

notable 24-hour increase of over 19.53%. Conversely, Synthetix (SNX) has taken the largest hit, with an 8.49% decline within the same period. Let's discuss the top crypto gainers of the day to understand the market conditions. Notcoin (NOT) - Market Cap: \$2.18 Billion - Trading Volume: \$4.53 Billion Notcoin continues to lead the gains, extending a 54% surge from \$0.01875 to a new all-time high of \$0.02896. Currently, NOT is trading at \$0.02125, up 19.53% in the last 24 hours, with a market capitalization of \$2.18 billion. Since its launch in mid-May, Notcoin has been on an upward trajectory, driving increased market transactions. Its 24-hour trading volume has soared by 162%, reaching \$4.53 billion. Toncoin (TON) - Market Cap: \$16.10 Billion - Trading Volume: \$498 Million Toncoin ranks as the second biggest gainer, experiencing a 20% increase in the last 24 hours, rising from \$6.37 to \$7.03. Despite a recent decline, TON is now trading at \$6.70, supported by a market cap of \$16.10 billion. Further, transaction activity for Toncoin has surged, boosting its daily trading volume by 250% to \$498 million. This trend suggests a bullish outlook, as TON trades above the 7-day simple moving average (SMA) and maintains an upward movement on the 4-hour chart. Gala (GALA) - Market Cap: \$1.48 Billion - Trading Volume: \$318 Million Gala, a layer 1 blockchain solution, has gained attention with a 10% increase over the past day, pushing its value from \$0.043 to \$0.047. GALA's market capitalization stands at \$1.49 billion, and its trading volume has jumped by 140% to \$318 million. Despite the overall positive market performance, several cryptocurrencies have not maintained their gains. Tokens such as Synthetix (SNX), Arweave (AR), and Beam (BEAM) have experienced declines after previously showing bullish trends.

The cryptocurrency landscape is teeming with innovations and trends that are capturing the attention of investors and enthusiasts. In this competitive market, Floki, PEPE, and BlockDAG are making significant strides. Floki has executed a strategic token burn, reducing its supply and sparking interest. PEPE has seen a substantial price surge, driven by institutional investors. Meanwhile, BlockDAG is poised to transform the industry with its cutting-edge mobile crypto mining technology. This article explores these top crypto projects, examining their unique features, potential impacts, and comparisons with other leading cryptocurrencies. Keywords such as Floki Token Burn, PEPE price surge, and Mobile crypto mining will be explored in depth to provide a comprehensive analysis.

**Floki: Community-Driven Token with Strategic Moves** Floki has been making waves in the crypto world due to its community-driven approach and strategic token burns. Recently, Floki DAO executed a significant Floki Token Burn, eliminating 15.246 billion FLOKI tokens from circulation. This move, supported by a 99% community vote, was intended to reduce supply and potentially increase demand. However, post-burn, FLOKI's price experienced a 10% drop, settling at \$0.0002278. Despite this short-term volatility, the token has shown resilience, with a 32% rise over the last month. The future of Floki hinges on its ability to maintain a bullish trend. The community's strong support and strategic decisions like the token burn could position Floki for further growth, but investors should remain cautious given the inherent volatility in the crypto market.

**PEPE: Meme Coin with Growing Institutional Interest** Pepe Coin (PEPE) has captured the market's attention with its remarkable PEPE price surge. Recently, PEPE hit an all-time high of \$0.00001422, soaring by over 26% in just 24 hours. This surge was largely driven by speculation around a potential spot Ether ETF, which fueled significant trading activity. Institutional investors, including BlockTower Capital, have shown interest, leveraging the momentum for profitable trades. Despite its impressive rise, PEPE's market cap remains significantly lower than that of more established meme coins like Dogecoin, suggesting ample room for growth. However, the volatile nature of meme coins means that rapid price reversals are possible, making it a risky investment. The key for potential investors is to balance the high rewards with the associated risks.

**BlockDAG: Revolutionizing Mobile Crypto Mining** BlockDAG stands out in the crypto space with its innovative approach to mobile crypto mining. The BlockDAG Network has laid out an ambitious roadmap from May to September, focusing on enhancing blockchain technology and the Miner X1 application. Key features include Proof-of-Work consensus, Ethereum smart contract compatibility, and integration with tools like Metamask. The phased development includes Devnet and testnet releases, culminating in a mainnet launch. A notable highlight of BlockDAG is the X1 mobile miner app, designed to transform everyday smartphones into efficient mining devices. This user-friendly app allows individuals with limited technical knowledge to participate in mining, potentially earning up to 20 coins daily. This feature democratizes mining, making it accessible to a broader audience. BlockDAG's presale has already raised an impressive \$39.5 million, reflecting strong backing from the crypto community. The project has recently enhanced its community experience with a new dashboard update on its website, ensuring greater transparency. The marketing efforts, including a high-profile appearance in London's Piccadilly Circus, have further fueled the excitement around BlockDAG. Analysts predict that BlockDAG could achieve a 30,000x return on investment (ROI), with projections suggesting a potential price of \$20 by 2027. With a focus on mobile crypto mining, BlockDAG is set to revolutionize the industry.

**BlockDAG Leading the Pack** In comparing Floki, PEPE, and BlockDAG, it's evident that each project has its unique strengths and potential. Floki's community-driven initiatives and strategic token burns highlight its dynamic approach. PEPE's recent price surge underscores the speculative excitement around meme coins. However, BlockDAG's blend of robust technology, strategic influencer partnerships, and an intuitive platform makes it a formidable contender in the crypto space. For readers looking for the next big crypto investment, BlockDAG presents a compelling case with its innovative mobile crypto mining capabilities and promising presale success. The upcoming mainnet launch and continuous roadmap developments position BlockDAG as a project to watch. The cryptocurrency market is renowned for its volatility and potential for substantial returns. Among the many stories of dramatic price movements, one recent event stands out: a prominent crypto bull has awakened from a period of dormancy to accumulate significant amounts of Pepe Coin (PEPE) and a formidable new rival to Polygon (MATIC) that has surged by 2000% in May. This rival, Retik Finance (RETIK), is rapidly gaining traction and attention from both seasoned investors and crypto enthusiasts alike.

**The Rise of Pepe Coin (PEPE)** Pepe Coin, built on the Ethereum blockchain, is one of the most popular meme coins in the market today. Since its launch in April 2023, PEPE has made significant strides, becoming one of the most traded cryptocurrencies. Its journey to fame was swift, with its market capitalization surpassing \$1 billion within three weeks of its launch. For context, it took Dogecoin (DOGE) almost four years to achieve the same milestone. PEPE's recent performance has been noteworthy. As of writing, PEPE's price has pumped by 13%, currently trading around \$0.0000168. This surge has propelled PEPE's market cap above \$7 billion, slightly higher than Polygon (MATIC), and catapulted it into the top 20 cryptocurrencies by market capitalization. The appeal of meme coins, coupled with PEPE's robust community and active trading, continues to drive its growth and market interest.

**Polygon (MATIC) and Its Crypto Journey** Polygon (MATIC) has established itself as a leading player in the crypto space, particularly known for its ability to provide scalable and efficient solutions for the Ethereum network. Polygon's framework allows for the creation of interconnected blockchain networks, offering high throughput and low transaction costs. This has made it a preferred choice for developers and projects looking to overcome Ethereum's scalability issues. MATIC, the native token of the Polygon network, has experienced substantial growth since its inception. It has consistently attracted investors due to its strong fundamentals, strategic partnerships, and continuous development efforts. However, even established tokens like MATIC must keep an eye on emerging competitors that could potentially disrupt their market position.

**The Emergence of Retik Finance (RETIK)** Amid the dynamic landscape of cryptocurrencies, Retik Finance (RETIK) has emerged as a formidable competitor to both PEPE and MATIC. Retik Finance is a DeFi platform designed to bridge the gap between traditional finance and the decentralized world, offering a comprehensive suite of financial services that are decentralized, secure, and efficient. RETIK's journey has been nothing short of spectacular. The token launched its presale in early Q1 and quickly sold out, raising over \$32 million in a short period. Initially priced at \$0.03, RETIK's value surged by over 2000%, reaching an all-time high of \$3 in May as it launched on major exchanges. This meteoric rise has not only caught the attention of the crypto community but also attracted significant investment from prominent crypto bulls.

**What Sets Retik Finance (RETIK) Apart?** Retik Finance's rapid ascent can be attributed to several key factors:

- Innovative DeFi Solutions** Retik Finance (RETIK) offers a range of innovative DeFi products, including DeFi debit cards, a smart crypto payment gateway, a non-custodial wallet, a swap aggregator, and AI-powered P2P lending. These solutions are designed to make DeFi accessible and practical for everyday users, bridging the gap between traditional finance and the crypto world.
- User-Friendly Interface and Experience** One of the primary challenges in the DeFi space is making complex services accessible to the average user. Retik Finance addresses this by providing a seamless and intuitive user interface, ensuring that even those with limited technical knowledge can easily navigate and utilize its services.
- Strong Community and Investor Confidence** The successful presale phase, which saw Retik Finance raise over \$32 million, is a testament to the strong investor confidence in the project. The platform's early success has built a robust community of supporters who believe in its vision and potential for growth.
- Strategic Exchange Listings** Retik Finance's listing on multiple global crypto exchanges, including Uniswap, MEXC, LBank, Digifinex, Bitmart, CoinW, and P2B, has significantly increased its liquidity and accessibility. This strategic move has driven substantial demand and trading volume, further propelling its price.
- Early Utility Launch** Retik Finance's decision to launch one of its unique offerings, the virtual DeFi debit card, a year ahead of schedule, showcases its commitment to innovation and user satisfaction. This forward-thinking move has generated excitement within the crypto community and positioned Retik Finance as a leader in the DeFi space.

**Why Retik Finance (RETIK) is Worth Watching** The impressive performance of Retik Finance has not gone unnoticed. Analysts and industry experts predict that RETIK could see further significant gains as it continues to roll out new features and forge strategic partnerships. The platform's robust fundamentals, combined with its innovative approach to DeFi, make it a compelling investment opportunity. For investors looking to diversify their portfolios and capitalize on the growth potential of emerging cryptocurrencies, Retik Finance represents a unique opportunity. Its ability to attract significant investment from prominent crypto bulls, coupled with its strong community support, positions it for continued success.

**Conclusion: A Promising Future for Retik Finance (RETIK)** As Retik Finance (RETIK) officially launches and gains traction in the market, the excitement and anticipation within the crypto community continue to build. The token's innovative approach to DeFi, combined with its robust presale performance and strategic listings, positions it as a strong contender in the cryptocurrency market. For investors, Retik Finance represents a unique opportunity to participate in a high-growth asset with real-world utility. As RETIK continues to gain momentum, keeping a close eye on its developments and market performance could prove to be a wise investment decision. With the potential for significant returns, Retik Finance is poised to make a lasting impact in the crypto space and could very well become the best investment opportunity of 2024. **Pepe Coin Hits New All-Time High** Pepe Coin (\$PEPE), one of the most popular meme coins built on the Ethereum blockchain, has been making waves in the cryptocurrency market. Since its public launch in April 2023, Pepe Coin has become one of the most highly-traded cryptocurrencies. To provide some

perspective, while Dogecoin (DOGE) took nearly four years to surpass a market capitalization of \$1 billion, Pepe Coin achieved this milestone within just three weeks of its launch. Despite the price volatility of \$PEPE, the number of individual holders remains impressive. As of writing, PEPE's price has surged by 13% today, currently trading around \$0.0000168, marking a new all-time high. This surge has propelled PEPE's market cap above \$7 billion, slightly higher than Polygon (MATIC), placing this meme coin within the top 20 cryptocurrencies by market capitalization. The Rise of Retik Finance (RETIK) A profitable trader, known for turning \$10,000 into \$1,000,000 with the Pepe Coin (PEPE) recent surge, has now identified the next potential top performer: Retik Finance (RETIK). Retik Finance, a relatively new entrant in the cryptocurrency market, has already shown remarkable growth. Following its launch, RETIK surged by 2000% within hours, demonstrating significant investor interest and market potential. Retik Finance's impressive performance has caught the attention of crypto enthusiasts and experts alike. The token's rapid ascent is attributed to its innovative approach to decentralized finance (DeFi) and strategic listings on major exchanges. These factors have positioned Retik Finance as a formidable contender in the cryptocurrency space, with many predicting further growth. Why Retik Finance (RETIK) is Gaining Attention Retik Finance (RETIK) offers a suite of DeFi products designed to bridge the gap between traditional finance and the emerging DeFi landscape. Its offerings include: DeFi Debit Cards: These cards allow users to spend their crypto assets seamlessly, bringing digital currencies closer to everyday use. Smart Crypto Payment Gateway: This gateway facilitates secure and efficient crypto transactions, enhancing the usability of digital assets. Non-Custodial Wallet: Retik Finance provides a wallet that allows users to maintain full control over their funds, ensuring security and privacy. Swap Aggregator: This tool enables users to find the best exchange rates across multiple platforms, optimizing their trading strategies. AI-Powered P2P Lending: Leveraging artificial intelligence, Retik Finance offers peer-to-peer lending services that are both efficient and secure. These innovative solutions not only enhance the utility of RETIK tokens but also contribute to the overall growth and adoption of the platform. As a result, Retik Finance is poised to become a major player in the DeFi space. The Impact of Exchange Listings The rapid growth of Retik Finance (RETIK) can be partly attributed to its strategic listings on multiple major exchanges, including Uniswap, MEXC, LBank, Digifinex, Bitmart, CoinW, and P2B. These listings have provided increased liquidity and accessibility, enabling a broader audience to trade RETIK tokens. The heightened visibility and trading volume have driven significant demand, contributing to the token's explosive price appreciation. The launch of Retik Finance on these exchanges occurred on May 21, 2024, at 12 PM UTC. Within hours, the price of RETIK skyrocketed from its initial listing price of \$0.15 to an all-time high of \$3, generating 20x gains for early investors. This remarkable performance has solidified Retik Finance's position as a high-growth asset in the cryptocurrency market. Predictions for Further Growth The success of Retik Finance (RETIK) has not gone unnoticed by analysts and industry experts. Many predict that RETIK has room for further growth, driven by its strong fundamentals and innovative offerings. The project's focus on providing practical DeFi solutions aligns with the growing demand for decentralized financial services. As the DeFi space continues to evolve, platforms like Retik Finance that offer real-world utility are likely to attract significant attention and investment. The combination of a strong community, strategic partnerships, and continuous development positions RETIK for sustained growth. Following in the Footsteps of Successful Traders The story of the trader who turned \$10,000 into \$1,000,000 with Pepe Coin is a testament to the potential rewards of identifying and investing in high-growth cryptocurrencies. By recognizing the early signs of Retik Finance's potential, this trader has once again positioned himself to benefit from the rapid price appreciation. For other investors, Retik Finance (RETIK) represents a compelling opportunity to participate in a high-growth asset with substantial upside potential. The recent surge and strong market fundamentals suggest that RETIK could continue to deliver impressive returns. Conclusion: A Promising Investment Opportunity Retik Finance (RETIK) has quickly established itself as a promising player in the cryptocurrency market. Its innovative approach to DeFi, combined with strategic exchange listings and robust market performance, positions RETIK as a top contender for investors seeking high-growth opportunities. As the project continues to develop and expand its offerings, Retik Finance is poised to make a lasting impact in the DeFi space. For investors looking to capitalize on the next big opportunity in crypto, following the footsteps of successful traders and investing in Retik Finance could prove to be a wise decision. With its potential for significant returns and strong market presence, RETIK is undoubtedly a token worth watching in 2024 and beyond. ETFSwap (ETFS), Shiba Inu (SHIB), and Polygon (MATIC) are three altcoins that have been tipped by major analysts and investors to overtake Binance Coin (BNB) in the list of the top 10 cryptocurrencies. With all three altcoins below \$1, the potential for a monumental upside peak is very huge. ETFSwap (ETFS) Will Lead Altcoins In Crypto Top 10 ETFSwap (ETFS) is emerging as a game-changer in the DeFi space with its revolutionary ETF trading platform. With a solid and innovative ecosystem mechanism to make the trading of exchange-traded funds profitable in cryptocurrency, ETFSwap (ETFS) is well set on track as one of the altcoins to topple Binance Coin (BNB) and become a top 10 cryptocurrency. ETFSwap (ETFS) comes into the crypto scene as the only prospectus-based provider of Ethereum-based ETF tokens, while offering the standard for what an exchange-traded fund database powering institutionally listed ETFs should operate like. With ETFSwap (ETFS), both retail and market-moving investors get to trade in a variety of high-liquid ETF asset classes offered on the ETFSwap (ETFS) platform with 24/7 risk management to protect liquidity. Powered by the native ETFS token, ETFSwap (ETFS) operates a trustless, decentralized protocol that serves as both an institutional ETF

trading platform and an ETF administration platform – investors, in turn, have direct access to institutional ETFs. With crypto ETFs, ETFSwap (ETFS) users get to monitor the performance of crypto-based ETFs from leading asset managers like Blackrock, giving ETFSwap (ETFS) a strategic entry point ahead of other traders and investors. The leveraged ETFs offering of ETFSwap (ETFS) utilizes financial derivatives and significant leverages to give investors up to 50x on their trading positions. Furthermore, ETFSwap (ETFS) offers high-liquid commodity ETFs such as gas, oil, coal, health assets, and even gold assets. This option is especially good for investors who are looking to diversify their portfolios and hedge against inflation. For maximum investor profits, ETFSwap (ETFS) offers stable asset classes of bonds, treasuries, and other fixed-income securities. ETFSwap (ETFS) is already pulling in the big market movers into its ongoing stage 1 presale as over 120 million tokens have already been sold at a steal price of less than \$1 – \$0.00854. With more investors buying in and major exchanges looking to list upon launch, ETFSwap is already set to double its stage 1 presale price to sell at \$0.01831 in stage 2. A break-out launch into the top 10 cryptocurrencies while toppling Binance Coin (BNB) looks set in the stars. Shiba Inu (SHIB) Can Remove Binance Coin (BNB) From Top 10 Launched as an alternative to Dogecoin (DOGE), Shiba Inu (SHIB) has already made a big name for itself in the crypto space, rising a meteoric 1859172.81% in value since its launch. The stellar price performance and favorable investor bias for Shiba Inu (SHIB) have skyrocketed the altcoin into the top 12 crypto coins, making it a strong contender to overtake Binance (BNB) in the crypto top 10. Consequently, Shiba Inu (SHIB) is now touted to be among the top three altcoins to topple Binance Coin (BNB) and break into the top 10 crypto list. This prediction is major as reliable market news has it that no less than 75% of SHIB holders have kept their tokens for more than one year, signaling bullish momentum and long-term bias from major holders. Polygon (MATIC) Joins High Potential Altcoins Polygon (MATIC) rounds off the list of the top three altcoins to overtake Binance Coin (BNB) in the crypto top 10. Polygon (MATIC) has been a mainstay cryptocurrency ever since its launch, as it has maintained a steady price performance, giving its early investors a 17,000% return on investment. Polygon (MATIC) is expected to do more in price performance and ecosystem development, which is why major analysts are tipping the native MATIC token to usurp the native BNB token. More so, the financial and market support of major exchanges like Coinbase and Binance itself assures the continued multi-chain functionality of the Polygon (MATIC) ecosystem. With the Polygon (MATIC) token trading at a relatively stable \$0.7, it could very well overtake Binance Coin (BNB) while breaking the \$1 mark. Conclusion ETFSwap (ETFS) is on the verge of what crypto analysts expect to be one of the biggest breakouts that the market has ever seen. Along with altcoins such as Polygon (MATIC) and Shiba Inu (SHIB), the Binance Coin (BNB) could be losing its spot on the crypto top 10 soon. For more information about the ETFS Presale: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. Victoria, Seychelles, May 31st, 2024, Chainwire Bitget, a leading crypto exchange and Web3 company, has participated in MEMECON, one of the five premier events at NFC 2024. MEMECON took place at Pavilhão Carlos Lopes in Lisbon on May 28-30. This event specifically focused on meme coins and meme NFTs, bringing together enthusiasts and experts for a comprehensive experience that includes a conference, expo, stage presentations, and a hackathon. As the world's first meme-themed conference, MEMECON Lisbon has drawn over 5,000 participants. The event featured keynotes, panel discussions, and interactive exhibits on the topic. The conference also attracted support from other influential projects and personalities like Crypto Banter, Mario Nawfal, HarryPotterObamaSonic10Inu, BURRRD, GMEonSol and many more. Bitget's participation in MEMECON 2024 marks a significant milestone for both the company and the broader cryptocurrency industry. As meme coins continue to transition from internet humor to influential financial assets, their market impact is undeniable. For instance, Dogecoin's market capitalization skyrocketed to over \$88 billion during the 2021 bull run, illustrating the immense financial potential and reach of meme coins. Engaging with the meme coin community at MEMECON underscores Bitget's commitment to fostering innovation and supporting creative development within the crypto ecosystem. Meme coins, despite their whimsical origins, have become an entry point for many new investors into the crypto space, promoting broader adoption and diversity in the types of projects being developed. Bitget's involvement in the hackathon and trading competitions at MEMECON not only encourages technical and creative advancements but also aligns with the company's vision of enabling smarter trading and nurturing the next generation of crypto innovators. Bitget's Chief Operating Officer, Vugar Usi Zade, was a key speaker at the conference, sharing his extensive experience in managing and scaling successful projects. Vugar is an award-winning senior manager and communications expert with 15 years of progressive hands-on experience, spanning Fortune 500 giants to dynamic startups. His talk – 2069: Catch the next meme! – focused on the evolving landscape of cryptocurrency exchanges and how to capture the next potential meme coin. – We have observed more chains and protocols launching memes, showing a strong prospect for cultural building and user onboarding. The Mona Lisa can also be considered a meme of the old days! Bitget has always been supportive of the community and strives to bring the latest tokens with potential to our platform in a safe and timely manner, – shared Vugar Usi Zade, COO of Bitget, during the panel. Bitget was one of the lead sponsors of the hackathon, encouraging developers and innovators to create new solutions and projects within the meme coin space. The hackathon participants had an opportunity to compete for prizes and gain recognition for their innovative ideas. Bitget also hosted a trading competition where participants could win a trip to Lisbon and compete for the chance to have their meme coin projects listed on the Bitget exchange. In addition to the activities on-site, Bitget also co-hosted an afterparty on May 29, together with FOMO Bull Club, BGW, b0rderless, and Memecon Degens. The cocktail party provided an opportunity for attendees to network and celebrate the success of MEMECON Lisbon. By supporting and engaging with the meme coin community, Bitget is helping to shape a

more robust and secure market for these unique digital assets, driving long-term growth and stability within the cryptocurrency landscape. This active support can lead to the development of more sustainable and innovative meme coin projects, enhancing their appeal and credibility in the financial markets. Event highlights About Bitget Established in 2018, Bitget is the world's leading cryptocurrency exchange and web3 company. Serving over 25 million users in 100+ countries and regions, the Bitget exchange is committed to helping users trade smarter with its pioneering copy trading feature and other trading solutions. Formerly known as BitKeep, Bitget Wallet is a world-class multi-chain crypto wallet that offers an array of comprehensive Web3 solutions and features including wallet functionality, swap, NFT Marketplace, DApp browser, and more. Bitget inspires individuals to embrace crypto through collaborations with credible partners, including legendary Argentinian footballer Lionel Messi and official eSports events organizer PGL. For more information, users can visit: Website | Twitter | Telegram | LinkedIn | Discord | Bitget Wallet Contact PR team media@bitget.com

