Maximus (GOAT): The Meme Coin with an AI Twist Goatseus Maximus (GOAT) is not your typical meme coin. It was inspired by an AI language model called Terminal of Truths, which started tweeting about a â€GOAT singularityâ€ and a meme-driven crypto movement. That sparked the launch of GOAT on Pump.fun, where it quickly gained traction. Currently, GOAT is trading at \$0.1198, down 3.27% in the last 24 hours but up 4.33% over the past week. Over the last month, itâ€™s seen a 66.31% decrease, reflecting broader market volatility. GOATâ€™s unique AI-driven origins have drawn in crypto enthusiasts who believe in meme culture mixed with technology. While the price has fluctuated, its devoted holders continue to engage with the project, keeping it relevant in the fast-moving meme coin space. The Final Thoughts Based on our research and market trends, meme coins remain a powerhouse in crypto, and these three projects each bring something different to the table. Top new meme coins to buy this week like BTDF Coin, PNUT, and GOAT are making headlines for their unique offerings. BTDF Coinâ€™s presale is on fire, especially with its Stage 14 bonus offer and 90% APY staking rewards. Meanwhile, PNUT continues to push its animal welfare mission, and GOAT is carving out its niche in AI-powered meme coin culture. But letâ€™s be realâ€BTDF Coin is where the biggest opportunity lies right now. With its high staking rewards, booming presale, and bullish community, the time to get in is now. Donâ€™t miss the chance to double your tokens with LAUNCH100 before the presale ends. Join the BTDF Coin presale nowâ€because this dip wonâ€™t last forever. FAQs What makes BTDF Coin different from other meme coins? BTDF Coin offers 90% APY staking, a fully launched P2E game, and a strong bullish community, setting it apart from traditional meme tokens. How does the LAUNCH100 bonus work for BTDF Coin? Enter LAUNCH100 during checkout in the presale to double your token purchase, giving you twice the BTDF for the same investment. Is Peanut the Squirrel a good long-term investment? PNUT has a dedicated community and a mission-driven focus, but like all meme coins, its price depends on market trends and adoption. What inspired Goatseus Maximus (GOAT)? GOAT was born from an AI-driven meme movement, making it one of the more unique and experimental projects in the crypto space. How can I maximize my BTDF Coin earnings? By staking your BTDF at 90% APY, you can grow your holdings exponentially, especially if you buy at the current presale price. The crypto world never sleeps, and new opportunities are always emerging. Astra (\$ASTRA) has proven its strength in volatile markets, showing resilience amid a major downturn. While Bitcoin and Ethereum suffered steep losses of 10% and 8% respectively, Astra only dipped 2%, holding firm at \$0.45. This stability highlights Astraâ€™s growing reputation as a reliable asset even in tough times. Meanwhile, NEAR Protocol (NEAR) has been making moves in the AI sector. As of February 10, 2025, NEAR is trading at \$3.19, experiencing a 5.9% daily dip but demonstrating notable volatility. NEAR has also launched a \$20 million AI Agent Fund aimed at fueling decentralized AI applications. This push for AI-driven innovation underscores NEARâ€™s commitment to staying ahead in blockchain advancements. But the biggest game-changer in the market right now is Qubetics (STICS). Unlike Astra and NEAR, which focus on market stability and AI applications, Qubetics is building a seamless blockchain ecosystem through interoperability. Qubetics: Powering the Future of Blockchain with Interoperability One of blockchainâ€™s biggest challenges is fragmentationâ€different networks operate independently, making cross-chain transactions slow and inefficient. Qubetics is solving this by introducing true interoperability, allowing blockchains to communicate seamlessly. Picture a decentralized finance (DeFi) platform needing to execute cross-chain trades between Ethereum, Binance Smart Chain, and Solana. Instead of dealing with complicated bridges and slow transfers, Qubeticsâ€™ interoperability framework enables instant transactions across multiple chains, reducing fees and improving efficiency. This innovation isnâ€™t just for DeFiâ€it extends to gaming, NFTs, and real-world asset tokenization. A business handling multiple blockchain assets can now manage everything from a single platform, saving time and resources. By creating an ecosystem where blockchains work together instead of competing, Qubetics is positioning itself as the top crypto presale with the most promising future. The numbers speak for themselvesâ€469 million tokens sold, 19,300+ holders, and \$12.4 million raised. With Qubeticsâ€™ STICS token still priced at \$0.0733, early investors are seizing the opportunity before the next price surge. With a booming presale already in its 21st stage, 469 million tokens sold, and \$12.4 million raised, Qubetics is setting new standards for blockchain efficiency. Right now, STICS tokens are priced at \$0.0733, with a 10% price surge expected in the 21st stage. Investors looking for the top crypto presale are jumping in before the next increase. Astra: Holding Strong Amid Market Downturns Astra has caught the attention of traders due to its resilience in volatile markets. While Bitcoin and Ethereum struggled with double-digit losses, Astra only saw a 2% decline, proving its stability and investor confidence. But Astra isnâ€™t just about market resilienceâ€itâ€™s also making strides in blockchain gaming. Astra Nova, in partnership with Shiba Inu, is set to launch an AI-powered Action RPG survival mode on the Shibarium platform. This move could redefine blockchain gaming, introducing advanced AI-powered NPCs to create more immersive experiences. With its proven market resilience and expanding blockchain gaming efforts, Astra remains a key player to watch in the crypto space. NEAR Protocol: Pushing AI Innovation in Blockchain NEAR Protocol continues to push the boundaries of AI and blockchain integration. With its \$20 million AI Agent Fund, NEAR is focusing on decentralized AI applications that could revolutionize consumer solutions and blockchain operations. Despite recent price volatility, NEAR remains a leading contender in the AI-driven blockchain space. If its AI-focused projects gain traction, NEAR could cement itself as a top innovator in decentralized technology. Conclusion: Which Crypto Holds the Most Promise? Each of these cryptos offers something unique, but Qubetics stands out as the top crypto presale to watch. With its groundbreaking interoperability solutions, a booming presale, and massive adoption potential, Qubetics has all the ingredients for success. Astraâ€™s market resilience and foray into AI-powered blockchain gaming make it a solid long-term project, while NEARâ€™s AI innovation positions it for strong future adoption. However, for those looking for the top crypto presale with real utility, Qubetics is the clear winner. Donâ€™t waitâ€get in on the Qubetics presale before the next price surge! For More Information: Qubetics: <https://qubetics.com> Telegram: <https://t.me/qubetics> Twitter: <https://x.com/qubetics> Disclaimer: TheNewsCrypto does not endorse any content on this page. - South Korea may fall behind as other countries launch crypto ETF. - Experts say crypto ETFs can bring more investors and help the economy. - Rules are a challenge, but too many restrictions could slow growth. South Korea is the third-largest cryptocurrency trading country, but it has not yet introduced cryptocurrency exchange-traded funds (ETFs). Experts warn that this delay could make the country fall behind in global finance. Jung Eun-bo, chairman of the Korea Exchange (KRX), has urged the government to launch crypto ETF. He says South Korea must keep up with other markets like the United States, Canada, and Europe, where crypto ETFs are already available. In the U.S., investors can trade spot and futures Bitcoin ETFs, and other countries have introduced ETFs for cryptocurrencies like Ethereum, Solana, and even meme coins. Jung believes South Korea must act fast to remain competitive. Why Crypto ETF Are Important? Crypto ETFs could create new financial opportunities for South Korea. They allow people to invest in crypto through a regulated and safer system, which could attract more investors and help the financial sector grow. Other financial leaders support this idea. Seo Yoo-seok, chairman of the Korea Financial Investment Association (KOFIA), says that not only young investors but also people in their 50s and 60s are interested in digital assets. He believes South Korea should follow the United States, where crypto ETF are widely traded, and adapt to global financial trends. He also noted that global policies are changing, and South Korea should not be left behind. One major challenge is government regulations. In October 2024, South Korean officials discussed allowing crypto ETF, but no final decision was made. Some regulators fear that crypto investments are too risky and need strict rules. Jung warns that too many restrictions could slow down financial growth. He also suggests changing pension fund rules to allow more investments in crypto ETF. This could help investors earn better returns over time. Crypto ETFs are gaining popularity worldwide, and South Korea's financial leaders believe the country must act quickly to stay competitive. If the government approves crypto ETFs, it could create new investment opportunities and strengthen the nation's financial market. Highlighted crypto news Today Kiyosaki predicts a 2025 market crash, urging investment in gold, silver, and Bitcoin

Meme coins have always had a special place in the crypto universe. They're fun, they're quirky, and they can be insanely profitable if you know where to look. Right now, the meme coin market is buzzing with action. Popcat, inspired by the legendary internet meme, is clawing its way through the rankings with a market cap of nearly \$282M. Meanwhile, Brett, the digital bestie of Pepe, is thriving on Base Chain with a \$447M market cap. But there's a new sheriff in town, and it goes by the name BTDF Coin. BTDF Coin's presale is still in Stage 14, raising over \$6 million with more than 10,500 Bulls charging full speed ahead. Even wilder? The project burned all unsold tokens from Stage 13 a few weeks ago, meaning fewer coins in circulation and a stronger, more valuable supply. And if that wasn't enough, BTDF's craziest deal is still drawing major investor attention: a 100% BONUS CODE (LAUNCH100), doubling your tokens when you invest in Stage 14. Powered by the Bulls Squad, hype and financial gains create the perfect blend in the BTDF ecosystem! It's time for you to see why BTDF Coin, Popcat, and Brett are some of the best cryptos for beginners right now. BTDF Coin's Bulls Squad: The Perfect Mix of Fun and Lucrative BTDF Coin isn't just another meme coin. It's a movement fuelled by its legendary Bulls Squad's Baby Bull, Raging Bull, Nerdy Bull, and Peoples Bull. These mascots represent different roles in the BTDF ecosystem, guiding newbies and veterans alike toward massive gains. Speaking of huge gains, let's say you're diving into the BTDF presale with \$3,000 at today's price of \$0.00016 per token. That investment scores you 18,750,000 BTDF tokens. But if you use the LAUNCH100 bonus code, your tokens double to 37,500,000. Now, imagine BTDF Coin hits its projected price of \$0.0006 post-launch. That's a whopping \$22,500 from your initial \$3,000 investment! Aside from the Bulls Squad, BTDF Coin comes packed with features like high-APY staking (90%), an exciting Play-to-Earn (P2E) game, and a referral program that rewards you and the people you invite to participate to the price. This isn't just about memes; it's about making real gains in crypto. Want in? Head to the presale page and use LAUNCH100 before this bonus expires! Popcat: From Clicker Game to Crypto Legend Popcat started as a simple meme—an open-mouthed cat that the internet couldn't get enough of. But now, it's one of the best cryptos for beginners looking to cash in on meme culture. Built on Solana, Popcat is fast, efficient, and meme-powered. Currently trading at \$0.285396 with a market cap of \$282M, Popcat has seen wild price swings but remains a solid option for traders looking for short-term action. With 979 million tokens in circulation, Popcat's tight supply and strong community backing could drive it higher. For beginners, Popcat is a great lesson in how meme momentum can push prices sky-high. If Solana's ecosystem keeps growing and Popcat maintains its meme relevance, there's still room for upward movement. Brett: The Blue Base Chain Mascot With Big Potential Brett is Pepe's best friend, and in crypto, that means serious backing. As the official mascot of Base Chain, Brett has become a cultural icon. And with Base Chain's ecosystem expanding rapidly, Brett's price potential is looking solid. Trading at \$0.044791 with a \$447M market cap, Brett is down 7.83% in the past 24 hours, which could present a solid entry point for new investors. With nearly 10 billion BRET tokens circulating, demand remains strong as more projects adopt Base Chain's infrastructure. For beginners, Brett is a prime example of how community-driven projects can thrive when paired with a strong ecosystem. As Base Chain continues to develop, Brett's influence and value will likely grow alongside it. How to Claim Your LAUNCH100 Bonus Code Want to double your BTDF investment? Follow these steps to claim your LAUNCH100 bonus: - Go to the BTDF Coin presale page. - Connect Your Wallet - Click Connect Wallet and select MetaMask, Trust Wallet, or your preferred option. - Enter the Bonus Code - Locate the bonus code field, enter LAUNCH100, click Apply, and confirm. - Enter Purchase Details - Input the amount of BTDF you want to buy. - Confirm & Buy - Click Buy Now and approve the transaction in your wallet. Conclusion: Don't Miss Out on BTDF Coin's Explosive Potential From BTDF Coin's Bulls Squad to Popcat's meme magic and Brett's ecosystem power, these three are some of the best cryptos for beginners looking to get into the meme coin game. BTDF's 100% bonus won't last forever, so if you're serious about getting in before prices rise, now's the time to invest in the Bulls Squad's universe. Visit the presale page, enter LAUNCH100, and double your tokens before this stage sells out! - Base sends sequencer fees to Coinbase, citing security and audit needs. - Critics question transparency and Ethereum alignment. Base, Coinbase's Ethereum Layer 2 network, is facing scrutiny for transferring its sequencer fee earnings to Coinbase. Critics argue the move lacks transparency and raises questions about fund usage. Santisa, Lucidity's chief investment officer, first flagged the issue on X. He shared Etherscan data showing regular ETH transfers from the Base sequencer's wallet to Coinbase. The most recent transaction involved 240 ETH. He noted that Base had sent nearly all its sequencer fees to Coinbase since its launch. Sequencer fees come from transaction processing on Base. These funds typically support network maintenance and development. However, blockchain figures like Andre Cronje criticized Base's approach. He questioned how Base aligns with Ethereum when it redirects revenue to Coinbase instead of keeping it on-chain. Cronje also highlighted Base's revenue versus costs. He noted that the network generated \$120 million in fees but paid only \$10 million for Ethereum's security and data availability. He argued that most of Base's profits were not reinvested into Ethereum's ecosystem. Base Dismisses ETH Sale Claims We earn and spend as much as we can in ETH, â Sadarangani wrote on X. He stated that the network pays Ethereum Layer 1 fees in ETH and denominates external grants in ETH. He assured that the network aims to increase on-chain operations over time. Concerns over ETH sales surfaced as well. Some speculated that Base may have liquidated its holdings. Sonic The Assistant pointed to Coinbase's financial reports. He noted that despite generating over \$100 million in fees, Coinbase's ETH holdings had increased by only 772 ETH. Sadarangani denied any significant ETH sales. He reiterated that Coinbase and Base hold over 100,000 ETH, making them the largest public company holders of ETH. He stressed that it remains committed to the Ethereum ecosystem. Highlighted Crypto News Today Serenity Launches DeDaSP for Secure On-chain Data Survivability

- User Growth of the exchange surpassed 38 million users, with rapid expansion in LATAM and MENA. - Futures Market introduced 125 new assets, attracting 3 million+ traders. - For 2025, the focus remains on security, compliance, and innovation. A Year of Milestones and Expansion: 2024 was a transformative year for KuCoin and the broader crypto market. Despite challenges, the exchange has reinforced its commitment to security, compliance, and user experience. The journey was marked by remarkable achievements: - User Growth: Surpassed 38 million users, with rapid expansion in LATAM and MENA. - Spot Trading Surge: MENA's trading volume tripled, while Europe saw a 144% increase. - Record Listings: Over 300 new listings, with a 170% growth in Q4. - Futures Market Expansion: Introduced 125 new assets, attracting 3 million+ traders. - Rewards Hub Engagement: Welcomed 15 million new users through incentives. - KCS Ecosystem Growth: Surpassed 2 million holders with a \$1.7 billion market cap. - Compliance Achievements: First global exchange registered with India's FIU, securing five regulatory licenses worldwide. Industry Landscape: Trends & Developments Key drivers of the 2024 crypto market included regulatory progress, institutional adoption, and macroeconomic shifts: - Bitcoin & Ethereum Milestones: Bitcoin hit \$100,000 after ETF approval and the halving event. Ethereum's Cancun upgrade secured ETF approval. - Meme Coin Boom: Market cap exceeded \$100 billion, fueled by community-driven tokens with enhanced utility. - Regulatory Evolution: Europe advanced MiCA regulations, while Asia saw varied enforcement. China and South Korea tightened policies, whereas Singapore and Hong Kong fostered innovation. - Macroeconomic Factors: The Federal Reserve's rate cuts revitalized investor confidence and market liquidity. Strengthening Security & Compliance KuCoin advanced security and regulatory adherence through: - AML & KYC Enhancements: Real-time monitoring and proactive risk management. - Bug Bounty & Encryption: Strengthened data protection in collaboration with Bugcrowd. - Global Compliance Recognition: Registered with India's FIU, secured five licenses, and earned accolades from TokenInsight. - Explosive Growth in Listings & Features New Token Listings: 300+ assets added, including 119 in Q4 alone. - Meme Coin Focus: Early adoption of WIF, SUNDOG, MOONDENG, and more. - Key Asset Launches: Strategic partnerships for ENA, ONDO, and MAVIA. - GemPool & GemVote Initiatives: Community-driven staking with \$1.73 billion locked. - Pre-Market Trading: 40 coins listed, surpassing \$42 million in volume with 100,000 active traders. - Futures Trading Expansion User Growth: 2 million new users, reaching 24 million total. - Trading Volume Surge: 30% increase driven by market momentum. - New Features: Cross Margin Mode for improved capital efficiency and Copy Trading for strategy replication. - Enhanced Experience: Reward-driven campaigns attracted 3 million+ users. Innovations and Collaborations - Automated Trading Boom: 7.5 million bots created (+36% YoY), with Q4 alone seeing a 49% surge. - AI Futures Trend Strategy: Expanded bot capabilities for diverse market conditions. - User-Friendly Interface: Upgraded Trading Bot homepage and streamlined Grid Bot setup. - KuCard: Expanding Utility & Adoption Transaction Surge: Usage increased by 48% in Q4. - KCS Integration: 1.7% cashback, with 97% of redemptions converted to KCS. Industry Firsts: Apple Pay support, multi-currency transactions, and ultra-fast processing (0.7s average transaction time). - KuCoin Pay: Crypto Payments for Retail Revolutionizing Payments: Seamless merchant integration for crypto transactions. - Frictionless Checkout: QR code-based payments enhance ease and adoption. - Reward Hub: Engagement & Loyalty Mass Adoption: 15 million new users engaged in earning opportunities. - USDT Rewards: Over 5 million USDT distributed to 2.5 million users. - Referral Success: 300,000+ new sign-ups, with 65% becoming long-term users. - Ventures & Labs: Fueling Innovation Strategic Investments: Supported projects like Uxlink, Xion, and Tomo. - Incubation & Partnerships: Backed Web3Labs, Solana Hackathon, and Sui Singapore initiatives. - Commitment to Customer Service Excellence AI-Driven Support: Enhanced efficiency and user experience through automated solutions. - Scalable Assistance: Optimized response times to accommodate global user needs. Looking Ahead For 2025, the focus remains on security, compliance, and innovation. The exchange aims to expand its ecosystem, strengthen regulatory adherence, and enhance user experience to solidify KuCoin's position as a leading global exchange.

- \$CAR memecoin hits \$530M, but deepfake concerns cast doubt. - A trader turned \$5K into \$12M, while insiders allegedly cashed out \$15M. The Central African Republic (CAR) just made headlines with a shocking move as it launches its own memecoin, \$CAR. President Faustin-Archange Touadra's official X account announced the token on February 9, calling it an "experiment" to unite people and boost national development. The token, built on Solana's Pump.fun, skyrocketed to a \$530 million market cap in hours. But just as quickly, doubts and controversy erupted. Skeptics immediately questioned the legitimacy of the project. Crypto analyst Skynet Insights warned, "Do not buy \$CAR, it's a scam," claiming insiders controlled 80% of the supply and had already cashed out over \$15 million. Others pointed out that the project's official website was registered using Namecheap, a budget domain provider, just three days before launch, hardly what you'd expect from a government-backed initiative. Deepfake Allegations & Suspicious Timing Then came an even bigger twist. AI detection tools flagged the president's video announcement as suspicious. Deepware, a deepfake checker, gave it an 82% chance of being fake, raising questions about whether the president even made the announcement. Adding to the chaos, the official X account dedicated to the memecoin, @CARMeme_News, was suspended, fueling more speculation. President Touadra, however, stood by the project, assuring his followers that the account would be restored soon. He doubled down on his support for crypto, tweeting, "As the second president in the world to adopt Bitcoin as legal tender, I have always recognized the potential of crypto and its benefits on a global scale." Massive Gains, High Risks, and CAR's Crypto History Despite the controversy, some traders are cashing in big. On-chain data from Lookonchain revealed that one investor turned 25 SOL (\$5,000) into a mind-blowing \$12 million in under three

hours, making a 2,450x return. The memecoin hype is real, but so are the risks. This isn't CARA's first crypto experiment. In 2022, the country made Bitcoin legal tender, following El Salvador's lead. It later launched Sango Coin to tokenize its natural resources. However, in 2023, CARA's parliament reversed its Bitcoin legal tender status, casting doubt on the country's long-term commitment to crypto. Now, with the \$CAR launch facing deepfake suspicions, liquidity concerns, and regulatory uncertainty, the big question remains: Is this a groundbreaking experiment or an elaborate scam? The world is watching. Highlighted Crypto News for Today TRUMP Token Drops Over 10% Amid Global Crypto Market Cap Decline

- Trump's family reportedly earned nearly \$100M from TRUMP token trading fees. - The U.S. imposed a 25% tariff on aluminum and steel, impacting global markets. Trump's pro-crypto stance is reshaping the industry. Reports suggest the Trump family and associates earned nearly \$100 million from TRUMP token trading fees. His victory over Kamala Harris was a pivotal moment for crypto enthusiasts. Many expected his administration to push crypto-friendly policies. While some policies have supported the sector, recent tariff decisions have introduced unexpected challenges. Trump's Tariff Policy and Market Reaction On February 9, the Trump administration imposed a 25% tariff on aluminum and steel. This move sent ripples through global markets. Canada, Brazil, Mexico, South Korea, Russia, and Japan are among the largest steel exporters to the U.S. Meanwhile, top steel importers from the U.S. include Canada, Mexico, China, and Italy. The new tariffs have raised concerns about economic strain and market volatility. Crypto markets reacted immediately. Yesterday, the total market cap fell by 0.32%. However, a 0.64% rebound today suggests resilience. The Crypto Fear and Greed Index dropped from 46 to 43, showing weak investor confidence despite recovery signals. TRUMP Token's Market Decline TRUMP token plunged 10.24% in the last 24 hours, settling at \$15.52. The market cap dropped 9.45% to \$3.17 billion. However, trading volume surged 47.84% to \$1.57 billion, reflecting increased activity. The token's fully diluted valuation (FDV) now stands at \$15.88 billion, with a circulating supply of 199.99 million TRUMP. TRUMP faces resistance at \$18.95 and support at \$14. A breakout above the resistance could push it toward \$20. However, a drop below support may send it to \$12. The Relative Strength Index (RSI) at 37.93 signals oversold conditions. With an RSI average of 39.82, momentum remains weak, but a rebound is possible if buying pressure strengthens. A bearish moving average (MA) crossover reinforces the downward trend. The 9-day MA at \$16.57 is below the 21-day MA at \$16.88, signaling further downside unless reversed. The Chaikin Money Flow (CMF) indicator shows weak capital inflow. If volume continues rising without price recovery, further volatility may follow. TRUMP token needs to reclaim \$16.88 for bullish momentum. If resistance holds, further losses could follow. Highlighted Crypto News Today WazirX Releases Preliminary Creditor List and Balance Snapshot