Meme coins like Shiba Inu (SHIB) and Dogecoin (DOGE) chart divergent paths, while NEAR Protocol garners momentum with its bullish prospects. SHIB has recently seen a 4.07% uptick, eclipsing DOGE's 1.48% increase, fueling speculation about SHIB's potential to outperform DOGE. Concurrently, cryptocurrency expert Jamie Coutts foresees a 47% rise for NEAR Protocol, bolstered by robust bullish indicators. In this shifting landscape, BlockDAG distinguishes itself with a forward-thinking strategy and a notable \$37M raised in its latest round, propelled by cutting-edge Directed Acyclic Graph (DAG) technology and integration with the Ethereum Virtual Machine (EVM). As the crypto sector evolves, BlockDAG's innovative approach earmarks it as an attractive investment, merging revolutionary technology with substantial market promise. SHIB vs DOGE: Battle for Dominance In the past day, Shiba Inu (SHIB) has enjoyed a 4.07% increase, surpassing Dogecoin (DOGE), which rose by 1.48%. This event has ignited debates about SHIB's potential to overtake DOGE. IntoTheBlock data shows a 31.25% reduction in SHIB traders, suggesting a strong short-term outlook as fewer traders speculate on its price. In contrast, DOGE's trader count has risen by 16.40%, indicating confidence in its sustained growth. Both coins maintain comparable social influence, suggesting they receive equal market attention. With DOGE's prices on the rise, SHIB could also see potential gains. NEAR Protocol: A Promising Future with Expected Gains Crypto analyst Jamie Coutts points to strong bullish signals for NEAR Protocol, predicting a potential 47% increase from its current levels. Coutts notes a consolidation of price momentum since March, with a bullish pattern signaling a possible breakout above \$7.60. NEAR Protocol's positive trajectory against Bitcoin and Solana, coupled with a rise in daily active users, supports Coutts' optimistic forecast. Despite a recent "death cross" in its Exponential Moving Average, which could suggest a downturn, NEAR's market sentiment is generally positive, leaning towards further growth. BlockDAG: Pioneering Blockchain Innovation BlockDAG is making significant strides in the blockchain sector, driven by its innovative technology and key updates that promote decentralization and improve transaction efficiency via advanced Directed Acyclic Graph (DAG) algorithms. These enhancements are vital for reliably facilitating rapid, large-scale transactions. An additional noteworthy feature of BlockDAG is its integration with the Ethereum Virtual Machine (EVM), which presents a quicker, more cost-effective option for Ethereum developers. This compatibility and user-focused features like Metamask integration broaden its appeal and promote wider adoption. As BlockDAG gears up for its mainnet launch, it emphasizes extensive testing and active community participation to bolster security and enhance system performance. These initiatives are set to exceed investor expectations, establishing BlockDAG as a leader in the competitive cryptocurrency market. With over \$37 million raised in its latest presale, and a coin price now at \$0.00955, an 850% increase, BlockDAG is positioning itself as a premier investment choice in the crypto world, ready to deliver substantial returns and technological advancements to its backers. Key Takeaways As SHIB and DOGE capture market interest and NEAR Protocol exhibits strong growth potential, BlockDAG stands out as the clear leader in the evolving cryptocurrency landscape. Its commitment to decentralization, rapid transaction processing, and user-friendly features like Metamask integration redefine blockchain standards. With its mainnet launch on the horizon, accompanied by extensive testing and community interaction, BlockDAG is well-positioned to meet and exceed investor expectations. The success of its \$37M fundraising underscores its market appeal, securing BlockDAG's status as a top choice for those seeking significant returns and innovative technology in their crypto investments. - PEPE has witnessed a surge of 106% in the past month. - Pepe coin has reclaimed its position as the third-largest meme coin in the market. The meme coin sector spearheads bullish rallies with a 34.88% price growth in the last 30 days. In particular, Pepe Coin has shown an impressive 106% growth in market price over the past month. PEPE's upward rally has resulted in 96% of the holders residing with profitable wallet holdings. The meme coin is now positioned as the most profitable coin in the sector. Pepe coin began its bullish rally at the end of April and sustained it throughout May. The meme coin fueled by the price rally, made incredible advancements both within the memecoin sector and the overall market. Notably, it outdistanced leading meme coins including Dogwifhat (WIF) to become the third-largest meme coin. Furthermore, PEPE momentarily surpassed the leading meme coin Dogecoin (DOGE) in trading volume on May 23. Notably, Pepe coin's advancements include flipping UNI and MATIC, native tokens of Uniswap and Polygon respectively, at the beginning of this week. However, recent price dips have caused the meme coin to slide downwards. PEPE Price in the Past Month Over the past 30 days, the memecoin staged a 106% surge. At the month's beginning, PEPE traded within the range of \$0.000005989 - \$0.00007149. Currently, it traded within the \$0.000013 range. This surge has

caught the market's attention and attracted increased investments pushing the coin to an overbought stage. Moreover, PEPE hit its all-time high of \$0.00001718 on May 27. Following this, the frog-themed meme coin witnessed slight dips in market price. At the time of writing, Pepe coin is trading at \$0.00001416 with a daily decline of 5%. The market cap stood at \$5 billion approximately while 24H trading volume increased by 5.67% according to CMC data. However, despite the recent price dip the current market price stood above the long-term 21-day MA indicating bullish trends according to TradingView data. If the bullish rally has to continue, PEPE is expected to break resistance at the \$0.000016 level. Finally, TheNewsCrypto analysts have predicted that the meme coin's price might hit a bullish price of \$0.00006588. However, if the bears take over it is expected to slide down to the \$0.0000045 level by the end of 2024. Highlighted Crypto News Today: Jack Dorsey's Ocean Mining Launches Global Hub in El Salvador

As the cryptocurrency market continues to evolve, investors are always on the lookout for promising opportunities to maximize their returns. With the anticipated alt season in 2024, three cryptocurrencies stand out as compelling investments: Polygon (MATIC), Shiba Inu (SHIB), and Retik Finance (RETIK). Each of these projects offers unique advantages and growth potential, making them ideal choices for savvy investors. This article will delve into the specifics of each, exploring why they should be considered before the alt season kicks off.

**Polygon (MATIC): Ethereum's Preferred Scaling Solution** Polygon, formerly known as Matic Network, is renowned for its ability to enhance the scalability of Ethereum. It achieves this through a Layer-2 scaling solution that seamlessly integrates with the development tools and infrastructure of Ethereum. This integration allows developers to build and deploy decentralized applications (dApps) that benefit from faster transaction speeds and lower costs without compromising on security and decentralization. The Polygon network has seen significant growth in its ecosystem, particularly within the realms of decentralized finance (DeFi) and non-fungible tokens (NFTs). By providing an efficient and scalable solution, Polygon has become the go-to platform for many projects seeking to overcome the scalability challenges of Ethereum. This trend is expected to continue, with more dApps, DeFi protocols, and NFT marketplaces choosing Polygon for its superior performance. As of May 2024, MATIC has shown a positive price trajectory, increasing by 13.27% over the past 30 days. Analysts predict that by December 2024, the price is expected to range between \$1.32 and \$1.51, with an average of around \$1.42. These projections highlight the strong bullish momentum of Polygon and its potential to deliver substantial gains for investors.

**Shiba Inu (SHIB): The "Doge" Killer with Massive Community Support** Shiba Inu, often dubbed the "Doge" killer, has gained immense popularity due to its rapid growth and strong community backing. The SHIB Army, a dedicated group of supporters, actively promotes the coin across various social media platforms, driving its widespread adoption. This grassroots marketing has played a pivotal role in the rise of Shiba Inu, differentiating it from many other cryptocurrencies. The Shiba Inu ecosystem has been expanding, with significant developments like ShibaSwap, a decentralized exchange platform. Additionally, the introduction of other tokens within the ecosystem, such as LEASH and BONE, adds further utility and complexity. These developments enhance the overall value proposition of SHIB, making it more attractive to investors. Shiba Inu's current price is \$0.00002476, with a 24-hour trading volume of \$405.49 million and a market cap of \$14.50 billion. The coin has shown a bullish sentiment, with the Fear & Greed Index indicating a score of 76, which falls under "Extreme Greed." Over the past year, SHIB has increased by 191%, outperforming 68% of the top 100 crypto assets. The implementation of token burn mechanisms to reduce the circulating supply further adds to its potential for significant price appreciation.

**Retik Finance (RETIK): Bridging Crypto and Traditional Finance** Retik Finance (RETIK) is a pioneering blockchain project that aims to bridge the gap between the cryptocurrency world and traditional fiat systems. In a market where cryptocurrencies and fiat systems have largely remained separate, Retik Finance offers a comprehensive solution to facilitate seamless transactions across both realms. This project leverages cutting-edge technologies to redefine financial interactions, catering to individuals, enterprises, institutions, and governments. The presale of Retik Finance (RETIK) was a resounding success, raising \$32,050,000 in just a short span of time. This exceeded initial expectations and demonstrated strong investor confidence in the project's vision and potential. The transparent and community-driven approach of Retik Finance has resonated with investors, fostering trust and confidence in its long-term viability. The recent launch of Retik Finance on multiple centralized exchanges marked a significant milestone in its journey toward mainstream adoption. Within hours of its debut, the market capitalization of RETIK soared to nearly \$3 billion, and the token price reached an all-time high of \$3. This represented a 20x increase from its launch price and a 100x surge from the first stage of its presale price. Listing on major exchanges enhances liquidity, increases accessibility, and facilitates seamless onboarding for new users, positioning Retik Finance for substantial growth. The innovative approach and strategic initiatives position it as a strong contender for significant growth. As it continues to expand its reach and enhance its offerings, the potential for a 5000% return before the altcoin season is substantial. The project's transparent and community-driven approach further fosters trust and confidence in its long-term viability.

**Conclusion** As we approach the 2024 alt season, Polygon (MATIC), Shiba Inu (SHIB), and Retik Finance (RETIK) emerge as three cryptocurrencies with significant potential for investors. Polygon's seamless integration with Ethereum, expanding ecosystem, and bullish price predictions make it a top choice for those looking to capitalize on Ethereum's scalability solutions. Shiba Inu's strong community support, expanding ecosystem, and impressive market performance position it as a compelling investment in the meme coin space. Finally, Retik Finance's innovative approach to bridging crypto and traditional finance, coupled with its successful presale and exchange listings, highlights its potential to redefine financial interactions. Investing in these three cryptocurrencies before the 2024 alt season starts could provide substantial returns, making them worthy additions to any diversified crypto portfolio. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Twitter: [www.twitter.com/retikfinance](https://twitter.com/retikfinance) - Telegram:

The cryptocurrency market is known for its volatility and rapid changes, but a few analysts have gained recognition for accurately predicting significant price movements. One such analyst, who correctly forecasted the explosive rally of Shiba Inu (SHIB) in 2021, has now turned their attention to three promising cryptocurrencies for 2024: Retik Finance (RETIK), Polygon (MATIC), and Aptos (APT). This article delves into the background of the Shiba Inu rally, introduces the analyst, and explores their insights and price predictions for these three cryptocurrencies. The Analyst Behind the Prediction The analyst who predicted the Shiba Inu (SHIB) rally remains relatively low-profile but is renowned in crypto circles for their deep market insights and accurate forecasts. This analyst's prediction about the rise of SHIB was based on a combination of social media sentiment analysis, market trends, and blockchain data. The analyst's foresight earned them a reputation for identifying undervalued assets with high potential for growth. As we look ahead to 2024, the same analyst has pinpointed three cryptocurrencies that they believe will experience significant gains: Retik Finance (RETIK), Polygon (MATIC), and Aptos (APT).

**The Shiba Inu (SHIB) Rally: A Brief Recap** Shiba Inu (SHIB), a cryptocurrency created in August 2020 by an anonymous entity known as "Ryoshi," was designed as a "meme coin" akin to Dogecoin. Initially, SHIB traded at negligible prices and was relatively unknown in the crypto community. However, in early 2021, a combination of social media hype, celebrity endorsements, and strategic moves by its creators propelled SHIB into the spotlight. The pivotal moment came in May 2021, when Elon Musk's tweets about Dogecoin fueled a broader interest in meme coins, drawing attention to SHIB. Moreover, the creators of SHIB made a bold move by sending half of the total supply to Ethereum co-founder Vitalik Buterin, who subsequently donated a large portion to charity and burned the rest. This created a significant supply shock, increasing scarcity and driving up demand. By October 2021, Shiba Inu had gained considerable traction. Its price surged by over 1,000% within a month, making it one of the year's best-performing cryptocurrencies. The rally was driven by a bullish crypto market, strong community support on platforms like Twitter and Reddit, and listings on major exchanges such as Coinbase. By the end of 2021, SHIB had established itself as a notable player in the cryptocurrency market, with a vibrant community and a significant market capitalization.

**Retik Finance (RETIK): Leading DeFi with Innovation** Retik Finance (RETIK) aims to democratize access to financial services by leveraging the principles of decentralization, transparency, and inclusivity. The platform offers a range of DeFi products, including smart crypto payment gateways, AI-powered peer-to-peer lending, and multi-chain non-custodial wallets. These innovative solutions are designed to provide cutting-edge features while maintaining user-friendly interfaces. A key factor in the rapid growth of Retik Finance is its vibrant and engaged community. Through initiatives like governance voting and incentivized participation programs, Retik Finance has fostered a strong sense of ownership and belonging among its users. This community-driven approach has propelled Retik Finance into the spotlight, making it a noteworthy contender in the DeFi space. Following its successful launch on centralized exchanges, Retik Finance has seen its market capitalization soar. The analyst predicts that RETIK could see a 10000% increase in 2024, driven by the introduction of innovative solutions like the Retik DeFi debit card, Retik Pay, and the Retik Wallet. The growing mainstream acceptance of DeFi solutions and cryptocurrencies provides a favourable environment for the growth of RETIK, with potential gains reaching up to four digits.

**Polygon (MATIC): Pioneering Scalability Solutions** Polygon, formerly known as Matic Network, was designed to address the scalability challenges of Ethereum. By offering a Layer-2 solution, Polygon enhances transaction throughput and reduces fees, making it a crucial component of the Ethereum ecosystem. Since its inception, Polygon has garnered support from industry giants like Reddit and Disney. The zkEVM roll-up solution of Polygon, launched in 2022, enabled seamless integration with the mainnet of Ethereum. This advancement solidified the position of Polygon as a leading scalability solution provider. Despite concerns about the future of Layer-2 solutions, the continued growth of Polygon underscores its relevance and importance. The analyst predicts a bullish year for Polygon in 2024. With the increasing adoption of its scalability solutions and strategic partnerships, the price of MATIC is expected to rise significantly. Analysts forecast that MATIC could reach up to \$5 providing investors with over 5000% profit. This prediction is based on ongoing technological advancements and the growing demand for scalable blockchain solutions.

**Aptos (APT): Redefining Blockchain Performance** Aptos (APT) is a Layer-1 blockchain that stands out for its high performance and scalability. Developed by former Meta employees with experience in the Diem project, Aptos aims to facilitate the transition to Web3. It boasts a capacity of up to 100,000 transactions per second (TPS), outpacing many existing blockchain networks and traditional payment systems. The enterprise-grade features of Aptos have attracted significant attention from developers and enterprises seeking robust blockchain solutions. Backed by prominent investors like Binance Labs and Jump Crypto, Aptos is well-positioned to become a dominant force in the blockchain market. Given its impressive scalability and enterprise support, CryptoOracle forecasts a strong year for Aptos. Analysts suggest that APT could reach \$50 by the end of 2024 providing up to 8000% gains, reflecting its potential to disrupt the blockchain industry and its growing adoption among developers and enterprises.

**Conclusion** The cryptocurrency market is known for its rapid changes and high volatility. However, the insights of this seasoned analyst provides valuable guidance for investors. The 2021 Shiba Inu rally demonstrated the power of community-driven projects and social media influence. Looking ahead, Retik Finance (RETIK), Polygon (MATIC), and Aptos (APT) represent three promising opportunities for 2024. With their innovative solutions and strong community support, these cryptocurrencies are well-positioned to achieve significant growth, offering exciting prospects for investors and enthusiasts alike. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Twitter: [www.twitter.com/retikfinance](https://twitter.com/retikfinance) - Telegram: [www.t.me/retikfinance](https://www.t.me/retikfinance) Disclaimer:

- Pepe Coin market cap flipped both Uniswap and Polygon on Monday. - Pepe has now become the third-largest meme coin in terms of market cap. The crypto sector has experienced optimistic waves since last week. With price recoveries and upward streaks multiple altcoin sectors have drawn investors' interest. In the meme coin sector, Pepe (PEPE) has become a prime focus, as it sustains last week's upward rally into this week, increasing by 79.94%. Notably, according to CMC data, the meme coin surpassed Uniswap, the native token of leading DEX Uniswap, on the leaderboard. With a staggering market cap of approximately \$7.1 billion, the meme coin ranks above Uniswap whose market cap stands at around \$6.6 billion. Following this, Pepe also flipped Polygon as the altcoin's market cap slid down slightly lower than that of Pepe. Zooming out, over the month Pepe has exhibited monumental growth climbing from \$0.000006094 to \$0.00001683. With a monthly price performance of a positive 124.45%, Pepe has become the third-largest meme coin in the market, according to TradingView data. Is Pepe Bracing Itself as a Strong Altcoin Contender? In the past 24 hours, the Ethereum-based meme coin has climbed to become the 3rd Top Gainer of the day. At the time of writing, Pepe is trading at \$0.00001683, after hitting a new all-time high of \$0.000017 momentarily during the day. The frog-themed meme coin has increased in market price by 12.26% in the past 24 hours. Additionally, its daily trading volume has increased by a whopping 51.39% standing at \$2.7 billion. Pepe has surpassed resistance levels at \$0.00001359 and \$0.00001570. DOGE, SHIB and PEPE are the only three memecoins ranking on the altcoin leaderboard. Pepe, with its recent price rally soared to become the third largest meme coin. On May 23, it surpassed the leading meme coin Dogecoin (DOGE) in trading volume reaching \$3 billion. However, presently, Shiba Inu has witnessed price dips recently and is trading around the \$0.0000245 level. Shiba Inu ranks second largest with a market cap double the amount of Pepe, \$14M. If Pepe's price rally continues, an incident of the meme coin inching closer to SHIB can be expected. Furthermore, whales and investors have shown increased interest in Pepe as the price rally continues. As reported by LookOnchain, an anonymous wallet with address 0x4d15 had an ROI of 2651% by liquidating their Pepe holdings for \$663K. Analysts and Crypto experts have indicated the buzz around spot ETH ETFs and Pepe's simplified liquidation to have contributed to the price rally. Additionally, Pepe price predictions suggest that the meme coin will hit \$0.00005 soon. Highlighted Crypto News Today:

- Post the approval of the spot Ethereum ETF, ETH price struggles to break the resistance at \$3.7K. - Ethereum developers have announced the target for the launch of the Pectra upgrade. Ethereum (ETH) price witnessed an impressive upsurge in the past seven days, instigated by the SEC's spot ETH ETF approval. As the week draws to a close, with the ETH approval not priced in yet, ETH struggles to surpass the \$3,700 mark. Prices hit a monthly high of \$3.9K on Thursday before sliding to a low of \$3,552 on the same day. In the past 24 hours, ETH has shown a modest increase of 1.95% to trade at \$3,755, at the time of writing. Additionally, ETH whales have shown significant movements today. Over 24,603 ETH worth \$92 million have been transferred in the past 5 hours. Reportedly, as per WhaleAlert data, these were transferred from Coinbase Institutional to four different unknown wallets. Ethereum Price Preceding ETF Approval vs Now Zooming out, over the month Ethereum price performance has increased by 19.75%. This month's beginning saw prominent declines with the price chart depicting bearish candles. On May 1, prices showed one-day lows of up to \$2,815. In the next few days, ETH price witnessed upsurges breaking the \$3K resistance. Notably, the decisive scrutiny on spot ETH ETF fueled a bullish rally in Ethereum price. The altcoin began showing signs of recovery early last week. On May 21, amid mounting anticipation for SEC approval, prices hiked upward hitting \$3,837. In the following days, the bullish rally continued with ETH hitting the monthly high of \$3,953 according to CMC data. Moreover, presently ETH's short-term 9-day MA lies above the long-term 21-day MA highlighting a bullish uptrend being sustained. The daily RSI stands at 68.62 indicating that the market sentiment is leaning toward the overbought zone. Furthermore, analysts' predictions for ETH prices state the altcoin shows potential to hit a new all-time high of \$5K by the end of 2024. For such an occurrence, Ethereum has to break resistance levels at \$3,841 and \$4,823. However, if the bears take over then prices will fall finding support at \$3,367 and \$2,864. After the Dencun upgrade in March, the Ethereum mainnet marches toward the Pectra upgrade. As per the recent update, Ethereum core developers expect Pectra to commence by the end of Q1 2025. The overall crypto has shown a modest recovery from the recent flat market in the past month. Today the market cap has increased by 0.68% while trading volume declined by 41.11%. Similar to Ethereum, Bitcoin prices have also declined in the past 24 hours and is currently trading at \$68,628 Highlighted Crypto News Today:

As the crypto market made a remarkable resurgence and heads for a bull run, staying ahead of market trends is crucial for both retail investors and institutional players, often referred to as "whales." Recently, three cryptocurrencies have garnered significant attention from these major investors: Pepe Coin (PEPE), Shiba Inu (SHIB), and Retik Finance (RETIK). This article delves into why they are attracting the interest of whales and how their future prospects look. Pepe Coin (PEPE): Recording New ATH Pepe Coin (PEPE) has been on an impressive upward trajectory, captivating the crypto market with its rapid gains and robust trading activity. Recently, PEPE has been trading at \$0.0000111, coming close to last week's all-time high (ATH) before a minor pullback. Despite this, the momentum remains strong, with PEPE firmly rejecting the \$0.0000090 support level, a previous point of resistance earlier this month. The surge in PEPE's price is backed by a significant increase in spot trading volumes, which have risen by 177% to \$2.2 billion in the past 24 hours. This surge has propelled PEPE to become the 8th most traded cryptocurrency, surpassing established giants like Dogecoin and XRP. Additionally, PEPE's open interest stands at over \$122 million, just shy of its

all-time high, indicating substantial bets by derivatives traders on its continued rise. One of the main drivers behind PEPE's recent rally is the renewed bullish sentiment in the broader crypto market, particularly around developments related to the spot Ethereum ETF. The U.S. Securities and Exchange Commission (SEC) has reportedly asked firms to update and refile key documentation, sparking optimism among investors. According to a prediction by Coincodex, PEPE is poised to hit a new ATH of \$0.00001846 soon, further fueling excitement among holders and potential investors. Over the past year, PEPE has seen a staggering 769.7% increase, establishing itself as one of the most noteworthy meme coins in the crypto space.

**Shiba Inu (SHIB): Whales Accumulate Amid Rally** Shiba Inu (SHIB) continues to be a favourite among crypto enthusiasts and whales alike. Recently, investors holding between 0.1% and 1% of its circulating supply have significantly increased their holdings. On May 20, these investors added a whopping 1.71 trillion SHIB to their holdings in a single day amid a 9% price spike. This accumulation brought their total balance to 138.03 trillion SHIB, representing 14.09% of the total supply. The surge in SHIB's price and volume is a testament to the renewed interest in the token. On May 19, SHIB recorded a 9% intraday gain, its highest daily gain in four days. This led to a 109% increase in trading volume to \$709 million the following day. This spike in volume can be attributed to the accumulation by mid-sized investors and the distribution by whales and retail players, who were likely capitalizing on the recent price uptick. Moreover, Shiba Inu broke through an 11-week resistance level at \$0.00002638, marking a significant shift in its trading pattern. This breakout has set the stage for potential further gains, with financial analysts projecting a possible rise to \$0.000081. Such a surge would represent a 210% increase from its current price levels, driven by strong bullish sentiment and increased trading volume. Shiba Inu's market behaviour highlights the differing strategies among various investor cohorts. Whales and mid-sized investors increased their holdings in anticipation of further price appreciation, while retail players took profits from the recent rally.

**Retik Finance (RETIK): Surges to \$3 Amid Listing** Retik Finance (RETIK) has rapidly emerged as a standout player in the decentralized finance (DeFi) sector. The platform's successful presale, which concluded earlier than scheduled, raised an impressive \$32,050,000, reflecting strong investor confidence. Following the presale, RETIK saw a 400% surge in value, demonstrating significant market enthusiasm. One of Retik Finance's key offerings is its innovative DeFi solutions, which include virtual debit cards, a non-custodial multi-chain wallet, and AI-powered P2P lending. These features aim to bridge the gap between traditional and digital finance, making DeFi more accessible and efficient for users. On May 21, Retik Finance announced its listing on several prominent exchanges, including Uniswap, MEXC, LBank, Digifinex, BitMart, CoinW, and P2B. This strategic move has significantly enhanced RETIK's market reach and liquidity, enabling both whales and retail investors to easily trade the token. The immediate impact of this listing was a surge in RETIK's price to nearly \$3, achieving a market capitalization of almost \$3 billion. This represented a 20x increase from its launch price and a 100x surge from the first stage of its presale price. The listing announcement has also sparked bullish predictions among analysts, with some forecasting that RETIK could witness another substantial price rally, potentially increasing its value by over 5000% to \$10. Such projections underscore the strong market confidence in Retik Finance's innovative approach and potential for disruption in the DeFi space.

**Whales Continue Accumulations Amidst Market Resurgence** Pepe Coin, Shiba Inu, and Retik Finance are three cryptocurrencies currently attracting significant attention from whales and other major investors. Each of these tokens has shown impressive performance and strategic market moves, making them stand out in the crowded crypto landscape. Retik Finance's successful exchange listings have positioned it as a formidable player in the market. Keeping a close eye on the project developments and market performances could yield significant insights and potential gains for anyone looking to capitalize on the next big trend in the crypto world. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Twitter: [www.twitter.com/retikfinance](https://twitter.com/retikfinance) - Telegram: [www.t.me/retikfinance](https://t.me/retikfinance)

- Frog-themed meme coin Pepe (PEPE) has captured significant retail attention, dethroning dogwifhat (WIF) as the third most valuable meme coin by market cap. - PEPE's daily trading volume has reached \$3 billion, surpassing even Dogecoin (DOGE). - The Ethereum ecosystem is at a tipping point, with the final decision on VanEck's spot Ether ETF in the United States coming soon. In the midst of the current altcoin craze, fueled by renewed speculation surrounding the potential approval of a spot Ethereum ETF in the United States tomorrow, the frog-themed meme coin Pepe (PEPE) has captured the attention of retail investors. Pepe has leapfrogged its way to overtake dogwifhat (WIF) as the third-largest meme coin by market capitalization. PEPE's daily trading volume has skyrocketed to an astonishing \$3 billion, outpacing even the well-established Dogecoin (DOGE), which currently stands at around \$2.58 billion.

**The Ascent of PEPE: Analyzing the Driving Forces** The meme coin sector is undergoing a resurgence, with its total value soaring to approximately \$62 billion and boasting a daily average traded volume of about \$10 billion. PEPE's remarkable rise to a new all-time high can be largely attributed to the high liquidity of more than \$60 million in WETH (Wrapped Ethereum). This abundant liquidity allows both whale and retail traders to effortlessly exchange Pepe without encountering any liquidity issues. The Ethereum ecosystem has reached a critical juncture, with the final decision on VanEck's spot Ether ETF in the United States set to be announced soon. This decision has the potential to significantly disrupt the current market dynamics. The recent cash rotation from Bitcoin to Ethereum, as evidenced by the reversal in the ETH/BTC pair and the decline in BTC dominance, has greatly benefited Ether-based altcoins. In recent days, early Pepe investors have been actively liquidating their holdings, as detected by on-chain analysts at Lookonchain. One notable transaction involved a single trader depositing over 201 billion Pepe tokens, valued at approximately \$2.83 million, into the Bybit exchange within a 24-hour period. Another early investor, who managed to

transform an initial investment of \$462 into a staggering \$3.4 million profit, made headlines by depositing over 182 billion Pepe tokens into Binance during the same timeframe.

Join the revolution and contribute to your financial success by investing in BEFE, the next MEME currency, from its inception. With a unique, increasingly well-liked, community-driven policy, BEFE is presently providing an incredible opportunity. Find out how investing in this funny coin might increase your wealth by millions. Meme-Centric Altcoins and BEFE's Ascension The emergence of meme-centric altcoins in the modern day is evidence of the significant impact that social media trends and online culture have on the digital currency market. Under this awning, the developers of BEFE, a recent addition to the meme coin market, aim to dispel this notion and prove that their token is the upcoming big thing. In order to stimulate trade activity, large meme currencies like Dogecoin have recently fused cryptocurrency with popular memes on the web. Like many social media titans, from Doge to Pepe the Frog, BEFE won over the hearts and minds of millions of people worldwide. Like them, it also attracted the attention of renowned cryptocurrency innovators who were eager to understand the possibilities that these sorts of virality focused tokens might bring to life. Waves of meme-based cryptocurrencies with animal themes compete for users' attention and acceptance at current times. However, BEFE wants to differentiate itself from this cliché by taking lessons from the achievements and shortcomings of its forerunners. The BEFE team strives for an equitable and easily available token that promotes community involvement and development. A launch devoid of sellout and taxation encourages a genuinely grassroots approach since users have a stake in the project's success and may earn BEFE by wagering BRISE tokens, which leads to widespread distribution. Meme-driven marketing strategies will receive a lot of attention from this initiative; it will use the viral potential of internet communities to generate widespread acceptance and exposure. Hopefully, BEFE will surpass the leading Inu and frog meme currencies in the perpetually developing meme coin field. BEFE's long-term viability mostly depends on its ability to mobilize a lively, engaged community in addition to its real utility and memetic virality. Decoding BEFE's 15-Day Market Positioning BEFE has performed well in the market over the past 15 days, presenting evidence that it has the potential to develop into a highly intriguing investment option. The price of BEFE may vary somewhat between \$0.00009683 and \$0.00010142 during that time, which runs from May 9-15. The value of BEFE merely kept rising over the next several days, rising almost 31% in just four days, from its low point of \$0.00009622 on May 16 to the high point of \$0.00012605 on May 20. Between May 21-22, there was a little price drop of about 8%; nevertheless, BEFE quickly rebounded and continued its upward trend. The coin's value on May 23, one day later, was \$0.00012095, a startling increase of over 25% from its May 16 price level. Conclusion BEFE stands out as the greatest option for an investment with the potential for large profits when taking into account its stellar performance over the last 15 days. A word of warning, though: in order to achieve significant returns while lowering the possibility of loss, investors must carefully navigate BEFE, keeping up with the project's advancements and utilizing risk management techniques. - To know more about BEFE, Visit <https://befetoken.com> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. TheNewsCrypto recommend our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this press release.

- Coinbase Derivatives said that the new product would be available beginning June 3rd. - The new contracts are designed to provide better trading possibilities in conventional markets. Futures contracts for oil and gold on a retail scale will soon be available on Coinbase Derivatives. Moreover, the exchange said on Tuesday that the new product would be available beginning June 3rd. The firm stated: "While crypto derivatives remain at the core of our business, we're excited to announce the launch of new futures contracts for oil and gold." Better Trading Possibilities in Conventional Markets The statement went on to say that users of Coinbase Derivatives "a business licensed by the CFTC" are already able to purchase futures for bitcoin, ether, bitcoin cash, litecoin, and dogecoin. According to Coinbase, the new contracts are designed to provide better trading possibilities in conventional markets. Thus, they are scaled at 10 barrels of oil and 1 troy ounce of gold. The crypto exchange hinted in March that dogecoin, litecoin, and bitcoin cash will soon have monthly cash-settled futures contracts. Chief Financial Officer Alesia Haas said on an earnings call earlier this month that the business is concentrating on generating liquidity, developing market share, and truly establishing themselves. Coinbase, the primary exchange, included 15 so-called perpetual futures this year as part of its derivatives launch. According to Lau, traders will find Coinbase Derivatives more appealing because of the impending oil and gold futures. Along with their current variety of commodities futures, more and more conventional financial organizations like BlackRock, Fidelity, and VanEck have begun to provide crypto trading in traditional financial markets via exchange-traded funds in recent months. Coinbase is not the pioneer in the cryptocurrency exchange space to launch commodities futures. Prior to its bankruptcy in November 2022, FTX had established futures markets for a number of highly traded commodities, including crude oil and lumber. Highlighted Crypto News Today: Bitcoin Policy Institute Launches Non-Custodial Fund Amid Scrutiny

Currently, the BEFE Coin has captured the spotlight, with analysts forecasting that this massive jump "from \$100 to \$200,000" will propel the cryptocurrency to new heights. Such an exceptional prospect attracts investors worldwide since the crypto memecoin space is usually fast-changing and reaching an unprecedented turning point. Let's take a deeper look at BEFE's fundamentals to discover more details regarding the revolutionary meme currency. MEME Coins and BEFE's Emergence Memecoins have consistently ruled the alternative coin crypto ecosystem niche thanks to their support from internet groups and viral guerrilla marketing. Fueled by increasing internet jokes, community-driven hypes, and celebrity endorsements, the Dogecoin (DOGE), Shiba Inu (SHIB), and Pepe the Frog-inspired coins dominate the top three charts. BEFE Coin presents an endeavor to its audience that has

the potential to grow into the next major contender. BEFE is distinct from typical entertainment in that it has a true and practical worth and utility, unlike other memecoins. By fusing humorous origins with practical applications, BEFE Coin seeks to stand out from other memecoins. This goal elevates BEFE beyond simple humor. The BEFE community is rumored to be upending the current memecoin scene, having risen at a rate never seen before in project enthusiasm. As a result, it provides investors with a new arena for investments such as DOGE and SHIB. The buzz is reminiscent of the last memecoin frenzy in several ways. The project is overtaking the investing landscape, and for some, participating in BEFE may be their last remaining opportunity to get into a potentially game-changing, extremely profitable venture. The worst that may occur with BEFE is if it really causes the memecoin market's dynamics to shift, altering speculators' perspectives in that sector. It's important to acknowledge the memecoin market's intrinsic volatility. Long-term viability for BEFE will undoubtedly rest entirely on meeting its utility commitments and establishing a vibrant population.

**BEFE's Pricing and Market Position Analysis** Exception for minor price changes, the performance of this cryptocurrency was good over the last three months. The price of BEFE surged by 33.47% on the 23rd of March to \$0.00054318 and then by 20.29% on the 24th of March to hit \$0.00065322. On the 24th of March, BEFE's trading volume hit \$1,722,236, which apparently signifies growing interest from investors toward this cryptocurrency. On the whole, BEFE has maintained a price of around \$0.00040000 during this period, which confirms its position in the market. This further attests that BEFE's three-month trend of volumes of trade exceeding \$200,000 on most days is a confirmation of investor confidence and strong fundamentals that are leading to its stability even in the most turbulent markets.

**Conclusion** Value creation is a considered investment that catches the eyes of many investors. Its real-time situation regarding its generally volatile nature within short spans of time is a well-known phenomenon. In view of this, any investor needs to exercise caution and do some thorough research on the basis of which they should make their BEFE or any other cryptos-related investment decisions. - To know more about BEFE, Visit <https://befetoken.com> Disclaimer: TheNewsCrypto does not endorse any content on this page. Shiba Inu (SHIB), Floki Inu (FLOKI), and Retik Finance (RETIK) are gaining traction and are poised to deliver substantial returns in the near future. Let us delve into why these three cryptocurrencies are expected to yield a 500% return on investment (ROI) in the next two weeks.

**Shiba Inu (SHIB)** Shiba Inu, often referred to as the "Dogecoin Killer," was launched in August 2020 as an experiment in decentralized community building. It quickly gained popularity due to its meme origins and its resemblance to Dogecoin. SHIB has since developed a robust and active community, with millions of followers and supporters across various social media platforms. Shiba Inu has consistently been a topic of conversation in the crypto community, largely due to its strong marketing and active social media presence. The coin's value is often driven by hype, making it susceptible to rapid price movements. Recently, there has been a resurgence in interest, fueled by mentions from influential figures and upcoming project developments. One of the significant catalysts for SHIB's potential rally is the impending launch of Shibarium, a Layer 2 solution that aims to improve the scalability and efficiency of the Shiba Inu ecosystem. Additionally, SHIB's entry into the metaverse with ShibaSwap and various NFT initiatives further enhances its utility and appeal. From a technical analysis perspective, SHIB has been forming bullish patterns, indicating a potential breakout. The combination of a strong community, significant developments, and favorable market conditions makes SHIB a prime candidate for a 500% ROI in the short term.

**Floki Inu (FLOKI)** Floki Inu, named after Elon Musk's dog Floki, is another meme coin that has captured the imagination of the crypto community. Unlike many other meme coins, Floki Inu aims to differentiate itself by focusing on utility and real-world applications. The project is driven by a strong community that calls itself the "Floki Vikings." Floki Inu has been actively pursuing strategic partnerships to expand its ecosystem. One notable collaboration is with Chainlink, which integrates Floki into its oracles, enhancing the token's utility in various DeFi applications. Additionally, Floki Inu is developing Valhalla, a play-to-earn NFT gaming metaverse, which is expected to drive significant user engagement and demand for the token. Floki Inu has shown impressive market performance, with periodic price surges driven by community-driven marketing campaigns and strategic announcements. Technically, FLOKI is displaying bullish signs, with increasing volume and positive momentum indicators. As the project continues to roll out its developments and partnerships, it is well-positioned for a substantial price increase. Given the project's focus on utility and its active community, Floki Inu has the potential to deliver a 500% ROI in the next two weeks, especially if the broader market sentiment remains positive.