- Bullish PYTH price prediction for 2025 is \$0.3717 to \$0.5591. - Pyth Network (PYTH) price might reach \$1.5 soon. - Bearish PYTH price prediction for 2025 is \$0.1638. In this Pyth Network (PYTH) price prediction 2025, 2026-2030, we will analyze the price patterns of PYTH by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | PYTH NETWORK (PYTH) PRICE PREDICTION 2025 | | PYTH NETWORK (PYTH) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Pyth Network (PYTH) Current Market Status | Current Price | \$0.1973 | 24  Hour Price Change | 0.29% Up | | 24  Hour Trading Volume | \$40.54M | | Market Cap | \$715.2M | | Circulating Supply | 3.62B PYTH | All  Time High | \$1.15 (On March 16, 2024) | | All  Time Low | \$0.1718 (On Feb 08, 2025) | What is Pyth Network (PYTH) | TICKER | PYTH | | BLOCKCHAIN | Solana Blockchain | | CATEGORY | Decentralized Oracle Network | | LAUNCHED ON | November 2023 | | UTILITIES | Governance, security, gas fees & rewards | Pyth Network, established in 2020, addresses the shortcomings of traditional oracles by providing ultra-low-latency, institutional-grade market data for decentralized finance (DeFi). Serving as a decentralized marketplace for financial data, Pyth incentivizes over 90 first-party publishers, including major exchanges and market-making firms, to contribute their proprietary data directly to the blockchain. This innovative first-party data model future-proofs Pyth for the evolving DeFi landscape. The Pyth Protocol aggregates data from these providers on the Pythnet blockchain, producing unified price feeds every 400 milliseconds. Notably, Pyth stands out with a Pull Oracle architecture, allowing users to request updates when needed, minimizing gas fees. With over 350 low-latency price feeds and high-frequency updates, Pyth Network excels in speed, coverage, and sourcing/quality of data, making it a game-changer among blockchain oracles. Pyth's transparency, multi-chain availability, and high-resolution data contribute to its significance in the DeFi space. Pyth Network 24H Technicals (Source: TradingView) Pyth Network (PYTH) Price Prediction 2025 Pyth Network (PYTH) ranks 92nd on CoinMarketCap in terms of its market capitalization. The overview of the Pyth Network price prediction for 2025 is explained below with a daily time frame. PYTH/USDT Descending Channel Pattern (Source: TradingView) In the above chart, Pyth Network (PYTH) laid out a descending channel pattern. Descending channel patterns are short-term bearish in that a stock moves lower within a descending channel, but they often form longer-term uptrends as continuation patterns. The descending channel pattern is often followed by higher prices. but only after an upside penetration of the upper trend line. A descending channel is drawn by connecting the lower highs and lower lows of a security's price with parallel trendlines to show a downward trend. Within a descending channel, a trader could make a selling bet when the security price reaches its resistance trendline. An ascending channel is the opposite of a descending channel. Both ascending and descending channels are primary channels followed by technical analysts. At the time of analysis, the price of Pyth Network (PYTH) was recorded at \$0.1973. If the pattern trend continues, then the price of PYTH might reach the resistance level of \$0.2080, \$0.2903, and \$0.3844. If the trend reverses, then the price of PYTH may fall to the support of \$0.1681. Pyth Network (PYTH) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Pyth Network (PYTH) in 2025. PYTH/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Pyth Network (PYTH) for 2025. | Resistance Level 1 | \$0.3717 | | Resistance Level 2 | \$0.5591 | | Support Level 1 | \$0.3415 | | Support Level 2 | \$0.1638 | PYTH Resistance & Support Levels Pyth Network (PYTH) Price Prediction 2025  RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Pyth Network (PYTH) are shown in the chart below. PYTH/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Pyth Network (PYTH) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.3148Price = \$0.1968(50MA < Price) | Bullish/ Uptrend | | Relative Strength Index (RSI) | Magnitude of price change;Analyzing oversold & overbought conditions | 29.3276 <30 = Oversold 50-70 = Neutral>70 = Overbought | Nearly Oversold | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Pyth Network (PYTH) Price Prediction 2025  ADX, RVI In the below chart, we analyze the strength and volatility of Pyth Network (PYTH) using the following technical analysis indicators  Average Directional Index (ADX) and Relative Volatility Index (RVI). PYTH/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Pyth Network (PYTH). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 56.3683 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 49.03 <50 = Low >50 = High | Low volatility | Comparison of PYTH with BTC, ETH Let us now compare the price movements of Pyth Network (PYTH) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs PYTH Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of PYTH is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of PYTH also increases or decreases respectively. Pyth Network (PYTH) Price Prediction 2026, 2027  2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Pyth Network (PYTH) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Pyth Network (PYTH) Price Prediction 2026 | \$2 | \$0.1 | | Pyth Network (PYTH) Price Prediction 2027 | \$3 | \$0.09 | | Pyth Network (PYTH) Price Prediction 2028 | \$4 | \$0.08 | | Pyth Network (PYTH) Price Prediction 2029 | \$5 | \$0.07 | | Pyth Network (PYTH) Price Prediction 2030 | \$6 | \$0.06 | Conclusion If Pyth Network (PYTH) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Pyth Network (PYTH) price prediction for 2025 is \$0.5591. Comparatively, if unfavorable sentiment is triggered, the bearish Pyth Network (PYTH) price prediction for 2025 is \$0.1638. If the market momentum and investors' sentiment positively elevate, then Pyth Network (PYTH) might hit \$1.5. Furthermore, with future upgrades and advancements in the Pyth Network ecosystem, PYTH might surpass its current all-time high (ATH) of \$1.15 and mark its new ATH. FAQ 1. What is Pyth Network (PYTH)? Pyth Network, established in 2020, addresses the shortcomings of traditional oracles by providing ultra-low-latency, institutional-grade market data for decentralized finance (DeFi) 2. Where can you purchase Pyth Network (PYTH)? Pyth Network (PYTH) has been listed on many crypto exchanges, including Binance, OKX, Bybit, Blofin, and Bitru. 3. Will Pyth Network (PYTH) reach a new ATH soon? With the ongoing developments and upgrades within the Pyth Network Platform, PYTH has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Pyth Network (PYTH)? On March 16, 2024, PYTH reached its new all-time high (ATH) of \$1.15. 5. What is the lowest price of Pyth Network (PYTH)? According to CoinMarketCap, PYTH hit its all-time low (ATL) of \$0.1718 on Feb 08, 2025. 6. Will Pyth Network (PYTH) reach \$1.5? If Pyth Network (PYTH) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$1.5 soon. 7. What will be Pyth Network (PYTH) price by 2026? Pyth Network (PYTH) price is expected to reach \$2 by 2026. 8. What will be Pyth Network (PYTH) price by 2027? Pyth Network (PYTH) price is expected to reach \$3 by 2027. 9. What will be Pyth Network (PYTH) price by 2028? Pyth Network (PYTH) price is expected to reach \$4 by 2028. 10. What will be Pyth Network (PYTH) price by 2029? Pyth Network (PYTH) price is expected to reach \$5 by 2029. Meme coins have carved out a unique niche, blending internet culture with financial speculation. Many investors have experienced the sting of FOMO (Fear of Missing Out) as they watched coins like Goatseus Maximus skyrocket, wishing they had seized the opportunity early on. But here's the silver lining: a new contender, Arctic Pablo Coin, is emerging as one of the top new meme coins for exponential returns. Let's delve into the tales of these two intriguing coins and explore why Arctic Pablo might be your next golden ticket. Embarking on an Adventure with Arctic Pablo Coin Enter Arctic Pablo Coin (\$APC), a fresh and innovative meme coin that combines storytelling with financial opportunity. Arctic Pablo invites investors to join its epic journey through enchanted realms, each representing a phase in its presale. This narrative-driven approach engages the community and creates a sense of adventure and urgency. The presale is structured uniquely, with each stage representing a location that Arctic Pablo explores. Starting for \$0.000015 during the Atlantis phase, the coin has progressed through various stages, with the price increasing at each new location. Currently, the token is priced at \$0.000054 in the Frostburg phase and has raised over \$1M. Any unsold tokens are burned at the end of each week, creating a deflationary environment that enhances scarcity and potential value. Arctic Pablo Coin's tokenomics are designed to foster growth and reward early participants. With a total supply of 221.2 billion APC tokens, 50% are allocated to the public presale, 25% to liquidity, and the remainder to development, marketing, staking, ecosystem growth, community rewards, and team allocation. Notably, the staking program offers an impressive 66% Annual Percentage Yield (APY), allowing investors to earn passive income while supporting the network. The Meteoric Rise of Goatseus Maximus Launched on October 10, 2024, Goatseus Maximus (GOAT) is a meme coin that quickly captured the crypto community's attention. Built on the Solana blockchain, GOAT was uniquely promoted by an AI bot named Truth Terminal, which described the coin as a Trojan horse designed to infiltrate every corner of the internet. This AI-driven endorsement led to a rapid surge in interest and investment. Within days of its launch, GOAT's price skyrocketed, reaching an all-time high of \$1.36 on November 17, 2024. Its market capitalization soared to over \$600 million, making it one of the most popular meme coins ever. Early investors recognizing its potential reaped substantial rewards, turning modest investments into significant gains. However, as with many meme coins, GOAT's value experienced volatility, and those who hesitated missed the initial explosive growth. Conclusion: Seize the Opportunity Based on our research and market trends, Arctic Pablo Coin (\$APC) presents a promising opportunity for investors in the next big meme coin. Its unique blend of storytelling, strategic tokenomics, and community engagement positions it as a strong contender in the crypto space. Don't let FOMO get the best of you this time. Join the Arctic Pablo adventure today and stake your claim in one of the top new meme coins poised for exponential returns. Join the meme coin presale today! For More Information: Arctic Pablo Coin: <https://www.arcticpablo.com/> Telegram: <https://t.me/ArcticPabloOfficial> Twitter: <https://x.com/arcticpabloHQ> FAQs: What is Arctic Pablo Coin? Arctic Pablo Coin (\$APC) is a new meme-inspired cryptocurrency built on the Binance Smart Chain. It offers various utilities within its ecosystem, including games, contests, and rewards. How does the Arctic Pablo Coin presale work? The presale is divided into multiple stages, each representing a location that Arctic Pablo explores. The token price increases at each stage, and unsold tokens are burned weekly to create scarcity. What are the staking rewards for Arctic Pablo Coin? Arctic Pablo offers a staking program with a 66% Annual Percentage Yield (APY), allowing investors to earn passive income by staking their APC tokens.

Have you ever wondered which crypto could turn a small investment into a life-changing fortune? With thousands of cryptocurrencies flooding the market, knowing which ones have real potential is the difference between striking gold and being stuck with a worthless coin. Among the most promising projects in 2025, Qubetics, Binance, and Polkadot stand out. These aren't just hyped-up tokens—they're legitimate crypto giants transforming blockchain technology. They're giving investors new ways to grow their wealth beyond traditional finance. Qubetics, the world's first Web3 aggregator, is leading the charge with its Non-Custodial Multi-Chain Wallet and a powerful partnership with linch. Binance, the biggest name in crypto exchanges, continues to expand its global influence. Polkadot, the king of interoperability, is shaping the next phase of blockchain connectivity. Let's dive into why these projects are the best cryptos to get rich in 2025.

Qubetics: The Web3 Aggregator Powering Next-Gen Crypto

Crypto investors want simplicity. Nobody likes juggling multiple wallets, swapping assets between blockchains, or dealing with endless technical headaches. Qubetics is solving all of that. Qubetics is in its 21st presale stage, with the \$TICS token priced at \$0.0667. The presale has already raised over \$12.3 million, selling more than 466 million tokens and attracting over 19,200 token holders. Analysts are buzzing about its potential, with price predictions reaching \$0.25 before the presale ends (a 274.70% ROI) and forecasts of \$10 in the long run (a 14,888.23% return). Qubetics isn't just another token—it's building the tools that will define the next era of crypto. The Non-Custodial Multi-Chain Wallet is a game-changer, letting users seamlessly manage assets across multiple blockchains without relying on a centralized exchange. Picture this: You're a trader who holds Ethereum, Solana, and Avalanche. Instead of hopping between wallets and bridges, Qubetics' Multi-Chain Wallet lets you manage everything in one place without giving up custody of your funds. No middlemen, no delays—just pure control. Then there's the partnership with linch, a leading decentralized exchange aggregator. This means Qubetics users can swap tokens at the best possible rates, across multiple blockchains, without needing separate accounts on different platforms. For businesses, this means lower fees and more efficient transactions. Imagine an e-commerce store that accepts crypto—customers can pay with any major token, and the merchant gets the best exchange rate in real-time. With all these innovations, Qubetics is proving itself to be one of the best cryptos to get rich in 2025.

Trust Wallet's latest Web3 Trust Wallet's latest Web3 Digest presents an insightful look at the newest Web3 dApp integrations, spotlighting Qubetics' a rising blockchain project revolutionizing decentralized finance. Dedicated to promoting emerging projects, the Digest emphasizes the impact of Layer 1 blockchain ecosystems and AI-driven advancements in transforming digital transactions. By amplifying these innovations, Trust Wallet plays a key role in driving adoption and shaping the future of blockchain technology.

Binance: The Global Leader in Crypto Trading

If you've been in crypto for even a minute, you know Binance. It's the largest and most influential crypto exchange on the planet. Despite regulatory battles, Binance keeps evolving. Its Binance Smart Chain (BSC) is still one of the most popular networks for DeFi, NFTs, and GameFi. With low fees and lightning-fast transactions, it remains a go-to choice for developers and investors. BNB, Binance's native token, is a must-have investment. It powers everything from trading fee discounts to staking and governance. As Binance expands, so does the demand for BNB, making it one of the best cryptos to get rich over time. Binance isn't just for retail traders. It's expanding into institutional finance, onboarding major players who want exposure to crypto. With growing adoption, Binance is likely to keep dominating the crypto exchange industry for years to come.

Polkadot: The King of Blockchain Interoperability

Most blockchains don't talk to each other—but Polkadot is changing that. It's the backbone of the multi-chain future, allowing different blockchains to interact and share data. Think of Polkadot as the Internet of Blockchains. Instead of isolated chains, Polkadot enables parachains—individual blockchains that can operate independently while benefiting from shared security and scalability. For businesses, this means customizable blockchain solutions. A DeFi project doesn't have to start from scratch—it can build a parachain on Polkadot and connect with other networks effortlessly. For investors, this means DOT, Polkadot's native token, has long-term potential. Every new parachain launch increases demand for DOT, making it one of the best cryptos to get rich as adoption grows. Polkadot is also seeing major growth in the DeFi and NFT sectors. With low fees and interoperability, projects are migrating from Ethereum to Polkadot—fueling even more demand for DOT. With its unique technology and growing ecosystem, Polkadot is a serious contender for best crypto to get rich in 2025.

Final Thoughts: Where Should You Invest?

With Qubetics, Binance, and Polkadot, you have three powerhouse crypto investments: Qubetics is revolutionizing multi-chain crypto management with its Non-Custodial Wallet and linch partnership. Binance remains the world's most influential exchange, driving adoption and expansion. Polkadot is the leading blockchain for interoperability, powering the future of multi-chain networks. Each of these projects has massive growth potential. The only question is—*which one will make you rich first?* For more information: Qubetics: <https://qubetics.com> Telegram: <https://t.me/qubetics> Twitter: <https://x.com/qubetics> Alt text: Best Crypto to Invest, Next Big Cryptocurrency, Crypto Bull Market 2024, High-Growth Cryptocurrencies, Binance Coin (BNB) Price Surge, Polkadot (DOT) Price Prediction, Best Crypto Presales, Top Altcoins to Buy Now, Future of Web3 Investments, How to Get Rich with Crypto FAQs

1. What is the current price of Qubetics (\$TICS)? The price of \$TICS is \$0.0667 during the presale. 2. Why is Qubetics' partnership with linch important? It allows Qubetics users to swap tokens across multiple blockchains at the best possible rates, making trading faster, cheaper, and more efficient. 3. Is Binance still a good investment? Absolutely. Binance dominates the crypto exchange market, and its BNB token continues to grow in utility and demand.

Have you ever felt like you missed out on the biggest meme coin rallies? What if you had jumped into Shiba Inu or Dogecoin before they skyrocketed? Meme coins aren't just speculative bets anymore—they're transforming into serious investment instruments with strong communities, play-to-earn games, and innovative use cases that challenge traditional finance. The meme coin frenzy is back, and this time, it's not just about hype. Coins like BTFD Coin (BTFD), Bonk (BONK), Dogwifhat (WIF), Just a Chill Guy (CHILLGUY), and Cat in a Dog's World (MEW) are proving that meme coins have real staying power. These projects are serving up fresh narratives, robust ecosystems, and potential life-changing returns. If you're hunting for the best new meme coins to invest in this weekend, this list breaks down the hottest picks that crypto investors can't stop talking about.

1. **BTFD Coin (BTFD): The Meme Coin Built for Bullish Investors**

What if you could Buy The Dip and profit before the next bull cycle takes off? That's exactly what BTFD Coin is offering—an early entry into a meme coin designed for traders who seize market opportunities rather than fear them. And with its presale currently in Stage 14 at \$0.00016, this could be the most lucrative meme coin play of the weekend. The BTFD Presale is on Fire—Why Investors Are Jumping In

BTFD isn't just another meme coin; it's a full-fledged movement for investors who understand timing. The presale started at \$0.000004 per coin and has already raised over \$5.95 million, proving that investors are betting big on its future. With over 10,300 holders and 69 billion tokens sold, the hype is real. If you invest \$4,500 at the current Stage 14 price of \$0.00016, you'll bag \$18,125,000 BTFD tokens. When the presale ends and BTFD hits its listing price of \$0.0006, that same investment could be worth a staggering \$16,875—a 275% ROI before it even hits exchanges. BTFD's P2E Game Is Changing the Meme Coin Landscape

BTFD isn't just about price speculation. Its play-to-earn (P2E) game went fully live on January 1, 2025, giving users a way to earn real rewards while enjoying a next-level gaming experience. Unlike the Beta version, which had no earnings, the full version rewards players for completing levels, challenges, and in-game achievements. On top of that, staking went live on December 2, offering an impressive 90% APY for investors who want to lock up their tokens and grow their holdings before the full exchange listing. How to Buy BTFD Coin Before the Presale Ends - Go to the BTFD Presale - Click "Connect Wallet" and select your preferred wallet (MetaMask, Trust Wallet, etc.) - Enter the amount of BTFD coins you want to buy - Click "Buy Now" and confirm the transaction

Why Is BTFD the Top Pick for This Weekend? Meme coins with strong tokenomics, staking, and play-to-earn mechanics tend to explode post-launch. With its presale closing in on \$6M raised and a listing price set at \$0.0006, BTFD could be the next meme coin that delivers insane gains.

2. **Bonk (BONK): The Solana Meme Coin That Keeps Delivering**

Solana's premier meme coin, Bonk (BONK), has been making waves with strong community backing and high-speed transactions. BONK has seen massive adoption, with traders using it as Solana's go-to meme asset. Unlike traditional meme coins that rely on hype alone, Bonk has built real momentum by integrating itself within the Solana DeFi ecosystem. Holders can stake BONK, use it as collateral, and even mint NFTs with BONK rewards. Why Is Bonk One of the Best Meme Coins This Weekend? BONK is well-established but still volatile enough for traders to catch short-term swings. As Solana's DeFi space grows, BONK continues to benefit from increasing network activity and adoption.

3. **Dogwifhat (WIF): The Meme Coin That Became a Cultural Phenomenon**

Dogwifhat (WIF) went from being an obscure meme to one of the most viral meme coins of the year. It gained traction in the Solana ecosystem, with traders and influencers pushing it as a must-have meme asset. Unlike other dog coins, WIF capitalized on a simple yet effective branding strategy that resonated with retail traders. It's frequently trending on social media and has one of the highest trading volumes among meme coins. Why Is WIF a Solid Weekend Investment? WIF's volatility makes it an attractive short-term trade, and as long as meme culture dominates crypto, it's likely to see continued speculative interest.

4. **Just a Chill Guy (CHILLGUY): The Laid-Back Meme Coin With DeFi Perks**

Just a Chill Guy (CHILLGUY) is one of the most unique meme coins on the market, branding itself as a "stress-free" DeFi token that offers staking, yield farming, and passive income opportunities. CHILLGUY holders can stake their tokens for rewards, participate in liquidity pools, and engage in the community-driven governance model. While other meme coins focus on hype, CHILLGUY is positioning itself as a sustainable, long-term ecosystem. Why Is CHILLGUY on This List? It's rare to see a meme coin with actual utility in DeFi, making CHILLGUY an interesting pick for investors looking for both speculation and passive income.

5. **Cat in a Dog's World (MEW): The Underdog Meme Coin Gaining Serious Attention**

Cat in a Dog's World (MEW) is a newcomer with a unique twist—it plays on the meme of cats challenging the dominance of dog-themed cryptos. It has rapidly gained attention due to its meme-driven marketing, strong branding, and upcoming NFT collaborations. The project also has a deflationary model, where a percentage of every transaction is burned, reducing the overall supply over time. This mechanic helps keep token scarcity in check, which could drive long-term value. Why Should You Watch MEW? The project is new but gaining traction fast, and its narrative could make it one of the next viral meme coins. Conclusion: Get in Before the Market Moves

Meme coins are serious investment opportunities nowadays when backed by strong communities, use cases, and unique tokenomics. Among this weekend's top picks, BTFD Coin stands out as the most promising investment, thanks to its ongoing presale, play-to-earn game, and lucrative staking rewards. With its price set to jump from \$0.00016 to \$0.0006, early investors stand to gain massive returns. If you're seeking the best new meme coins to invest in this weekend, this list gives you a mix of early-stage moonshots and established meme giants. But with BTFD's presale in its final stages, the window to get in early is closing fast. Don't miss out—join the BTFD presale before the next price jump! Find Out More: Website: <https://www.btfid.io/> X/Twitter: https://x.com/BTFD_COIN Telegram: https://t.me/btfid_coin

FAQs

1. What makes BTFD Coin different from other meme coins? BTFD Coin offers a P2E game, staking rewards, and an active trading strategy, making it more than just a meme—it's a full ecosystem for traders and gamers. 2. How can I buy BTFD Coin? You can buy BTFD during its presale at the BTFD Presale website. 3. Is investing in meme coins risky? Like all cryptos, meme coins carry risk, but strategic investments in strong projects with real use cases can yield high rewards.

The crypto world moves fast—blink, and you might miss the next big thing. Coins like Immutable X and Avalanche have carved out their spaces, offering unique solutions to blockchain's toughest challenges. Immutable X is shaking up the NFT scene with zero gas fees and blazing-fast transactions, while Avalanche boasts lightning-speed processing and eco-friendly protocols, making it a favorite among decentralized app developers. But with the crypto market evolving daily, the question isn't just about which projects are strong today—it's about which ones will dominate tomorrow. That's where Qubetics (\$TICS) enters the conversation. While Immutable X and Avalanche are impressive, Qubetics is solving problems even they can't touch. It's the world's first Web3 aggregator, designed to unite leading blockchains under one roof. Think of it like the ultimate connector, breaking down the walls that keep networks isolated. Businesses, developers, and even everyday crypto users are about to experience a level of efficiency that's never existed before. And with the Qubetics presale gaining serious momentum, there's growing excitement around what many are calling the best crypto investment opportunity of the year.

Qubetics Changing the Game with QubeCode IDE

When it comes to picking the best crypto investment, utility matters. That's exactly where Qubetics shines, thanks to its revolutionary QubeCode IDE—a tool designed to make blockchain development as easy as drag, drop, and deploy. Think of QubeCode IDE like the Canva of blockchain: no need to be a coding wizard to build complex decentralized applications (dApps). It's designed for both seasoned developers and curious beginners who want to bring their blockchain ideas to life without drowning in code. Let's say a small business owner wants to create a custom loyalty program on the blockchain. Normally, that would require hiring expensive developers and dealing with complicated smart contract coding. But with QubeCode IDE, they can use drag-and-drop components to set up user authentication, manage tokens, and store data securely—all without writing a single line of code. It's that simple. For bigger enterprises, the possibilities are even more exciting. Imagine a logistics company tracking shipments globally. With QubeCode IDE, they can build a supply chain management system that pulls real-time data from multiple blockchains—Ethereum for smart contracts, Solana for speed, and Bitcoin for payment tracking. This level of cross-chain interoperability is exactly why Qubetics isn't just another project in the crowd. It's built to be the backbone of the decentralized future. No wonder investors are eyeing it as the best crypto investment in 2025.