**Retik Finance (RETIK)** Retik Finance is emerging as a significant player in the decentralized finance (DeFi) space. The project offers a comprehensive suite of DeFi products, including lending, borrowing, staking, and DeFi debit cards. Retik's innovative approach aims to bridge the gap between traditional finance and blockchain technology, providing users with seamless and secure financial solutions. Retik Finance has garnered substantial community support, which is evident from its successful fundraising efforts. The project raised over \$30 million in a short period, underscoring strong investor confidence. This financial backing has provided Retik with the resources needed to accelerate its development and expand its ecosystem. One of the key factors driving Retik Finance's potential is its strategic partnerships with other DeFi projects and platforms. These collaborations enhance the project's visibility and utility, driving user adoption. Additionally, Retik Finance has undergone a comprehensive audit by Certik, a leading blockchain security firm, which underscores the reliability and safety of its smart contracts. The DeFi market is poised for exponential growth, and Retik Finance is well-positioned to capitalize on this trend. With innovative products, strong community support, and strategic initiatives, Retik Finance is expected to see significant demand and value appreciation. Analysts predict that RETIK could achieve a 500% ROI in the next two weeks, driven

by ongoing developments and positive market sentiment. Furthermore, these three altcoins offer compelling opportunities for investors seeking high returns in a short period. Whether you are drawn to the meme coin appeal of Shiba Inu and Floki Inu or the innovative DeFi solutions of Retik Finance, these projects have the potential to deliver substantial gains. About Retik Finance Retik Finance (RETIK) is a cutting-edge decentralized finance (DeFi) project revolutionizing global transactions with its innovative suite of financial solutions. Introducing futuristic DeFi Debit Cards, a Smart Crypto Payment Gateway, AI-powered Peer-to-Peer (P2P) lending, and a Multi-Chain Non-Custodial Highly Secured DeFi Wallet. As the cryptocurrency landscape evolves, investors are keenly watching new developments across various tokens. BNB Chain's Airdrop Alliance Chapter 2 promises enticing rewards, and Shiba Inu (SHIB) is on the brink of a potential 20% surge if key resistance levels are broken. However, BlockDAG is making the most significant waves with its revamped dashboard, driving a \$28 million presale success. This innovative platform simplifies blockchain interactions, offering real-time data and comprehensive features that make it a standout investment. Among these tokens, BlockDAG emerges as the top pick for those seeking substantial returns and cutting-edge technology. BNB Chain Unveils Airdrop Alliance Chapter 2: Exciting Rewards Await BNB Chain has launched Chapter 2 of its Airdrop Alliance, offering users new opportunities and rewards. This phase is tied to the BNB Chain Fusion, a strategic transition to migrate functionalities from the BNB Beacon Chain to BNB Smart Chain (BSC). To qualify for the airdrop, users must stake at least 1 BNB on BSC or migrate tokens using the Stake Migration tool. Exciting events include the CARV Exclusive SOUL Drop with a 50,000,000 SOUL prize pool, RIDO's X Treasure Hunt for \$RIDO tokens, and the World of Dypians Entry Campaign with 100,000 WOD tokens up for grabs. Additional events like the BNB Chain Game Expedition and Cards Ahoy! game app events also offer unique rewards. Shiba Inu (SHIB) Could Surge 20%: Analysts Warn of Potential Risks Shiba Inu (SHIB) may see a 20% rise if it breaks through a key resistance level at \$0.00002444, according to crypto analyst Ali Martinez. Currently, SHIB faces crucial support levels, which will determine its next move. The cryptocurrency market recently saw a 5.56% increase in capitalization, with meme coins like SHIB, Pepe Coin (PEPE), and Dogecoin (DOGE) driving the surge. This increased interest is partly fueled by Keith "Roaring Kitty" Gill's return to the spotlight. SHIB is also forming a symmetrical triangle pattern, suggesting a significant price move could be imminent. This pattern, characterized by lower highs and higher lows, indicates potential volatility. SHIB is near the triangle's lower support level, a critical point for investors. A breakout above the upper resistance could lead to substantial gains, while a drop below support could continue the bearish trend. BlockDAG's Dashboard Revamp Drives \$28M Presale Surge BlockDAG's recent presale has skyrocketed, surpassing \$28 million, thanks to its revamped dashboard that has captivated investors. This innovative dashboard simplifies blockchain technology, making it accessible to both beginners and experts. It provides real-time insights and deep data analysis, crucial for informed investment decisions in the fast-moving crypto market. Key features include Hot News updates, a Current Rank display that fuels competition, and a Wallet feature for easy balance and transaction tracking. The Referral Screen is particularly noteworthy, enabling users to track referral link activity and bonuses, transforming referral sharing into an engaging and rewarding experience. These enhancements have significantly boosted BlockDAG's presale momentum, with the coin price now at \$0.008, a 700% increase from Batch 1. The user-friendly interface and comprehensive features make BlockDAG an attractive investment. As the platform continues to grow and innovate, it solidifies its position as the top crypto to invest in for 2024. For those looking to maximize their returns, BlockDAG offers a compelling opportunity. Final Thoughts While BNB Chain and Shiba Inu present interesting opportunities, BlockDAG stands out with its user-centric dashboard and impressive presale performance. The platform's ability to democratize blockchain technology and offer significant returns positions it as the premier choice for investors. With continuous innovation and strong community engagement, BlockDAG is set to lead the crypto market in 2024. For investors aiming to maximize their returns, BlockDAG offers an unparalleled opportunity, making it the best crypto investment among the top picks. Join BlockDAG Presale Now: - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. - The whale profits \$3.2M from SHIB tokens after 2.6 years of holding - The whale bought these SHIB tokens from Coinbase and DEXs at an average price of \$0.000008468. A significant Shiba Inu transaction has caught the crypto community's attention as a major investor, identified by the wallet address 0x541, moved all 197.99 billion SHIB tokens, worth approximately \$4.88 million, to Coinbase. This action follows six months of inactivity with the token, with the sale price at \$0.00002463. The whale initially acquired these SHIB tokens from Coinbase and decentralized exchanges at an average price of \$0.000008468, investing about \$1.68 million between October 2021 and September 2023. If the whale proceeds with selling the tokens at the current price, they stand to gain an estimated profit of \$3.2 million, representing a 191% increase after holding the tokens for 2.6 years. A whale just took a \$3.2M (x2) profit from \$SHIB after 2.6 years! "Spot On Chain (@spotonchain) May 17, 2024 The whale bought 199B \$SHIB (est. cost: \$1.68M) from #Coinbase and DEX between Oct 10, 2021, and Sep 11, 2023,

And then deposited all \$SHIB (now \$4.88M) to #Coinbase 3 hours ago, realizing an est. profit of \$3.2M! pic.twitter.com/rMKMf7Z13i In a previous transaction, this whale experienced a loss of approximately \$176,000. They had purchased 138.568 billion SHIB at an average price of \$0.000008385, mostly after the Shiba Inu price dropped following Vitalik Buterin's \$1 billion donation of Shiba Inu to India for COVID relief in May 2021. However, the whale sold these tokens at \$0.000007117 on September 26, 2021, resulting in a \$176,000 loss, just before the SHIB price hit an all-time high. Despite this recent large-volume transaction, SHIB's market value has demonstrated volatility, with a 2.88% decline over the past day after an 8% rally. At the time of writing, Shiba Inu traded at \$0.00002433 with a market cap of \$14.3 billion. However, it has shown a 3.5% increase over the past week. Is the Hype Around Meme Coins Cooling Off? Meme coins are notorious for their extreme volatility and the waves of FOMO they generate, particularly during bullish market phases, as retail investors seek high returns. This week, while most memecoins showed little movement, several leading tokens by market cap recorded substantial gains. For instance, FLOKI surged by 9.53% in a single day. Despite lagging behind some competitors, Shiba Inu and Dogecoin (DOGE) continue to dominate 70% of the memecoin market. Additionally, PEPE saw a 6.81% increase over the past 24 hours, recovering from a recent slump. The overall market turned green on Thursday, with Bitcoin reaching a new weekly high. Observers are keen to see if SHIB and DOGE will follow this upward trend.

- PEPE Coin marked a significant growth and hit a new ATH. - A whale made a profit of \$13.67M and still holds 1.26T Pepe coins. Frog-themed memecoin PEPE had remarkable growth this week and soared over 30%, hitting a new all-time high yesterday at \$0.00001128. It gained immense attention as the price surged almost by 109% in the past month and 901% in the past 6 months. Investors and analysts are looking confidently at the meme coin, which has now set high targets. Meme coins have been in a bearish trend for a long time, and fortunately, yesterday, Pepe made a good move with a price surge in double-digit gains. This unforeseen rise raises expectations for the coin's value in the coming days. Moreover, whales are making good returns out of it; a whale made \$13.67 million profit from PEPE in just three months and out of that, it spent around \$1.56 million to buy 1.40T Pepe. Around 14 hours ago, the whale sold 140.4B PEPE for 1.57M DAI at the new all-time high of PEPE. Despite the massive sale, the whale still holds 1.26T Pepe coins worth \$13.7 million. Since March, Pepe Coin has been struggling to surpass the resistance level of \$0.00000900. However, the coin's price has been on an uptrend since mid-April. At the time of writing, it is valued at \$0.00001103, an increase of 6.75% in a day. Pepe Coin has made a significant surge in trading volume as well, and that has developed investor interest and market engagement with the meme coin. Does the Re-entry Direct the Surge? Pepe's performance aligned with the return of Keith Gill, known as the "Roaring Kitty," which was dormant in the meme coin sector since June 2021 and re-entered on May 13, 2024. Furthermore, it ignited the meme coin market with the PEPE becoming one of the beneficiaries. The reappearance of Roaring Kitty likely led to the meme coin rally, with Solana-based GameStop memecoin (GME) surging over 350% and the AMC token witnessing a 900% increase. Other meme coins like Dogecoin (DOGE) and Shiba Inu (SHIB) also experienced gains, according to CoinGecko data. Highlighted crypto news today: El Salvador Mines \$29 Million in Bitcoin with Volcano Energy

As the cryptocurrency market continues to evolve, meme coins have emerged as a significant player, captivating the attention of investors and enthusiasts alike. Among these meme coins, Dogwifhat (WIF) has garnered considerable interest, prompting discussions about its potential as the top performer in the current bull cycle. However, market experts believe that alternative meme coins such as Hump (HUMP), Dogecoin, and Shiba Inu pose strong contenders. In this article, we delve into the analysis provided by market experts, exploring the factors that could determine the best meme coin in this bull cycle. Dogwifhat (WIF): A Brief Overview Dogwifhat, based on the Solana blockchain, has gained attention as a meme coin driven by community engagement and social media hype. Unlike traditional cryptocurrencies, meme coins like Dogwifhat primarily thrive on internet culture and community involvement rather than underlying technology or utility within a blockchain ecosystem. With its humorous branding and grassroots momentum, Dogwifhat has positioned itself as a speculative investment opportunity within the crypto space. Market Expert Opinion While Dogwifhat may have captured the interest of some investors, market experts offer varying opinions on whether it's the best meme coin of this bull cycle. Some argue that the susceptibility to market manipulation and lack of fundamental value beyond speculative trading could hinder its long-term viability. Additionally, the meme coin landscape is highly volatile, with trends shifting rapidly based on social media hype and market sentiment. Case Study: Dogwifhat Falls Short Despite its potential, Dogwifhat faces challenges that could impact its performance compared to other meme coins. For example, during periods of market volatility, the price of Dogwifhat may be subject to significant fluctuations due to its speculative nature and relatively low market capitalization. In contrast, meme coins with stronger community support and established use cases may offer more stability and long-term growth potential. Hump (HUMP): The Rising Star In contrast to Dogwifhat, Hump Token (HUMP) has emerged as a promising contender in the meme coin arena. Operating on the Solana blockchain, Hump Token distinguishes itself by eliminating transaction taxes, offering users a cost-effective and efficient trading experience. This innovative approach has garnered attention from investors seeking alternatives to traditional meme coins. Furthermore, Hump Token prioritizes community involvement and governance, empowering users to participate in decision-making processes. This commitment to decentralization aligns with the core principles of cryptocurrency and sets Hump Token apart from its peers. Dogecoin (DOGE): The Dark Horse No discussion on meme coins is complete without mentioning Dogecoin (DOGE), the original meme coin and a perennial favorite among crypto enthusiasts. Created as a lighthearted parody of Bitcoin, Dogecoin has evolved into a cultural phenomenon, propelled by its vibrant community and celebrity endorsements, notably from Tesla CEO Elon Musk. Despite its origins as a joke, Dogecoin boasts a loyal following and a track record of resilience in the face of market volatility. Its low transaction fees and fast transaction times make it an attractive option for microtransactions and charitable endeavors. While

Dogecoin may lack the technical sophistication of other cryptocurrencies, its enduring popularity cements its status as a cornerstone of the meme coin market. Shiba Inu (SHIB): The Established Competitor Shiba Inu is a formidable competitor in the meme coin landscape. Built on the Ethereum blockchain, Shiba Inu features a vibrant community and a wide array of projects within its ecosystem. From decentralized exchanges to gaming platforms, Shiba Inu offers diverse user opportunities to engage with its tokens. Moreover, Shiba Inu's recent popularity surge underscores its potential to rival Dogecoin as the premier meme coin. With a robust infrastructure and strong community support, Shiba Inu remains a top contender in the meme coin space. Conclusion While Dogwifhat presents a compelling investment opportunity for some, investors need to explore alternative meme coins and assess their potential within the current market landscape. With Hump Token, Dogecoin, and Shiba Inu emerging as noteworthy alternatives, investors have a diverse array of options to consider. Ultimately, conducting thorough research, evaluating risk factors, and staying informed about market trends are crucial steps in navigating the dynamic world of meme coin investments. In conclusion, while Dogwifhat may have its merits, investors must diversify their portfolios and consider alternative meme coins offering unique features and strong community support. As the cryptocurrency market evolves, staying vigilant and adaptable will be key to making informed investment decisions in this bullish cycle. Click here to Buy Hump Token (HUMP): - Website: <https://hump.io/> - Twitter: <https://x.com/Humptoken> - Telegram: <https://t.me/humptoken> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this article does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this article.

Making the appropriate decisions in cryptocurrency investing may be likened to navigating a maze. As meme currencies like Shiba Inu (SHIB) continue to soar in value and draw interest from investors throughout the globe, investors must pay attention to the recommendations of experienced analysts to identify potentially profitable chances. This piece delves into the perspectives of an analyst who correctly forecasted the SHIB surge in 2021 and examines why they believe that SHIB may not be the optimal investment for 2024 gains. We'll also look at their suggestion for Hump Token (HUMP), a competitor situated in Solana with a market capitalization of less than \$100,000,000. Shiba Inu's Past Success and Current Challenges Shiba Inu (SHIB) gained widespread attention in 2021, propelled by its association with the meme coin phenomenon and the broader surge in interest surrounding cryptocurrencies. Riding the coattails of the success of Dogecoin, SHIB experienced a meteoric rise in value, attracting a legion of investors eager to capitalize on the next big trend. However, as with many meme coins, the journey of SHIB has been marked by extreme volatility and uncertainty. Analyst Insights: Why SHIB May Not Be the Best Bet for 2024 Gains Despite its previous success, the analyst who accurately predicted SHIB's rally in 2021 views it as something other than the most promising investment for 2024. Several factors contribute to this assessment: - Market Saturation and Competition: The meme coin market has become increasingly saturated, with new coins emerging almost daily. While SHIB enjoyed a period of dominance, it now faces stiff competition from many newcomers. This heightened competition could dilute the market share of SHIB and diminish its long-term growth prospects. - Inherent Volatility: The history of the extreme price fluctuations of SHIB underscores its inherent volatility and unpredictability. While some investors may be drawn to the potential for rapid gains, the analyst warns that such volatility can also lead to significant losses. As the meme coin landscape evolves, the stability and sustainability of SHIB come into question. - Limited Utility and Use Cases: Unlike some other cryptocurrencies that offer tangible utility and real-world applications, the value of SHIB is primarily driven by speculative trading and market sentiment. SHIB may need robust utility and use cases to maintain long-term relevance and value. - Analyst Caution: The analyst emphasizes caution when considering SHIB as an investment option. Despite its moments in the limelight, the volatile nature and lack of fundamentals of SHIB value make it a risky venture for many investors. While some may be willing to tolerate the uncertainty of meme coins, others may prefer assets with more stable fundamentals and growth potential. The Appeal of Solana-Based Rival (HUMP) Amidst the uncertainty surrounding Shiba Inu, the analyst is shining a spotlight on Hump Token (HUMP) as a compelling alternative investment opportunity. Positioned as a Solana-based rival to Shiba Inu, HUMP distinguishes itself with a combination of innovative features, community engagement, and strong market potential. At the heart of the HUMP appeal lies its commitment to utility and community involvement. Unlike traditional meme coins that rely solely on hype and speculation, HUMP prioritizes real-world use cases and community governance. By empowering users to participate in decision-making processes, HUMP fosters a sense of ownership and inclusivity within its ecosystem. This emphasis on decentralization aligns with the core principles of cryptocurrency and sets HUMP apart from its peers. Another key advantage of HUMP is its elimination of transaction taxes, offering users a cost-effective and efficient trading experience. This departure from the norm addresses a common pain point among investors in meme coins and enhances the appeal of HUMP as a viable investment option. Market Performance and Growth Potential Despite its relative infancy, HUMP has demonstrated strong engagement and liquidity in the market. With a market capitalization of under \$100,000,000, HUMP presents an attractive opportunity for investors seeking exposure to promising digital assets with significant growth potential. The analyst's recommendation of HUMP is supported by its impressive market performance and growing recognition within the cryptocurrency community. As the infrastructure of Solana continues to evolve and mature, HUMP stands to benefit from its robust network capabilities and low transaction fees. This favorable environment positions HUMP for continued growth and expansion in the coming years. Conclusion: Rethinking Investment Strategies As investors reassess their investment strategies in light of evolving market dynamics, the recommendation to shift focus from Shiba Inu to Hump Token reflects a broader trend towards prioritizing utility, innovation, and community engagement in cryptocurrency investments. While Shiba Inu may have enjoyed its moment in the spotlight, the emergence of Solana-based alternatives like HUMP underscores the importance of diversification and

strategic foresight in navigating the volatile world of meme coins. Ultimately, the analyst's recommendation reminds investors to conduct thorough research, evaluate risk factors, and consider the long-term prospects of their investment decisions. By staying informed and remaining open to emerging opportunities, investors can position themselves for success in the cryptocurrency investment ecosystem. Click here to Buy Hump Token (HUMP): - Website: <https://hump.io/> - Twitter: <https://x.com/Humptoken> - Telegram: <https://t.me/humptoken> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this article does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. - Mark Cuban, a billionaire entrepreneur, has been quite critical of the SEC and its chair. - The billionaire proposed entrusting crypto regulation to the U.S CFTC. No one in the cryptocurrency world is taking the US SEC's regulatory actions regarding the industry's future lightly. The chairman of the SEC has been the target of criticism from billionaire Mark Cuban, who claims that the chair has failed miserably in his duty to safeguard investors against fraud. Mark Cuban, a billionaire entrepreneur, has been quite critical of the SEC and its chair, Gary Gensler. He has warned that the present regulatory tendencies would have repercussions in the next election. Failure to deal with the issues of crypto-savvy voters, Cuban said, might affect election results, especially among younger and more independent groups. Entrusting Crypto Regulation to CFTC while criticizing regulatory moves that impede genuine crypto businesses are possibly resulting in company closures and entrepreneurial setbacks. Cuban accused Gensler of neglecting to safeguard investors against fraud. Moreover, Cuban has urged lawmakers to pass bills that would create transparent, crypto-specific regulatory frameworks, and he has asked Congress to act. He proposed entrusting cryptocurrency regulation to the U.S CFTC for efficient supervision and stressed the need for regulatory clarity. The statement from Cuban is a timely reminder of the increasing relevance of crypto-related problems and their potential influence on political landscapes, especially as elections are around the corner. Gary Gensler and the Biden administration have been on the sidelines regarding cryptocurrency legislation. Since the SEC lost the Debt Box case, many in the cryptocurrency community feel that the agency is overreacting to the industry and limiting its ability to innovate. Mark Cuban has received support from other members of the cryptocurrency community as well. The Biden administration was also the target of criticism from Dogecoin co-founder Billy Markus. Highlighted Crypto News Today:

Not many things draw investors' attention, like a big move in a crypto whale's portfolio. Keeping a close watch on market developments and new prospects, these influential individuals significantly influence how digital assets develop. An anonymous crypto whale recently caused a stir in the market by selling their holdings in the well-known meme currencies Pepe Coin (PEPE) and Shiba Inu (SHIB) in favour of Hump (HUMP), a token with much less popularity. Crypto fans are intrigued and speculating about this strategic shift, which has prompted a closer look at the elements that led to this choice. The Crypto Whale's Portfolio Maneuver With a staggering \$20,000,000 portfolio predominantly consisting of meme coins, the crypto whale's decision to divest from Pepe Coin and Shiba Inu in favour of Hump has raised eyebrows within the cryptocurrency community. Pepe Coin (PEPE), known for its association with internet memes and digital art, and Shiba Inu (SHIB), inspired by the famous dog breed and often dubbed the "Dogecoin Killer," were once darlings of the meme coin market. However, the crypto whale's strategic reallocation suggests a shifting sentiment and a calculated bet on the potential of a Solana-based token with a market capitalization of under \$100,000,000. Reasons Behind the Dumping of Pepe Coin and Shiba Inu The decision to liquidate positions in Pepe Coin and Shiba Inu can be attributed to several factors, reflecting the evolving landscape of the cryptocurrency market:

- Market Saturation and Declining Sentiment: Despite their initial hype and popularity, Pepe Coin and Shiba Inu have faced challenges maintaining investor interest and sustaining long-term growth. With the proliferation of meme coins and the emergence of new projects vying for attention, these tokens have struggled to differentiate themselves and capture sustained momentum. The crypto whale's decision to exit positions in Pepe Coin and Shiba Inu may reflect a growing skepticism regarding their ability to deliver meaningful returns in the face of market saturation and waning sentiment.
- Lack of Utility and Use Cases: While meme coins often garner attention for their catchy branding and viral appeal, their lack of inherent utility and tangible use cases can limit their long-term viability as investment assets. Despite their enthusiastic communities and loyal followers, Pepe Coin and Shiba Inu have struggled to demonstrate significant utility beyond speculative trading. In contrast, the crypto whale may view the emphasis of Hump on utility and real-world applications, particularly within the decentralized finance (DeFi) ecosystem, as a more compelling investment opportunity.
- Network Scalability and Efficiency: As blockchain scalability becomes an increasingly pressing concern, investors gravitate towards projects offering robust infrastructure and efficient transaction processing. Pepe Coin and Shiba Inu, built on the Ethereum network, have faced challenges related to network congestion and high gas fees, impacting user experience and adoption. In contrast, the deployment of Hump on the Solana blockchain positions it as a scalable and efficient alternative, offering faster transaction speeds and lower fees. The crypto whale's decision to transition towards a Solana-based token may reflect a broader trend toward blockchain platforms prioritizing scalability and usability.

The Rise of Hump (HUMP): A Solana-Based Gem Amidst the backdrop of the whale's divestment from PEPE and SHIB, Hump (HUMP) emerges as a compelling alternative, attracting the attention of astute investors seeking innovative projects with solid fundamentals. Positioned as a Solana-based meme coin, HUMP distinguishes itself from its peers through its commitment to utility, community governance, and technological innovation. The decision of Hump to leverage the Solana blockchain underscores its focus on scalability, efficiency, and low transaction costs, addressing common pain points associated with meme coins on other networks. By harnessing the robust infrastructure of Solana, Hump offers investors a seamless trading experience and positions itself for

long-term growth and adoption within the decentralized finance (DeFi) ecosystem. Moreover, the emphasis of Hump on community involvement and governance sets it apart from traditional meme coins, fostering a sense of ownership and inclusivity among its stakeholders. Through mechanisms such as decentralized decision-making and transparent communication, Hump empowers its community to shape the project's direction and contribute to its success, creating a vibrant ecosystem of passionate supporters and contributors. The Potential of Hump: A Hidden Gem in the Meme Coin Market Despite its relatively modest market cap of under \$100,000,000, Hump embodies the spirit of innovation and resilience that defines the meme coin landscape. With its unique blend of technological sophistication, community engagement, and market potential, Hump has garnered attention from investors seeking high-growth opportunities in the cryptocurrency market. The whale's decision to allocate a portion of their portfolio to Hump signals confidence in the project's vision and potential for long-term success. By strategically investing in Hump at an early stage, the whale positions themselves to reap the rewards of its future growth and adoption while also contributing to the project's liquidity and ecosystem development. As Hump continues to gain momentum and recognition within the crypto community, it remains poised to challenge the status quo and redefine the narrative surrounding meme coins. With its innovative features, strong community support, and the robust infrastructure of Solana as a foundation, Hump represents a compelling investment opportunity for those seeking exposure to the burgeoning meme coin market. Conclusion The recent move by a crypto whale to dump Pepe Coin (PEPE) and Shiba Inu (SHIB) in favour of Hump (HUMP) highlights the dynamic nature of the cryptocurrency market and the strategic decisions made by influential investors. While the specific motivations behind the whale's actions remain speculative, factors such as market trends, risk management, and the appeal of innovative projects like Hump likely influenced the decision. As Hump continues to gain traction and establish itself within the meme coin landscape, its potential for growth and market acceptance may attract further attention from investors seeking opportunities in the burgeoning cryptocurrency sector. - Bitcoin surges 15% from recent lows of \$56,715 to surpass \$65,350. - The global crypto market has climbed over to \$2.37 trillion. - Altcoins like TON, SOL, and AVAX have shown impressive gains in the last 24 hours. The global crypto markets have witnessed a notable rebound following a jumble period, with Bitcoin spearheading the recovery by surging over 15.2% from its recent lows experienced at the beginning of May (\$56,715). Climbing above \$65,350 for the first time since April 24, Bitcoin's resurgence has infused renewed optimism into the broader cryptocurrency landscape. Notably, altcoins have showcased remarkable rallies, with assets like TON, SOL, and AVAX standing out with imposing gains over the past day. Altcoins Showing Huge Gains Despite enduring an 11.79% correction over the previous week, the global crypto market has bounced back, reclaiming a significant portion of its recent decline. This rebound has not only reaffirmed a crucial long-term support level but has also formed a bullish weekly candlestick, hinting at a potential upward trajectory. The leading altcoins have notably outperformed Bitcoin, with assets like Solana (SOL), Toncoin (TON), and Avalanche (AVAX) posting gains of 6.9%, 8%, and 7%, respectively. Additionally, the largest altcoin, Ethereum (ETH), has surged by 3% to surpass \$3,200, while Binance Coin (BNB) has climbed to \$600 following a similar increase. Other prominent altcoins, including XRP, Cardano (ADA), Dogecoin (DOGE), Shiba Inu (SHIB), and Bitcoin Cash (BCH), have also seen positive movements. Furthermore, lesser-trend altcoins such as Chainlink (LINK), Polygon (MATIC), Near Protocol (NEAR), Hedera (HBAR), and Render (RNDR), among others, have recorded even more impressive gains. While the recent bounce has been promising, the market still has ground to cover to reach its yearly and all-time highs, requiring a further increase of approximately 16.81%. The question remains whether this rebound signals the start of a sustained upward trend aimed at achieving these milestones. However, the overall crypto market cap has surged to \$2.42 trillion, marking an increase of nearly \$100 billion in just one day.

As the crypto market expects a strong comeback, investors are looking out for the most promising but slightly lesser-known projects. This revitalised interest extends to the popular altcoins and meme coins as well because of their growth potential. BEFE, a meme coin, has impressed one and all in recent times by its incredible performance. So, let us study about the BEFE coin in detail and check out what the meme coin has to offer to its investors. Why BEFE is Different? What sets BEFE apart from the crowd is its unique combination of community involvement and practical applications on the blockchain. More than any other method, its decentralized exchange model and community-driven approach appeal to investors who want to be able to influence how much a project grows over time directly. This shows that it could go very far indeed. Key Benefits of BEFE Here are some reasons why people might consider this meme coin as being better than others: Equitable Launch: No presale was held for BEFE so that there wouldn't be any bias towards specific investors. Instead, they wanted everyone who uses or invests in them to have ownership rights over those tokens. No Taxes Involved: Hidden charges or taxes are not part of the whole process with BEFE. Amazing Expansion: Although undergoing a correction throughout all markets at present moment, yet during past occasions has shown upto 550% gains surpassing even bigger cryptocurrencies such as Dogecoin and Shiba Inu. BEFE's objective and reach The aim of BEFE is to compete favorably with established players in the meme currency industry. By being present on Ethereum, Binance Smart Chain, Solana as well as listed on Pancakeswap, Uniswap, Tapbit and Gate.io among others where it is available for trading, the project ensures it is accessible widely. BEFE is Adding Value through NFTs and DeFi Within its strategic roadmap; BEFE plans for NFTs integration alongside DeFi applications which shows that they are interested in creating value that lasts longer than just a momentary buzz in media circles. This commitment places them

rightly among serious contenders within the meme coin space owing to their stellar growth rates and scalability achievements. Buying BEFE is easy – go to any supported exchange (DEX), enter token address then swap ETH or BNB across your preferred network. Additionally, holders may stake BRISE tokens so as earn themselves some more freebies i.e., BEFE rewards. Furthermore, both BSC & SOL versions of BEFE tokenomics have been fine-tuned having dedicated allocations towards marketing activities; development purposes as well liquidity provision. Conclusion Having large numbers of active traders combined with ambitious expansion strategies makes this digital asset quite interesting from an investment standpoint. However, deep research and a strategic approach are crucial to successfully incorporate BEFE into a portfolio with the potential for substantial returns. To know more about BEFE, Visit <https://befetoken.com>

- Coinbase is facing allegations of securities law violations from individual complainants. - The exchange is alleged by the complainants to have willfully disregarded securities laws. Another class action complaint has been filed against cryptocurrency exchange Coinbase, claiming that the exchange deceived investors into buying securities. Coinbase is facing allegations of securities law violations from individual complainants who have filed a formal complaint. The complaint also claims that SOL, MATIC, NEAR, MANA, ALGO, UNI, XTZ, and XLM are securities. A class action lawsuit has been filed against Coinbase Global and its CEO, Brian Armstrong, by five plaintiffs. Securities Claim Coinbase is alleged by the complainants to have willfully and persistently disregarded securities laws of the states of California and Florida. According to their claims, Coinbase acknowledged its status as a “Securities Broker” in its user agreement, which means that the exchange sells digital assets as securities alongside investment contracts and other products. As a securities broker/dealer, the complaint also targeted Coinbase prime brokerage. Also, by promising bigger returns, Coinbase Earn accounts broke securities laws, according to their claims. In their demand for a jury trial, the plaintiffs are seeking injunctive relief, statutory damages under state law, and full recession. This case is very much like the SEC complaint and other class actions. The “investment contract” concept was the subject of Coinbase’s interlocutory appeal, which further aggravated the company’s legal battle with the United States SEC. Since the SEC’s view of investment contracts conflicts with decisions made by the Second Circuit and the Supreme Court, Coinbase CLO Paul Grewal said that the exchange has a better chance of winning. The US Court of Appeals for the Second Circuit provided Coinbase with significant clarification that secondary transactions of crypto are not securities due to the lack of investment contracts, prompting the company to take these actions. Highlighted Crypto News Today: Tesla Now Accepting Dogecoin for Certain Items, DOGE Price Rallies

- Compared to 23% of pension plans, 80% of high-net-worth people have a favorable opinion. - Pension funds usually follow conservative tactics to ensure life savings of retired individuals. The most recent research from Fidelity Digital Assets indicates that pension funds are becoming more open to the prospect of pursuing crypto asset investment exposure. At a London event, Fidelity Digital Assets VP Manuel Nordeste saw that investment committees of defined benefit plans and other pension funds are in the initial phases of talking about crypto assets. Cryptocurrency is attracting the attention of small-scale, knowledgeable investors, such family offices and high-net-worth individuals, according to Nordeste. Conservative Approach From its 2018 inception, Fidelity Digital Assets has attracted attention from family offices, specialist asset managers, hedge funds, and eventually bigger blue-chip hedge funds, as he reminisced on the company’s early days. He stated: “Now, we’re starting to have conversations with the larger, real money institutional investor types, and we’re getting some of those clients, as well as corporates and so on.” Compared to 23% of pension plans, 80% of high-net-worth people have a favorable opinion of crypto, according to a market study by Fidelity Digital Assets. In addition, over half of those people have put money into digital assets, but a pitiful seven percent of pension funds have done the same. Because they are either not subject to as many strict investment requirements or have more flexible and easier to understand requirements, smaller enterprises, as Nordeste noted, tend to be more nimble and willing to take risks. Pension programs, on the other hand, are very time-consuming and market-specific. In order to ensure that the life savings of retirees in the future are protected, pension funds usually follow conservative tactics. Concerns about the hazards of innovative and very volatile assets, which are now part of an unclear regulatory setting have led to this cautious attitude. Highlighted Crypto News Today:

- Ethereum may be classified as a security by the SEC as per Michael Saylor. - Instead of flat-out rejecting these petitions, an analyst thinks the SEC will delay their approval. The U.S Securities and Exchange Commission’s (SEC) judgment on Ethereum ETFs is imminent, and professionals in the field are becoming more skeptical. Crypto analyst Michaël van de Poppe has voiced his skepticism on the May approval of Ethereum Spot ETFs, taking the lead in the discussion. Michael Saylor, CEO of MicroStrategy, shared his negative outlook on the future of Ethereum ETFs and shares his opinions with others in the industry. Application Delay Anticipated This struggle is being led by three of the seven candidates: Hashdex Nasdaq, Ark 21 Shares, and VanEck. Given the SEC’s ongoing investigation into the underlying securities concerns, they are up against a daunting task. Instead of flat-out rejecting these petitions, Van de Poppe thinks the SEC will delay their approval. The emphasis may now be on possible approvals later in the year, depending on this decision. Michael Saylor predicts that the SEC will take a harder line on cryptocurrencies, especially Ethereum. According to his forecast, Ethereum may be classified as a security by the SEC by the summer of this year. Applications for the Ethereum Spot ETF, both existing and prospective, may find this development problematic. Approval procedures for these ETFs may encounter substantial legal hurdles if Ethereum is classified as a security. Major cryptocurrencies such as Ethereum, BNB, XRP, Solana (SOL), and Cardano (ADA) might all be impacted by this categorization. More comprehensive regulation may result from the far-reaching effects on the cryptocurrency sector. Companies like BlackRock, who is also vying for an ETF, may experience delays or rejections in the approval process. Highlighted Crypto News Today: Dogecoin Outperforms Major

## Altcoins Amid Surging Whale Activity and Wallet Growth

- The Commission has recently said that it needs further time to examine the application. - Carbon Credit Futures ETF and 7RCC Spot Bitcoin have chosen Gemini as their custodian. A further two months of waiting have been imposed upon 7RCC Global after almost five months of waiting for the US Securities and Exchange Commission (SEC) to render a verdict on its spot Bitcoin ETF application centering on carbon credits. In order to decide on whether to adopt, reject, or initiate proceedings for the 7RCC Spot Bitcoin and Carbon Credit Futures ETF proposal, the Commission has recently said that it needs further time to examine the proposed rule change. The SEC has announced in a new filing that the decision date has been rescheduled to June 24, 2024. All Eyes on SEC An RCC filing brought attention to the fact that the first-ever environmental-focused offering would consist of 80% Bitcoin and 20% carbon credit futures. In order to establish, run, and expand the proposed ETF, Tidal Financial Group collaborated with 7RCC to act as the platform. Carbon Credit Futures ETF and 7RCC Spot Bitcoin have chosen Gemini as their custodian. The application for the spot bitcoin and carbon credit futures ETF was submitted on December 18, 2023. Eleven further spot Bitcoin ETF applications were approved by the U.S. SEC a month later, including those from BlackRock, Fidelity, Grayscale, and others. The SEC has a long history of dragging its feet when it comes to registrations for spot crypto ETFs. Leading investment asset management companies are now holding their breath, hoping that the securities regulator will make a public announcement about their Ethereum ETF applications. Although market watchers are skeptical, the crucial Ethereum ETF decision for ARK 21Shares is anticipated this month. Highlighted Crypto News Today: Dogecoin Outperforms Major Altcoins Amid Surging Whale Activity and Wallet Growth

- Customers get a new option to purchase and trade crypto that is completely frictionless. - At least 436 million PayPal customers will be able to utilize this service. United States users may now purchase and trade more than a hundred different cryptocurrencies, including Bitcoin and Ethereum, using PayPal transactions via wallet, bank transfers, or debit cards, thanks to the new collaboration pact between MoonPay and PayPal. A variety of digital assets, including Bitcoin, Ethereum, Litecoin, PayPal USD, and Bitcoin Cash, were formerly available for purchase via PayPal. Solana (SOL), Tether (USDT), Dogecoin (DOGE), Cardano (ADA), Polygon (MATIC), and many more are now available to them. New Option to Purchase and Trade Crypto As stated in MoonPay's X post, this partnership establishes the crypto infrastructure business as the pioneering on- and off-ramp provider to include PayPal. MoonPay claims that by doing this, it is giving PayPal customers a new option to purchase and trade cryptocurrencies that is completely frictionless. At least 436 million PayPal customers will be able to utilize this service to convert fiat currency to cryptocurrency via their wallets, bank transfers, or debit cards linked to their PayPal account, says MoonPay. The new service, according to MoonPay co-founder and CEO Ivan Soto-Wright, is better than what's available on other platforms. The MoonPay CEO highlighted: "Many traditional banks do not allow users to purchase crypto on debit/credit cards, but when users pay with PayPal, using that same card, we have already seen a dramatic increase in the success rate of transactions." He uncovered exchanges that limit their clients' access to a small number of digital assets, such as a single Ethereum or the recently established PayPal USD stablecoin. As a whole, Soto-Wright thinks the PayPal connection has a big effect on the conversion rate. Highlighted Crypto News Today: European Banking Giant BNP Paribas Invests in Blackrock Bitcoin ETF

The altcoin segment has banked ~\$1 trillion in Market Cap. It houses a trading volume of over \$71 billion at the time of articulating this piece. There are almost 37,623 altcoins in the market, making it difficult to choose the one that best fits current conditions. Therefore, a short list of top 10 altcoins has been crafted to offer better exposure to the crypto market. Needless to say, one must still conduct research before fund allocation. MAGA VP The newly launched token is backed by the Market Cap of around \$6 million. It remains one of the top choices in the altcoin segment because of the 98% surge in the token value in the last 30 days. Also known as MVP, the token is currently trading at \$0.1137, with the possibility of testing the resistance at \$0.38 by the end of this month and forecasted to touch \$4 level by the US elections. The community takes inspiration from the tokenomics drawn by MAGA VP. It has assigned 1% of the Buy/Sell tax for TRUMP token rewards, 0.25% added to MVP LP and burn and 0.25% is allocated to the MAGA TRUMP LP to bolster liquidity for MAGA TRUMP transactions. DOGE The dog-themed meme coin has been down by 3.63% in the last 24 hours and is trading at \$0.1261. It sports a Market Cap of ~\$18.18 billion. Dogecoin ranks 8th on the crypto list and first on the meme coin list in terms of Market Cap. It aims to surpass the \$0.9 milestone by the end of this year. ADA Cardano has experienced a surge of ~1% in the last 24 hours after the FED interest rate announcement. What makes ADA one of the top candidates in altcoins is the potential to carry forward the trend of green trade. The ecosystem is currently looking forward to launching Cardano Chang Upgrade in the second quarter of 2024. ETH The list would indeed be incomplete without mentioning Ether, a token that holds almost 33.5% of the market share in the altcoin segment. Conversations around Ether ETF may have taken a back seat, but that has not stopped Ethereum from testing the resistance at \$3,100. It is likely to achieve the \$5k mark by the end of 2024. SOL Solana Spot ETF has made it to several headlines since SOLwealth pitched the idea of launching the product in North America. That has placed SOL in a better position, set to accelerate its price rise from \$130 to \$280 by the end of this year. BNB Binance Coin has seen one of the best jumpers in token value during 2024. It is up by 68.7%, trading at \$547.7. It is likely to make it to \$850 by the end of this year. SHIB The Shiba Inu community aims to dethrone DOGE in terms of market cap. There is a difference of ~\$6 billion, with the community believing it should be bridged in the next 2-3 years. SHIB is currently listed at \$0.0000218. AVAX Avalanche rarely makes it to the headlines. The last that was heard was about the Stripe integration. That has set the stage for a broader reach. Thereby helping the current token value of \$32.68 to gain a better upward trajectory. TRX Currently, at \$0.1226,

Tron's native crypto is likely to sustain the margin for the next 30 days. While this does signal a hesitation in investing, it also hints at the potential to hold on to the risk level and uncertainty. DOT The Runtime Upgrade by Polkadot caused a halt on the network for nearly an hour. The mainnet launch, however, has done little to harm the token value as it is still experiencing a green trade at \$6.89, up by 6.22% in the last 24 hours. That showcases the confidence of the community and traders in the ecosystem. Disclaimer: TheNewsCrypto does not endorse any content on this page. The cryptocurrency landscape is witnessing a remarkable shift as Option2Trade (O2T) captures the market's focus with its innovative "Black Account" trading platform, significantly outpacing traditional players like Solana (SOL) in terms of investor interest and technological advancement. Option2Trade (O2T) Introduces "Black Account" Option2Trade (O2T) has unveiled its "Black Account," a premium feature designed to cater to the crème de la crème of the crypto trading community. This elite account option offers exclusive benefits such as copy trading incentives, where novice traders can mirror the moves of seasoned pros, enhancing their trading strategies while contributing to a dynamic trading environment. Solana (SOL) Faces Market Challenges While Option2Trade (O2T) is on the rise, Solana (SOL) has been grappling with a significant downturn, with its value decreasing by 22.55% over the past week. This downturn highlights the increasing competition in the blockchain space and underscores the challenges that even well-established platforms like Solana (SOL) face amidst rapidly evolving market dynamics. The "Black Account" Magnetizes Elite Investors The "Black Account" by Option2Trade (O2T) is particularly appealing to the affluent segments of the Shiba Inu (SHIB) and Dogecoin (DOGE) communities. Its allure lies in its promise of high returns and exclusive access to advanced trading tools and a community of influential traders. This account has become a status symbol among investors who seek to leverage community insights for personal gain, offering a robust blend of technology and personalized investment strategy. Advanced Features of the "Black Account" Beyond the basic trading functionalities, the "Black Account" provides advanced analytics, premium social trading features, and access to bespoke investment strategies, all within a community-focused framework. This holistic approach not only enhances the trading experience but also fosters significant learning and growth among its members. Market Response and Implications The introduction of the "Black Account" has sent ripples through the cryptocurrency markets, with Option2Trade (O2T) seeing a surge in its presale phase, now nearing a remarkable \$4.8 million raise. This enthusiastic market response is a testament to the demand for more sophisticated and integrated trading solutions that cater to both novice and experienced investors. Solana (SOL)'s Path Forward As Option2Trade (O2T) continues to gain momentum, Solana (SOL) is tasked with reassessing its strategy to maintain relevance in a market that increasingly favors innovation and user-centric features. Solana (SOL) must navigate this complex environment carefully to regain its footing and appeal to a broader investor base. Conclusion: A New Era for Crypto Trading The launch of the "Black Account" by Option2Trade (O2T) represents a significant milestone in the evolution of crypto trading platforms. It not only caters to the elite investor but also sets a new standard for what a comprehensive trading solution should offer. As Solana (SOL) and other cryptocurrencies work to match this new benchmark, the entire sector may shift towards more sophisticated, community-driven trading environments, heralding a new era in the cryptocurrency space. The cryptocurrency market has always been a realm of innovation, speculation, and sometimes, unpredictability. In recent years, meme coins have emerged as a fascinating phenomenon within this space, often characterized by their viral nature and community-driven hype. One such token, \$HUMP, has been gaining traction, particularly among investors seeking the next big opportunity in the meme coin landscape. With its foundation built on the Solana blockchain and a market cap under \$200,000,000, \$HUMP has captured the attention of both seasoned analysts and retail traders alike. In this article, we delve into why experts believe that \$HUMP is poised to lead the 2024 meme coin season, drawing parallels to the meteoric rise of Shiba Inu (SHIB) during the last bull run. Understanding \$HUMP: More Than Just a Meme Coin At first glance, \$HUMP might seem like just another meme coin riding the coattails of the Dogecoin success. However, a closer examination reveals a project with ambitious goals and innovative features. Launched on the Solana network, \$HUMP distinguishes itself by eliminating transaction taxes, offering users a more cost-effective and efficient trading experience. This departure from the norm is a bold move, addressing a common pain point among investors in meme coins. Moreover, the \$HUMP development team has placed a strong emphasis on community involvement and governance. By empowering users to participate in decision-making processes, \$HUMP aims to foster a sense of ownership and inclusivity within its ecosystem. This commitment to decentralization aligns with the core principles of cryptocurrency and distinguishes \$HUMP from its peers. Expert Analysis: Drawing Parallels to Shiba Inu (SHIB) Rally The expert who predicted the rally of Shiba Inu (SHIB) during the last bull run has turned their attention to \$HUMP, seeing similarities in its trajectory. Shiba Inu, a meme coin initially dismissed by many as a Dogecoin knockoff, defied expectations and experienced an unprecedented surge in value, making early investors significant returns. Now, this same expert believes that \$HUMP possesses the key ingredients to replicate the success of Shiba Inu, albeit on the Solana blockchain. With a market cap under \$200,000,000, \$HUMP has room for exponential growth, especially considering the rising popularity of Solana-based projects and the broader adoption of meme coins within the cryptocurrency ecosystem. The HUMP Advantage: More Than Just a Meme What sets

\$HUMP apart from its meme coin peers is its commitment to utility and community involvement. While other meme coins may fade into obscurity as internet trends come and go, \$HUMP aims to establish itself as a staple in the decentralized financial (DeFi) ecosystem. By prioritizing community governance and showcasing real-world use cases, \$HUMP challenges the notion that meme coins are mere internet novelties, positioning itself as a serious contender in the cryptocurrency market.