Qubetics Presale The Hottest Opportunity You Shouldn't Miss

As one of the best crypto investments, Qubetics presale is making waves at \$0.0667 per token in its 20th stage, where over \$12.1 million has been raised so far. A \$750 investment secures 11,244 tokens,

turning into \$2,810 if Qubetics reaches \$0.25. A \$1 valuation pushes it to \$11,174, while \$5 per token results in \$55,870. If Qubetics surges to \$15, total returns hit \$167,640, making it the best crypto investment for massive gains. Immutable X Powering the Future of NFTs Immutable X has carved out its niche as the go-to layer-2 solution for NFTs on the Ethereum network. With gas fees being one of Ethereum's biggest headaches, Immutable X swooped in like a hero, offering zero gas fees for minting and trading NFTs without compromising security. This alone has made it a favorite among NFT creators and collectors. Plus, its carbon-neutral stance appeals to eco-conscious investors looking for sustainable blockchain solutions. But it's not just about NFTs. Immutable X's scalability means it can handle thousands of transactions per second, opening the door for gaming platforms and DeFi projects to thrive without the usual bottlenecks. Major games like Gods Unchained and Illuvium are already leveraging its tech, showcasing just how versatile this platform is. However, while Immutable X excels in the NFT space, its scope is somewhat limited compared to the broad interoperability focus of Qubetics. Immutable X is great if you're all-in on NFTs, but if you're looking for the best crypto investment with wider applications, Qubetics brings more to the table. Avalanche Speed, Scalability, and Eco-Friendly Innovation Avalanche has been making waves with its high-speed, low-cost transactions, positioning itself as a strong contender in the DeFi and enterprise blockchain space. Its unique consensus mechanism allows it to process over 4,500 transactions per second, far outpacing older blockchains like Ethereum. This speed, combined with its eco-friendly Proof-of-Stake system, has attracted a wide range of developers and businesses. One of Avalanche's standout features is its ability to support custom blockchain networks, known as subnets. This flexibility allows projects to create tailored environments optimized for specific use cases, whether that's DeFi platforms, NFT marketplaces, or even government applications. Big names like Deloitte have tapped into Avalanche's potential, proving its real-world viability. While Avalanche's speed and scalability are impressive, it still operates within the traditional blockchain framework, focusing more on performance than cross-chain connectivity. This is where Qubetics has an edge. By acting as a bridge between blockchains, Qubetics offers broader use cases, making it a strong contender for the best crypto investment title in 2025. Conclusion: The Future Belongs to Projects That Solve Real Problems In the fast-moving world of crypto, it's easy to get caught up in hype. But smart investors know that the real winners are projects solving real-world problems. Immutable X is revolutionizing NFTs with zero gas fees and eco-friendly solutions. Avalanche is pushing the boundaries of speed and scalability in DeFi. But Qubetics? It's doing something bigger. By uniting blockchains through its QubeCode IDE, it's solving the industry's biggest challenge—interoperability. The Qubetics presale is heating up, and with each presale stage lasting just 7 days (and a 10% price increase every Sunday at midnight), the clock is ticking. Analysts predict explosive growth, with \$TICS potentially reaching \$15 after the mainnet launch. This is why Qubetics isn't just another project—it's the best crypto investment for 2025. Don't miss your chance to be part of something revolutionary—join the Qubetics presale today and position yourself ahead of the curve. Ready to ride the wave of meme coin madness? There's something electrifying about watching these quirky, community-driven coins make huge leaps in the crypto world. As investors scramble to scoop up the best new meme coins to buy this month, BTFD Coin stands out with its skyrocketing staking rewards, while coins like Bonk and Shiba Inu continue to build momentum. So, grab your surfboards, because you're about to dive into the meme coin ocean, and BTFD Coin's 90% APY is the wave you'll want to catch. With over \$5.95 million raised, BTFD Coin has taken presale by storm, with more than 69 billion coins sold and over 10,300 Bulls on board. But the excitement doesn't stop there—the true gem of BTFD Coin lies in its staking program, which promises investors a jaw-dropping 90% APY. Plus, with the special bonus code LAUNCH100, you can double your tokens during Stage 14. This is the kind of presale that turns into a success story, and you'll want to be part of it. 1. BTFD Coin: The Meme Coin Revolutionizing Staking and Rewarding Investors What makes BTFD Coin the top contender for the best new meme coin to buy this month? Well, it's all about that staking reward. With a 90% APY on staking, your initial investment can grow exponentially. You're not just sitting back and watching your coins gather dust. No—you're staking them and earning massive rewards as the coin's ecosystem continues to grow, powered by its innovative Play-to-Earn (P2E) game and community-driven platform. The true magic of BTFD Coin lies in how its staking rewards operate. For example, if you stake your coins for a year at 90% APY, your \$1,000 investment could grow by an additional \$900, turning your stash into a seriously juicy pot. And because BTFD Coin has already proven itself to be a hit in the presale phase, with over \$5.95 million raised and a dedicated community of over 10,300 holders, it's clear this meme coin is about making your investment work for you. Claiming the LAUNCH100 Bonus - Go to the Presale Page to begin. - Click & Connect Wallet and select your wallet (e.g., MetaMask, Trust Wallet). - Locate the bonus code field, enter LAUNCH100, click & Apply and confirm the message with your wallet to apply the code. - Input the amount of \$BTFD you want to buy. - Click & Buy Now and confirm the transaction in your wallet. Note: LAUNCH100 must be entered in ALL CAPS to be valid. 2. Bonk Coin: The Viral Hit Back for Round Two Bonk Coin was a household name in the meme coin world in 2022, and now it's making a strong comeback. This meme coin, built on Solana, surged in popularity with its playful community and deflationary mechanics. It caught the attention of investors not just because of its meme potential, but also due to its strong community support and unique tokenomics. Now, Bonk is back, and it's gearing up for another phase of growth. With new updates and the backing of its ever-loyal following, Bonk is ready to make waves again. Will it achieve the same success as in its first viral moment? Only time will tell, but with the crypto world still buzzing about it, Bonk might be one to watch closely. 3. Shiba Inu: An Optimistic Comeback on the Horizon Shiba Inu needs no introduction. It's been the poster child of meme coins for years, rising from a small community project to a global phenomenon. But what sets Shiba Inu apart now is its relentless pursuit of new opportunities—especially in the world of decentralized finance (DeFi) and metaverse integration. With plans for Shiba Inu's metaverse and enhanced tokenomics, this meme coin is far from slowing down. The project continues to expand its ecosystem, bringing in new investors, developers, and community members. Shiba Inu has proven it's here for the long haul, with its ever-growing fanbase and continuous developments. Conclusion: Invest Smart Today With BTFD Coin's meteoric staking rewards, Bonk Coin's comeback, and Shiba Inu's ongoing evolution, the meme coin market is primed for explosive growth. But if you're looking for the meme coin that offers not just hype, but real, tangible returns, BTFD Coin should be at the top of your list. The 90% APY on staking is just the beginning. And here's the best part: thanks to the LAUNCH100 bonus code, you can double your tokens during the presale's Stage 14. All you need to do is use the code when purchasing \$BTFD tokens, and boom—your coins are doubled. Don't wait any longer; this is your chance to make big gains with BTFD Coin. Find Out More: Website: <https://www.btfd.io/> X/Twitter: https://x.com/BTFD_COIN Telegram: https://t.me/btfd_coin Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market never sleeps, and 2025 is shaping up to be one of the wildest years yet. With Bitcoin inching closer to another all-time high and Ethereum solidifying its dominance in the DeFi and NFT spaces, investors are watching every move. But here's the kicker—those who missed the boat on Ethereum back in the early days are kicking themselves. A measly \$1,000 investment in ETH back in 2015 would have ballooned into millions by now. But that train has left the station. Ethereum, while still a solid player, isn't the same high-risk, high-reward opportunity it once was. Enter Qubetics (\$TICS)—the best crypto presale to join right now. This is where second chances are made, where those who felt left behind can now jump in on what could be the next big thing. Unlike its predecessors, Qubetics is built to tackle real-world problems and redefine blockchain interoperability. Qubetics (\$TICS): The Best Crypto Presale to Join Right Now Those who missed Ethereum's early days now have a golden opportunity—Qubetics (\$TICS). This isn't just another token; it's the world's first Web3 aggregator, bridging multiple blockchain networks into one seamless ecosystem. Think of it as the ultimate blockchain unifier, solving issues that Ethereum and other major networks have failed to fix. Imagine an artist who wants to sell NFTs on Ethereum, a business accepting payments on Solana, and a developer building dApps on Avalanche. Qubetics eliminates the hassle of switching between networks, making transactions effortless across different chains. This interoperability isn't just a buzzword—it's a real-world solution that changes the game for businesses, professionals, and investors alike. A non-custodial multi-chain wallet is a decentralized digital wallet that allows users to store, manage, and transact cryptocurrencies across multiple blockchain networks without relying on a third party. Unlike custodial wallets, where a centralized entity holds private keys, non-custodial wallets give users full control over their private keys and funds, enhancing security and privacy. These wallets support various blockchains, enabling seamless asset management across networks like Ethereum, Binance Smart Chain, Solana, and more. With features like private key encryption, cross-chain swaps, and direct DeFi integration, non-custodial multi-chain wallets empower users with financial sovereignty while reducing reliance on centralized exchanges. Qubetics is in its 21 presale stage, with the \$TICS token priced at \$0.0667. The presale has already raised over \$12.1 million, with more than 464 million \$TICS tokens sold to over 19,000 holders. And the projections? Absolutely mind-blowing. Analysts are eyeing massive potential gains for Qubetics (\$TICS), making it one of the best-performing crypto assets to buy in Feb 2025. If \$TICS reaches \$0.25 by the end of the presale, early investors could see a staggering 274.71% return. But that's just the beginning—once the presale wraps up, a jump to \$1 would mean a mind-blowing 1,398.82% surge. The real excitement kicks in if \$TICS hits \$5 post-presale, skyrocketing returns to 7,394.12%. With numbers like these, it's no wonder Qubetics is capturing serious investor attention. Ethereum: The Giant That Got Away Ethereum revolutionized blockchain with its smart contracts and decentralized applications (dApps). No one's denying that. Launched in 2015 at a mere \$0.75 per token, ETH now trades in the thousands. Those who bought in early are living the dream—luxury vacations, six-figure cars, and financial freedom. But for everyone else? The opportunity to turn a small investment into a fortune with Ethereum is long gone. Ethereum still dominates the DeFi and NFT sectors, but it's not without its flaws. High gas fees, slow transaction speeds, and scalability concerns have plagued the network for years. Ethereum 2.0 has been a step forward, but it's still struggling to keep up with demand. Institutional money has poured in, making ETH a more stable, long-term hold rather than a moonshot opportunity for those looking to turn \$1K into \$100K. Analysts still see Ethereum maintaining its dominance, but the days of insane ROI are over. Price predictions for 2025 suggest ETH will hover between \$4,000 and \$6,000, which, while solid, doesn't offer the life-changing gains early adopters saw. The next Ethereum-like opportunity? Qubetics. Final Thoughts: The Best Crypto Presale to Join Before It's Too Late Opportunities like Ethereum in 2015 don't come around often. The best crypto presale to join right now isn't ETH—it's Qubetics. With its cutting-edge interoperability solutions, massive presale success, and insane upside potential, it's positioned to be the next big thing in the crypto space. Ethereum had its moment, but Qubetics is the future. Those who get in early could be looking at life-changing gains—and those who hesitate? Well, they might just end up watching history repeat itself, wishing they had jumped in when they had the chance. For More Information: Qubetics: <https://qubetics.com> Telegram: <https://t.me/qubetics> Twitter: <https://x.com/qubetics> Disclaimer: TheNewsCrypto does not endorse any content on this page. Innovative tasks that combine artificial intelligence (AI) with blockchain technology are swiftly gaining momentum, promising to convert multiple industries. One such project that has captured tremendous interest is Ozak AI, with professionals forecasting a capability of one 1000% surge through the end of 2025. This growth is pushed by way of the specific integration of AI and blockchain, positioning Ozak AI to disrupt the market and offer groundbreaking solutions throughout numerous sectors. Ozak AI's Unique Proposition Ozak AI distinguishes itself through combining predictive analytics with blockchain infrastructure. This integration permits the improvement of decentralized applications (dApps) that offer real-time information processing and actionable insights all through industries together with finance, healthcare, and logistics. The platform's AI-driven solutions are designed to enhance preference-making strategies, operational efficiencies, and make certain records safe. Presale Success and Market Potential The ongoing Ozak AI presale tokens has been met with enthusiastic investor interest, raising over \$700,000 so far. Tokens are presently priced at \$0.003, with projections suggesting a capability growth to \$1 by the end of 2025. This anticipated increase reflects the market's self belief in Ozak AI's modern approach and the growing name for AI-based blockchain solutions. Comparative Analysis with Industry Leaders Drawing parallels with the early stages of successful cryptocurrencies like Solana, Ozak AI's integration of AI and blockchain positions it as a strong project in the crypto space. Analysts liken its capacity to that of Ethereum's early boom, suggesting that Ozak AI should experience great appreciation as it gains adoption and reputation. Technological Innovations Ozak AI's technological framework includes the Ozak Stream Network (OSN) and Decentralized Physical Infrastructure Networks (DePINs), which facilitate stable and efficient processing. These

improvements are anticipated to deal with scalability and protection demanding situations, imparting a robust basis for the platform's growth and adoption. While the cryptocurrency marketplace is inherently volatile, the mixture of AI with blockchain is anticipated to be a big increase in pressure. Ozak AI's strategic consciousness in this convergence, coupled with its innovative answers and sturdy presale normal overall performance, positions it as a capacity leader in the evolving crypto landscape. Experts are looking ahead to that, much like the early days of Bitcoin, Ozak AI ought to revel in extensive growth, making it a noteworthy mission to look at in 2025. Ozak AI's innovative approach to mix AI and blockchain era, in conjunction with its strong presale, usual overall performance and market projections, indicates that it has the functionality to end up an extensive participant in the cryptocurrency market. While the only 1000% surge forecast is formidable, the undertaker's unique price proposition and the developing demand for AI-included blockchain solutions make it a compelling project for customers and agency observers alike. About Ozak AI Ozak AI is a blockchain-based crypto project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Through machine learning algorithms and decentralized network technologies, Ozak AI enables real-time, accurate, and actionable insights to help crypto enthusiasts and businesses make the correct decisions. - The market cap of USDT reached an all-time high of \$141.76 billion. - Stablecoin regulation is gaining momentum as global leaders propose a bill. The crypto market is struggling to pick up as Bitcoin fell below the \$97K level and Ether trading in the \$2,600 zone. Major altcoins such as XRP, Solana, BNB, Dogecoin, Cardano, and Tron are following BTC and ETH in terms of market price momentum. Total crypto market capitalization dropped by 1.29% in the last 24 hours. However, the top stablecoin USDT is grabbing all the attention in the industry with its new record. Tether's USDT hit an all-time high of \$141.76 billion in the early Asian hours. Being the top stablecoin, USDT religiously maintains its peg to the US dollar. It witnessed periodic sharp hikes in terms of market capitalization historically. After witnessing one of those hikes earlier today, his market cap surpassed the \$141 billion level for the first time. Factors Propelling the USDT Adoption Tether recently partnered with a leading real estate B2B platform in the UAE, Reelly Tech. UAE is the leading country in terms of crypto regulation, adoption, and innovation. Partnering with one of the top companies in the UAE, Tether is set to raise its global standard and adoption. On another note, efforts to regulate the stablecoin space in the United States is gaining attention across the industry. US Financial Committee officials have recently released a House Bill on stablecoin regulatory framework. Additionally, the UK has also revealed its plans to implement stablecoin regulations last year. While the newly appointed Presidential Working Group is evaluating the Bitcoin strategic reserve, stablecoin regulations are moving forward. The US White House Crypto & AI Czar several times mentioned stablecoins and their potential to increase dollar dominance. He even believes that stablecoins can create trillions of dollars of new demand to the US treasury, helping with its debt issues. Highlighted Crypto News Today: Poland Cancels Bitcoin Reserve Proposal Despite President Mentzen's Promise

Which meme coin could skyrocket next? With the crypto space constantly evolving, new projects are making headlines, offering lucrative opportunities. While Arctic Pablo Coin (APC) is gaining momentum with its high-yield staking and referral incentives, other meme coins like Meme Coin and Ponke are also experiencing market shifts. Arctic Pablo Coin is not just another meme token—it's an adventure, a story, and a high-reward investment. As he treks through the frozen frontier, Arctic Pablo discovers a hidden treasure: \$APC. This article will cover the latest updates on Arctic Pablo Coin, Meme Coin, and Ponke, breaking down their performance and potential. Arctic Pablo Coin's Presale Rewards: The Best New Meme Coin to Buy This Week Arctic Pablo isn't just a digital character—he's an explorer on a mission, navigating the harshest terrains in search of something rare. That's something is Arctic Pablo Coin (APC), a meme coin designed to reward its investors. Investors have the chance to stake their tokens during the presale, earning an impressive 66% APY. This means early supporters can generate significant passive income simply by holding their tokens. Spreading the word about Arctic Pablo brings even more benefits, as the referral program allows users to earn extra APC tokens for introducing new buyers to the project. Arctic Pablo Coin also embraces a strong community-driven approach, where competitions and exclusive challenges reward winners with APC tokens or even USD. The project is not only about investment but also about engagement, making it an exciting ecosystem where early adopters can reap multiple benefits. These standout features position Arctic Pablo Coin as the best new meme coin to buy this week. Frostburg Phase: A Limited-Time Presale Offer at \$0.000054 Arctic Pablo has now reached Frostburg, the ninth phase of his expedition, marking another milestone for \$APC. In less than a month, the project has successfully completed eight previous phases, raising over \$1 million in record time. This incredible momentum speaks volumes about the coin's growing popularity. At the moment, Arctic Pablo Coin is priced at just \$0.000054 per APC, presenting an extraordinary opportunity for investors. The numbers tell an exciting story. A \$100 investment at this stage would secure 1,853,703 APC tokens, which, when the coin reaches its listing price of \$0.008, would grow into a staggering \$14,829.62. With each new phase, the price of \$APC continues to increase, and those who enter now lock in the lowest possible entry before Arctic Pablo moves to the next location. The Frostburg phase won't last forever, and once it ends, the price will rise again. The opportunity is right now, making Arctic Pablo Coin the best new meme coin to buy this week. Meme Coin's Latest Market Update Meme Coin (MEME) has been making waves in the meme crypto space, showing solid performance in recent trading sessions. As of February 7, 2025, MEME is priced at \$0.004347, with a market capitalization of approximately \$165.49 million and a 24-hour trading volume of \$97.23 million. The circulating supply currently stands at 38.07 billion tokens out of a total supply of 69 billion MEME. Meme Coin continues to solidify its presence in the meme token category, with steady trading activity and a growing user base. Its recent performance suggests that investors are still finding value in its ecosystem, and it remains a contender in the meme coin market. Ponke's Performance in the Market Ponke (PONKE), a meme coin operating on the Solana blockchain, has been making significant strides in the crypto landscape. As of February 7, 2025, Ponke's price sits at \$0.1256, with a market capitalization of around \$69.76 million and a 24-hour trading volume of \$14.94 million. The total supply of Ponke stands at 555.54 million tokens, all of which are in circulation. With its presence on major exchanges and increasing adoption within the meme coin community, Ponke continues to attract attention. Its Solana-based infrastructure gives it the advantage of fast transactions and lower fees, adding to its appeal for investors looking to explore new meme tokens. Final Thoughts: Arctic Pablo Coin Stands Out as the Best New Meme Coin to Buy This Week Meme coins continue to dominate discussions in the crypto world, with Meme Coin and Ponke making waves in their respective spaces. However, Arctic Pablo Coin (APC) is proving to be an unmissable opportunity for early investors. With its high-stakes APY, engaging referral system, and rapidly progressing meme coin presale, Arctic Pablo Coin is set to be a major player in the meme coin sector. The Frostburg phase is still open, but not for long, and those who act now will secure the lowest price before the token moves into the next phase of its journey. As the excitement builds, Arctic Pablo Coin remains the best new meme coin to buy this week, and there's no telling how high it could go once it lists. For More Information: - Arctic Pablo Coin: <https://www.arcticpablo.com/> - Telegram: <https://t.me/ArcticPabloOfficial> - Twitter: <https://x.com/arcticpabloHQ> Frequently Asked Questions What is Arctic Pablo Coin (APC)? Arctic Pablo Coin is a meme-based cryptocurrency that offers staking rewards, referral incentives, and community competitions, making it a compelling investment opportunity. How can I participate in the Arctic Pablo presale? To join the presale, visit the official Arctic Pablo website, connect your crypto wallet, and follow the instructions to purchase APC tokens at the current presale price. What are the benefits of staking APC tokens? Staking APC tokens during the presale allows investors to earn a 66% annual percentage yield (APY), providing a lucrative way to grow their holdings before the official launch. How does the referral program work for Arctic Pablo? By referring others to the Arctic Pablo project, participants can earn additional APC tokens or USD as rewards, incentivizing community growth and engagement. Why is Arctic Pablo considered the best new meme coin to buy this week? With its innovative staking system, strong referral program, and rapidly increasing presale price, Arctic Pablo Coin presents one of the most exciting meme coin investment opportunities currently available. - Rapper Kanye West disclosed that he was offered \$2 million to promote a fake crypto. - Kanye posted a screenshot where he said he will ask for Coinbase CEO phone number. Popular artist Kanye West known for his super active presence on X special platform disclosed a possible crypto scam earlier today. Based on one of his posts, Kanye is trying to get in touch with Coinbase CEO Brian Armstrong, regarding crypto. By saying "No" to a crypto scam offer, Kanye received mixed responses from his followers. Concerning crypto pic.twitter.com/ytfDfjiqXS "ye" (@kanyewest) February 7, 2025 When the sender asked for a crypto connect where he would eliminate middlemen and contact directly with the concerned person, Kanye mentioned Coinbase CEO. Kanye further stated that he will ask for the contact number of Coinbase CEO Brian Armstrong. In one of the earlier posts, Kanye shared another screenshot of an "X Promotional Contract" offer sent to him. It says Kanye will be paid around \$2 million dollars for promoting a fake Ye cryptocurrency to his followers. Interestingly, it said that Kanye can post "my account was hacked, the post was not me," to get him out of the trouble. Even though the rapper said he rejected this offer and stopped working with that person, he received criticism from the audience. While most of the people replied that Kanye exposed all the big accounts who promoted the tokens and then said it was a scam, some of them said the screenshot is fake. The message says, "The company will be scamming the public out of tens of millions of dollars." No company that does this and approaches a celebrity may not publicly mention this. Polymarket Says Odds Kanye Launches His Coin is 46% Kanye was offered \$2 million to launch "YE coin." Polymarket (@Polymarket) February 7, 2025 Odds he launches one just shot up to 46%. <https://t.co/abioAHJH7Q> pic.twitter.com/upIFNjNcT4 Amidst the Kanye West buzz around launching a token and his crypto scam offer, Polymarket made an interesting prediction. It says the odds of Kanye launching a crypto token shot up to 46%. On the other hand, the popular Solana memecoin launch pad Pump.fun encouraged Kanye to launch a token. To one of his posts, Pump.fun replied "Channel Andrew Tate and launch a coin." Highlighted Crypto News Today: Tornado Cash developer Alexey Pertsev is released from prison

If you thought meme coins were just a passing phase, think again! The market is buzzing, and despite the minor dips from some top contenders, one coin refuses to slow down—BTFD Coin. This presale beast recently skipped straight to Stage 14, burned all remaining Stage 13 tokens, and has already raised over \$5.97 million! Oh, and did you know about the insane 90% APY staking rewards? Yeah, it's that kind of party. To top it all off, BTFD is handing out a 100% bonus on purchases with the LAUNCH100 code. That means whatever you buy, you get double. Imagine walking into a store, paying for one pizza, and getting two. Except, in this case, your "pizza" could be worth 10x more in a few months! On the other hand, Book of Meme (BOME) and Dogwifhat (WIF), two other major meme coin players, just took 5% hits in value over the last 24 hours. So, is BTFD Coin the best meme coin presale to buy now? BTFD Coin: The Meme Coin That Gives You More Than Just Laughs Meme coins are fun, but let's be real—nobody buys them just for the memes. Investors want gains. That's exactly what BTFD Coin is delivering, combining humor, an active community, and crazy-high staking rewards to build one of the strongest meme ecosystems out there. Most meme coins rely solely on price pumps to make holders money, but BTFD Coin flips the script with its massive 90% APY staking rewards. That's right—by staking your tokens, you can earn nearly double your holdings every year, creating an additional income stream while you wait for the price to skyrocket. Crunch some numbers to understand BTFD's potential: You invest \$2,000 into BTFD Coin at the current presale price of \$0.00016. That lands you 12,500,000 BTFD tokens. But wait—you're using the LAUNCH100 bonus code, which doubles your purchase, giving you 25,000,000 BTFD tokens. Now, say BTFD Coin hits \$0.0006 after launch. Your 25M tokens? Now worth \$15,000. And that's before factoring in staking rewards! Other BTFD Coin Perks Beyond the crazy staking benefits, BTFD Coin boasts: - A loyal Bulls Squad community fueling its hype. - A deflationary supply, strengthened by token burns (like the recent Stage 13 burn!). - A play-to-earn (P2E) game where users can win even more tokens. With all this going for it, BTFD Coin easily earns its spot among the best meme coin presales to buy now! BOOK OF MEME: The Crypto Encyclopedia of Internet Culture Book of Meme (BOME) is an experimental meme project aiming to preserve internet culture on the blockchain. The idea? A decentralized storage solution that immortalizes memes forever using Arweave, IPFS, and Bitcoin inscriptions. The BOME token, built on Solana, fuels this ecosystem, allowing users to trade and engage with meme-based content. What's Happening with BOME Now? - Current Price: \$0.002034 - Market Cap: \$140.2M - 24-Hour Trading Volume: \$67.5M - Down 5.44% in the last 24 hours Despite the recent dip, BOME is a unique project with a vision to make memes unstoppable, blending crypto and culture like never before. Dogwifhat: The Meme Coin That's Got That Dog in It Dogwifhat (WIF) exploded onto the scene with its adorable Shiba Inu sporting a pink knit hat. A purely community-driven meme coin, WIF thrives on social media hype and Solana's fast, low-fee transactions. Current WIF Stats - Price: \$0.751024 -

Market Cap: \$750.1M - 24-Hour Trading Volume: \$367.8M - Down 5.40% in the last 24 hours Dogwifhat has cemented itself as a top-tier meme coin with massive engagement. While the price is volatile, WIF remains one of the most beloved meme projects in the space. How to Get Your Hands on 100% More \$BTFD With the LAUNCH100 Bonus Code Want to double your BTFD Coin investment? Follow these simple steps: - Go to the presale page to get started. - Connect Your Wallet â€” Click â€”Connect Walletâ€ and choose MetaMask or Trust Wallet. - Enter the Bonus Code â€” Type LAUNCH100 in the bonus code field, click Apply, and confirm the message in your wallet. - Enter Purchase Details â€” Input how much BTFD you want to buy. - Confirm & Buy â€” Click â€”Buy Nowâ€ and confirm the transaction. Reminder: The code MUST be in all caps (LAUNCH100) to work. Conclusion: Is BTFD Coin Your Best Bet Right Now? With the BTFD Coin presale moving at breakneck speed, a 100% token bonus, and 90% APY staking rewards, itâ€™s clear why itâ€™s one of the best meme coin presales to buy now. While Book of Meme and Dogwifhat each bring distinctive angles to the meme coin scene, BTFD is the only one offering massive staking rewards and a deflationary structure. Donâ€™t miss outâ€”use the LAUNCH100 code now and secure double your tokens before Stage 14 sells out. Find Out More: - Website: <https://www.btfd.io/> - X/Twitter: https://x.com/BTFD_COIN - Telegram: https://t.me/btfd_coin FAQs 1. What is BTFD Coinâ€™s staking APY? BTFD Coin offers a 90% APY staking reward, allowing holders to earn nearly double their tokens annually. 2. How does the LAUNCH100 bonus code work? When purchasing BTFD Coin, enter LAUNCH100 at checkout to receive 100% extra tokens, effectively doubling your purchase. 3. What makes BTFD Coin different from other meme coins? Unlike most meme coins that rely on hype alone, BTFD Coin offers staking rewards, token burns, and a P2E game, making it a more versatile and rewarding investment. The meme coin craze continues to evolve, with new tokens capturing the marketâ€™s imagination and promising lucrative returns for early adopters. While the majority of meme coins thrive on hype, some projects stand out due to their strong narratives, robust communities, and unique tokenomics. In this article, let's dive deep into the top meme coins to join for long term, including Arctic Pablo Coin, Baby Dogecoin, and TRUMP Meme Coinâ€”each offering a distinct opportunity for investors looking for potential exponential growth. Arctic Pablo Coin â€” The Icy Adventurer with Limitless Potential Deep within the heart of a frostbitten expanse, Arctic Pablo Coin (\$APC) is carving out a niche as one of the most exciting meme coins to enter the crypto world. Unlike traditional meme coin presale, Arctic Pablo Coin presents an adventurous storyline where Pablo, a daring explorer, embarks on a mission to uncover the lost mysteries of the Arctic, all while discovering the mystical \$APC coins that hold untold riches. The Arctic Pablo Coin presale is already generating buzz, offering investors an entry point into a deflationary token that rewards early adopters. With each location-based phase, the price increases weekly, making it a time-sensitive investment opportunity. Investors who join early could see monumental returns upon listing. If you invest \$1,500 in Arctic Pablo Coin, you would receive 27,805,545.00 APC tokens, with your investment projected to balloon to \$222,444.36 once the listing price reaches \$0.008. Additionally, Arctic Pablo Coin offers a 66% APY staking program, allowing holders to grow their assets while participating in the grand journey of Arctic Pabloâ€™s expeditions. With all staked tokens vested for two months from launch, this ensures sustainable rewards and investor security. To further fuel scarcity and value appreciation, Arctic Pablo Coin features a weekly token burn mechanismâ€”ensuring that unsold presale tokens are permanently removed, creating a deflationary environment. This approach enhances the long-term viability of the project, making it a compelling choice among the top meme coins to join for long term. Currently, Arctic Pablo Coin is in its 9th location (Frostburg) with a presale price of \$0.000054. With over \$1 million raised in under a month, the excitement continues to grow. The unique concept, combined with its strong tokenomics and passionate community, positions Arctic Pablo Coin as a must-watch investment for long-term gains. Baby Dogecoin â€” The Community-Driven Powerhouse Baby Dogecoin (BabyDoge) has cemented itself as one of the most beloved meme coins in the crypto space. Launched as a spinoff of the legendary Dogecoin, Baby Doge takes the playful energy of its predecessor and enhances it with deflationary tokenomics and an engaging community. With a market cap of approximately \$243.61 million and a 24-hour trading volume of \$40.28 million, BabyDoge has proven its ability to maintain strong investor interest. What sets Baby Doge apart is its unique burn mechanism, which continuously reduces supply to increase scarcity and value. The coin has also expanded its ecosystem by launching BabyDogeSwap, a decentralized exchange offering automated market-making (AMM), farming services, and an NFT marketplace. However, like all meme coins, Baby Doge experiences extreme volatility, making it essential for investors to strategize their entry and exit points. Despite its fluctuations, Baby Dogeâ€™s enduring community and innovative expansions position it among the top meme coins to join for long term. TRUMP Meme Coin â€” Political Satire Meets Crypto Success In the world of political meme coins, few tokens have generated as much controversy and hype as The OFFICIAL TRUMP (TRUMP) token. Built on the Solana blockchain, this coin thrives on political narratives, speculation, and an active trading community. Currently, TRUMP is trading at \$17.78, with a market cap of \$3.55 billion and a 24-hour trading volume of \$1.69 billion. Its fully diluted valuation (FDV) stands at \$17.77 billion, with a total and max supply of 999.99 million TRUMP tokens. The token has seen extreme volatility, reaching an all-time high of \$75.35 on January 19, 2025, before plummeting to an all-time low of \$6.24 the very next day. Final Thoughts â€” Which Meme Coin Should You Choose? Based on our research and market trends, the top meme coins to join for long term each offer unique opportunities depending on your investment strategy. Arctic Pablo Coin presents a deflationary presale model with adventurous storytelling and massive growth potential, making it a top choice for early adopters. Baby Dogecoin remains a strong community-driven project with a robust ecosystem and charitable mission, while TRUMP Meme Coin delivers high-stakes political speculation for those who can handle extreme volatility. With Arctic Pablo Coinâ€™s weekly presale price increases, burning mechanism, and 66% APY staking rewards, now is the best time to join the adventure. Donâ€™t miss outâ€”secure your Arctic Pablo Coin today before the next price increase! The cryptocurrency space is buzzing with meme coins, offering investors a mix of humor, community engagement, and financial potential. But which ones are worth considering for the long haul? If youâ€™re searching for the Best Meme Coins to Join for Long Term, three stand out with unique stories and strong community backing: Arctic Pablo Coin, Goatseus Maximus, and Cat in a Dogâ€™s World. Letâ€™s dive into each and explore why they could be major players in the future. Arctic Pablo Coin: Bridging Myth and Reality Unlike most meme coins, Arctic Pablo Coin (\$APC) isnâ€™t just about funâ€”itâ€™s an entire adventure. It follows Arctic Pablo, an intrepid explorer traveling through icy landscapes in search of hidden treasures. The story unfolds as he discovers magical APC coins, each carrying the promise of wealth and mystery. First, the presale structure is entirely unique. Instead of traditional stages, itâ€™s based on Pabloâ€™s travels. Right now, the coin is in its 9th location, Frostburg, priced at \$0.000054 per token.. At this stage, the ROI from Stage 9 to the listing price of \$0.008 has reached an extraordinary 14,725.93%. If you invest \$750, youâ€™d receive 13,902,772.50 APC tokens, which could skyrocket to \$111,222.18 when the listing price reaches \$0.008. Then thereâ€™s the 66% APY staking program. Imagine locking in your coins and watching them grow, all while Pabloâ€™s journey unfolds. Staked coins are vested for two months from the launch date, ensuring sustainability and preventing sudden sell-offs. Another crucial element of the meme coin presale is token burning. Any unsold tokens at the end of each presale phase will be burned, reducing supply and increasing scarcity. This deflationary model ensures that as the number of coins in circulation decreases, their potential value increases. Best Meme Coins for Long-Term Investment â€” With over \$1 million raised, Arctic Pablo Coin is emerging as a top contender, offering high APY staking, deflationary tokenomics, and strong investor interest. Goatseus Maximus: The AI-Powered Meme Revolution If youâ€™re into meme coins with a historical twist and AI-driven hype, Goatseus Maximus (\$GOAT) is one to watch. Built on the Solana blockchain, this token has gained massive attention due to its connection with Truth Terminal, an AI bot influencing its market presence. GOATâ€™s numbers are impressive. Currently ranked #329, its price stands at \$0.1175, reflecting an 8.71% increase in the last 24 hours. With a market cap of \$117.52 million and a 24-hour trading volume of \$49.27 million, GOAT has a strong and active community pushing its momentum forward. Historically, GOAT hit an all-time high of \$1.36 on November 17, 2024, before dropping 91.33%. But hereâ€™s the wild partâ€”its all-time low was \$0.000195 on October 10, 2024, meaning itâ€™s surged by an astonishing 602,525.03% since then. If history repeats itself, GOAT could have another massive rally in store. Recent developments, like its listing on OKX for USD trading pairs, are fueling even more interest. Several crypto influencers are backing the token, creating additional bullish momentum. Cat in a Dogâ€™s World: The Ultimate Underdog (or UnderCat?) For those who love a good underdog story, Cat in a Dogâ€™s World (\$MEW) is a purr-fect choice. Built on the Solana blockchain, MEW is a quirky but surprisingly solid meme coin thatâ€™s clawing its way to the top. MEW is currently trading at \$0.002798, marking a 10.29% increase in the last 24 hours. With a market cap of \$248.73 million and a 24-hour trading volume of \$31.16 million, itâ€™s showing strong activity. The token supply stands at 88.88 billion MEW, and despite a previous all-time high of \$0.01288, itâ€™s still 233.91% above its lowest point. Community engagement is through the roof, with over 82% of holders expressing optimism about its future. If youâ€™re looking for something fun, community-driven, and unpredictable, MEW might just be one of the Best Meme Coins to Join for Long Term. Conclusion: Which Meme Coin Reigns Supreme? Based on our research and market trends, Arctic Pablo Coin, Goatseus Maximus, and Cat in a Dogâ€™s World each offer unique opportunities for investors. Arctic Pablo Coin delivers an immersive, narrative-driven experience combined with a high APY staking program and a deflationary token burn mechanism, making it appealing for long-term holders. Goatseus Maximus capitalizes on AI hype and strong trading volumes, presenting a volatile yet potentially lucrative investment. Meanwhile, Cat in a Dogâ€™s World stands out in the meme coin space as a quirky outsider, gaining traction with strong community support despite the dominance of dog-themed tokens. For those seeking long-term potential, Arctic Pablo Coin is a standout choice with its staking rewards, innovative presale model, and deflationary tokenomics. Donâ€™t miss outâ€”join the Arctic Pablo Coin presale now and be part of the adventure! For More Information: Arctic Pablo Coin: <https://www.arcticpablo.com/> Telegram: <https://t.me/ArcticPabloOfficial> Twitter: <https://x.com/arcticpabloHQ> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Choe BZX Exchange filed Form 19b-4 with the SEC to list spot XRP ETFs for Bitwise, 21Shares, Canary Funds, and WisdomTree. - Grayscale also joined, filing for its own XRP ETF. - Polymarket puts the odds of approval in 2025 at 80%, with JPMorgan projecting \$6â€”8 billion in revenue within a year if approved. The Choe BZX Exchange has filed Form 19b-4 with the U.S. Securities and Exchange Commission (SEC), seeking approval to list and trade spot XRP exchange-traded funds (ETFs). The filings cover ETFs proposed by asset managers Bitwise Investment, 21Shares, Canary Funds, and WisdomTree. In a significant development, Grayscale has also submitted a 19b-4 application for an XRP ETF, signaling a growing push from institutional players to introduce XRP-based financial products. What Does Form 19b-4 Mean for XRP ETFs? Form 19b-4 is the standard procedure for stock exchanges to propose rule changes to the SEC, essential for the introduction of new financial products like ETFs. However, as Fox Business reporter Eleanor Terrett pointed out, the filing itself does not guarantee SEC approval. Once the SEC acknowledges the filing, it triggers a 240-day review period during which the agency must decide to approve or deny the proposed ETFs. If approved, these filings could pave the way for XRP to become a tradable ETF, significantly increasing its exposure to institutional investors. The potential impact of an XRP ETF is substantial. A JPMorgan report estimates that such a product could generate between \$6 billion and \$8 billion in revenue within its first 6 to 12 months of trading. On the prediction platform Polymarket, the odds of an XRP ETF approval in 2025 are strikingly high at 80%, reflecting strong market optimism about the likelihood of regulatory acceptance. SECâ€™s Recent Moves Could Benefit XRP This development follows the SECâ€™s acknowledgment of NYSEâ€™s 19b-4 filings for Grayscaleâ€™s Litecoin (LTC) and Solana (SOL) ETFs. The acknowledgment for Solana is particularly notable, as it was previously classified as a securityâ€”similar to XRPâ€”s regulatory status under the prior administration. â€”This MAY be a good sign for other assets like XRP that were deemed securities under the prior administration that could now be getting a second look,â€ Terrett wrote on X. However, Choeâ€™s amended filings for a Solana ETF have yet to receive SEC acknowledgment, highlighting that the regulatory path for crypto ETFs remains uncertain.

Meme coins arenâ€™t just survivingâ€”theyâ€™re thriving! From legendary internet memes to iconic crypto mascots, the meme coin scene is heating up this month, and if you blink, you might miss out. Below, youâ€™ll find thrilling updates on BTFD Coin, Brett, and Popcat, three of the best new meme coins to join this month. Whether youâ€™re a P2E gaming enthusiast, a BASE chain supporter, or just love a good cat meme, thereâ€™s something

here for you. Oh, and if you havenâ€™t heard yetâ€”BTDF Coinâ€™s 100% BONUS CODE (LAUNCH100) is still valid, doubling your token stash if you act fast. Paired with the coinâ€™s incredible P2E ecosystem, crypto investment has never sounded more appealing. Ready to explore? Letâ€™s dive in.

BTDF Coin: Play-to-Earn Excellence & Presale Surge

BTDF Coin is rewriting the meme coin playbook, and itâ€™s not just about hypeâ€”itâ€™s about action. This Ethereum-based token comes with a high-stakes Play-to-Earn (P2E) gaming ecosystem where investors and players alike can rack up real value. Imagine this: youâ€™re battling it out in the BTDF metaverse, earning in-game rewards that convert into real BTDF tokens. Itâ€™s like stacking XP in your favorite RPG, but this time, the loot is cold, hard crypto.

BTDF Coin is now in its 14th presale stage, priced at \$0.00016 per token, with over \$5.97 million raised and 69 billion tokens sold. If you jump in with \$1,000 today, youâ€™d be securing 6,250,000 BTDF tokens. Now, letâ€™s talk potentialâ€”if the price hits \$0.0006, that same stash skyrockets to \$3,750. And hereâ€™s the cool bit: using the LAUNCH100 code DOUBLES your purchase. That means \$1,000 turns into 12,500,000 BTDF tokens, effectively making your projected earnings \$7,500 if the price surges as predicted. Not bad for a simple presale play! Beyond its P2E model, BTDF Coin is also making waves with high-APY staking, a robust Bulls Squad community, and locked liquidity for long-term security. The Bulls Squadâ€”including characters like Baby Bull, Raging Bull, Nerdy Bull, and Peoples Bullâ€”are the backbone of this thriving ecosystem, fostering FOMO-worthy excitement.

Brett: The BASE Chainâ€™s Blue-Colored Meme King

Originally a character from Matt Furiaâ€™s Boysâ€™ Club comic, Brett has found new life as the BASE chainâ€™s beloved blue mascot. With strategic partnerships, a rapidly expanding ecosystem, and a loyal community, Brett is proving that meme coins can go beyond the joke and into the realm of serious investments. Currently trading at \$0.047122, Brett boasts a 24-hour trading volume of \$55.53 million and a market cap of \$466.99 million. The coinâ€™s circulating supply sits at 9.91 billion out of a max of 10 billion, meaning the room for scarcity-driven price growth is real. With its solid community support and the BASE ecosystem expanding, Brettâ€™s future looks bright.

Popcat: The Viral Meme-Turned-Meme-Coin Powerhouse

From a simple cat meme to a \$207.5 million market cap, Popcat has done the impossible. Originally an internet sensation with a clicking game that took the world by storm, Popcat now thrives on Solanaâ€™s high-speed, low-cost blockchain. Its mystery-backed team, growing community, and strong meme culture have propelled it into the ranks of the best new meme coins to join this month. Popcat (POPCAT) currently trades at \$0.212983, with a 24-hour trading volume of \$45.52 million. Its circulating supply is 979.97 million tokens, nearly reaching its max cap. With the power of Solana behind it and a global audience who already loves the meme, Popcat is proving that nostalgia and viral internet culture can translate into serious crypto value.

How to Claim the LAUNCH100 Bonus Code Right Now

Want to double your BTDF Coin holdings? Follow these simple steps:

- Go to the Presale Page.
- Connect Your Wallet â€” Click â€”Connect Walletâ€” and select MetaMask or Trust Wallet.
- Enter the Bonus Code â€” Type LAUNCH100 in the bonus code field and hit â€”Applyâ€”.
- Enter Purchase Details â€” Input the amount of \$BTDF tokens you want to buy.
- Confirm and Buy â€” Click â€”Buy Nowâ€” and confirm the transaction.

Note: The LAUNCH100 code MUST be in all caps for it to work.

Conclusion: The Buzz Is Getting Louder

Around These Best New Meme Coins to Join This Month

If youâ€™re looking for the best new meme coins to join this month, BTDF Coin, Brett, and Popcat are your top picks. BTDF Coinâ€™s P2E revolution is bringing real earning potential to investors, Brett is becoming BASE chainâ€™s breakout star, and Popcat is turning nostalgia into serious market dominance. Donâ€™t miss outâ€”BTDF Coinâ€™s presale is closing fast, and with LAUNCH100, your investment could double instantly. Get in now before the next price jump!

- House Bill 1217 would create a Bitcoin reserve fund, letting the state treasurer buy, hold, and accept Bitcoin donations. - If passed, all government offices in Missouri must accept cryptocurrency for taxes, fees, and fines, with payers covering transaction fees. Bitcoin collected cannot be sold for five years. - Utah has passed a similar bill, and at least 16 other states, including Arizona and Wyoming, are considering cryptocurrency investments. Missouriâ€™s Plan to Create a Bitcoin Reserve Fund A new bill introduced by Representative Ben Keathley moves Missouri a step closer to adopting Bitcoin. House Bill 1217 creates the opportunity for a bitcoin reserve fund for the state so that it can invest in bitcoin as part of its financial strategy. The idea is that the usage of bitcoins will protect the stateâ€™s investment from inflation, ensuring more diversification in investments. If the bill gets passed, it will allow the Missouri state treasurer to buy, hold, and manage Bitcoin. The bill further allows the state to accept donations in Bitcoin by residents and governmental entities to further grow the reserve. Government Payments and Future Possibilities The biggest change in this bill is that all government offices in Missouri must accept cryptocurrency payments for taxes, fees, and fines. However, it would require that the individuals who make payments are responsible for all the fees on the transaction. There is a law stating that any Bitcoin gained by the government cannot be liquidated within a period of five years. In this case, Missouri would essentially be investing long-term. Therefore, if the plan is perfect. And the act will become law on August 28, 2025; however, discussions are ongoing so changes might be expected. At this point, there is no date set for the next hearing on the bill. Missouri is not the only state looking at cryptocurrency investments. Utah recently passed a similar bill, House Bill 230, which has already cleared the House and is now being considered by the Senate. This bill would give Utahâ€™s treasurer the authority to invest up to 5% of certain public funds. Like in Bitcoin, stablecoins, and other major digital assets. At least 16 states across the United States are currently discussing similar ideas. Which is including Arizona, Kentucky, New Hampshire, North Dakota, Wyoming, and South Dakota. If Missouriâ€™s bill is approved, it could encourage other states to take similar steps in adding cryptocurrency to their financial plans. This shift shows that Bitcoin is becoming more accepted as a legitimate investment, even at the government level. The decision on House Bill 1217 could determine how Missouri positions itself in the evolving world of digital assets.

As per the latest Binance Research report, due in part to possible policy measures like a national crypto reserve and stablecoin regulations, the cryptocurrency market recovered from its December decline and reached a high of US\$3.76T in January 2025. But when DeepSeek, a new AI model, surpassed ChatGPT as the most downloaded app, late-month progress stalled, leading to a 2% drop in both the cryptocurrency and U.S. markets. Amid worries about possible U.S. tariff measures, early February witnessed increased market volatility that affected risk assets worldwide, including cryptocurrency. The next monthly report will go into more depth about these trends. New crypto ETF registrations have surged as a result of the U.S. administrationâ€™s shift to President Donald Trump and pro-crypto Republicans, as well as the resignation of previous SEC Chair Gary Gensler. In the United States, there are now 47 active filings covering 16 different asset classes, including memecoins. Token-based ETFs have gained traction due to fresh confidence about digital asset regulation, although timelines are unpredictable since the new approval structure is still being developed. More than 37 million tokens have been created as a result of the introduction of token launchpads and the memecoin frenzy, with estimates that will surpass 100 million by the end of the year. Because of the dispersed capital caused by this expansion, tokens find it more difficult to maintain prices and reach high values. The proliferation of new tokens discourages long-term holding, shortens attention spans, and increases speculation. The top 100 tokens account for almost 98% of the entire cryptocurrency market capitalization, whereas the majority of tokens have very little market cap despite the spike. Every month since October 2024, Solanaâ€™s DEX volumes have surpassed Ethereumâ€™s, with January volumes surpassing Ethereum by more than 200%. The Solana-to-Ethereum DEX volume ratio actually hit a record high of more than 300% in January. The introduction of the \$TRUMP and \$MELANIA memecoins in January further enhanced Solanaâ€™s success, which has been fueled by its leadership in the memecoin and AI agent narratives. Major protocols including Jito, Raydium, Meteora, and Pump.fun have contributed to and maintained high fee generation, making Solana one of the few chains in the DeFi sector to demonstrate growth in 2025. The acquisition of the memecoin app Moonshot by Jupiter, a prominent DEX aggregator, is one of the noteworthy highlights. The debut of their new Jupnet liquidity aggregation network and the announcement of their buyback-and-burn program have also garnered a lot of interest. The DeFAI sector closed January with a -10% return, after a strong start. Nonetheless, with 44% of Kaitoâ€™s Narrative Mindshare, the total AI narrative domination is still strong. Driven by open-source advancements, AI tokens symbolize the fast growth of conventional AI innovation. Monitoring the trading trends of these globally tradable AI tokens could yield important information about retail interest and the evolving AI landscape as the global AI race heats up.