### Navigating the Hump Phenomenon: Tips for Investors

For those considering investing in Hump or already part of its growing community, here are some tips to navigate this exciting phenomenon:

- **Conduct Thorough Research:** Before investing in any cryptocurrency, it's essential to understand the project's fundamentals, goals, and potential risks. Take the time to research Hump's whitepaper, team members, and community sentiment to make informed decisions.
- **Stay Informed:** Cryptocurrency markets can be highly volatile and subject to rapid changes. Stay updated on news and developments related to Hump and the broader crypto space to adjust your investment strategy accordingly.
- **Diversify Your Portfolio:** While Hump may present an enticing investment opportunity, it's essential to diversify your portfolio to mitigate risk. Consider allocating a portion of your investment capital to a range of assets, including established cryptocurrencies and traditional investments.
- **Monitor Market Trends:** Keep an eye on market trends and investor sentiment surrounding Hump to identify potential entry and exit points. Technical analysis tools can help you assess price movements and make informed trading decisions.
- **Engage with the Community:** Join the official channels of Hump, such as social media groups and community forums, to connect with fellow investors and stay updated on project developments. Engaging with the community can provide valuable insights and support your investment journey.

### Conclusion: Betting on HUMP as the Leader of the 2024 Meme Coin Season

Identifying the next big winner can be a daunting task. However, for those willing to take a calculated risk, HUMP represents an enticing opportunity. With its innovative features, passionate community, and strategic positioning on the Solana network, HUMP has the potential to lead the 2024 meme coin season and beyond. As investors look for the next Shiba Inu or Dogecoin, HUMP stands out as a project with the vision, technology, and community support to achieve lasting success. While there are no guarantees in the world of cryptocurrency, betting on HUMP could prove to be a lucrative decision for those seeking exposure to the meme coin market. - About 99,014 traders have been liquidated, with a total of \$286.26 million being recorded.

- The precise amount of liquidation on Bitcoin for the day was \$69.2 million. The market has seen massive liquidation as the values of cryptocurrencies, especially Bitcoin, have fallen precipitously in the last day. The liquidation of some of these digital assets exceeded \$286 million in leveraged crypto positions. In the last 24 hours, about 99,014 traders have been liquidated, with a total of \$286.26 million being recorded, according to on-chain statistics from CoinGlass. The precise amount of liquidation on Bitcoin for the day was \$69.2 million, with long transactions totaling \$44.92 million and short trades amounting to \$22.29 million. At around the same period, Ethereum had a higher rate of liquidation than Bitcoin. There was a \$91.73 million liquidation on ETH. Dogecoin (DOGE), Solana (SOL), and other digital assets reported a combined liquidation of \$40.20 million. There were a few hundred dollar liquidations for other cryptocurrencies. Negative Investor Sentiment Several prominent exchanges, such as Binance, OKX, ByBit, Huobi, and Bitfinex, were affected by the large liquidation. As the liquidation erases any gains that were made earlier, traders have gone into panic mode due to the frightening sell-off and the market outlook. Bitcoin has fallen 4.69 percent in the previous day, and is now trading at \$60,382 as per data from CoinMarketCap. A number of important technical indicators have shown a shifting technical structure, raising the prospect of falls below \$60,000 or even lower. Some are wondering whether the underlying cryptocurrency's price decline is related to the spot Bitcoin ETF excitement that began a few months before the halving. Even the introduction of a spot Bitcoin ETF to the Hong Kong market failed to appease buyers. The first day's trade volume was lower than anticipated. Highlighted Crypto News Today: Hong Kong's New Bitcoin and Ether ETFs Hit \$11.2M Volume on First Day

Some stories capture the imagination and inspire the masses in cryptocurrency investment. One such narrative is the tale of an investor who turned \$10,000 into a staggering \$1,000,000 with Shiba Inu (SHIB), a feat that seemed improbable to many but serves as a testament to the boundless potential of this nascent asset class. Now, this very investor has stepped into the limelight once again, revealing their next big play: HUMP, a Solana-based meme coin priced below \$0.05. HUMP has emerged as a disruptive force within the meme community, with its meteoric rise stunning observers and attracting attention from all corners of the cryptocurrency world.

### \$HUMP's Inception: From Concept to Reality

HUMP's journey began with a vision—a vision to create a meme coin that not only captured the imagination of investors but also pushed the boundaries of what was possible within the cryptocurrency space. Leveraging the robust infrastructure of the Solana blockchain, the creators of HUMP set out to build a token that would not only be fast and efficient but also scalable enough to support widespread adoption. Drawing inspiration from the success of meme coins like Dogecoin and Shiba Inu, HUMP sought to carve out its own niche within the meme coin universe. With a focus on community engagement and decentralized governance, HUMP aimed to empower its users and foster a sense of belonging among its growing legion of supporters. The Surge of \$HUMP: An Explosive Trajectory In just a week since its launch, HUMP has defied expectations by skyrocketing an astonishing 9800%. Such unprecedented growth has catapulted it into the spotlight, as investors scramble to get in on the action and capitalise on its explosive potential. As of the latest data, HUMP is trading at a support zone ranging from \$0.01802 to \$0.01204, indicating a strong foundation upon which further growth can be built. Technical analysis suggests that HUMP has found solid support in this region, with its daily candlestick forming a bullish pin bar as it rejects lower prices and surges upwards. Moreover, HUMP has recently been listed on popular cryptocurrency tracking platforms such as CoinMarketCap and CoinGecko, signalling its growing prominence within the broader digital asset ecosystem. With listings on centralised

exchanges (CEX) imminent, HUMP is poised to reach an even wider audience, attracting new investors and cementing its position as a formidable player in the meme coin space. The Solana Advantage: Powering HUMP's Success But what sets HUMP apart from the myriad of meme coins flooding the market? The answer lies in its foundation as a Solana-based token, leveraging the robust infrastructure and scalability of the Solana blockchain to deliver unparalleled speed and efficiency. HUMP isn't just another meme token—it's a beacon of progress, embodying the spirit of innovation and community empowerment. By harnessing the power of Solana, HUMP is able to process transactions at lightning speed and scale to accommodate a growing user base. This technological advantage not only enhances the user experience but also sets HUMP apart from its competitors, positioning it for long-term success in the increasingly crowded meme coin landscape. The Road Ahead: Charting HUMP's Course to Success With a total supply of 6,900,000,000 tokens, HUMP offers investors ample opportunity to participate in its journey towards mass adoption and mainstream recognition. Its affordable price point and exponential growth potential make it an attractive proposition for both seasoned traders and newcomers alike, democratizing access to the world of decentralized finance and reshaping the future of digital assets. As HUMP continues to gain momentum and solidify its position within the meme coin universe, the road ahead is filled with promise and potential. With upcoming listings on centralised exchanges and a growing ecosystem of decentralized applications (dApps) built on the Solana blockchain, HUMP is poised to become a dominant force in the cryptocurrency landscape for years to come. Conclusion \$HUMP stands as a testament to the transformative power of cryptocurrency, transcending its status as a mere meme coin to emerge as a symbol of innovation and possibility. As the investor who turned \$10,000 into \$1,000,000 with Shiba Inu (SHIB) sets their sights on this Solana-based marvel, the stage is set for HUMP to redefine the boundaries of success and usher in a new era of prosperity in the meme coin universe. So buckle up and prepare to ride the wave of HUMP's ascent to greatness—it's going to be one wild ride! The cryptocurrency industry has experienced a significant upswing, and riding on the same BEFE Coin has seen outstanding price increases. Seasoned investors and memecoiners are becoming curious to know more about BEFE Coin's potential. BEFE has become a hot favorite and stands out from among the present league of memecoin, attracting interest from both active memecoin clubs and nascent investors. In what particular ways has BEFE gained this bullish pace? Let's dig out the reason! BEFE's Emergence in The Meme Coin World BEFE is tax-free therefore, transactions using BEFE are simpler and more alluring. BEFE is a great choice for any investor who would like not to deal with the complexity of the charge schedule. BEFE is one of the most well-known players in the meme coin market, and it is growing and finding use cases rapidly. Unlike many other coins, BEFE was touted as a fair launch project and had no presale. This immediately increased accessibility for many potential customers. BEFE Coin has seen a trading volume of \$284,406 over the past 24 hours, indicating a very active community even when the market is in decline. At this point, investors should be feeling very confident about BEFE, as its fully diluted valuation is still \$15,925,820. Having reached its all-time high of \$0.001128, BEFE has recovered from its all-time low by \$24.36% demonstrating great rebound and resilience in investors' interest. Why BEFE Should Be Your Top Choice among The Other Meme Coins BEFE Coin stands out from many other meme currencies for its usefulness and style. Unlike some of its predecessors, like DOGE and PEPE, which saw a lot of pre-launch hype and an extremely complex financial structure, BEFE got off to a 100% fair start. This makes it more popular and less susceptible to a large number of investors. BEFE does not impose any transaction taxes. This is unusual in the conventional crypto market since transaction fees might function as an additional barrier to entry for potential investors because of their complexity and additional expense. This strategy not only makes trading easier, but it also makes trading more alluring. BEFE provides liquidity for trade on several platforms, most notably decentralized exchanges like Uniswap and Pancakeswap. BEFE's easy-to-use transaction system, active community, and clear value make it one of the favourite choices in the meme coin space. BEFE is therefore ready to captivate both seasoned investors and those who are new to the cryptocurrency world. Conclusion BEFE is now considered the king of meme coins since its rise is almost identical to the previous major meme coins like Dogecoin and Shiba Inu. The BEFE sensation has been steadily rising over the last five weeks. Investors' aspirations are high on BEFE about its price touching to \$0.01 very soon. This phenomenon may keep growing until the end of the year as more investors join the BEFE community. So, this is the right time to choose BEFE.

- Altcoins, meme coins, and layer-1 cryptos face price swings amid Bitcoin stability concerns. - Bitcoin is struggling to maintain crucial support at \$63,500. The latest update from the cryptocurrency market shows a slight uptick in global crypto activity, albeit with some notable declines. The overall market capitalization dipped by 1.79%, to \$2.33 trillion, and a 19.83% decrease in total trading volume, now at \$63.56 billion. Bitcoin is facing challenges in maintaining support levels after its fourth halving on April 20, particularly struggling around the \$62,700 to \$63,500 mark. While Bitcoin grapples with stability, attention has turned to altcoins, with memecoins and layer-1 cryptocurrencies leading the charge to outperform Bitcoin over the past month. This shift has sparked discussions among traders about the potential onset of an altcoin season. Market Watchers Over the past month, the altcoin market has witnessed significant value growth, particularly amid concerns about Bitcoin's halving. However, today, major altcoins experienced a decline in their values, suggesting a potential reversal or consolidation in the market. Ethereum (ETH), the second-largest cryptocurrency, is encountering resistance in breaching the \$3,150 zone, while BNB and Solana have experienced 3% and 5% declines in their respective prices over the last 24 hours. The frenzy surrounding meme coins, which has captured the attention of the entire market, has also encountered a substantial decline in prices. Prominent meme coins like Dogecoin (DOGE), Shiba Inu (SHIB), and PEPE are among those experiencing significant drops in value.

Dogecoin (DOGE) and Pepecoin (PEPE) captivated investors with their unique themes and community-driven initiatives. These meme coins provided not only amusement but also spectacular financial returns, resulting in a revolutionary investing environment that transformed many people into overnight millionaires. As Dogecoin (DOGE) and Pepecoin (PEPE) continue to navigate the tumultuous seas of the cryptocurrency market, they remain popular among people who like their playful character. A New Frontier in Crypto Investment However, the landscape is changing with the emergence of Option2Trade (O2T), an AI-powered DeFi token that's catching the eye of seasoned Dogecoin (DOGE) and Pepecoin (PEPE) investors. Unlike Dogecoin (DOGE) and Pepecoin (PEPE), which primarily rely on community support and viral marketing, Option2Trade (O2T) is built on cutting-edge AI technology that enhances its market predictions and trading efficiencies. Why Option2Trade (O2T) Attracts Dogecoin (DOGE) and Pepecoin (PEPE) Investors The shift from Dogecoin (DOGE) and Pepecoin (PEPE) to Option2Trade (O2T) isn't just about chasing the next big thing; it's about strategic diversification. Investors who benefited from the peaks of Dogecoin (DOGE) and Pepecoin (PEPE) are now looking to Option2Trade (O2T) for its potential to offer more stable and sustainable growth through its AI-driven platform. The promise of advanced analytics and smarter investment strategies makes Option2Trade (O2T) particularly appealing. Technological Advantages of Option2Trade (O2T) Over Dogecoin (DOGE) and Pepecoin (PEPE) Option2Trade (O2T) stands out due to its integration of AI with blockchain technology, setting it apart from Dogecoin (DOGE) and Pepecoin (PEPE). This integration allows Option2Trade (O2T) to offer secure, efficient, and highly scalable trading options that are designed to optimize investor returns and minimize risks, a significant advancement over the simpler technologies behind Dogecoin (DOGE) and Pepecoin (PEPE). The Future of Investing: Beyond Dogecoin (DOGE) and Pepecoin (PEPE) As the crypto market matures, the novelty of meme coins like Dogecoin (DOGE) and Pepecoin (PEPE) may gradually diminish. This makes tokens like Option2Trade (O2T), which provide tangible technological benefits and real-world applications, increasingly crucial for investors looking to adapt to the changing landscape. Conclusion: A Strategic Evolution The evolution from meme-driven investments like Dogecoin (DOGE) and Pepecoin (PEPE) to technologically robust platforms like Option2Trade (O2T) marks a significant shift in the cryptocurrency paradigm. As investors continue to explore new opportunities, Option2Trade (O2T) stands out as a beacon of innovation, promising to redefine the boundaries of what cryptocurrencies can achieve. For more information on the Option2Trade (O2T) Presale: - Use promo code O2T Launch to get 15% bonus - Visit Option2Trade (O2T) Join and become a community member: Disclaimer: TheNewsCrypto does not endorse any content on this page. Pionex â€œ Best AI Trading Bot for Creating Custom Strategies | AI Trading Platform | Pionex | | Supported Assets | Crypto | | Fees | 0.05% | | Minimum Investment Required | \$10 | | Free Plan | Available | Pionex is a popular platform utilized by over 100,000 traders spanning over 100 countries. It offers a range of crypto trading bots, including the Grid trading bot

and the Rebalancing Bot, catering to different investment strategies. With Pionex, users have access to a comprehensive crypto trading platform integrated with AI bots, eliminating the need to connect to external exchanges. The platform supports nearly 380 crypto markets, ensuring ample trading opportunities for users. Pionex has earned a solid reputation, with its AI bots receiving positive feedback from various sources, including prominent YouTube influencers like Max Maher, who conducted tests with his own \$10,000 capital. Pionex provides access to popular cryptocurrencies like Bitcoin, Dogecoin, Solana, Shiba Inu, and Cardano for trading. Their AI bots offer various strategies, including a grid trading bot that purchases major cryptocurrencies during market downturns and sells them at predetermined profit margins. Additionally, Pionex offers a dollar-cost averaging bot designed for long-term investors. Regarding fees, Pionex does not charge for using its trading bots. Instead, users incur a trading fee of just 0.05% per transaction, making it a cost-effective option for automated trading.

**Pros:** â€” One of the top AI trading platforms for cryptocurrencies â€” Wide selection of bot strategies available â€” Pay only when the bot trades â€” 0.05% per trade â€” Supports nearly 380 cryptocurrencies â€” No minimum deposit requirement

**Cons:** â€” Does not support traditional assets such as stocks â€” High-margin trading fees

**Kryll** â€” The Best AI Trading Platform for Automated Strategies | AI Trading Platform | Kryll | | Supported Assets | Crypto | | Fees | Varies by bot | | Minimum Investment Required | \$100 | | Free Plan | Not Available | Kryll is known as a game-changer in AI trading platforms, especially for folks keen on AI software for stock trading. It boasts of being one of the biggest marketplaces for AI trading bots, offering a vast selection of user-created bots featuring various crypto day trading strategies. According to Kryll, a whopping 75% of these bots outperform the market, with some top strategies raking in returns exceeding 100% annually. Traders on Kryll have the option to either copy existing strategies, tweak them to their liking, or craft their own using the platformâ€™s user-friendly strategy editor, which doesnâ€™t require any coding knowledge. The editor supports numerous technical indicators, unique metrics, as well as rules and triggers to help traders manage their risk effectively. Kryllâ€™s strategies can be seamlessly executed on major crypto exchanges such as Binance, KuCoin, Kraken, Crypto.com, Gate.io, and ByBit, making it convenient for users. When it comes to pricing, traders need to purchase subscriptions for individual bots from the marketplace. Kryll levies a small trading fee for each execution, but users holding Kryllâ€™s native \$KRL crypto token enjoy fee discounts. Kryll adopts a flexible Pay-As-You-Go pricing model, which is attractive for those who want to keep a close eye on their trading expenses. Users only pay for the strategies they use, with the option to further reduce costs by participating in the Kryll Holding Program.

**Pros:** â€” Marketplace with a wide selection of ready-to-deploy bots â€” Ability to create custom trading strategies â€” Integration with 9 major crypto exchanges â€” 75% of strategies outperform the market â€” Reduced fees available for \$KRL holders

**Cons:** â€” Costs can accumulate rapidly â€” Lack of backtesting tools for custom strategies

**Learn2Trade** â€” Top Crypto Trading Bot with 79% Win Rate | AI Trading Platform | Learn2Trade | | Supported Assets | Crypto | | Fees | No fees | | Minimum Investment Required | Â£99 | | Free Plan | Not Available | Learn2Trade is a well-known service that provides forex and crypto trading signals alongside a reliable crypto trading bot. The Learn2Trade crypto bot boasts an impressive success rate of 79% when trading tokens like Bitcoin, Ethereum, Cardano, BNB, Chainlink, and more. Operated through Cornix, the bot translates signals from Learn2Tradeâ€™s Telegram group into orders that are then sent to a traderâ€™s crypto exchange or broker. Setting up the bot is a breeze and takes less than 10 minutes. Once itâ€™s up and running, traders can sit back as the bot handles the opening and closing of crypto trades automatically, without any manual intervention. Built using over 100 technical indicators and capable of scanning dozens of crypto pairs, Learn2Tradeâ€™s AI bot can spot opportunities in any market condition. Operating 24/7, itâ€™s perfectly suited for the crypto market, which never sleeps. With a target reward-risk ratio of 3:1, mirroring professional tradersâ€™ aims, the bot employs take-profit and stop-loss levels with every trade to effectively manage risk. Learn2Tradeâ€™s bot is available for Â£99 per month, Â£349 per year, or Â£1,499 for a lifetime subscription, offering flexibility for traders based on their preferences and budget.