Shiba Inu (SHIB) and Dogecoin (DOGE) are on edge as recent on-chain data shows big money investors who had previously invested in this token before the surge have started exchanging their holding for this new token that does have a massive potential of 15448%, the token is Rexas Finance (RXS). It is in presale stage 12, experiencing a lot of demand, where it has raised a whopping \$43,932,804 within a very short period, with whales from SHIB and DOGE flocking in. Rexas Finance Redefines Asset Ownership: \$43M Raised in Presale as RXS Unlocks Multi-Trillion-Dollar Markets! The Rexas Finance platform establishes an extensive ecosystem with revolutionary management and accessibility methods for tangible world assets. RXS utilizes blockchain technology to enable asset owners to tokenize properties, including real estate, commodities, and art, for fractional ownership, which creates enhanced liquidity and broader accessibility. The innovation enables institutional markets worth trillions to welcome more participants by removing entry obstacles investors faced when accessing these sectors. Companies now have increased access to the Web3 economy because the Rexas Token Builder enables asset tokenization for non-coders. Stage 12 of the RXS presale shows advanced development while maintaining a token price of \$0.200. The project has surpassed \$43,932,804 of its \$56,000,000 goal, with 439,661,731 tokens transacted from a maximum of 500,000,000 available. Investors display increasing confidence in Rexas Finance because of the significant financial support backing the project. â€” Milestone Alert! â€” â€” Rexas Finance (@rexasfinance) January 26, 2025 Rexas Finance has successfully raised \$43.7 Million! â€”â€” Thank you for your support! â€” Buy Now: <https://t.co/tN3AsvBiYe#rexas> #RXS #rexasfinance #cryptopic.twitter.com/pqNX0pQMIB Listing RXS on primary cryptocurrency tracking sites CoinMarketCap and CoinGecko strengthens its reputation. Certik, a top blockchain security company, has performed audit evaluations on smart contracts to secure the entire platformâ€™s ecosystem integrity. RXS Surpasses SHIB and DOGE: 15,448% Profit Potential Makes Rexas Finance the Next Big Crypto Opportunity! Most investors have moved their attention from SHIB and DOGE towards RXS because of RXSâ€™s strong utility combined with its potential to generate lucrative returns. SHIB and DOGE earned their value through the hype and their active communities, yet RXS delivers sustainability through RWA tokenization. The framework provides practical applications for RXS while creating sustainable growth potential that attracts investors who desire excellent returns alongside stable foundations. The possibility of generating a 15,448% profit stands out because it exceeds previous returns spotted with popular meme coins, including SHIB and DOGE. On June 19, 2025, Rexas Finance will launch for trading at \$0.25, representing a significant step forward during its operational history. This public listing network, exposure, and investor access will expand, which may result in higher demand and increased asset valuation. RXSâ€™s groundbreaking methodology and solid market traction allow it to take full advantage of the expanding interest in real-world asset tokenization. Platforms such as Rexas Finance, which deliver practical utility alongside powerful growth possibilities, stand to garner greater interest from major financial investors when they seek different ways to expand their portfolios while improving investment outcomes. Conclusion The shift of big money investors from SHIB and DOGE to RXS signals another bullish area for RXS; savvy investors who wish to gain a staggering 15,448% should head to the RXS website and buy into the presale stage 12, where one RXS is priced at \$0.2, a modest investment of \$380 can grow to a whopping \$58k. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance>

- Berachain native token BERA price dropped by 16% today. - Berachain layer-1 mainnet launched on Feb 06, 2025 along with its token airdrop. Berachain is making waves in the industry with its recent mainnet launch and token airdrop. Its Proof-of-Liquidity consensus mechanism is grabbing attention across the community. After launching one of the largest crypto airdrops, BERA token is now trading at \$7 price range. But, is the project worth the hype? Berachain token airdrop was launched yesterday after much anticipation from the crypto community. Its tokenomics stated that a total of 500 million initial supply of BERA tokens. Out of the total supply, 79 million tokens are allocated for airdrop starting from Feb 6. After the airdrop launch, BERA token reached a peak of \$14.46 within a few hours, as a result of built up interest and enthusiasm in the crypto community. However, it is currently trading at \$7.39 as the initial excitement subsides. Major crypto exchanges such as OKX, Upbit, Bitthumb, Coinbase, and Binance listed BERA spot trading pairs after the airdrop launch. The addition of BERA tokens on top crypto exchanges further added to the increased hype around Berachain. Amidst the BERA token airdrop hype, a whale made a profit of \$589K within a couple of hours. This whale deposited 1.6 million USDC to hyperliquid and withdrew \$2.19 million by shorting BERA tokens. On the other hand, another whale deposited 2.5 million USDC into hyperliquid to buy BERA. The increase in trading activity led to a thousand-fold increase in its 24-hour trading volume. Is

Berachain Worth the Hype? The Berachain project launch was one of the highly anticipated project launches in crypto. Three pseudonymous co-founders Smokey the Bear, Homme Bera, and Dev Bear, developed Berachain. It has several innovative features like its PoL consensus, triple token system, and EVM compatibility. The PoL consensus claims to align incentives across the network and create a cooperative economy. While BERA is the native utility token of the project, HONEY is native stablecoin, and BGT is the governance token. From starting as an NFT project to launching its own layer-1 mainnet, the project came a long way. Unlike existing crypto projects, it prioritizes liquidity and incentive mechanisms since the beginning of the launch. Its tough competition to established crypto projects such as Ethereum and Solana makes it intriguing to watch Berachain. Highlighted Crypto News Today: Ondo Finance Rolls Out Layer-1 Blockchain for RWA Tokenization

- Solana price-taking support at 200 days EMA. - VanEck gave their bold predictions for SOL price amid the growing SCP market. The investment firm VanEck believes that the Solana price will strike the \$520 mark before 2025 ends. The reason behind this is the growing market for smart contract platforms (SCP) and the surge in M2 money supply. VanEck projections that M2 money supply will surge to \$22.3 trillion in 2025 from the present \$21.5 trillion. M2 is like a tool that measures the circulation of money in the United States. When the central bank advances M2 money and lower interest rates, more money comes into circulation. This process adds more liquidity in the economy which leads to a surge of investment in riskier assets like crypto. Furthermore, VanEck predicts the growth of Solana in the smart contract platforms (SCP) market. It estimates SOL might grow by 43% to reach \$1.1 trillion in 2025. At press time, Solana holds 15% in the SCP market which could grow by 22% by the end of 2025. Besides all these anticipations, if the Solana exchange-traded fund approves, it could give a boost to SOL price. Will Solana Break Below the 200 EMA Curve? At press time, SOL price is trading at \$192.99 with an intraday growth of 1.74%. Its market capitalization stands at \$93.96 billion with 24 hours trading volume of 4.11 billion. On the daily technical chart, SOL price is hovering below the 50 day exponential moving average. Moreover, it takes support on 200 days EMA level. If the SOL price breaks below 200 EMA, then it may see downside levels in the upcoming days. Solana's price has support of \$175.53 and a resistance of \$215.80. The RSI indicator is trading in the bearish zone, where the RSI curve is hovering at 38.82 indicating a bearish sign. - Choe BZX Exchange filed four applications for spot XRP ETFs with the SEC. - SEC has 45 days to review, with possible extensions up to 90 days. Cboe BZX Exchange has filed four separate applications to the U.S. Securities and Exchange Commission (SEC) to list spot XRP exchange-traded funds (ETFs). Asset managers WisdomTree, Bitwise, 21Shares, and Canary Capital are seeking to launch the first U.S.-based spot XRP ETFs. The move comes despite XRP's 25% price decline in the last two weeks. These filings follow recent developments in the cryptocurrency sector. Major players previously launched Bitcoin and Ethereum spot ETFs after securing SEC approval. However, XRP still faces regulatory hurdles. Unlike Bitcoin and Ethereum, it lacks a CME futures market, a key requirement for past ETF approvals. The proposed funds rely heavily on the partial victory Ripple Labs secured in July 2023. The case questioned whether XRP qualifies as a security. Although the court ruled that programmatic sales to retail investors were not investment contracts, the SEC is currently appealing the decision. Regulatory Safeguards and Market Prospects To address regulatory concerns, asset managers have introduced several safeguards. According to WisdomTree's filing, XRP will be sourced from secondary markets rather than Ripple Labs. This separation aims to distance the fund from Ripple Labs, which remains closely associated with the digital asset. Protective measures include surveillance, third-party custodial services, and cold storage for XRP holdings. Fund managers have also proposed mechanisms to halt intraday trading to enhance market integrity and investor protection. If approved, these applications would push XRP ETFs into uncharted regulatory territory. The SEC will review the filings within 45 days once published in the Federal Register. This review period can be extended up to 90 days. The push for XRP ETFs follows Cboe's reapplication for spot Solana ETFs last week after addressing the SEC's previous concerns. Analysts have noted an uptick in crypto-related filings under acting Chair Mark Uyeda, signaling a more open regulatory approach than former Chair Gary Gensler's tenure. Highlighted Crypto News Today Will XRP Find Support or Sink Deeper into Bear Territory?

Crypto markets are buzzing with new innovations, and investors are on the lookout for the top cryptos to buy this month. With so many projects in the space, only a handful stand out for their real-world applications, strong adoption, and groundbreaking technology. Three names leading the charge in 2025 are Qubetics (\$TICS), EOS (EOS), and SUI (SUI). EOS (EOS) is navigating a strong comeback, focusing on scalability and developer-friendly smart contracts. Meanwhile, SUI (SUI) is positioning itself as a high-performance blockchain, recognized for scalability and real-world applications in finance and logistics. But the real game-changing project? Qubetics (\$TICS) is revolutionizing decentralized finance with its Non-Custodial Multi-Chain Wallet and strategic partnership with lynch, making crypto trading, storage, and transactions more efficient and user-friendly. Let's explore why Qubetics, EOS, and SUI are the top cryptos to buy this month. Qubetics: The Future of Non-Custodial Multi-Chain Wallets Security, accessibility, and seamless trading—these are the driving forces behind Qubetics (\$TICS). The project is redefining how users interact with blockchain by introducing a Non-Custodial Multi-Chain Wallet that eliminates the need for centralized intermediaries, giving users complete control over their assets across multiple blockchains. For traders, managing multiple wallets across different blockchains is a hassle. Qubetics' wallet eliminates this issue by supporting seamless transactions across Ethereum, Binance Smart Chain, Solana, and more, enabling direct swaps and trades without the need for third-party services. But that's not all. Qubetics has also secured a high-impact partnership with lynch, one of the top decentralized exchange (DEX) aggregators in the market. The Qubetics presale is already making waves. Currently in its 20th stage, over 461 million tokens have been sold to more than 18,600 holders, raising over \$12 million. The \$TICS token is priced at \$0.0667, but prices will increase by 10% in the 21st stage at the weekend. With its cutting-edge wallet technology, powerful DeFi integrations, and strong presale performance, Qubetics is one of the top cryptos to buy this month. Qubetics x lynch: A Powerful Collaboration for Seamless Trading Qubetics is proud to announce its integration with the lynch Network, allowing users to access the best trading rates across hundreds of DEXs in one place. Through this strategic partnership, Qubetics Wallet users can: Execute optimized trades across multiple decentralized exchanges. Gain access to lynch's advanced aggregation technology for the best market prices. Experience frictionless and cost-efficient transactions with no hidden fees. By integrating lynch into the Qubetics Wallet, the project is evolving beyond just another crypto wallet—it's becoming a gateway to the decentralized future, providing traders and investors with unmatched liquidity and superior pricing. EOS: A Blockchain Rebuilding for Mass Adoption EOS (EOS) has had its share of ups and downs, but it's proving to be a resilient player in the blockchain industry. Despite a price dip of 3.59% over the last 24 hours, EOS remains one of the most developer-friendly blockchains, offering fast transactions, low fees, and an optimized smart contract infrastructure. EOS is focusing on scalability, making it an attractive choice for enterprise applications, dApp developers, and Web3 projects. Its unique consensus mechanism, Delegated Proof-of-Stake (DPoS), ensures efficient transaction processing, making it a solid choice for large-scale decentralized applications. For investors looking at a blockchain with strong fundamentals, high transaction throughput, and an active developer ecosystem, EOS remains a project worth watching. SUI: A Scalable Blockchain for Finance and Logistics SUI (SUI) is emerging as a leading blockchain for real-world applications, with a focus on finance, logistics, and high-speed transactions. Designed for scalability, SUI ensures fast transaction finality with minimal fees, making it a top contender for financial institutions and businesses adopting blockchain solutions. With a price of \$3.45 (-3.63%), SUI continues to gain traction, with analysts predicting a positive market outlook for 2025. Its modular blockchain architecture ensures security, speed, and efficiency, making it one of the top cryptos to buy this month. Conclusion The crypto market is evolving, and investors searching for the top cryptos to buy this month should focus on projects with strong fundamentals, adoption potential, and real-world utility. Qubetics is redefining non-custodial wallets and decentralized trading with its lynch integration. EOS is making a strong comeback, offering scalability and developer-friendly tools. SUI is a high-speed blockchain for finance and logistics, catering to enterprise adoption. For those looking for a high-growth project with an innovative approach to DeFi, Qubetics (\$TICS) stands out. Its powerful wallet solutions, strategic partnerships, and strong presale make it one of the top cryptos to buy this month. For More Information: - Qubetics: <https://qubetics.com> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> Frequently Asked Questions (FAQs) 1.Why is Qubetics considered one of the top cryptos to buy this month? Qubetics is revolutionizing crypto wallets and DeFi with its non-custodial multi-chain wallet and lynch integration, allowing seamless trading and asset management. 2.What makes EOS a strong blockchain investment? EOS offers fast transactions, low fees, and a scalable infrastructure for developers, making it ideal for enterprise adoption and decentralized applications. 3.Why is SUI gaining traction in finance and logistics? SUI's high-speed blockchain architecture supports real-world applications in finance and supply chain management, making it a solid choice for large-scale adoption. 4.What is the benefit of Qubetics' lynch partnership? Qubetics' integration with lynch enables optimized trades across multiple DEXs, providing the best liquidity and market prices for traders. 5.How can I participate in the Qubetics presale? You can buy \$TICS tokens at \$0.0667 before prices increase by 10% in the 21st stage this weekend. Disclaimer: TheNewsCrypto does not endorse any content on this page. Meme coins are shaking up the crypto space once again! With massive interest in meme tokens like Cat in a Dog's World (MEW) and Goatseus Maximus (GOAT), the market is ripe for new opportunities. MEW, currently priced at \$0.003091, boasts a market cap of over \$274 million, while GOAT holds strong at \$0.127993 with a trading volume exceeding \$105 million. The demand for high-potential meme coins is undeniable, and one name is standing out—Arctic Pablo Coin (APC). Arctic Pablo isn't just another meme coin—it's an adventure! This isn't a traditional presale; it's a thrilling expedition where every phase unlocks a new legendary location. Arctic Pablo has now reached Frostburg, the 9th stop in its journey, with over \$1 million already raised. Early adopters have a golden ticket to an estimated ROI of 14,725.93%. As Pablo journeys deeper into uncharted territories, wealth-generation opportunities continue to grow. The only question is—who's ready to join this epic ride? Arctic Pablo Coin: A Legendary Expedition Into Crypto Wealth Deep in the icy unknown, Arctic Pablo Coin, the fearless explorer, speeds through frozen landscapes on his snowmobile. He isn't just searching for riches—he's uncovering Earth's best-kept secrets. Each presale phase is a new destination, revealing hidden fortunes to those who dare to follow. Right now, Arctic Pablo has arrived at Frostburg, a mystical land where the \$APC coin's power is more potent than ever. Arctic Pablo Coin (\$APC) bridges the gap between myth and reality unlike standard meme coins. Each presale phase isn't just a stage—it's an adventure. Investors don't just buy a token; they embark on a legendary journey where fortunes are built. The thrill of discovery drives this presale, and as each location gets unlocked, scarcity fuels the price surge. With the launch price set at \$0.008, early adopters can turn a \$500 investment into a staggering \$74,148.12. It is one of the top meme coin presales to buy now. Arctic Pablo's presale doesn't just generate excitement—it's structured for maximum value. The token burn mechanism permanently removes unsold tokens, increasing scarcity and enhancing long-term sustainability. The Binance Smart Chain-powered BEP20 token attracts investors globally, with BNB, ETH, USDT, BTC, SOLANA, and XRP accepted as payments. With a 66% APY staking system, holders can watch their investments grow passively while being a key part of this ever-evolving expedition. As Arctic Pablo continues his mission to unearth the world's hidden riches, the real question is—who's ready to claim their share of the fortune? Goatseus Maximus: The Meme Titan With Divine Potential While Arctic Pablo embarks on his icy adventure, another meme coin is making waves—Goatseus Maximus (GOAT). This isn't just a meme coin; it's a divine revolution. Inspired by the legends of ancient gods, Goatseus Maximus brings humor and mythology into the crypto world, attracting a cult-like following and pushing its market cap past \$127 million. Unlike most meme coins that fade after a hype cycle, GOAT has cemented its presence with strong community backing. The circulating supply of 999,995,774 GOAT tokens ensures a balance between accessibility and scarcity. Investors are flocking to this token, recognizing the potential for long-term growth as it secures its place among top-tier meme assets. Price predictions suggest GOAT could experience explosive gains if it maintains its current momentum. With meme coin seasons historically seeing massive surges, GOAT's divine influence may just lead to celestial profits. As traders continue to accumulate, Goatseus Maximus could become one of the most dominant meme assets in the space. Cat in a Dog's World: The Underdog Story Investors Love Nothing gets meme coin enthusiasts more hyped than an underdog story, and Cat in a Dog's World (MEW) delivers exactly that. This rebellious feline-themed coin has clawed its way into the top meme coins list, proving that a cat can still reign supreme even in a world dominated by dog coins. MEW's innovative branding and strong community-driven approach have propelled its market cap to \$274 million. With a circulating supply of 88,888,888,888 tokens, it offers a perfect mix of accessibility and potential for massive gains. The coin's unique appeal has drawn in traders who believe MEW is on the verge of an explosive rally. While meme coins are typically known for their volatility, MEW's growing adoption could lead to sustainable growth. If buying pressure increases, the token could see a major breakout, positioning it as one of the top meme coin presales to buy now. With traders keeping a close eye on this resilient feline, the next big crypto

superstar might just be hiding in plain sight. Conclusion: The Next Big Meme Coin Explosion Awaits Based on our research and market trends, Arctic Pablo Coin, Goatseus Maximus, and Cat in a Dogâ€™s World dominate the meme coin scene. Arctic Pabloâ€™s legendary expedition offers an unparalleled opportunity for early adopters, with a projected ROI of 14,725.93%. Goatseus Maximus is proving its divine strength in crypto, while Cat in a Dogâ€™s World redefines the underdog narrative. With Arctic Pablo now in Frostburg and its presale heating up, thereâ€™s no better time to join the adventure. Donâ€™t wait for the next location to be revealedâ€”invest now and secure a spot in one of the most exciting meme coin presale in history! For More Information: Arctic Pablo Coin: <https://www.arcticpablo.com/> Telegram: <https://t.me/ArcticPabloOfficial> Twitter: <https://x.com/arcticpabloHQ> FAQs: What makes Arctic Pablo Coin different from other meme coins? Arctic Pablo Coin isnâ€™t just another meme tokenâ€”itâ€™s a full-fledged adventure where each presale phase unlocks a new location. With a structured burn mechanism and 66% APY staking, it provides investors with long-term value and scarcity-driven growth. How can investors benefit from the Arctic Pablo Coin presale? Investors who join early have the potential to see an ROI of up to 14,725.93%. With each new presale location, the price increases, and staking rewards allow investors to compound their holdings for even greater returns. Is Goatseus Maximus a good investment compared to other meme coins? Goatseus Maximus is backed by strong community support and mythology-based branding. With its balance of accessibility and scarcity. Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this article does not represent any investment advice. - Sweden-based Virtune has launched a Cardano (ADA) ETP on the Nasdaq Helsinki Stock Exchange under the ticker VIRADAE. - The Cardano ETP offers 1:1 ADA exposure, a 2% annual staking reward, and charges a 1.49% management fee. - Despite ADAâ€™s recent 22.5% price drop, analyst Ali Martinez predicts a potential rally to \$15 per token, a 1,904% surge. Sweden-based digital asset manager Virtune has expanded its crypto investment offerings with the launch of a Cardano (ADA) exchange-traded product (ETP) in Finland. The Virtune Staked Cardano ETP was officially listed on the Nasdaq Helsinki Stock Exchange under the ticker VIRADAE, with trading commencing on February 5, 2025. Virtune Staked Cardano ETP: Key Features The Virtune Staked Cardano ETP offers both retail and institutional investors direct 1:1 exposure to ADA, providing a simple way to invest in Cardano without holding the asset directly. Investors will also benefit from an additional 2% annual return through staking rewards, which are continuously added and reflected in the ETPâ€™s daily price. The ETP is 100% physically backed by ADA stored securely in Coinbaseâ€™s cold storage, ensuring transparency and asset protection. The management fee is set at 1.49%, and the product is denominated in euros (EUR), catering specifically to European investors, with a focus on Finland. Alongside the Cardano ETP, Virtune also launched an Avalanche (AVAX) ETP under the ticker VIRAVAXE. Similar to the Cardano product, the Avalanche ETP is fully backed by AVAX, offers 1:1 exposure, and includes 2% annual staking rewards with a 1.49% management fee. With these additions, Virtune now offers seven crypto-related ETPs in Finland, including: - Virtune Bitcoin ETP - Virtune XRP ETP - Virtune Staked Solana ETP - Virtune Staked Ethereum ETP - Virtune Crypto Altcoin Index ETP Virtuneâ€™s growing portfolio of crypto ETPs provides investors with diverse exposure to leading digital assets, all while simplifying the investment process. Analyst Predicts Monster Rally While Cardano (ADA) currently ranks as the ninth-largest cryptocurrency with a market cap of \$26.22 billion, it has faced recent price struggles. ADA is down 2.87% in the last 24 hours and has dropped 22.5% over the past week, currently trading at \$0.7482. However, prominent market analyst Ali Martinez remains bullish on ADAâ€™s long-term prospects. Citing historical price data, Martinez predicts a â€œmonster parabolic rallyâ€”that could push ADAâ€™s price to \$15 per token, representing a 1,904% surge from current levels.

- Solana meme coin creation platform received a cease and desist letter from US law firms. - The law firm demanded to remove some tokens from their platform to impersonate their firms. Pump.fun is making headlines again for receiving a cease and desist letter by Burwick Law and Wolf Popper. This is because some meme coins on the platform use law firm logos and names without any official permission. Pump.fun is Solanaâ€™s meme coin launchpad used to create and launch meme coins. On February 5, Burwick Law and Wolf Popper demanded the immediate removal of some tokens such as Dog Shit Going Nowhere (DOGSHIT2) and others. The US law firm said that these tokens are using their logos and names, which comes under the unlicensed use of intellectual property. According to the Burwick Law, the platform has launched over 200 tokens after last weekâ€™s class action lawsuit. Moreover, most of these tokens impersonate their firms. Burwick Law Says Pump.fun did this Intentionally According to the post, multiple users created tokens utilizing the names and logos of Burwick Law and Wolf Popper. Additionally, some tokens use Burwick Law employees and their clientâ€™s names. The law firm stated, â€œBurwick Law confirmed that PumpFun has the technical capability to remove these tokens and has chosen not to act, despite the clear financial and legal risks posed to the public.â€” Besides this Burwick Law also alleges that Pump.fun did this intentionally with the help of a third party. By this, the platform aims to intimidate our clients and interfere with ongoing litigation. Pump.fun had not responded to this allegation and also had not taken down the tokens. The law firms stated that these tokens are risky for the general public as they could mislead individuals. Despite the ongoing litigation, Pump.fun has seen a surge in usage, especially after launching tokens related to the Trump family. Highlighted Crypto News Today: Will Trump Coin Reclaim Its Earlier Gains or Continue to Struggle Below \$20?

Meme coins have taken the crypto world by storm, delivering high-energy, community-driven projects, insane returns, and unparalleled excitement. While traditional cryptocurrencies focus on utility, meme coins bring something even more thrillingâ€”culture, engagement, and viral momentum. In 2025, a handful of meme coins stand out for their investment potential and unique narratives. Among the best meme coins to buy today, three projects lead the way: Arctic Pablo Coin, Pudgy Penguins, and Just a Chill Guy. These arenâ€™t just another set of digital assets; they are stories, ecosystems, and viral sensations poised to capture the next big wave of crypto mania. However, one project is stealing the spotlight and rewriting the meme coin game Arctic Pablo Coin. Arctic Pablo Coin is creating history in real-time with an electrifying expedition that transcends mere investment. Letâ€™s dive into what makes these meme coins stand out and why Arctic Pablo Coin, in particular, could be a life-changing investment. Arctic Pablo Coin: An Icy Adventure to Untold Riches Deep in the Arctic, an explorer unlike any other, is charting a path through the frostbitten landscapes, ancient mysteries, and hidden treasures of the world. This isnâ€™t just a legendâ€”this is Arctic Pablo, whose mission is to unlock riches buried beneath the ice. His story isnâ€™t just entertainmentâ€”itâ€™s the investment gold. Arctic Pablo Coin is an opportunity to join an adventure that pays. Arctic Pabloâ€™s journey is already in its ninth location, Frostburg, where the latest presale phase is heating up despite the cold. Investors have already poured in over \$950,000, and the price is currently \$0.000054 per APC. But hereâ€™s where it gets jaw-dropping. The projected launch price is \$0.008, and the potential ROI is over 14,725.93% from Frostburg to launch. A \$500 investment today could turn into a mind-blowing \$74,148.12. Unlike most meme coins that simply ride on hype, Arctic Pablo ties its presale to real-world locations, transforming investment into an immersive, evolving adventure. Every new location boosts momentum, and once Pablo reaches his final stop, early investors will be sitting on a goldmine. Arctic Pablo Coin isnâ€™t just an explosive meme coin; itâ€™s also structured for long-term value. An automatic token burn mechanism permanently removes unsold tokens weekly, tightening supply and driving value. The staking program offers an eye-watering 66% APY, meaning investors can watch their holdings snowball into massive gains. With a Binance Smart Chain foundation, multi-currency acceptance in BNB, ETH, USDT, BTC, SOLANA, XRP, and more, and a global fanbase rallying behind the Arctic Pablo narrative, thereâ€™s no doubt this is the best meme coin to buy today. Pudgy Penguins: A Thriving Ecosystem of Adorable Profit While Arctic Pablo Coin leads the charge in meme coin storytelling, Pudgy Penguins brings an established NFT empire to the meme coin world. Launched as an Ethereum-based NFT collection in 2021, Pudgy Penguins quickly became a blue-chip NFT project, drawing celebrity attention and six-figure NFT sales. The 2022 acquisition by entrepreneur Luca Schnetzler injected fresh life into the brand, leading to a hybrid model of NFTs and crypto. Pudgy Penguins is a strong meme coin investment because of its real-world integration. The project launched physical NFT-inspired toys in major retail stores, bridging digital and physical assets. The community-driven innovation grants holders access to exclusive events, metaverse integrations, and even revenue-sharing models. Unlike newer meme coins, Pudgy Penguins already has an established global fanbase and strong brand loyalty. Pudgy Penguins is a solid pick for investors looking for a trusted meme coin with lasting power. However, its price point is already high, and the exponential gains seen in Arctic Pablo Coin might be harder to replicate with an established project like PENGU. Just a Chill Guy: Laid-Back Vibes, Serious Gains On the opposite end of the meme coin spectrum, Just a Chill Guy is all about good vibes and steady rewards. Built around an engaging, community-driven ecosystem, Just a Chill Guy is designed for investors who want a fun project with staking rewards, interactive games, and community engagement. Just a Chill Guy deserves a spot on the list because of its steady growth and active investor interest. The current price is \$0.127732, showing a 5.46% increase in the last 24 hours. The market cap sits at \$127.73M, and trading volume has reached \$19.75M, indicating strong liquidity. The project focuses on rewarding its community through engaging games and events, making it a unique and interactive investment. With an emphasis on community rewards, interactive games, and staking benefits, Just a Chill Guy is perfect for investors looking for a sustainable, fun, and rewarding project. However, unlike Arctic Pablo Coinâ€™s sky-high ROI potential, CHILLGUY offers a slower but steadier growth path. Final Verdict: Which Meme Coin Will Make the Biggest Impact? Based on our research and market trends, Arctic Pablo Coin, Pudgy Penguins, and Just a Chill Guy all offer unique advantages. But for investors looking for massive ROI, an evolving narrative, and the next big viral crypto sensation, Arctic Pablo Coin is the undisputed winner. Donâ€™t miss outâ€”join the Arctic Pablo Coin presale now and secure your spot in this icy adventure of wealth and discovery! For More Information: - Arctic Pablo Coin: <https://www.arcticpablo.com/> - Telegram: <https://t.me/ArcticPabloOfficial> - Twitter: <https://x.com/arcticpabloHQ> FAQs What makes Arctic Pablo Coin the best meme coin to buy today? Arctic Pablo Coin stands out due to its unique narrative-driven investment model, high ROI potential, and strong community engagement. How does the Arctic Pablo Coin staking program work? Investors can stake their APC tokens for a 66% APY, with all staked coins vested for two months post-launch. Why is Pudgy Penguins a good investment? Pudgy Penguins has a strong NFT ecosystem, brand recognition, and real-world integrations, making it a solid long-term investment. Disclaimer: TheNewsCrypto does not endorse any content on this page. - Public Citizen filed a complaint on US Presidentâ€™s TRUMP memecoin. - Trump promoted his memecoin after he took office as the 47th President on Jan 20. Consumer advocacy organization Public Citizen filed a legal complaint against the US President over his TRUMP memecoin. It called for a Federal investigation on Trumpâ€™s promotion of his memecoins through his social media accounts. Public Citizen is a government, corporate, and consumer watchdog non-profit organisation founded in 1971. It recently filed a complaint to the Department of Justice and the US Office of Government Ethics, accusing Donald Trump of violating laws regarding President solicitation of gifts. The US federal laws impose stringent rules when it comes to government official payments. It allows the US President to receive gifts but not solicitation of gifts. The Public Citizen raised concerns regarding this issue as the US President promoted his TRUMP memecoin several times before and after taking office on Jan 20. Public Citizen Accused Donald Trump of Violating Federal Laws The Public Citizen complaint explained why they are calling for an investigation on Trump memecoin in detail. It detailed how the Trump memecoin official website explained that around 80% of the tokens are owned by CIC Digital LLC, which is an affiliate of The Trump Organization. And, Donald J Trump is the only owner of CIC Digital. Furthermore, the Public Citizen did its research and carefully gathered all the facts to foster its case. It also outlined how the TRUMP memecoin website answered that it is the only Official Trump meme, by President Donald J. Trump. Furthermore, the complaint also said Trump could receive money from foreign state actors in the way of purchasing the memecoin. The filed complaint Says, â€œIt appears Trump is not soliciting money in exchange for an investment or tangible product such as Bible, sport shoes, or a guitar, but soliciting money in exchange for nothing â€” that is, asking for a gift that will benefit him personally.â€” The complaint requested the OGE and DoJ to investigate the TRUMP memecoin. In case, it finds impermissible gift solicitation, it recommends termination of the TRUMP memecoin sale, return of funds, among other actions. This could either lead to the termination of the memecoin or further support memecoins launched by officials. - Hackers compromised Jupiterâ€™s exchange main X account. - Hackers promoted fake memecoin \$MEOW on Jupiterâ€™s X account. Solana DEX aggregator Jupiterâ€™s X account has been compromised to promote fake memecoin. Jupiter Mobileâ€™s X account announced the official update. On Thursday, the platform team announced that the hackers had compromised the main Jupiter exchange account. They warned the users not to click on any link. In addition, the teams suggested users exercise caution and avoid purchasing any asset. They added that the team is working on restoring access.

Hackers Promote Fake Cryptocurrency on Jupiterâ€™s X Account The hackers promoted some fake meme coins through a series of posts, which they have now deleted. The attackers posted the ticker \$MEOW on Jupiterâ€™s X account. Just after this post, the token market cap surged to \$20 million. Moreover, after the coin reaches a certain level, hackers remove the liquidity pool, so that the selling of coins may stop. Furthermore, the hackers named the token after the pseudonymous co-founder of Jupiter, Meow. After promoting the fake token \$MEOW, hackers promoted another token with the ticker \$DCOIN. In just a few minutes, traders lost millions because of this hack. Moreover, many users on X claim they lost their Solana token in this scam. After this, the X platform was flooded with numerous posts. On this, a crypto investor named Lucidvein said, â€œX needs to make an AI that detects suspicious behavior allowing for faster account resolutions.â€ Investors should be cautious of this type of scams. Such scams are now increasing in the crypto industry. Recently, the same incident happened when actor Dean Norris Xâ€™s account was hacked to promote a fake \$Dean token. - WIF has registered a loss of over 3.53%, trading at \$0.8058. - PEPE is trading at \$0.00001027, marking a modest spike. The volatile crypto market is at a critical juncture. Whale activity is a double-edged sword, with the potential to ignite a price rally or set the stage for a market correction. The largest assets, Bitcoin and Ethereum, have been consolidating. A break above the next crucial resistance could trigger a bull rally, while rejection signals a bear trap. The on-chain data reveals the whales amassing PEPE and WIF and the large crypto investorâ€™s accumulation signals potential bullish sentiment. Notably, three whale transactions were recorded, withdrawing substantial amounts of PEPE and WIF from Binance. A whale, â€œ0xf37â€, made its first-ever accumulation of 375.35 billion PEPE worth \$3.73 million. Another whale â€œ0x3M8â€, dormant for two years, reappeared to withdraw 6.5 million WIF valued at \$5.19 million. Finally, the whale â€œ0x43M8â€, withdrew 9 million WIF estimated at \$7.42 million despite incurring a \$1.35 million loss from the first trade. Meanwhile, the meme market cap is settled at \$79.1 billion, with the assets priced in red. Could breaking through nearby resistance levels ignite a rapid surge in meme coins? Price movements of WIF and PEPE The Solana-based Dogwifhat (WIF) posted a loss of over 3.53%, and it trades at \$0.8058, with its daily trading volume reaching \$404 million. Besides, the market has observed a \$2.04 million WIF liquidation. In the early hours, the meme coin traded at \$0.8505, and the bears chose to rule the day, pulling the price back to \$0.7741. WIF is struggling to hold its ground to reclaim \$1. On the other hand, PEPE, the third-largest meme coin, has spiked by over 0.89%. At the time of writing, the meme coin traded at \$0.00001027. The market has witnessed a \$1.19 million liquidation in PEPE. The bear trap in the market drove the frog-themed PEPE to visit its daily low of \$0.000009783 from a high of \$0.00001044. Moreover, both assetsâ€™ Moving Average Convergence Divergence (MACD) line and signal line are below the zero line. This crossover suggests the overall negative trend within the market. Highlighted Crypto News Shiba Inu Price Surges 5% Following Partnership With UAE Ministry

As the next crypto bull run approaches, investors are eyeing low-cost, high-potential altcoins that have the ability to deliver exponential returns. Many of the most successful cryptocurrenciesâ€™ such as Dogecoin (DOGE) and Shiba Inu (SHIB)â€™ started at fractions of a cent before skyrocketing in value. Now, a new batch of promising tokens is emerging, offering significant upside while still being accessible at under \$0.25 per token. Among the top picks, Shiba Inu (SHIB), Bonk (BONK), Pepe Coin (PEPE), and Lightchain AI stand out as high-growth candidates. While SHIB, BONK, and PEPE have strong community-driven momentum, Lightchain AI is bringing a unique AI-powered blockchain model to the market. Shiba Inu (SHIB) and Bonk (BONK) â€™ Meme Coins Expanding Their Ecosystems Shiba Inu (SHIB) and Bonk (BONK) are prominent meme coins actively expanding their ecosystems. SHIB has evolved from its meme origins into a comprehensive decentralized cryptocurrency ecosystem, introducing initiatives like Shibarium, a layer-2 scaling solution, to enhance transaction efficiency and reduce costs. Despite these developments, SHIBâ€™s price remains at \$0.0000187, approximately 80% below its all-time high, with its vast circulating supply of over 549 trillion tokens contributing to limited price movement. BONK, as one of the first Solana-based meme coins, gained popularity through its dog-themed branding and a massive community airdrop. Its marketing strategy leveraging memes led to massive user acquisition, making BONK more than just a trading token. The recent deployment of Bonkbot, Bonkswap, Moonwalk, and Bonk Bets has broadened BONKâ€™s functionality within the Solana ecosystem. However, the token has surged over 100% over the past year, its recent performance has been less promising, with a 17% drop over the last seven days. Both SHIB and BONK exemplify the dynamic nature of meme coins, transitioning from internet jokes to assets with expanding utilities within their respective blockchain ecosystems. Pepe Coin (PEPE) â€™ Meme Coin That Wonâ€™t Slow Down Pepe Coin (PEPE), a prominent meme-based cryptocurrency, has experienced significant volatility recently. As of February 3, 2025, PEPE is trading at approximately \$0.00008810, marking a 27% decline in the past 24 hours and an 80% drop from its December 2024 peak of \$0.00002825. This downturn is attributed to substantial sell-offs by large holders, with over 1.1 trillion PEPE tokens liquidated recently, intensifying market pressure. Despite these challenges, indicators suggest potential for recovery. The Market Value to Realized Value (MVRV) ratio, a key metric, implies that PEPE may rebound, as similar past scenarios have led to price increases between 51% and 72%. Additionally, a decrease in exchange reserves indicates that investors are moving tokens to private wallets, signaling a holding trend that could stabilize prices. Looking ahead, PEPEâ€™s upcoming halving event on February 4, 2025, will reduce block rewards from 62,500 to 31,250 PEPE per block. Historically, such events have led to price appreciation due to reduced supply. However, market conditions and investor sentiment will play crucial roles in determining PEPEâ€™s trajectory post-halving. Lightchain AI â€™ Rising AI-Blockchain Contender While meme coins dominate speculative trading, Lightchain AI is gaining traction for its unique blend of blockchain and AI integration. This project is attracting serious investors looking for long-term utility in decentralized networks. One of its standout features is its AI-driven smart contract optimization, which allows for seamless execution of automated tasks within decentralized applications. By reducing processing inefficiencies, Lightchain AI improves blockchain scalability and performance, making it a strong alternative to traditional networks. Additionally, Lightchain AIâ€™s Treasury Fund plays a critical role in ensuring long-term ecosystem sustainability. This fund is designed to support developers, community initiatives, and infrastructure upgrades, positioning Lightchain AI as a self-sustaining blockchain ecosystem. With its presale raising \$15.1 million and tokens priced at \$0.006, Lightchain AI is still in its early growth phase, making it a prime candidate for significant upside potential. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Shiba Inu token price surged by around 5% today. - Shiba Inu partnered with the UAE Ministry of Energy and Infrastructure. The crypto market has not fully recovered since the global macroeconomic uncertainty triggered by Donald Trumpâ€™s new tariff system. While Bitcoin is trading in the \$98,000 price range, Ether is trading above \$2,800. Even though there are no significant price surges in major altcoins such as XRP, Solana, BNB, Dogecoin, and Cardano, Shiba Inu surged by around 5% today. Shiba Inu token is trading at \$0.00001639 with a 3.26% price surge in the last 24 hours. The second-largest memecoin by market cap is witnessing a 28% drop in its 24-hour trading volume. While its 24-hour low is \$0.00001535, 24-hour high is \$0.00001663. The SHIB token recorded a price surge of around 5% at some point today, fueled by various market factors. What Caused Shiba Inu Token to Surge? Shiba Inu partnered with the UAE Ministry of Energy and Infrastructure (MoEI) to enhance Web3 innovation. This partnership with the UAE Ministry marks a pivotal moment for Shiba Inu. Because the UAE is one of the top governments to have friendly crypto policies and regulations. On this, the Undersecretary for Energy and Petroleum Affairs at MoEI says, â€œWeâ€™re delighted to deepen our commitment to cutting-edge digital services. This partnership represents a pivotal moment in our journey toward redefining government services. Together, we are shaping a future built on sustainability, connectivity, and digital excellence.â€ On the other hand, Shiba Inu has been burning SHIB tokens to decrease supply and increase its value. Its official X account recently posted that Shiba Inu burn recorded a staggering 577% in the last 24 hours. This is phenomenal when it comes to fighting inflationary supply of SHIB tokens. A partnership with a leading pro-crypto government such as the UAE and a substantial increase in Shiba Inu token burn led to the present price surge. However, the drop in trading volume might cause price of Shiba Inu to go on a downtrend in the next few days. Highlighted Crypto News Today: Bybit Registers With Indian FIU After Settling Monetary Fine

Recently, the whole crypto market experienced a downturn due to President Donald Trumpâ€™s proposed tariffs. This kind of market uncertainty has historically led to a change in investorsâ€™ sentiment toward alternative assets. As global markets react to these policies, altcoins are seeing massive inflows. One of the top altcoins this season is IntelMarkets (INTL), an AI-driven trading platform currently in its presale. Read on to find out why INTL could compete with crypto giants like Ripple and crush the XRP price bull run this cycle. How High Could XRP Price Go This Cycle? With President Trumpâ€™s recent tariff announcement, we saw a huge market downturn. Consequently, XRPâ€™s price followed broader market dynamics. On the positive side, the new pro-crypto SEC chairman could help with the regulatory lawsuit that would reflect on the XRP price. While the end of Rippleâ€™s legal battle may be near, further delays with the SEC lawsuit might dampen investor enthusiasm reflecting on XRPâ€™s price potential. XRPâ€™s price is currently sitting at \$2.61, with a market cap of \$149 billion. In Rippleâ€™s impressive January rally fueled by rumors and the imminent inauguration ceremony, XRPâ€™s price jumped from \$2.3 to almost \$3.5. Ripple was near breaking its ATH of \$3.84. However, on February 1, 2025, Ripple unlocked 400 million XRP tokens, valued at approximately \$1.1 billion. This significant increase in supply led to a 24.6% drop in XRPâ€™s price, highlighting the marketâ€™s sensitivity to large token releases. Despite its recent correction, Rippleâ€™s XRP remains in the top 10. With more than \$4.4B invested in crypto by the largest investment companies in the world, such as BlackRock and Fidelity, if the pro-crypto chairman Paul Atkins commits to the resolution of Rippleâ€™s legal case, we could easily XRP price breaching its ATH somewhere in 2025. However, Ripple holders also know that while the XRP price could breach its ATH, itâ€™s still only a modest increase of just several percent. They have recognized that its large market cap and market saturation are preventing the XRP price from pumping as high and as quickly as IntelMarkets. This is why they are betting on it to outperform Ripple in this bull run. Why IntelMarkets (INTL) Could Easily Crush XRP Price This Cycle IntelMarkets (INTL) is a relatively new altcoin that is offering a trading platform that integrates artificial intelligence together with decentralized finance. Through the technical superiority of INTLâ€™s artificial intelligence, users are able to trade based on real-time data, with analytics and self-learning trading bots working in the background and providing the best trading strategies. In its ninth ICO round, the tokens are priced at just \$0.082, and the presale has already raised more than \$8 million. Its presale price is attractive to everyone, from institutional investors to novice traders. According to experts, after the imminent public listing, INTL may rise 75x, crushing the potential XRP price rally and making it one of the most attractive cryptos on the market right now. Furthermore, via its dual-chain architecture, the platform operates on both Ethereum and Solana blockchains, guaranteeing scalability, speed, and security. Also, support for IntelMarkets comes from a team of professionals from OpenAI and MIT, which only strengthens the companyâ€™s potential for development. XRP remains a major player in crypto, but its potential for massive gains is diminished after multiple bull runs. Ongoing SEC appeals also add uncertainty, keeping institutional investors cautious. In contrast, IntelMarkets (INTL) is entering the market at the perfect time, leveraging AI and blockchain to revolutionize trading. With a low market cap and high investor demand, INTL has far more room for explosive growth. Conclusion While XRP continues to be a key player in the crypto market, its upside potential pales in comparison to IntelMarkets. INTLâ€™s revolutionary vision for crypto trading, together with its AI-powered platform, sets it apart as the more lucrative choice for investors looking for high returns. As Trumpâ€™s tariffs fuel uncertainty and push more capital into altcoins, IntelMarkets is emerging as the best crypto for 2025. Join today and receive a 50% welcome bonus on your deposit. Learn More About IntelMarkets: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. The frenzy surrounding Trump-themed cryptocurrencies is fading as investors realize the limitations of hype-driven tokens. In contrast, Lightchain AI is gaining serious traction for its real-world utility and cutting-edge technology. Lightchain AI has successfully secured over \$15.1 million during its presale at a price of \$0.006, reflecting high investor trust in its innovative blend of blockchain and AI. Unlike meme coins, Lightchain AIâ€™s solid foundation sets it up for sustained growth, making it a promising investment opportunity for 2025. As the market shifts toward utility-driven projects, Lightchain AI is quickly becoming the top pick for those seeking sustainable and high-potential crypto opportunities. Trumpâ€™s Crypto Hype Fadesâ€™Where Investors Are Moving Now The initial enthusiasm for President Donald Trumpâ€™s meme coin, \$TRUMP, has significantly waned. After peaking at over \$70 per token, its value has plummeted by approximately 75%, now trading around \$19. This decline is attributed to market reactions following recent U.S. tariff announcements and growing skepticism regarding the coinâ€™s speculative nature. In

response, investors are shifting focus toward cryptocurrencies with more substantial foundations. Projects that integrate blockchain technology with real-world applications, such as decentralized finance (DeFi) platforms and tokens emphasizing utility, are gaining traction. This trend reflects a broader move towards assets with tangible value propositions, as the market matures and participants seek sustainable investment opportunities. Why Lightchain AI? Lightchain AI's Strong Fundamentals Set It Apart Lightchain AI stands out due to its robust economic model and high-performance infrastructure, ensuring long-term sustainability and efficiency. Its inflation control mechanisms maintain token scarcity and long-term value, with early higher rewards gradually decreasing as the network matures. Additionally, token burning mechanisms help regulate supply by burning a portion of transaction fees and AI task payments, reducing inflation and enhancing LCAI token value over time. Beyond tokenomics, Lightchain AI offers ultra-low latency, making AI computations and transactions fast and seamless. The Artificial Intelligence Virtual Machine (AIVM) ensures real-time execution, parallel processing, and optimized resource allocation, with task completion times under 300ms. With a deflationary token model and high-speed AI execution, Lightchain AI is positioned for long-term success. Choose Long-Term Success Over Short-Term Hype Let's face it: Trump-themed cryptocurrencies might have turned heads during their hype-filled peak, but the future belongs to projects with real substance. That's where Lightchain AI shines. With its innovative economic model, high-performance infrastructure, and cutting-edge technology, Lightchain AI isn't just another crypto; it's a game-changer. As the market shifts toward utility-driven investments, Lightchain AI stands out as a smart, forward-thinking choice for anyone serious about the future of cryptocurrency. Why chase fleeting trends when you can invest in something built to last? Ready to be part of the next big thing in crypto innovation? Join the growing Lightchain AI community today and take your first step toward a more secure and promising investment future! - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

Cross-chain interoperability isn't the most exciting web3 concept, but it's undoubtedly one of the most valuable. If it's a domain you work or trade in, you wouldn't brag about it on your dating profile, but you'd certainly be name-dropping it at your next crypto conference. Because wherever you operate in web3, you should care about interoperability. It's the difference between liquidity and no liquidity. Between ecosystem and ghost chain. It's no exaggeration to say that the very future of web3 is dependent upon cross-chain interoperability challenges being not just solved but widely implemented. Otherwise, blockchains are destined to continue spinning away from each other like asteroids lost in space. Thankfully, we don't need to pray for an interoperability breakthrough to solve all our cross-chain woes because it's already here. It's just, as the saying goes, not evenly distributed. In other words, the tech is already in place to allow assets, data, messages and anything else that can be transmitted onchain to be sent between every chain, rapidly, efficiently, and regardless of programming language or VM. All that's preventing this infra from becoming routinely deployed is the inevitable latency between a tech being perfected and being universally integrated. As a closer analysis of just one of the manifold protocols chipping away at interoperability, Orbs shows, the omnichain singularity is fast approaching. And it promises to be streets ahead of the patchwork efforts that have carried the industry this far. Making Blockchains Great Again While the full history of blockchain interoperability is a tale for another time, or perhaps never, it can be summarized as follows: while progress has been made in connecting the multi-chain landscape in recent years, it's been piecemeal. For example, Cosmos IBC (Inter-Blockchain Communication) and Polkadot's parachains are great for allowing networks within these respective ecosystems to communicate but they do nothing for the broader onchain landscape. If you've got USDC on Solana and are trying to execute a swap on Arbitrum, 100 parachains ain't gonna help you. And no amount of IBC is going to deliver liquidity to the EVM L2 you're exploring. Interoperability developers need to think bigger with the ultimate goal of connecting it all: all the data, all the assets, anywhere, all at once. It's a lot to ask for, but it's the only way to make DeFi live up to its promise of being fast, liquid, accessible, and capable of holding its own against CeFi and TradFi alternatives. The solution to this grand challenge, as web3 engineers such as Orbs have found, is through the creation of dedicated Layer 3 architecture. One layer to link it all. Which is exactly what Orbs' L3 stack does. Acting as a decentralized execution layer, Orbs enhances interactions between chains such as Ethereum, BNB Chain, and Polygon. This allows DeFi protocols to optimize for liquidity aggregation, yield strategies, and multi-chain governance without relying on centralized bridges, which have been frequent targets of exploits, losing over \$2.5B alone in the last three years. Even the very word "bridge" is prone to inducing a shudder in seasoned DeFi users, many of whom have first-hand experience of being rekt while trying to funnel funds between chains. What Orbs Does Differently As a decentralized execution layer, Orbs has been optimized for a combination of security and cross-chain functionality. Instead of merely enabling communication between chains, it enhances how transactions are executed, making DeFi protocols more efficient and interconnected. Its execution layer, which allows smart contracts to automate operations without reliance on centralized intermediaries, is particularly useful for DeFi applications that require liquidity aggregation from multiple chains. This makes it possible to implement things such as automated yield strategies that rebalance positions across different DeFi protocols. Orbs also enables use cases such as cross-chain governance, where DAOs can conduct decentralized decision-making across multiple blockchains. In automating these tasks on a trustless and decentralized network, Orbs removes the need for centralized relayers or custodial services, significantly reducing attack vectors. At the moment, many DeFi projects are still limiting themselves to a single chain out of fear of venturing into pastures unknown and getting something wrong. Which is a perfectly reasonable position to take, given the millions of dollars in user funds that could be lost should they screw up. What plug-and-play solutions such as Orbs do is allow these projects to explore new terrain in the knowledge that they can rely on battle-tested infra that's already proven itself in the wild, across dozens of chains, protocols, and DEXes. There's More Than One Way to Cross a River If we imagine blockchains as expanses of land separated by water, and bridges as the rickety infrastructure connecting them, it's easy to see where the danger lies. They're a chokepoint for the billions of dollars that need to flow between chains and a natural attack point, as any military strategist will tell you. But there's more than one way to cross a river, and in this analogy L3s can be regarded as tunnels. They're less susceptible to airborne attacks, more direct, and much safer to use. Orbs mitigates the risk presented by bridges by removing the need for direct asset transfers via traditional bridges. Instead, its decentralized execution model enables protocols to coordinate multi-chain activities without exposing assets to unnecessary security risks. For example, instead of relying on a bridge to swap assets between Ethereum and BNB Chain, a DeFi protocol using Orbs can coordinate liquidity pools across both networks, allowing users to interact with assets on different chains without requiring direct transfers. DeFi Without Limits When you boil it down, the value proposition of Orbs' cross-chain infrastructure is this: it enables DeFi protocols to become chain-agnostic. Instead of deploying separate versions of smart contracts on every chain or engaging in complicated bridging processes, developers can build once and tap into Orbs' decentralized execution layer to coordinate operations across multiple networks. And we've barely scratched the surface in terms of the use cases this permits. We're talking about moving capital between chains with minimal overhead; capturing arbitrage opportunities in real time across different ecosystems; benefiting from advanced DeFi features like auto-compounding and multi-chain governance; and exploring opportunities on new chains without needing to worry about whether there'll be enough liquidity to exit into stables should the market suddenly become jittery. Instead of merely bundling or compressing data for cheaper onchain fees (as many Layer 2s do), Orbs offers an execution environment that can run decentralized applications and automation across multiple chains. With more than a dozen networks, from Avalanche to Solana, already using Orbs tech, the interoperability solution web3 has been waiting for is finally here and proving itself onchain. With any luck, 2025 will be the year when L3 solutions see universal integration, inching us closer to the endgame of a landscape in which all chains work as one.