**Pros:** â€” Ready-to-use crypto trading bot â€” Simple setup process and seamless integration â€” Bot operates 24/7 ensuring continuous trading â€” Built-in risk management features â€” Trades across dozens of crypto pairs â€” Lifetime subscription option available

**Cons:** â€” No free plan offered

**Bitsgap** â€” Best User-Friendly Trading Platform | AI Trading Platform | Bitsgap | | Supported Assets | Crypto | | Fees | \$20 per month | | Minimum Investment Required | \$230 | | Free Plan | Not Available | Bitsgap is a leading AI trading platform that offers a comprehensive solution for automating cryptocurrency trading strategies, catering to traders in the United States. With its user-friendly interface and advanced technology, Bitsgap is suitable for both beginners and experienced traders aiming to enhance their efficiency and profitability in the dynamic crypto market. Traders can seamlessly connect to various crypto exchanges like Binance and Coinbase through the Bitsgap trading terminal. Currently, over 500,000 customers rely on Bitsgap for their AI trading needs. One of the standout features of Bitsgap is its wide range of pre-made trading bot strategies. These strategies can be easily customized to match individual trading goals and risk preferences, providing traders with the flexibility to explore new techniques or optimize existing ones. Bitsgap offers a transparent and flexible pricing structure, with plans starting from just \$23 per month for the Basic subscription. Each plan is designed to meet different trading requirements, offering features such as active GRID and DCA bots, unlimited smart orders, and futures bots. Additionally, Bitsgap provides a free 7-day PRO trial, allowing users to fully experience its capabilities before making any commitments.

**Pros:** â€” Offers a comprehensive suite of trading tools â€” User-friendly interface across various devices â€” Provides a wide range of pre-made strategies â€” Transparent and flexible pricing structure

**Cons:** â€” Access to premium features necessitates higher-tier subscriptions

**Octobot** â€” Best for Price Predictions Through ChatGPT | AI Trading Platform | Octobot | | Supported Assets | Crypto | | Fees | Monthly subscription | | Minimum Investment Required | \$100 | | Free Plan | Available | Octobot is a platform designed to assist traders in navigating the cryptocurrency markets by offering tailored trading strategies with the help of AI. The platform provides support for various popular trading bots, including GRID

strategies, daily trading modes, and DCA strategies. What sets Octobot apart is its integration of AI within the crypto trading realm. Utilizing OpenAI's ChatGPT, one of the leading AI trading tools globally, Octobot incorporates AI-powered trading strategies. By leveraging ChatGPT, Octobot analyzes cryptocurrency market trends and receives price predictions. For instance, Octobot might inquire about ChatGPT for a short-term price forecast on XRP. The AI chatbot then examines historical price data and real-time market movements to generate a price prediction, which is subsequently suggested to the investor. These AI predictions are provided within the GRID and Daily trading modes. Octobot offers a free subscription plan, but it only supports pre-set automated trading and paper trading. For access to the ChatGPT trading mode, investors need to subscribe to the 'Standard Plan' priced at \$76 per month.

Pros: " Utilizes ChatGPT for making price predictions " Provides a free trading version " Utilizes real-time market movements " Supports GRID and daily trading bots Cons: " Requires a payment of \$76 per month to access the AI mode

**CryptoHopper** " Popular Trading Bot Work on Multiple Exchanges | AI Trading Platform | CryptoHopper | | Supported Assets | Crypto | | Fees | \$129 per month | | Minimum Investment Required | \$240 | | Free Plan | Available |

CryptoHopper distinguishes itself as a robust platform designed specifically for crypto traders, providing a strategy marketplace where users can replicate a wide range of pre-made and user-created trading strategies. Traders have the flexibility to customize these strategies with features like trailing stops and price targets to effectively manage their risk. For those looking to take their trading to the next level, CryptoHopper enables users to build and backtest their strategies without requiring any coding skills. With support from over 130 indicators, traders can fine-tune their strategies to suit their preferences and market conditions. One of CryptoHopper's most advanced features is the ability to create AI bots for trading. These bots learn from the success of both self-created and copied strategies and can automatically switch between them based on market conditions, optimizing profit potential. This sets CryptoHopper apart from other trading bot services that typically focus on one strategy at a time. However, CryptoHopper's top-tier plan, which includes AI trading functionality, comes for \$129 per month. Nonetheless, users can avail themselves of a 30% discount by using the Promo Code "CLICKOUT.

Pros: " Marketplace offering a variety of bots for copy-trading " Capability to create and backtest custom trading strategies " Capable of automatically switching between strategies " Supports over 130 built-in technical indicators " Integrates with 17 major crypto exchanges Cons: " Limited to crypto trading, excluding other asset types " Some bots may require additional subscriptions

**TradeSanta** " Best AI Trading Platform for DCA Strategy | AI Trading Platform | TradeSanta | | Supported Assets | Crypto | | Fees | \$25 per month | | Minimum Investment Required | \$180 | | Free Plan | Available |

TradeSanta is a top-notch crypto trading platform that offers a range of features including trading bots, trading signals, copy trading, and a trading terminal, all accessible via a convenient mobile app. This versatility makes it an ideal choice for traders who are frequently on the move and need to closely monitor their investments and bots. Traders can easily connect their exchanges, including Binance, OKX, Coinbase, HTX, Kraken, and ByBit, using API keys. TradeSanta provides a comprehensive suite of tools for automating trading strategies. It offers both spot and futures trading bots that support long and short strategies, enabling users to capitalize on market movements in any direction. Integration with top exchanges ensures access to a wide market, while features like Dollar Cost Averaging (DCA) and Grid strategies help mitigate risks and exploit market volatility. Technical indicators and signals, including those from TradingView, assist traders in entering and exiting the market at optimal times. For traders who prefer not to create their bots, TradeSanta offers a marketplace where they can find bots developed by other traders. Before committing, users can test strategies using a demo account to assess performance. Additionally, they can set stop loss and trailing stops and establish take-profit targets to optimize bot performance.

Pros: " User-friendly platform suitable for traders of all levels " Automated trading available 24/7 on both spot and futures markets " Copy trading feature allows users to leverage successful strategies " Competitive pricing structure with a free trial option Cons: " Advanced features require upgrading to higher-tier plans

**3Commas** " Best Platform for Manual & Automated Trading | AI Trading Platform | 3Commas | | Supported Assets | Crypto | | Fees | \$22-\$75/month | | Minimum Investment Required | \$100 | | Free Plan | Available |

3Commas is a crypto investment platform that empowers users to create and manage automated trading strategies. With a wide range of prebuilt strategies available, users can also design their strategies using indicators, signals, and triggers. Additionally, users can link their 3Commas account to TradingView to execute trades based on TradingView signals. Supporting over 20 exchanges, including Binance, Coinbase Pro, and Bitfinex, 3Commas allows users to monitor their portfolio, track performance, and adjust settings via both web and mobile apps. The platform offers various bots like the DCA Bot, Futures Bot, and GRID Bot, with seamless integration with top exchanges such as Binance, Coinbase Pro, and Bitfinex. With dedicated apps for iOS and Android, 3Commas caters to mobile users. To make its features accessible, 3Commas offers a lifetime free basic plan. 3Commas was founded in 2017 and currently has over 140,000 users as well as favorable reviews from users and experts. It prioritizes security by offering features like two-factor authentication and encryption. However, it's essential to acknowledge the risks associated with any trading platform and conduct thorough research before investing.

Pros: " Automated portfolio rebalancing functionality " Smart and Copy trading features available " Ability to test all Pro features in a 3-day free trial " Integration across major exchanges " Bots available for all crypto market conditions " bull, bear, and sideways " Unique bot options offered Cons: " Detailed interface may initially feel overwhelming " Profitability may be difficult to measure " Tracking average profitability can be challenging

**Coinrule** " Best Platform for Beginners | AI Trading Platform | Coinrule | | Supported Assets | Crypto | | Fees | \$499.99 a month | | Minimum Investment Required | \$100 | | Free Plan | Available |

Coinrule is one of the top AI-automated cryptocurrency trading platforms, particularly suited for beginners. Its trading terminal seamlessly connects with over 10 of the leading crypto exchanges worldwide. Coinrule employs military-grade security measures and encryption protocols. Traders can access straightforward and effective AI-based trading strategies like "Catch the Swing," which leverages the RSI technical indicator to identify

optimal buying and selling opportunities during sideways markets. The free version of Coinrule's automated trading bot supports 20 exchange platforms, with the option for users to pay for access to an unlimited number of exchanges. Supported exchanges include Binance, Kraken, OKX, Gemini, KuCoin, Robinhood, and more. Users can set their parameters via the Coinrule website and deploy them to their chosen exchange. Trading is available 24/7, with users able to select from three pricing plans. The most premium plan allows up to 50 trading rules to run and execute 10,000 trades per rule within 24 hours. Coinrule also offers personalized one-to-one training sessions, unlimited trade volume, and ultra-fast trade execution from a dedicated server. Coinrule's demo exchange offers the opportunity to create numerous trial rules and strategies. Users can experiment with various trading choices and gain insights without risking actual funds. The system supports both market and limit orders within these demo rules, providing a comprehensive learning experience.

**Pros:** "It is a beginner-friendly trading platform" Customized bots for trading "Free subscription service" Individual training sessions are accessible. **Cons:** "Pro plan is priced at \$449.99 per month" **Conclusion** The top AI trading bots can assist traders in identifying more trading opportunities, minimizing risk, and potentially increasing profits. These bots come with a variety of strategies and can be applied to trading crypto, stocks, forex, and other assets. Our choice for the best overall AI trading bot in 2024 is ValueZone. ValueZone provides access to two crypto trading bots and will soon allow traders to develop their custom bots. It boasts a user-friendly interface and offers a reasonably priced subscription, delivering exceptional value.

**FAQs** Are AI bots the best option for trading? AI bots can be highly effective for trading, often yielding returns that surpass what many individual traders could achieve on their own. Do AI trading bots yield successful results? Many AI trading bots exhibit win rates significantly higher than 50%, with some boasting annual returns exceeding 100%. Are AI trading bots permissible? AI trading bots are entirely legal for crypto, stock, and forex trading in the US and the majority of other countries. How do AI trading bots operate? AI trading bots function based on a set of predetermined entry conditions, which, when met, prompt the bot to initiate a trade. Which AI trading bot is optimal for crypto? The leading AI crypto trading bot is ValueZone. ValueZone supports trading across numerous cryptocurrencies, boasting an impressive win rate.

- Cryptocurrency market faces downward pressure post-halving and volatility surges. - Dogecoin, Pepe, and more experience significant price declines heightened amid trading volume. In the wake of the recent halving, the cryptocurrency market has been grappling with downward pressure, with key indicators reflecting a mixed sentiment among traders. As of today, the total market capitalization stands at \$2.37 trillion, marking a 3.76% decline, while trading volume has surged to \$85.03 billion, up by 18%. The Fear & Greed Index sits at 62, indicating a neutral market sentiment. Bitcoin (BTC) is currently trading at \$64,228, reflecting a 3.68% decline, while Ethereum (ETH) is priced at \$3159, down by 2.84%. However, traders are closely monitoring the performance of meme coins, which have become a focal point amidst the broader market volatility. Dogecoin (DOGE) Dogecoin, a perennial favorite among traders, is currently trading at \$0.1513, experiencing a 6.25% decline over the past 24 hours. Despite the downturn, trading volume has surged by 24%. With Dogecoin trading at a six-day low of \$0.1488, it remains 79% below its all-time high. The daily Relative Strength Index (RSI) stands at 42, with bullish projections aiming for \$0.1763, while bearish pressures could drive it down to \$0.1398. Pepe (PEPE) Pepe, another prominent memecoin, is priced at \$0.00007262, reflecting an 8.94% decline over the past 24 hours. Trading volume has also seen a notable increase of 24%. Pepe is currently trading 33% away from its all-time high, with the daily RSI at 45. Bullish forecasts suggest a potential rise to \$0.0000820, while bearish pressures could push it down to \$0.0000397. Dogwifhat (WIF) Amid the memecoin downturn, Dogwifhat (WIF) has witnessed a significant downturn, trading at \$2.94, marking a 13% decline over the past 24 hours. However, trading volume has increased by 16%. WIF is currently 33% away from its all-time high, with a daily RSI of 49. Bullish projections anticipate a rise to \$3.149, while bearish pressures could pull it down to \$2.318. Further, Floki had a 7% decline and Shiba Inu saw a drop of 7.63% in the past 24 hours. Concludingly, as traders navigate the turbulent market conditions, the performance of memecoins continues to draw attention, with both volatility and trading activity on the rise.

- Meme coins like MEW, FLOKI, PEPE, and MEME gain attention for potential gains amidst market anticipation post-Bitcoin halving. - MEW leads with 33% surge in 24 hours, targeting \$0.012, appealing for portfolio diversification. - FLOKI eyes \$0.00020, PEPE targets \$0.000177 with 60% surge, showing breakout potential. As the cryptocurrency market anticipates a stronger recovery post-Bitcoin halving, a fresh entry of meme coins in the top performers list has caught the attention of smart investors. While established players like Dogecoin (DOGE) and Shiba Inu (SHIB) are making conservative moves, these underrated low-cap coins are emerging as the choice for those seeking potentially higher returns. With the market sentiment turning bullish and the hype surrounding meme coins growing, these lesser-known tokens offer a unique opportunity for sideline traders to capitalize on potential breakouts. Let's take a closer look at these underrated meme coins that are ready to deliver massive gains in the coming time. Cat In A Dog World (MEW) Cat In A Dog World (MEW) stands out as a cat-themed coin in a meme coin sector primarily dominated by dog-themed top performers. The MEW price has recently experienced a bullish reversal, surging by 33% in the last 24 hours and breaking through a resistance trendline. As the trend momentum builds, MEW could potentially surpass the \$0.008683 mark and climb towards \$0.012. This unique positioning and the growing interest in the token make it an attractive option for investors looking to diversify their meme coin portfolios. Floki Inu (FLOKI) Floki Inu (FLOKI) is currently trading within a falling channel on the 4-hour chart, indicating a larger pullback phase in motion. However, the short-term reversal within the channel suggests a

potential breakout rally, which could lead to a golden crossover. With a nearly 50% increase in the last 30 days, the FLOKI price is inching closer to the psychological mark of \$0.00020. If the breakout rally materializes, the hype surrounding the meme coin could intensify, propelling the price towards \$0.00040. Pepe Coin (PEPE) Pepe (PEPE) has emerged as a top meme coin contender, showcasing a breakout rally that signifies the beginning of a prolonged bullish trend. If the broader market recovery continues, PEPE has the potential to deliver a 10x return in 2024. Having broken beyond a falling channel, the meme coin has surged by 60% in the last six days, forming a streak of bullish candles. As the uptrend approaches the trend-based 50% Fibonacci level at \$0.00008966, the retracement levels suggest that the breakout rally could target the \$0.000177 mark or even the 1.618 level. Memecoin (MEME) Memecoin (MEME), one of the youngest top names in the meme coin sector, presents a bullish reversal entry opportunity for investors. With a recent bounce back, the MEME token value has risen by 23% in the last seven days. This reversal has positioned the MEME price to challenge the 50-day Exponential Moving Average (EMA) and potentially the resistance trendline in the near future. The bullish crossover of the Moving Average Convergence Divergence (MACD) and signal line further strengthens the likelihood of an uptrend.

BEFE Coin surged into the crypto market as a new meme coin, innovating its place differently cause of its rhetorical meme content. At the crossroads of meme culture and investment opportunity, BEFE Coin provides a unique gateway for a wider audience to discover what is standing behind this meme coin. It guarantees to be in the top trend. Let's learn how. Meme Coins: Historical Purview Meme coins derive their cult status from internet memes, having carved out their own unique territory in the crypto space. It all began in 2013 with Dogecoin. Initially, it was created as a joke by Billy Markus and Jackson Palmer. With a Shiba Inu dog from a viral internet meme as its mascot, Dogecoin exemplified such a playful take on the vision for a cryptocurrency that it brought a wide audience of users and turned into a serious investment. After the success of Dogecoin, an explosion in meme coins followed, all either copy-pasting the former or trying to innovate above its viral formula. Coins like the Shiba Inu, SafeMoon, and many others took center stage as the power of community, coupled with potential quick gains, attracted eyeballs. Such currencies are often used to fuel trends on social media and the support of celebrities by going hand-in-hand in their popularity and market capitalization. Meme coins, of course, have added to the speculative discussion of the democratization of finance and whether cryptocurrencies can engage a much wider, more diverse audience. BEFE's Performance Consistency BEFE Coin has shown an amazing performance over the last month, which, in general, can be described as very dynamic and promising for further activity on the market. BEFE registered high trading activity at 1.7 million USD volume from an opening price peak of 0.00065322 on March 24th. This illustrates BEFE's peak of strong interest in setting a strong stride for the month. After the peak, the price had adjusted towards lower levels inside a declining channel, but the volume had remained stable, indicating steady trader involvement. Most importantly, on April 23rd, BEFE's lowest price point was recorded at \$0.00016553, indicative of good correction and price stabilization from the initial high. Price movements of BEFE during the past month have been characterized by all sorts of fluctuations, which gave room for traders to find a number of entry and exit points and, therefore, trigger an active trading environment. More often than not, its closing prices for different days were higher than opening, thus resilient demand and optimism investor sentiment. Can BEFE Keep Up to its Name? BEFE has cumulatively been losing price but holding impressive trading volume, pointing towards a strong market liquidity trend. Since BEFE has cumulatively dipped from its highs, it reflects a market correction rather than a lack of interest. It further signals that BEFE is getting its balance right in the market. Investors seeking aggravated BEFE buy-ins are recommended to conduct continuous market research, track BEFE's performance over the week, and call right puts wherever possible.

As the cryptocurrency market continues its dynamic evolution, certain altcoins have emerged as frontrunners, captivating the attention of investors and analysts alike. Among these, three stand out as dominant forces shaping the landscape in April 2024: Dogwifhat (WIF), Solana (SOL), and Retik Finance (RETIK). In this article, we will explore the unique features and market dynamics driving the success of these top altcoins. Dogwifhat (WIF) Dogwifhat's inception is rooted in the rich tradition of internet culture, drawing inspiration from the popularity of dog memes. What sets Dogwifhat apart is its rapid ascent from a playful online joke to a cryptocurrency with a growing community of enthusiasts and investors. The meme coin has rapidly ascended to prominence with its innovative approach to decentralized finance (DeFi). Drawing inspiration from the beloved Dogecoin and combining it with DeFi functionalities, Dogwifhat has captured the imagination of crypto enthusiasts. Its unique blend of meme culture and financial technology has cultivated a dedicated community and propelled WIF into the spotlight. With features such as decentralized lending, staking, and yield farming, Dogwifhat offers users a comprehensive suite of DeFi solutions while maintaining the whimsical charm of its namesake. As with any meme coin, Dogwifhat presents a unique set of challenges and opportunities for investors. Its market performance is characterized by high volatility, with price movements often driven by social media trends rather than fundamental value. Savvy investors navigate this landscape by balancing the speculative nature of meme coins with a diversified investment strategy. Solana (SOL) Solana, a familiar name from the previous year's list, continues to impress with its high-speed blockchain and robust performance. Designed to outdo other blockchains by allowing the processing of thousands of transactions per second at low costs, Solana has made significant strides in 2024. The blockchain's architect goes beyond the realm of cryptocurrencies and blockchain, potentially powering real-time data platforms, supply chain management, and addressing other complex challenges. Solana has already made crypto millionaires in the past year, and it seems poised to continue the trend. Solana's recent transaction surge is a glimpse into its potential rise. With transaction volumes soaring by over 700%, daily volumes peaking at \$42.72 billion, and a 4% increase in the day, Solana's overall performance remains strong. Despite an 11.6% price drop, now trading around \$90,

Solana boasts a 25% gain over the past month and an impressive 616% yearly gain. In a bullish scenario, Solana (SOL) could break past its crucial resistance level of \$109.26, targeting the next significant resistance at \$129.07. This upward trend is fueled by its strong trading volume of \$3.594 billion and a market cap of \$40.535 billion, solidifying Solana's dominance in the crypto market in April. Retik Finance (RETIK) In the world of decentralized finance, Retik Finance has emerged as a pioneering force, revolutionizing global transactions with its innovative suite of financial solutions. The project encompasses futuristic DeFi debit cards, a smart crypto payment gateway, AI-powered peer-to-peer (P2P) lending, and a Multi-Chain Non-Custodial highly secured DeFi wallet. One of the key factors contributing to Retik Finance's prominence is its remarkable fundraising success. As of writing, Retik Finance has successfully sold out 95.04% of its targeted funds from stage 6, and eyes are now set on stage 7 with a token price of \$0.09. In just two months, the project swiftly secured over \$12 million, and the momentum has continued to soar, This remarkable milestone positions Retik Finance as a robust contender in the competitive DeFi landscape Beyond its financial achievements, Retik Finance actively engages its community, fostering a vibrant and enthusiastic user base. The mega \$333,000 giveaway is a testament to Retik Finance's commitment to giving back to its supporters. This initiative provides participants with the thrilling opportunity to be among the 10 lucky winners, each claiming an impressive \$33,300 worth of RETIK. Such community-centric activities contribute to Retik Finance's growing popularity and positive reputation. The project's listing on major platforms such as CoinMarketCap and CoinGecko further enhances transparency and credibility, solidifying Retik Finance's position as a trusted player in the DeFi landscape. Additionally, the plans to list two of the top 5 centralized exchanges (CEX) in the world mark a significant milestone. Such a move holds great promise for the project's liquidity, visibility, and accessibility, further reinforcing Retik Finance's domination in the crypto market in April. Conclusion As we navigate the complex landscape of the cryptocurrency market in April 2024, Dogwifhat (WIF), Solana (SOL), and Retik Finance (RETIK) emerge as frontrunners, each offering unique value propositions and driving innovation in their respective domains. Whether it's the whimsical charm of Dogwifhat, the lightning-fast transactions of Solana, or the visionary approach of Retik Finance, these altcoins showcase the diversity and dynamism of the crypto space. As investors and enthusiasts continue to monitor their progress, these top altcoins are poised to shape the future of finance and redefine the crypto market landscape for years to come.