EzyDTF, a cutting-edge decentralized investment platform, is revolutionizing crypto investing with AI-driven ETF portfolios. By leveraging blockchain technology, AI agents, and intelligent automation, EzyDTF simplifies diversified asset management, making it more accessible, transparent, and secure for investors at every level. EzyDTF's decentralized ETFs enable investors to effortlessly diversify across Bitcoin, Ethereum, Solana, meme coins, AI tokens, DeFi assets, DeFAI protocols, DePIN projects, liquid staking tokens, and treasuries. The platform employs intelligent rebalancing algorithms powered by AI agents that optimize portfolio performance while ensuring affordability and ease of access. Launching initially on Base and Solana, EzyDTF has plans for cross-chain expansion, integrating with leading blockchain networks like Ethereum, Arbitrum, and Sui to enhance liquidity and user engagement. The EzyDTF team is composed of industry veterans with deep expertise in blockchain, AI, and decentralized finance. Strategic partnerships with TON, Solana, Base, Request Network, and AWS Activate position the platform for rapid growth. Backed by Bison Fund, high-net-worth individuals, and influential tech leaders, EzyDTF is set to become a dominant player in the decentralized finance ecosystem. The roadmap includes a Testnet Launch in February 2025, followed by a Token Generation Event (TGE) at the end of February 2025. Future developments will introduce advanced yield farming, staking options, and further AI-driven enhancements for predictive portfolio management. EzyDTF is led by a visionary founding team: - Hemant Singh Tomar (Co-founder & CEO (LinkedIn) - Vijay Jumani (Co-founder & CBO (LinkedIn) - Siddhu Kadi (Co-founder & CMO (LinkedIn) With a mission to democratize crypto investing, EzyDTF is reshaping decentralized asset management through AI-driven intelligence and seamless multi-chain functionality. Everyone was surprised at how much Ethereum and Cardano grew; the same applies to other altcoins. When Ethereum was just \$1.50, and Cardano was at \$0.18, very few people at the time knew their potential. Those who did are now reaping the benefits as these projects hit new all-time highs. A new altcoin offers a similar opportunity, **Rexas Finance (RXS)**, which offers a new take on asset tokenization. With the presale price at **Rexas Finance** sitting at just **\$0.20** per token, this article explores why **Rexas Finance** at **\$0.20** could be the next Ethereum or Cardano-like success story, enabling savvy investors to place their bets early and profit off it. **Rexas Finance (RXS): The Next Big Altcoin Revolutionizing Asset Tokenization** **Rexas Finance** is revolutionizing the blockchain space by introducing fresh techniques to asset tokenization. For instance, **Rexas Finance** allows tokenizing of real estate, art, commodities, and even intellectual property on the blockchain. With tokenization, **Rexas Finance** allows users to break down and trade highly valuable assets, which significantly increases the fluidity of the assets, providing a rare chance for the average person to invest. Accessing valuable assets in investment is often difficult because entry costs are typically expensive, and assets are not easy to sell. Anyone willing to invest in traditional high-value assets must be willing to have a significant capital base. **Rexas Finance** eliminates these issues through the use of fractional ownership. This quick method enables people from every social background to invest more easily. The platform enables users to invest in tokenized fractional shares of properties, commodities, and other luxurious assets, thereby eliminating the restriction of needing a large sum to invest in precious metals, real estate, etc. **Rexas Finance** is now set to become a leader in tokenized assets. This is possible because **Rexas Finance** operates on a decentralized blockchain network, providing opportunities for secure and transparent trading of tokenized assets. Their method is revolutionary, considering that the tokenized asset market is growing rapidly. Why **RXS Tokens** at **\$0.20** Present a Once-in-a-Lifetime Investment Opportunity Without a doubt, **RXS tokens** are highly lucrative for investors with their extremely low price of **\$0.20** each. Early adopters of Cardano and Ethereum bought tokens for a fraction of their worth today, with Ethereum once trading at 1.50 and Cardano at \$0.18. Those early investments have since changed the lives of these investors. If history is anything to go by, buying into **Rexas Finance** right now could be equally lucrative. **RXS tokens** are still in their presale phase, which suggests low pricing, making this an ideal opportunity for early investors. Over 87.72% of the tokens have already been sold, and **Rexas Finance** has managed to raise over \$43.7 million, putting the company on track to achieve its full funding target. As the funding goals are drawing nearer, expectations concerning price also increase. **Rexas Finance's** launch is scheduled for June 2025, meaning potential returns could be realized if the tokens are secured. Similar to the cases of Ethereum and Cardano, **RXS tokens** will appreciate in value if **Rexas Finance** keeps growing. As **Rexas Finance** increases its recognition and acceptance in the market, the value of **RXS tokens** may rise dramatically, making early purchases in the tokens very profitable. The Certik audit boosts **Rexas Finance's** credibility because it guarantees that the project's smart contracts are secured and devoid of vulnerabilities. Since Certik is a trusted name in the blockchain space, the audit further strengthens **Rexas Finance's** commitment to ensuring the safety and reliability of the platform. Given the level of security and transparency required in the crypto world, the successful audit enhances the platform's appeal and comforts possible

investors. The Similarities Between RXS and Early Ethereum & Cardano Investors Initially, most investors did not understand Ethereum and Cardano's potential, making them skeptical of their growth. Rexas Finance is also in its early stages, and many are unaware of the long-term value that tokenizing real-world assets can bring. Nevertheless, just like Ethereum and Cardano overcame their obstacles, Rexas Finance possesses everything it needs to be a success story in the Crypto world. Unlike the more traditional approaches, Ethereum and Cardano succeeded due to their ability to improve different industries with higher efficiency and transparency. Rexas Finance is doing the exact same thing using its asset tokenization platform. RXS is bound to have greater token demand and wider acceptance as more people realize how impactful owning fractional shares in valuable items like real estate and art can be. Conclusion Rexas Finance has an exceptional opportunity for early investors, who can buy tokens for \$0.20 each. This is reminiscent of the early days of investing with Cardano and Ethereum. With its innovative asset tokenization platform, successful presale, and robust security features, RXS has the potential for massive growth, making it an exciting prospect for investors seeking substantial returns. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Identifying the top altcoins that will explode can be daunting with the myriad of choices out there. Whether you're interested in passive earnings, decentralized trading, or scalable blockchain solutions, selecting wisely is essential. BlockDAG is at the forefront, presenting an exceptional chance through its affiliate program and impressive presale achievements. Other notable altcoins include Litecoin, Polkadot, Uniswap, and Shiba Inu, each bringing distinct advantages and potential for growth. Consider these options to broaden your portfolio and enhance your returns. 1. BlockDAG (BDAG) BlockDAG (BDAG) is the most promising altcoin, featuring a blend of high returns and passive earning possibilities. Its Affiliate Program allows users to gain USDT rewards by sharing a referral link. With a 5% cashback on every linked purchase, participants receive USDT instantly, appealing to both crypto enthusiasts and beginners. BlockDAG's presale success is noteworthy. It has gathered \$191.5 million, selling over 18.3 billion BDAG coins through 27 batches. The current batch price is \$0.0248, reflecting a 2,389% return since the initial batch. Users have utilized the affiliate program to earn passively while contributing to a rapidly expanding initiative. To begin, users just need to register, create a referral link, and share it. Each referred purchase results in instant USDT cashback for both the referrer and the buyer, making it a straightforward method to earn passively. As BlockDAG's presale continues to thrive, now is the perfect time to engage and take advantage of the opportunity to buy one of the top altcoins that will explode. 2. Litecoin (LTC) Often seen as Bitcoin's counterpart, Litecoin remains a top-used cryptocurrency. With quicker transaction speeds and a distinct hashing algorithm, LTC stands as a strong option for those seeking stability and long-term value. With a supportive community and ongoing enhancements, Litecoin is a dependable asset for any portfolio, earning its second-place ranking on the list of top altcoins that will explode. 3. Polkadot (DOT) Polkadot excels in interoperability, facilitating effortless communication across diverse blockchains. This capability allows for both data and value to be transferred between networks, boosting blockchain integration which is vital for the growth of decentralized applications. Its adaptable, multi-chain architecture ensures that it continues to be a preferred platform for developers. 4. Uniswap (UNI) Uniswap transforms how tokens are swapped, moving away from traditional exchange models. As a prominent decentralized exchange (DEX), its automated liquidity protocol positions it as a fundamental component of the DeFi ecosystem. Holding UNI tokens grants governance rights, emphasizing its value to those engaged in decentralized finance. 5. Shiba Inu (SHIB) Initially a meme coin, Shiba Inu has developed into a robust ecosystem encompassing a decentralized exchange, NFT ventures, and a dedicated community. This evolution shows that SHIB is more than the initial buzz, appealing to those interested in sustained growth and community-oriented initiatives. Final Thoughts Navigating altcoin options demands thorough analysis, yet BlockDAG positions as top crypto due to its swift expansion and unique passive earning avenues. With a robust presale phase, a compelling affiliate program, and a high potential for future growth, it leads as a prime choice among top altcoins that will explode. Along with Litecoin, Polkadot, Uniswap, and Shiba Inu, these cryptocurrencies offer a comprehensive strategy for engaging with the dynamic crypto market. The current period presents a prime opportunity to delve into these options and prepare for possible advancements. Disclaimer: TheNewsCrypto does not endorse any content on this page. - Coinbase secures FCA approval, securing its UK Virtual Asset Service Provider (VASP) registration. - The approval allows Coinbase to offer crypto and fiat services to UK users. - The exchange becomes the largest registered crypto platform in the country. The Financial Conduct Authority (FCA) has granted Coinbase its UK Virtual Asset Service Provider (VASP) registration. According to the press release, the exchange will now be able to offer crypto and fiat services to UK users under the UK's regulations. This milestone makes Coinbase the biggest FCA-registered crypto exchange in the country. The approval comes as Coinbase eyes the expansion of retail and institutional services in the country. Only 14% of applicants are approved, subject to the FCA's rigorous registration process. This move shows the company's willingness to adhere to UK rules and regulations and its desire for safe trading. COINBASE SECURES SPOT ON UK FINANCIAL CONDUCT AUTHORITY (FCA) REGISTER TO OFFER CRYPTO SERVICES IN THE COUNTRY FOR THE FIRST TIME - BSCN (@BSCNews) February 3, 2025 - The UK Financial Conduct Authority (FCA) has granted @Coinbase a place on its register, enabling it to launch crypto services in the UK for the first time. <https://t.co/42emWdKKoa> pic.twitter.com/eJN0a7kwMk Coinbase Expands UK Crypto Services Coinbase has been active in the UK through its subsidiary CB Payments Ltd. which has provided e-money services since 2018. However, it needed third-party rights to deal with the FCA. The new registration removes this obstacle, thereby enabling direct communication with the regulator. Crypto ownership in the UK has increased significantly. Recent data reveals that 12% of UK adults, which equates to 8.8 million people, now hold digital assets. This is up from 10% in previous years. The crypto user base has reached 65 million across Europe, indicating a growing interest in digital currencies. This registration will enable Coinbase to offer staking services, stablecoins, and other crypto products. FCA approval helps to meet the legal requirements of the UK, thus providing better protection for investors and traders. This move also corresponds with the UK government's effort to encourage pro-crypto regulations. Coinbase is positioned to solidify its presence in the UK's financial ecosystem as institutional and retail investors gain access to its services. The FCA's regulatory framework provides legal clarity, making mainstream crypto adoption easy. In a recent development, Coinbase Derivatives filed to list Solana (SOL) and Hedera (HBAR) futures contracts with the Commodity Futures Trading Commission (CFTC). The exchange plans to launch the new contracts on February 18, 2025, if approved. The move is part of Coinbase's desire to expand its derivatives offerings. Highlighted Crypto News: Solana Price Nears Make-or-Break Level as Bulls Challenge Short Sellers

The latest rate cut of the European Central Bank to 2.75% has generated strong momentum in various digital investment markets in cryptocurrencies as traditional returns vanish. Among these, three cryptocurrencies, Ripple (XRP), Cardano (ADA), and IntelMarkets (INTL), stand apart in the due course of their value propositions. XRP and ADA rely on their existing ecosystems, while INTL has recently become an AI-powered trading platform with a presale momentum and institutional support. These tokens seem to be extraordinary in an era of depressed interest rates. Ripple (XRP) Gains Strength Amid Regulatory Clarity and Institutional Adoption Ripple's XRP, whose current price is \$3, with a market cap of \$172 billion, remains a key asset in cross-border payment solutions despite going down -3% for the day and -4% for the last week. Ripple strives to engage global financial entities to demonstrate value in international money transfer systems through present-day alliances with Asian banks. Investors who prefer less liquid assets need XRP as a great option to appreciate the value against the challenging conditions of extremely low rates. The short-term market instability may remain, but Ripple's XRP, given its regulatory progress, specifically in 2023 with a reply against partial claims by the SEC, potentially sets to compete in the long term. Investors consider Ripple's engagement with an expanding network in the central bank digital currency (CBDC) pilots as another big push forward for bridging traditional finance with crypto. Cardano (ADA) Targets Revival With Key Technical Upgrades The Cardano (ADA) price is currently at \$0.93 with a \$32.7 billion market cap, and it faces challenges going down -3.8% for the day but retains a loyal developer base. The upcoming Chang hard fork with governance features is being installed, and Hydra scaling solutions have been designed to optimize network efficiency. Some of the biggest miners are pressing for a price push to get Cardano (ADA) above \$1 under the claim that their proof-of-stake (PoS) incentives and complex scientific principles give robust groundwork that can trigger some enthusiasm. However, the success of Cardano depends on how fast decentralized applications (dApps) are adopted, a field in which competitors like Solana and Ethereum are leading. Cardano's recent partnership with telecom providers in Africa to integrate ADA for micropayments highlights its real-world utility, a strategy that aligns with its vision of encouraging financial inclusion through blockchain technology. IntelMarkets (INTL) Gains Institutional Support with AI-Powered Trading Innovation The rising star in the post-rate-cut landscape, IntelMarkets (INTL), combines AI innovation with blockchain to redefine crypto trading. The project's presale has raised \$7.9 million, with its token priced at \$0.08 in Stage 9, and the next stage is set for \$0.09, which is a 12% increase. Supported by Fortune 500 investors and people in MIT and OpenAI backgrounds, IntelMarkets has brought significant breakthroughs in this field, including the self-learning Intelli-Ma, trading bots that trade automatically utilizing 100,000+ digital signals on a global basis, allowing the trader to fine-tune risk by adjusting leverage up to 1000x. This platform combines the DeFi ecosystem of Ethereum with Solana's cost efficiency. The QuantumX Wallet provides quantum-resistant security that can be implemented to ensure the holdings are maintained. Industry analysts highlight IntelMarkets' potential to democratize institutional-grade tools, with its AI blockchain infrastructure positioning it as a leader in the crypto trading sector. Key Takeaways Rate cuts by the ECB acting as a motivation have opened up the imaginative scope for Ripple's XRP and Cardano (ADA) from the crop of cryptocurrencies booming. On the other side of the field, IntelMarkets brings into play AI, quantum security, and dual-chain technology to add a unique point of its own for those wanting a glimpse of forward-looking DeFi innovation. As traditional investment returns decline, the crypto market's expansion is increasingly linked to AI advancements. IntelMarkets (INTL), backed by strong presale momentum and institutional credibility, embodies this shift, positioning it as a key player to watch in the unfolding 2025 bull market. For more information, visit the IntelMarkets Website, Buy Presale, or Join The INTL Community. Disclaimer: TheNewsCrypto does not endorse any content on this page. - Ethereum dropped to \$2,159.28, currently trading at \$2,574.83, down 16.93% in 24 hours. - Market cap stands at \$310.15B, while trading volume surged 252% to \$83.61B. Ethereum (ETH) experienced a sharp decline, dropping to a low of \$2,159.28 before slightly recovering. At present, ETH is trading at \$2,574.83, marking a significant 16.93% drop in the last 24 hours. The cryptocurrency's market capitalization stands at \$310.15 billion, reflecting the broader market downturn. Meanwhile, the 24-hour trading volume has surged by 252% to \$83.61 billion, indicating heavy sell-offs. The market cap ratio has climbed to 26.96%, underlining increased trading activity driven by bearish sentiment. Technical Indicators Reflect Bearish Outlook Ethereum faces immediate support at \$2,200, a critical level tested during the latest plunge. If this support breaks, ETH could slide further toward \$2,000, a psychological threshold that may trigger panic selling. Conversely, the nearest resistance level is around \$2,800, which aligns with recent consolidation zones. Should ETH surpass this barrier, a rally toward \$3,000 could be on the horizon. However, breaking above this resistance will require strong buying momentum and improved market sentiment. The Relative Strength Index (RSI) currently stands at 23.90, firmly in the oversold region, indicating that selling pressure has been excessive. The 14-day RSI average is at 36.17, signaling persistent bearish momentum. If the RSI climbs above 40, it could suggest a potential price reversal. However, the current readings highlight the dominance of sellers in the market. Moving averages further reinforce this bearish outlook. Ethereum is trading well below key moving averages, with the 50-day moving average trending downward. A bearish crossover has occurred between the 50-day and 200-day moving averages, a classic signal suggesting prolonged downside risk. Until ETH reclaims these averages, the bearish trend is likely to persist. The Chaikin Money Flow (CMF) indicator is at 0.06, reflecting weak buying interest despite the sharp price drop. Ethereum's future hinges on whether it can hold above the critical \$2,200 support level. A breakdown below this point could open the door for further declines toward \$2,000.

The Ozak AI presale experienced explosive demand during its initial stages, which resulted in \$780,000 worth of investments from investors who trust the AI-powered blockchain solution. The number of sold \$0.2 tokens reached 55,117,564, which amounted to 81% of the initial presale objective.

Market participants trust the platform's ability to provide next-generation predictive analytics through decentralized infrastructures. The present third phase of the \$0Z token is \$0.003 before the upcoming phase, which is expected to boost the price to \$0.005. Investors have directed strong interest toward the presale stage of Ozak AI to gain pre-launch access to a financial analytics ecosystem that combines predictive analytics with decentralized infrastructure and machine learning capabilities. The fundraising campaign seeks to collect \$1 million from investors. Ozak AI's Technology and Vision Ozak AI utilizes progressive artificial intelligence and machine learning algorithms with blockchain technology to enhance decision-making capabilities in financial markets. The platform implements three essential components: Ozak Stream Network (OSN), Decentralized Physical Infrastructure Networks (DePIN) and Ozak Data Vaults, which provide instant data-driven insights. The Ozak Prediction Agent (PA) analyzes external and proprietary data sources to provide precise financial forecasts. The innovative platform allows Ozak AI to compete in the AI analytics market by providing analytical solutions to traders, institutions and businesses that need improved market insights. \$1 Million Giveaway and Presale Participation Ozak AI increases community engagement by establishing a \$1 million giveaway contest in addition to the presale platform. The prize money will be distributed to 100 winners and bonus entry points will be provided to anyone who refers others to use the platform. The giveaway eligibility criteria state that users must maintain at least \$100 worth of \$0Z tokens. Future Outlook and Listing Expectations Ozak AI positions itself as an upcoming AI and blockchain financial analytics platform that benefits from strong supporting technology and growing presale adoption. Ozak AI is speeding up its funding targets because of strong buyer interest in its presale. The listing value of \$0Z tokens has been projected at \$0.05, thus providing early adopters with robust investment opportunities. Ozak AI enhances its position in the market through the expanding interest in AI-blockchain integration which positions it for future growth and adoption. The elevated interest in AI-driven investment tools positions Ozak AI as a promising project that combines advanced technology solutions for practical uses. Investors predict that the \$0Z token will hit \$1 by the end of 2025. Potential shareholders will closely follow its advancement while awaiting upcoming developments before the presale finalization. For more information about Ozak AI, visit the links below: - Website: <https://ozak.ai/> - Telegram: <https://t.me/OzakAGI> - Twitter : <https://x.com/ozakagi> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bitcoin fell below \$94K as Trump's tariffs sparked a massive sell-off. - Analysts weigh in on implications of Trump's economic decisions, and impacts on digital assets. The cryptocurrency industry has hit another downturn as US President Donald Trump's latest tariff decisions. Trump's tariff decision caused a market shock, Bitcoin (BTC) fell below \$94,000 and recorded an intraday low of \$91,242, a clear loss from its recent highs. Ethereum (ETH) also plummeted over 26% to \$2,159, causing panic among investors. Trump's decision to impose a huge 25% tariff on imports from Mexico and Canada, along with a 10% levy on Chinese goods, has sparked fears of a full-scale trade war. Also, the move provoked retaliatory threats from affected nations, raising concerns about escalating economic instability. In sharp response to Trump's tariff policies, Canada will now impose a 25% Tariff on \$155 Billion worth of US goods. Crypto Market Faces Billions in Liquidations Amid Severe Panic Bitcoin's decline to the \$91K zone wiped out nearly \$2.27 billion from the overall crypto market, including \$1.89 billion in long positions within 12 hours, according to Coinglass market data. In the past 24 hours, 745,971 traders were liquidated. CoinGecko showed how holders began selling, signaling a shift in sentiment. Ethereum saw even steeper losses, dropping to \$2,135 in its worst intraday decline since 2021. Memecoins and altcoins were not spared. DOGE plunged 23%, XRP shed 21.6%, and Solana slipped 8%. The crypto market lost nearly \$2 billion in value as a result of the Tariff decision and global economic policies. Robert Kiyosaki, an intelligent investor and acclaimed author, expressed his rare views. "Gold, silver, and Bitcoin may crash" good. Crashes mean assets are on sale. Time to get richer," he tweeted. Analysts Warn of More Volatility as Trade War Escalates Trump's tariffs have already strained relations with Canada, Mexico, and China, with retaliatory measures expected. The European Union has hinted at countermeasures if similar tariffs extend to its member states. The financial fallout has been severe across global markets. The dollar surged, while equities and risk assets tumbled. US stock futures dropped 2%, and European stocks saw a 2.8% decline. Analysts warn that prolonged trade tensions could further destabilize both traditional and crypto markets. According to Jorge Montepique, Director of Benchmark, in a podcast, he described, "Trump's proposed tariffs are just economically dumb." Despite challenges, Bitcoin still dominates the digital sector, with over 60% market share and a possible recovery as it's set for a bullish rebound. With the Federal Reserve maintaining a cautious stance and global markets on edge, the next moves in this unfolding trade war could define the trajectory of crypto for months to come. Highlighted Crypto News for Today: Dogecoin (DOGE) Suffers 16% Plunge Amidst Crypto Market Crash