Since the year began, hundreds of crypto projects have made their debut in the cryptocurrency market, solving real-life issues and consequently attracting a committed following. Investors have once again stepped into the picture by analyzing these projects to find out which of them is worth investing in. Not too long has passed since investors and market enthusiasts stumbled on a project that could potentially go on to become the project of the year. BEFE Coin, a relatively new coin in the market, has been hailed as the surprising winner of the 2024 market. Let's look at the fundamentals of the BEFE token and find out whether or not it could live up to its name. What is BEFE Coin? BEFE Coin is a new meme coin on the market, but unlike most meme coins, BEFE was launched with a presale and imposed taxes. BEFE's price performance in the market has been a major talking point for investors in search of lucrative opportunities in the short term. Shortly after its market debut, BEFE rallied by over 500%. This price jump was in less than a month, despite the extreme selling pressure at about the same window. BEFE Coin is not just growing to be a powerhouse in the meme coin sector of the market, but the ultimate king of meme coins. Restoring The Glory Days of Meme Coins Unlike your cute dog-themed tokens with technical in-built utilities, BEFE was created for just having a blast. Memecoins like Dogecoin and Floki Inu began as memes and later thrived as projects on the market. In the course of development, they built utilities within their ecosystem. Meme coins have since followed this trend, losing the original fun feel of meme-based projects. BEFE was created to restore the good old days—the days when meme coins were for fun, cruises, and bants. Enthusiasts are backing BEFE Coin to restore the golden era of meme coins. This unique purpose has attracted a growing number of fans and meme lovers around the world. BEFE's unique purpose and fundamentals set it up to be a potential market winner in 2024. Conclusion The further incorporation of a deflationary economic model into BEFE's tokenomics has increased investors' interest. This unique model drives scarcity and sets BEFE up for a future price surge. You can't afford to miss out on BEFE like you did with DOGE in 2021 and PEPE in 2023. BEFE is a once-in-a year-long opportunity. Buy your BEFE tokens now!

With the cryptocurrency market experiencing unprecedented growth and volatility, it can be daunting for newcomers to identify promising investment opportunities. However, with careful research and strategic planning, investors can capitalize on the potential of emerging coins poised for significant growth in the next bull cycle. Let us explore three low-risk, high-return coins that are gaining traction in the crypto community: Retik Finance, Shiba Inu, and Dogecoin. 1. Retik Finance (RETIK) Retik Finance is a decentralized finance (DeFi) platform that aims to redefine global transactions through advanced technology and user-centric solutions. With its innovative features, including DeFi debit cards, smart payment gateways, and AI-powered lending, Retik Finance offers users enhanced financial accessibility and security. The platform's commitment to privacy and transparency has resonated with investors, leading to significant growth in its user base and market value. One of Retik Finance's standout features is its DeFi debit cards, which allow users to conduct anonymous transactions without the need for Know Your Customer (KYC) verification. This unique offering provides users with greater privacy and security while facilitating seamless transactions across multiple blockchain networks. Additionally, Retik Finance has completed a comprehensive audit conducted by Certik, a leading blockchain security firm, further enhancing its credibility and trustworthiness in the DeFi space. Retik Finance is thrilled to unveil the beta version of its groundbreaking Retik DeFi Crypto Cards, a significant milestone for both the platform and its dedicated community. This achievement underscores Retik's unwavering dedication to innovation and its goal of reshaping the future of finance in tandem with our esteemed community members. As pioneers in the decentralized

finance (DeFi) arena, the Retik team is proud to introduce Visa and Mastercard-compatible cards that seamlessly integrate with leading payment methods like Binance Pay, Gate Pay, and Token Payment. The launch of Retik DeFi Crypto Cards represents a significant step forward in providing users with unparalleled convenience and flexibility in crypto payments. With a meticulously crafted user-friendly interface, these cards empower individuals and businesses to navigate the digital economy effortlessly. Retik Finance is well-positioned to capitalize on emerging trends and drive significant value for its investors. With its innovative features, strong community support, and commitment to security and transparency, Retik Finance is poised for continued growth in the next bull cycle and beyond.

**2. Shiba Inu (SHIB)** Shiba Inu is a decentralized meme token that gained widespread attention following the success of Dogecoin. Named after the popular dog breed, Shiba Inu aims to create a decentralized ecosystem of meme tokens and digital assets. The project's community-driven approach and meme-inspired branding have attracted a dedicated following of investors and enthusiasts. Shiba Inu's appeal lies in its low price point and high potential for exponential growth. With a large circulating supply and active community engagement, Shiba Inu has the potential to experience significant price appreciation in the next bull cycle. Additionally, the project's recent initiatives, such as the development of decentralized exchanges and NFT marketplaces, are expected to further drive adoption and value for SHIB holders. While Shiba Inu carries some risk due to its speculative nature and volatility, it remains a popular choice among investors seeking high-risk, high-reward opportunities in the cryptocurrency market. As the meme token market continues to evolve, Shiba Inu is poised to maintain its position as a leading player and potentially deliver substantial returns for investors in the next bull cycle.

**3. Dogecoin (DOGE)** Dogecoin is a peer-to-peer cryptocurrency that started as a joke but has since grown into a widely recognized digital asset with a dedicated community of supporters. Known for its lighthearted branding and meme-inspired origins, Dogecoin has gained mainstream acceptance and adoption as a viable means of payment and value transfer. Despite its humorous beginnings, Dogecoin has demonstrated resilience and longevity in the cryptocurrency market. With a large and active community of users, Dogecoin has maintained its relevance and market value over the years. The recent surge in interest and investment in cryptocurrencies has propelled Dogecoin to new heights, with the coin experiencing significant price appreciation and trading volume. While Dogecoin's price may be subject to fluctuations and market sentiment, its strong community support and widespread adoption make it an attractive investment opportunity for those looking to diversify their crypto portfolio. As the cryptocurrency market continues to mature, Dogecoin is expected to remain a prominent player and potentially deliver substantial returns for investors in the next bull cycle. As the cryptocurrency market continues to evolve and mature, investors have an array of opportunities to capitalize on emerging trends and technologies. Retik Finance, Shiba Inu, and Dogecoin are three low-risk, high-return coins that offer investors the potential for significant growth in the next bull cycle. With innovative features, strong community support, and widespread adoption, these coins are poised to lead the next wave of cryptocurrency adoption and deliver substantial returns for investors. About Retik Finance Retik Finance (RETIK) is a cutting-edge decentralized finance (DeFi) project revolutionizing global transactions with its innovative suite of financial solutions. Introducing futuristic DeFi Debit Cards, a Smart Crypto Payment Gateway, AI-powered Peer-to-Peer (P2P) lending, and a Multi-Chain Non-Custodial Highly Secured DeFi Wallet. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Twitter: [www.twitter.com/retikfinance](https://twitter.com/retikfinance) - Telegram: [www.t.me/retikfinance](https://t.me/retikfinance)

As the Bitcoin halving event edges closer, investors are increasingly optimistic of a market summer in Q2. This optimism in the market has triggered a bullish trend for hundreds of tech-based and meme-based projects. Particularly for meme-based projects, their capacity to deliver short-term gains has once again drawn investors. They have proven to be the best strategy for investors who want to cash out big within a short window. BEFE, a relatively new meme-based project, promises significant returns, making it an ideal pre-halving purchase for investors aiming for sky-high profits before the arrival of July. In today's article, we will investigate why BEFE appears to be the must-have meme-based project to secure massive profits in the short term. Will History Repeat Itself Once Again? History has shown that Bitcoin's price action has always experienced an upturn after each halving event in the past. Over the span of 12 years, Bitcoin's three halving events had a positive and consequent effect on its price trajectory. For instance, in 2012, Bitcoin surged by approximately 2116.67%, with price jumps from \$12 to \$266. Also, after the halving event in 2016, Bitcoin pumped by an additional 375%. And in the most recent halving event back in 2020, Bitcoin's market increased from around \$7,000 to over \$60,000. With the quadrennial event only days away, investors are increasingly optimistic of an imminent crypto summer in the second quarter of the year. BEFE, Your Ticket to Sky-High Profits Before July The popular animal-themed tokens like the Inus and Frogs have had their fair share of success in the market, racking major pumps in 2021 and 2023, respectively. The impact of meme coins like Dogecoin and Pepecoin was felt on a whole new level, but this success is short of what BEFE, a relatively new meme coin, can achieve in the market. In the latest development within Bitgert, one of BEFE's strategic allies in the market, the completion of Bitgert's staking platform was confirmed. With this platform, users will have the opportunity to earn \$BEFE rewards when they stake \$BRISE tokens. This utility inclusion further solidifies BEFE's position and credibility in the market. BEFE's enthusiasts are confident in the project's potential to not just mirror the success of Dogecoin and Pepecoin but also surpass it. They believe BEFE has what it takes to climb to the top of the charts. With a profit potential reaching an impressive 2000% in the second quarter, more and more investors are now accumulating BEFE for massive profits in the short term. BEFE might be your only ticket to sky-high profits before July. Don't miss out on BEFE! Don't miss out on this opportunity!! Invest in BEFE Coin and watch your investments grow exponentially! - Kraken released its source code on GitHub to make the Kraken Wallet more secure. - By limiting the amount of data collected from users, Kraken's new wallet prioritizes privacy. The Kraken Wallet is the latest addition to Kraken's product range. Users are able to manage their digital assets on eight major blockchain networks—Dogecoin, Ethereum, Solana, Optimism, Base, Arbitrum, and Polygon—through this self-custodial mobile wallet. Users will have full control over their digital assets with this wallet, and they won't have to sacrifice security for ease. As a multi-purpose tool for dealing with the larger digital asset ecosystem, the Kraken Wallet was built to handle non-fungible tokens (NFTs) and support other decentralized finance (DeFi) operations. Furthermore, Kraken joins other big exchanges in this endeavor that provide similar solutions but vary from them in their commitment to open-source development. Prioritizing Privacy Kraken released its source code on GitHub to make the Kraken Wallet more secure. At this point, the code is open for review by developers all across the globe. Their input might make the code even better and, of course, help find and address security flaws. By using an open-source methodology, Kraken enhances the wallet's security and fosters confidence among crypto enthusiasts. By limiting the amount of data collected from users, Kraken's new wallet prioritizes privacy. The wallet conceals users' IP addresses and doesn't need any login details, email addresses, or KYC data. As the firm emphasizes the importance of traders' privacy, Kraken claims that internal app performance metrics are not even gathered. Despite its robust build, the Kraken Wallet is really a hot wallet due to the fact that iOS's CryptoKit does not support secp256k1, the elliptic curve. Highlighted Crypto News Today: Shiba Inu Investors Exhibit Diamond Hands as 75% Hold for Over a Year

In the ever-evolving landscape of the cryptocurrency market, trends come and go with lightning speed. One such trend that has captured the imagination of investors worldwide is the rise of memecoins. From Dogecoin to Shiba Inu, memecoins have dominated headlines and generated astronomical returns for early adopters. As we delve into the phenomenon of memecoins in 2024, one project stands out amidst the frenzy: Healix Protocol's HLX token presale. The Memecoin Phenomenon: Q1 2024 Highlights In the first quarter of 2024, memecoins emerged as the most profitable crypto narrative, captivating the attention of investors seeking quick gains and viral success stories. Memecoins, characterized by their playful branding and vibrant online communities, became a cultural phenomenon, transcending traditional financial markets and capturing the climate of the digital age. With skyrocketing prices and unprecedented levels of social media engagement, memecoins became the talk of the town, attracting both seasoned traders and newcomers alike. HLX Token Presale: Capitalizing on Market Trends Amidst the memecoin mania, Healix Protocol's HLX token presale offers investors a unique opportunity to capitalize on the growing trend while simultaneously contributing to a project with real-world utility and impact. Unlike traditional memecoins that often lack fundamental value and rely solely on hype and speculation, the HLX token presale is backed by a team of experienced professionals and innovative technology, positioning it as a formidable contender in the competitive crypto landscape. Empowering Healthcare: The Vision of Healix Protocol At the core of Healix Protocol lies a vision to revolutionize healthcare through blockchain technology. By leveraging the power of decentralized networks, Healix Protocol aims to democratize access to healthcare services and empower individuals to take control of their health and financial well-being. Through its HLX token presale, Healix Protocol seeks to bridge the gap between traditional finance and emerging technologies, paving the way for a more inclusive and transparent healthcare ecosystem. Seizing the Moment: Why HLX Token Presale? As investors navigate the volatile crypto market, the HLX token presale stands out as a beacon of stability and opportunity. With a focus on community engagement, transparency, and innovation, the HLX token presale offers investors the chance to be part of something truly transformative. By supporting Healix Protocol's vision of redefining the healthcare industry, investors can not only capitalize on market trends but also contribute to positive change in the world. In conclusion, while memecoins have captured the headlines and fueled investor speculation, projects like Healix Protocol's HLX token presale offer a more sustainable and impactful investment opportunity. By embracing innovation and supporting projects with real-world utility, investors can navigate the ever-changing crypto landscape with confidence and purpose. As Healix Protocol continues to make waves in revolutionizing healthcare, the HLX token presale remains a symbol of hope and progress in an increasingly uncertain world. - Visit Healix website: <https://healixprotocol.com/> - Join Healix Telegram channel - Follow Healix on X - Follow Healix on Instagram Disclaimer: TheNewsCrypto does not endorse any content on this page. Are you an investor looking into investing in a crypto project that can do a move of 2000% or more in a few months (or weeks in some cases)? Then meme coin is your best bet for this high gain in a short time. Because meme coins have a high reliance on market sentiment and speculative hype, as long as the buzz keeps going up, the price will keep following it too. The speculative price movement of meme coins can be high in most cases, but most meme coins are bad at keeping the hype up. Often, the sharp decline in meme coins can be drastic and this is because they lack content or a real actionable feature that can keep pushing the hype up. That's why BEFE is gradually becoming the king of meme coins. BEFE is a meme coin with an actionable strategy that is currently proving its worth. The BEFE coin approach focuses on making sure the community is constantly engaged which can help BEFE create organic promotion across various social media platforms. Lately, no other meme coin has been able to come any closer to BEFE in terms of its buzz and current market hype. How will BEFE the future of meme coin hype? Through an actionable strategy that creates value for the meme token. BEFE: Revolutionizing Hype in Meme Coin In the past years, hype in meme coins has been all about promising some unrealistic

target to investors and adopters. An example of this is how Dogecoin was used for making some unrealistic insinuation that it will be the native token when we colonize Mars or on the moon. First of all, we know humans are not colonizing Mars anytime soon. But, even when/if we do, what factor will make dogecoin worthy of that status? BEFE is revolutionizing the approach to how hype is created and handled in this age. Although using influencers has been going on well as a way to create hype around a meme coin, BEFE is doing that and more. BEFE is using humor content to create engagement for the BEFE token. BEFE has been creating content that can be shared and re-shared within the community and beyond which is proving as a strategy that can keep pushing the speculative hype higher. What makes this strategy better than using the old method of relying entirely on an influencer to talk about the coin or making unrealistic insinuations is that it can be maintained and has a long-term profit value. Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. In crypto investing, Bitcoin and Ethereum have always been the major players in the field. On the other hand, altcoins are emerging as serious contenders with meme coins taking the lead – often driven by hype or social media trends. However, BEFE is doing things differently by capturing experienced investors through its usability and long-term potential. BEFE’s Magnificent Course At first, If we look back to its launch in December 2023, BEFE was just one more coin among meme coins. Nevertheless, this coin defied expectations quickly. It delivered on every promise according to its roadmap, earning investors’ trust and becoming a mantra for cryptocurrency enthusiasts. In only four months after buying early at \$ 0.05, investors received up to 559% profits hence confirming what direction of meme coins market price is trending towards. The Factors Behind BEFE’s Success Notably, BEFE X (which has over 50K followers) accounts for most of its activities on social networking sites thereby promoting perpetual hype around this virtual currency and bringing members together even tighter than before. Bitgert staking makes it possible for users to get free tokens further separates it from similar kinds of investments making it attractive to experienced traders who are seeking variation. Utility is the key to cryptocurrency sustainability. The projects that offer real value in real-life situations are those that continue despite drastic changes in markets. Because most memes die off once they fulfil their short-term purpose whereas others like BEFE endure this proves why differently this coin is built. BEFE’s integrated suite of utilities positions it for long-term success. Ongoing demand created by the existence of low gas fees, staking options for passive income as well as cross-chain accessibility make BEFE a preferred choice for investors who want more than just short-term gains. The reason why more and more investors are choosing BEFE over other similar companies is this combination of utility and meme coin popularity. BEFE’s Potential in The Coming Days Despite the present bearish performance of BEFE, several indicators are pointing to a possible future reverse. Here’s why: Upcoming SOL Launch and Exchange Listings: As soon as it launches on the SOL chain and lists on major exchange platforms like Raydium Protocol and CITEEX, BEFE will have its visibility increased significantly. Bitcoin Halving Impact: Whenever Bitcoin adjusts its mining rewards downwards after four years to keep inflation in check, it also causes deflationary pressures across the rest of the market. As we approached halving, investors were looking at stable meme coins such as BEFE due to their trustworthiness and reputation which made them stand out among other things within their market segment. While the larger meme coin market shows a bearish trend with losses reported from giants like Dogecoin or Shiba Inu; however, the 800% spike projected for BEFE suggests resilience even in these conditions. This underscores BEFE’s growing reputation as a powerhouse within the cryptocurrency landscape.

- Dogwifhat (WIF) now ranks as the third-largest meme coin by market cap, surpassing PEPE. - Dogwifhat (WIF) hit \$4.63, an all-time high, amid a market cap surge. - Open interest for Dogwifhat (WIF) has surged by 23% to \$643 million in the last 24 hours. The Solana-based meme coin, Dogwifhat (WIF), has surged to prominence, overtaking PEPE to claim the title of the third-largest meme coin by market capitalization. This significant feat underscores the coin’s rapid ascent, driven by a substantial increase in both its price and overall market cap, which stands at \$4.48 billion. The surge in Dogwifhat’s popularity can be attributed to various factors, including its recent sale of the original WIF NFT for a staggering \$4.3 million. Today, Dogwifhat experienced yet another substantial 22% spike, reaching an all-time high of \$4.63. This surge follows a previous all-time high attained in mid-March, signaling sustained momentum in its upward trajectory. What Triggered the Dogwifhat Rally? According to data from Coinglass, a leading on-chain analytics firm, Dogwifhat’s open interest has surged by 23% in the last 24 hours, reaching a staggering \$643 million. However, this sparks concerns about its sudden surge in value. Meanwhile, PEPE, inspired by the controversial Pepe the Frog webcomic character, has seen a modest 1.84% price surge over the last 24 hours and holds a market cap of \$3.37 billion. Moreover, the meme coin has faced an uptrend of 6% over the past week, highlighting a contrast in performance compared to the surging WIF. DOGE, the world’s most renowned meme coin, has also experienced a notable price surge, surpassing 29% and currently hovering around \$0.21, the level not seen since November 2021. This further highlights the widespread enthusiasm for meme-based cryptocurrencies. However, this surge in interest is not limited to Dogwifhat alone but extends to other top meme coins such as Dogecoin (DOGE) and FLOKI.

- Leading altcoins like BNB, DOGE, and SOL are signaling a new bull run, with Bitcoin dominance likely to reverse soon. - Solana (SOL) has attracted attention, with Pantera Capital seeking to buy \$250 million of SOL from the distressed FTX estate. - Institutional demand for SOL has surged due to Solana’s Web3 ecosystem growth and the Saga mobile phone launch. Leading altcoins, such as BNB, Dogecoin (DOGE), and Solana (SOL), have already signaled a fresh bull leg ahead, sparking optimism among investors and enthusiasts alike. With Bitcoin dominance showing signs of an inevitable reversal