While Ethereum's price has long been hovering between the \$3000 and \$4000 marks, this might all change now. Recently news has surfaced of the SEC approving Bitwise ETH ETF. Bitwise still needs the SEC to approve a pending registration application, known as a Form S-1, for the fund to go live. With this small step only left behind, traders are now questioning whether this is the start of Ethereum's season. Read on to find out what experts are saying and why they are pointing to this Ethereum-based viral crypto for the maximum gains possible this season. Could Ethereum Price Rally After Bitwise's ETH ETF? Ethereum, the second-largest cryptocurrency by market capitalization, is currently trading at \$3,265, reflecting a modest 2.49% decrease from the previous week. Ethereum's price movement remains sluggish seeing quite high volatility over the course of last year. Over the past month, Ethereum's price has seen several fluctuations, struggling to break above key resistance levels, such as the \$3800 mark. In mid-2024, the U.S. SEC approved the first spot ETH ETFs. This approval allowed major financial institutions, including BlackRock, Fidelity, and Grayscale, to launch ETH ETFs, providing investors with more ways to gain exposure to Ethereum without directly holding the asset. The introduction of these ETH ETFs has opened the door for increased institutional investment in Ethereum. Despite the initial excitement, Ethereum's price wasn't quite affected by the launch of ETH ETFs. However, just recently, the SEC has approved Bitwise ETH ETF. Bitwise now still needs the SEC to approve a pending registration application, known as a Form S-1, for the fund to go live. Investors are now closely watching this upcoming new ETH ETFs and the network's ongoing upgrades, which could provide the catalyst needed for a stronger uptrend. However, given its massive market capitalization, Ethereum's price potential remains relatively limited compared to emerging projects such as the talked about Ethereum altcoin. IntelMarkets (INTL): Why This AI-Powered Ethereum Altcoin Is Dominating Charts IntelMarkets is a new AI altcoin that is making waves with its groundbreaking AI-powered trading platform and a 720% jump in its presale. IntelMarkets aims to revolutionize the crypto trading market by integrating artificial intelligence into every aspect of trading. INTL's platform unique self-learning trading robots analyze vast amounts of data, identify profitable opportunities, and execute trades with remarkable speed and efficiency, offering retail traders an edge previously reserved for institutional investors. Unlike Ethereum, which is widely adopted and has a huge market cap, IntelMarkets is still in its early stages. INTL offers a seamless AI-driven experience with advanced trading algorithms that optimize performance. Furthermore, IntelMarkets' dual-chain architecture, which operates on both the Solana and Ethereum blockchains, ensures scalability and interoperability, positioning INTL as a strong contender. Currently, IntelMarkets' presale has raised more than \$8M, which is a sign of the amount of confidence and momentum it has created. In its ninth ICO stage, INTL's tokens are priced at just \$0.082, making them highly appealing to early backers. With the market focus shifting to utility-based coins acting as a wind in the back, some analysts are predicting a 75x increase by 2025. This is why INTL comes out as a must-watch altcoin in 2025. Conclusion IntelMarkets is offering investors a unique blend of AI-driven trading, dual-chain architecture, and high-growth potential. While Ethereum's Bitwise ETH ETF approval could provide a boost to Ethereum's price, its upside remains somewhat limited due to its massive market cap. In contrast, IntelMarkets (INTL) presents a better opportunity with its AI-powered trading platform and an already impressive presale performance. With analysts predicting a 75x increase by 2025, INTL stands as the best presale to watch, offering investors the chance to capitalize on this new era of AI-driven trading. EXPERT_MONEY (\$EXPERT), a pioneering project in the Web3 space, is redefining decentralized collaboration. Built on the Solana blockchain, this unique token brings content creators and communities together in a secure, transparent, and rewarding ecosystem. Revolutionizing the Creator Economy As the world's first YouTube community token, \$EXPERT introduces a new revenue model for content creators and their audiences. With a strong social media community of 470,000 members, EXPERT_MONEY fosters engagement and builds a sustainable economy that rewards its participants. Key Features of EXPERT_MONEY (\$EXPERT): - Decentralized Community Platform: A unique ecosystem connecting content creators with their audiences, promoting global collaboration. - Burn and Reward Mechanism: Revenues from YouTube and donation wallets contribute to token burning while rewarding participants. - Flexible Participation Models: \$EXPERT holders gain access to exclusive community-driven initiatives and project involvement. - Community Governance: Key decisions are made through transparent voting processes, ensuring decentralized governance. Massive Hold & Earn Campaign Worth 270,000 USDT! To attract more users and enhance community engagement, EXPERT_MONEY has announced a massive hold & earn campaign worth 270,000 USDT. This campaign stands out as a unique airdrop in the Web3 space, offering significant opportunities for participants. Prioritizing Security and Transparency EXPERT_MONEY is a fully verified project with Cyberscope Audit and Coinscope KYC approvals. Its smart contracts are designed to meet security and sustainability standards, providing users with a transparent and trustworthy platform. EXPERT_MONEY Founder & CEO, Expert Para: "Our vision is to build a decentralized ecosystem where creators and communities grow together. With \$EXPERT, we are ensuring that individuals are rewarded for their contributions." Listed on Leading Exchanges EXPERT_MONEY has gained significant attention and is already listed on major exchanges such as MEXC, Toobit, Kcex, WEEK, Bitci TR, U2X, and Bicomony.com. Join EXPERT_MONEY Today! Explore decentralized collaboration through blockchain technology and become part of the future of the creator economy with EXPERT_MONEY. The crypto world faces fluctuations caused by tokens that become more infamous than some already famous cryptocurrencies. While Bitcoin and Ethereum receive all the publicity, new altcoins such as Rexas Finance (RXS), Dogecoin (DOGE), Bonk (BONK), and Pepe (PEPE) have set themselves to achieve value and recognition. Here is why these tokens have the potential to boom as the next bullish wave comes through the market. Rexas Finance (RXS): A Revolutionary Assets Tokenization RXS has sold 437 million tokens and raised \$43.5 million. This appealing effort to raise funds during presale is the last stage, where tokens are sold at \$0.200. Due to the project's popularity, the community added an extra presale phase. This will be followed with an RXS listing at \$0.25 on June 19, 2025. RXS's unique method of decentralizing ownership of assets is what captures attention. RXS allows users to tokenize real estate and other tangible assets, opening up investment opportunities for retail investors. Regarding tokenomics, RXS allocates 50% of the total supply to presale and liquidity. In comparison, 20% is set aside for staking rewards, which encourages holding in the long term. This structure not only guarantees the stability of the market but also provides solid backing for a community of investors. According to market analysts, RXS might hit \$50 within the last quarter of 2025, which would be phenomenal for first movers as an increase of 12,904%. Its CertiK audit, ecosystem expansion, and other factors give further confidence that RXS has what it takes to be a leader in the altcoin market. Dogecoin (DOGE): The Meme That Completely Changed the Crypto Space Previously perceived as merely a meme currency, Dogecoin has become another distinguished crypto name. Dogecoin is valued at \$0.3541 and it has a market cap of over \$53.06 billion. Dogecoin gained popularity as it had the backing of high business giants and a large community, which made it successful in such a short period. Technical indicators have revealed that Dogecoin is replicating its 2021 performance, which peaked by more than 1,100% within weeks. Analysts are confident that if the crypto asset keeps the bullish momentum intact, DOGE can test and cross its previous all-time high of \$0.73, reaching astonishing numbers of \$4 by the end of 2025. The culture surrounding meme coins and their adoption of microtransactions sets Dogecoin apart. With more merchants willing to accept DOGE as a form of payment, it will further cement its utility place, which makes it a significant altcoin to look out for in the upcoming months. Bonk: The Meme Token Upstart Shaking the Ground Bonk (BONK), a new contender on the meme token scene, is gaining attention for its distinctive model. Unlike Dogecoin and Shiba Inu, Bonk utilizes the Solana blockchain, enabling faster transactions and lower costs. Currently valued at \$0.00003091, BONK has a market cap of \$2.36 billion and is coming up as a "community-first benevolent token." Recently, Bonk has integrated into the Solana DeFi ecosystem, which lets users stake BONK and earn passively. It also has a deflationary model that becomes more

advantageous the more popular it gets, so its price will likely increase. Many analysts believe that BONK can surge up to \$0.001 during the next bullish cycle, a highly optimistic gain from its current price. Bonk has a strong community and great partnerships, so it is set to outperform the market and is one of the best choices for higher-risk investors expecting significant profits. PEPE: The Meme Token Looking to Conquer the Market PEPE is gradually becoming popular as a meme token with market value. With a price of \$0.00001563 and a market cap of \$6.57 billion, PEPE has gained visibility in the Asian market recently after being listed on Binance Japan. This listing gave PEPE a lot more attention than other markets. Among the factors fueling this token's recent rally are whale movements alongside the growing expectation of the token's entry into the DeFi space. The planned move to meme token staking and liquidity pools allows PEPE to become more than a mere token. Alongside these factors, we can expect a price of \$0.0001 by the end of 2025. The combination of PEPE's growth potential and the company's focus on remaining relevant within the meme token ecosystem makes it a strong brand with further growth. Conclusion The cryptocurrency world has abundant opportunities, but Rexas Finance, Dogecoin, Bonk, and Pepe stand out. Investors looking for lesser-known altcoins for growth would undoubtedly find these selections useful. The innovative tokenization approach with RXS and its remarkable presale are enough for this investment to set it apart in the long term. At the same time, Dogecoin's global standing and Bonk's effectiveness on Solana increase the value of the proposition. Increasing utility and market focus on PEPE also make it a strong contender. In terms of significant life-altering profits, these tokens could deliver them, but in investments, adequate precautionary measures along with diligence are absolutely critical. With the boom of the altcoin market, one should undoubtedly be examining and analyzing these lesser-known beauties. Solana has surpassed Ethereum in stablecoin activity, showcasing the SOL token's growing influence within the crypto ecosystem. Despite its recent dip, which has seen the Solana price shake off by over 6% in just a week, its momentum remains significant. Ton, on the other hand, has flashed signs of a possible surge. The market signals suggest a potential rebound in the price of Toncoin, with the normalized risk metric indicating a market bottom, which is a level linked to price increases. In August 2024, Toncoin surged from \$5.3 to \$6.8 after recording a similar metric. Meanwhile, Elluminex (ELX) could soon take the crypto market by storm with its comprehensive DeFi ecosystem set to rival established platforms like Solana. Its unique capabilities have already attracted over \$300K in presale funding in just stage one of its presale, with the ELX token selling at just \$0.06. Here is why Elluminex could rival the likes of SOL, pushing the TON blockchain to new highs. Solana Price Analysis: Solana Surpasses Ethereum In Stablecoin Activity, Which Could Trigger A Price Rally The Solana price has faced a sharp dip over the week but has retained a monthly rally of over 22%. The dip followed Bitcoin's dip below the \$100K region, a move that saw most of the altcoins also stumble. Solana also managed to overtake Ethereum in stablecoin supply growth, marking a significant shift within the crypto market. Data from Artemis shows Solana leading with a monthly net supply rally of around \$5.3B, surpassing Ethereum's \$4.2B growth. The surge points to increasing confidence in Solana's blockchain, known for its speed and lower transaction fees. The trend also suggests traders and DeFi users are now favoring SOL for stablecoin transactions. Other chains, including TON and Base, showed impressive supply growth as Tron and Arbitrum declined. While Solana's price has fallen below its key \$250 resistance level to test support above the \$230 level, this new development could help it regain a bullish outlook. The RSI at 52 also points to building upward momentum supported by the MACD level of 11.76. A Solana price rally could see the token retest the \$250 region with the potential for a \$300 breakout. Analyzing TON Coin's Imminent Rally: Can TON Hit \$6? Toncoin's partnership with Telegram continues to boost the blockchain's market position. Telegram has made TON the exclusive blockchain for its mini app's ecosystem. This move will exclusively allow Toncoin to reach over 950M global users, increase adoption, and strengthen Toncoin's partnership with Telegram while boosting the blockchain's market position. However, Toncoin's price action indicates a consolidation phase within a pennant flag pattern. Support lies at \$4.50, with \$5.30 as a key resistance level. According to historical data, if the price of Toncoin breaks above \$5.30, a rally towards \$6.00 could be possible. Moreover, on-chain data suggests a drop in active addresses, but Telegram's integration could reverse this trend. The drop in zero-balance addresses indicates consolidation, which might provide price stability. This makes Toncoin perfectly positioned for a price breakout. With strong ecosystem growth, the launch of Elluminex, and positive technical indicators, the price of TON could hit the \$6 target in the coming weeks. Why Elluminex Could Be One Of The Hottest DeFi Platforms In 2025 Toncoin is currently considered one of the fastest-growing Layer-1 blockchains on the market. It boasts a successful gaming platform that interfaces with Telegram and over 950M active users. However, despite its growing adoption and essential updates, the TON blockchain still lacks a unified DeFi solution that will channel this incredible potential. Elluminex seeks to change this by providing the TON ecosystem with the needed tools to compete against other Layer-1s, including Solana and Ethereum. One significant hurdle hindering DeFi from working at full capacity is the fragmentation of liquidity across blockchains, which already face considerable difficulties when interfacing with one another. Elluminex aims to solve this with its revolutionary cross-chain bridge, which allows users to seamlessly transfer and trade assets between major blockchains with minimal slippage. Elluminex will also feature an AI-powered portfolio tracker with built-in analytic tools for an all-rounded investing experience to ensure users benefit from reliable information. These features are set to contribute significantly to the ELX token and the project's significant growth. Stage one continues to attract major players with a low-price entry of just \$0.06, which is set to rally to \$0.08 in stage two. Elluminex Presale Could Be The Millionaire's Maker Of 2025 The SOL token is looking to regain a bullish outlook after surpassing Ethereum in stablecoin activity. The surge could see the price of Solana reclaim the \$250 mark as it aims for the \$300 target. Toncoin is also looking to record an uptrend momentum following the Telegram partnership, which could push it to the \$6 target. Similarly, Elluminex has the best potential for growth in 2025 compared to Solana. Each dollar invested in the project could multiply significantly and bring in generational gains once the bull market reaches its full potential. For more information about Elluminex (ELX), visit the links below: - Website: <https://elluminex.com/> - Twitter/X: <https://x.com/elluminex> - Telegram: <https://t.me/Elluminex> Disclaimer: TheNewsCrypto does not endorse any content on this page. As we delve into 2025, Ethereum (ETH) price action delights with a rise of 3.89% this week, demonstrating resilience amid challenges. Concurrently, XRP news shines as Ripple achieves significant regulatory victories, securing crucial licenses to boost its adoption. These developments have cast a spotlight on both Ethereum and XRP, drawing the attention of both traders and crypto followers. However, an equally compelling story unfolds with BlockDAG (BDAG). This company has formed a partnership with the legendary football team Inter Milan. It's a courageous move that combines the worlds of blockchain technology and traditional sports. This venture not only illustrates blockchain's increasing acceptance in mainstream arenas but also exemplifies the union of groundbreaking tech startups and esteemed institutions to set new standards in fan interaction and digital innovation. BlockDAG and Inter Milan's Pathbreaking Alliance BlockDAG's alliance with Inter Milan marks a pivotal movement towards integrating blockchain technology with traditional sports. Inter Milan, with its rich football legacy and global fan base, paired with BlockDAG's innovative solutions for secure and scalable digital transactions, demonstrates the expanding influence of blockchain beyond just the tech community, hinting at its broader potential for adoption. It signals a readiness among traditional sectors to adopt technological advancements. Integrating blockchain for fan engagement, Inter Milan is pioneering a trend for digital collectibles and secure fan tokens, enhancing fan experiences with transparency and security. Moreover, BlockDAG has made significant strides with its exceptionally successful presale, having amassed \$191.5 million and sold over 18.2 billion BDAG coins. At a current rate of \$0.0248 per BDAG, this equates to a remarkable 2,380% ROI from its initial pricing, establishing BlockDAG as a prominent crypto initiative in 2025. This partnership, coupled with the presale achievements, could pioneer new standards for other sports organizations, potentially leading to the adoption of similar blockchain-based models for enhancing fan interaction and boosting revenue. With BlockDAG's sophisticated technology and Inter Milan's prestigious standing, this partnership is poised to serve as a model for merging sports and technology. XRP News: Ripple's Regulatory Triumphs and Market Impact XRP news highlights Ripple's recent strides, having secured Money Transmitter Licenses in New York and Texas, which may greatly enhance its market position. This allows Ripple to expand its services in these critical markets, positioning XRP as a leader in cross-border financial transactions and digital asset management. Currently, XRP trades at \$3.15 after touching a low of \$2.91, reflecting a cautious optimism in the market following these regulatory approvals. This could mark the beginning of wider recognition for XRP as Ripple solidifies its presence in the American financial sector, reaffirming its place as a leading cryptocurrency to monitor in 2025. Ethereum (ETH) Price Trends and Insights Ethereum's latest 3.89% increase to \$3,191.58 signals a positive market response as it recovers from recent volatility. Analysts link this recovery to renewed interest in Ethereum's plans for enhanced scalability and security, with foundational changes hinted at by Vitalik Buterin. Despite competition from platforms like Solana, which attract developers with lower costs, Ethereum's comprehensive support for DeFi, NFTs, and Layer 2 solutions lays a strong foundation for continued prominence among top trending cryptocurrencies. Final Say! XRP news celebrates significant regulatory milestones with Ripple acquiring licenses in New York and Texas, setting the stage for wider usage. Likewise, Ethereum (ETH) price action displays tenacity with noticeable gains, hinting at a potential rebound amidst fierce competition from alternative blockchains. Both Ethereum and XRP continue to be leading cryptocurrencies to monitor closely this year. Among these advancements, BlockDAG embarks on an innovative journey through its partnership with Inter Milan. This alliance blends a renowned sports franchise with pioneering blockchain technology, illustrating the potential of blockchain to amplify fan involvement and digital interactions. BlockDAG's initiative serves as a model for various sectors considering the expansive possibilities of blockchain technology. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxgHmVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bloomberg analyst James Seyffart says Litecoin ETF will get approval before Grayscale's XRP ETF. - Litecoin never faced any allegations of being a security, unlike XRP. Filings for Crypto funds are increasing by the day as the new administration takes charge in the US. Bitcoin was the first crypto to have its exchange-traded funds on conventional market places in 2024. However, we are witnessing other cryptos such as XRP, Solana, and Litecoin ETF filings this year. Grayscale and Canary Capital ETF filings are the talks of the town at present in the industry. While Grayscale plans to convert its \$16.1 million XRP Trust into XRP Spot ETF, Canary Capital filed for Litecoin ETF. As per the recent post by Litecoin on X, 3 Litecoin ETFs are filed in the US by Canary Capital, CoinShares, and Grayscale. When the US SEC advanced the Litecoin ETF by opening a public comment period, the market was optimistic that it would soon get approval. Bloomberg Analyst Predicts Litecoin ETF to Move Past XRP ETF The spree of crypto ETF filings sparked discussions among industry leaders and top market analysts. While global asset management firms are moving forward with their filings, market analysts are estimating which ETFs are going to be approved first. Popular Bloomberg ETF analyst James Seyffart believes in the possibility of XRP fund getting approval in 2025. However, he says ETFs for other cryptocurrencies will likely come first. Referring to the XRP, Seyffart further says, "There's some more work that needs to be done on that front that doesn't need to happen with something like Litecoin. The SEC has never called Litecoin a security so, I wouldn't be surprised if you see Litecoin come first." On the other hand, Ripple president Monica Long stated that she thinks XRP exchange-traded fund is next in line and will be approved very soon. Highlighted Crypto News Today:

Dubai, UAE, February 1st, 2025, Chainwire MuskIt Token: Merging Culture with Real-World Impact The highly anticipated Musk Tower with the Musk Institute at its core will serve as a hub for groundbreaking advancements in technology, renewable energy, and blockchain. Central to this vision is the MuskIt Token, a rising cultural and utility-driven digital asset, poised to become a key enabler of long-term innovation and decentralized growth. The tower will also feature a dedicated crypto hub, including an investment fund to back blockchain innovation and support early-stage crypto businesses. We believe in the transformative power of emerging technologies, and MuskIt is a reflection of that belief, said Errol Musk, founder of the Musk Institute. "This endeavor transcends mere technological advancement; it's about nurturing cultural movements and empowering the next generation of innovators, much like how I guided my own children who fully support my initiatives." Musk Tower: Technology Hub

the ever-demanding world of cryptocurrency, it is crucial to gain early insight into potential gainers. A renowned trader spotlights Texas Finance (RXS), the world's first real-world asset tokenization platform; Pepe (PEPE), the excellent meme coin; and Solana (SOL), the rising blockchain giant, as primed for significant gains. Whether you're a seasoned investor or new to crypto, these picks could offer substantial returns soon if you act fast, you could be in for an exciting ride of financial growth. Texas Finance (RXS): Unmatched Prospects for a Crypto Ecosystem Using blockchain technology, Texas Finance specializes in tokenization of real-world assets (RWA). This platform enables extremely valuable assets, including real estate, arts, and commodities, to be converted into smaller, usable, and circulatable fractions. Investors can obtain fractioned ownership of these tokens. This method unifies traditional asset classes with blockchain, bringing liquidity to the market. In presale stage 11, Texas Finance has progressed at lightning speed, raising \$40.5 million from selling 422.45 million tokens since September last year. Its increased market price from \$0.03 to \$0.175 makes the presale significantly more exciting for retail investors. The primary and Advanced multi-chain tools used for DeFi services are encompassed in the Texas Finance ecosystem and include the Texas token Builder, the quick mint bot, the Texas launchpad, and Texas GenAI. The "no code" Texas token builder allows users to effortlessly create tokens, while the Texas Quick Mint Bot facilitates tokenization through social networks such as Telegram. The Launchpad enables projects to secure funding and establish communities in addition to the launch. GenAI has allowed Texas to usher in a new era of AI technology into the NFT market and enables the creation of rare digital assets. The project is conducting a \$1 million giveaway, and each of the top 20 participants redeems \$50,000 worth of RXS tokens. Such initiatives increase the project's visibility and adoption, accelerate its growth, and, in return, reward high achievers and help project participants. With tremendous presale backing, impressive ecosystem elements, and a rapid mega listing, Texas Finance is undoubtedly among the best-rising millionaire cryptos. Pepe Coin (PEPE): A Meme Coin on the Rise Pepe Coin (PEPE) is one of the leading meme coins today. Currently, it has a price of \$0.00001813, and experts are bullish, estimating the price will increase to \$0.00004. If this happens, Pepe Coin will increase in value by 120%. Pepe Coin enjoys strong accumulation patterns, and this coin could be looking at a breakout. This potential breakout is influenced by several indicators, especially with the larger market cap cryptocurrencies like Bitcoin and Ethereum stabilizing, which could lead to increased investor confidence and a subsequent rise in the value of Pepe Coin. With increasing demand and the exponential popularity of meme coins, Pepe Coin is likely to gain even more value as the market matures. Solana's DEX Volume Earns Its Attention Even though Solana (SOL) has not recently been among the greatest winners, its DEX (decentralized exchange) engagement has been exceptional. In the last week, Solana's DEXs saw an astounding \$27 billion in transactions, far greater than the \$16 billion for Ethereum. The increase in Solana's market share of DEXs is evidence of its efficiency and scalability. Furthermore, Solana's potential approval to launch a spot ETF has attracted the bullish sentiment of institutional traders. According to JPMorgan, this ETF has over a 70% chance of being approved. This approval rate could trigger an investment of \$3-6 billion and above, making a significant difference. For now, SOL holders are very focused, as technical indicators show uncertainty about its near-term price movement, but it looks good. Conclusion Momentum, innovation, and timing are at the forefront of crypto industry development, and so it is with RXS, PEPE, and SOL. Texas Finance is positioning itself in the asset tokenization industry, PEPE is still riding on its community-powered brand, and Solana continues demonstrating its market competitiveness. The indicators for these cryptocurrencies are very positive, suggesting that now is the ideal moment to consider investing in them. As the window of opportunity narrows, the question isn't whether they'll gain but whether you'll be part of the ride. Ready to make your crypto portfolio pop? If you're hunting for the hottest meme coins that are not just trending but set to soar, then buckle up. Whether you're a veteran investor or new to the game, getting into the right coin at the right time can unlock serious rewards. The short-term crypto market is buzzing with excitement, and some of these meme coins are gearing up for big things in 2025. Speaking of the best crypto opportunities, BTFCoin is been dominating presale news. With over \$5.85 million raised and more than 68 billion coins sold, this coin is already catching the eyes of over 10,000 bullish holders. With its vibrant Bulls Squad driving hype, BTFCoin's presale is one to watch as it's set to make waves—especially for short-term investors. Ready to dive into the list? This article breaks down the top cryptos to join for the short term, starting with the one that has everyone talking. 1. BTFCoin | Where Memes Meet Market Moves If you've been paying attention to the crypto space, you know that the Bulls Squad is already making noise, with characters like Baby Bull, Raging Bull, and Nerdy Bull leading the charge. These lovable figures aren't just mascots; they're the embodiment of the "Buy the Dip" mindset that fuels this project. With an insane 90% annual percentage yield (APY), BTFCoin isn't just looking to thrill traders; it's offering a chance for long-term wealth growth even in the short term. Investors can stake their coins and watch their holdings grow while the presale continues to gain momentum. Numbers? If you were to invest \$9,000 at today's price of \$0.00016 per coin, that would net you a whopping 56,250,000 coins. Now, if BTFCoin hits \$0.0006 at launch, you're looking at a return of \$33,750—that's over 3x your investment. And if it rises to \$0.006 (which some analysts predict could happen), that could turn your \$9,000 investment into \$337,500. Now that's some serious upside. Why this meme coin made it to this list: With its unique community-driven approach, a thrilling P2E game, and that juicy 90% APY, BTFCoin offers one of the most exciting meme coin prospects around. 2. Shiba Inu | A Shiba Army Ready to Conquer the Crypto World Shiba Inu isn't just another meme coin—it's the Dogecoin Killer. Launched as an experiment by the anonymous founder a.k.a. Yoshii, this coin took the world by storm in 2021. Today, it's still one of the most popular coins out there, with a massive following and a growing ecosystem that includes ShibaSwap and future projects like Shiba Inu Metaverse. Why this meme coin made it to this list: Shiba Inu's strong community, burn initiatives, and plans for future projects make it a top contender for short-term gains. If you're looking for an established meme coin with growth potential, Shiba Inu is the way to go. 3. Dogecoin | The Meme Coin that Just Won't Quit You can't talk about meme coins without mentioning Dogecoin. Born as a joke, Dogecoin has become a powerhouse, supported by a loyal fanbase and high-profile backers like Elon Musk. The coin's value has risen and fallen with market sentiment, but it remains a cornerstone in the meme coin universe. Why this meme coin made it to this list: Dogecoin is the original meme coin and its staying power is undeniable. While its price is volatile, it has a track record of rapid short-term gains, especially when the crypto market gets bullish. 4. Bonk | The Dogecoin Follower with a Whole Lot of Hype Bonk, originally launched on the Solana blockchain, quickly made waves in the meme coin space. It's a low-cost coin with strong community backing, and while it's a relatively newer player compared to Dogecoin and Shiba Inu, it's been making a name for itself through viral social media campaigns and celebrity endorsements. Why this meme coin made it to this list: Bonk is gaining momentum thanks to its community-
